Tables of Abbreviations

The following tables and notes are intended to guide readers of THE CATHOLIC ENCYCLOPEDIA in interpreting those abbreviations, signs, or technical phrases which, for economy of space, will be most frequently used in the work. For more general information see the article ABBREVIATIONS, ECCLESIASTICAL.

I.—GENERAL ABBREVIATIONS.

a. article.
 ad an. at the year (Lat. *ad annum*).
 an., ann. the year, the years (Lat. *annus, anni*).
 ap. in (Lat. *apud*).
 art. article.
 Assy. Assyrian.
 A. S. Anglo-Saxon.
 A. V. Authorized Version (i.e. tr. of the Bible authorized for use in the Anglican Church—the so-called “King James”, or “Protestant Bible”).
 b. born.
 Bk. Book.
 Bl. Blessed.
 C., c. about (Lat. *circa*); canon; chapter; *compagnie*.
 can. canon.
 cap. chapter (Lat. *caput*—used only in Latin context).
 cf. compare (Lat. *confer*).
 cod. codex.
 col. column.
 concl. conclusion.
 const., constit. Lat. *constitutio*.
 curâ. by the industry of.
 d. died.
 dict. dictionary (Fr. *dictionnaire*).
 disp. Lat. *disputatio*.
 diss. Lat. *dissertatio*.
 dist. Lat. *distinctio*.
 D. V. Douay Version.
 ed., edit. edited, edition, editor.
 Ep., Epp. letter, letters (Lat. *epistola*).
 Fr. French.
 gen. genus.
 Gr. Greek.
 H. E., Hist. Eccl. Ecclesiastical History.
 Heb., Hebr. Hebrew.
 ib., ibid. in the same place (Lat. *ibidem*).
 Id. the same person, or author (Lat. *idem*).

inf. below (Lat. *infra*).
 It. Italian.
 l. c., loc. cit. at the place quoted (Lat. *loco citato*).
 Lat. Latin.
 lat. latitude.
 lib. book (Lat. *liber*).
 long. longitude.
 Mon. Lat. *Monumenta*.
 MS., MSS. manuscript, manuscripts.
 n., no. number.
 N. T. New Testament.
 Nat. National.
 Old Fr., O. Fr. Old French.
 op. cit. in the work quoted (Lat. *opere citato*).
 Ord. Order.
 O. T. Old Testament.
 p., pp. page, pages, or (in Latin references) *pars* (part).
 par. paragraph.
passim. in various places.
 pt. part.
 Q. Quarterly (a periodical), e.g. “Church Quarterly”.
 Q., QQ., quæst. question, questions (Lat. *quæstio*).
 q. v. which [title] see (Lat. *quod vide*).
 Rev. Review (a periodical).
 R. S. Rolls Series.
 R. V. Revised Version.
 S., SS. Lat. *Sanctus, Sancti*, “Saint”, “Saints”—used in this Encyclopedia only in Latin context.
 Sept. Septuagint.
 Sess. Session.
 Skt. Sanskrit.
 Sp. Spanish.
 sq., sqq. following page, or pages (Lat. *sequens*).
 St., Sts. Saint, Saints.
 sup. Above (Lat. *supra*).
 s. v. Under the corresponding title (Lat. *sub voce*).
 tom. volume (Lat. *tomus*).

TABLES OF ABBREVIATIONS.

tr. translation or translated. By itself it means "English translation", or "translated into English by". Where a translation is into any other language, the language is stated.
tr., tract. tractate.
v. see (Lat. *vide*).
Ven. Venerable.
Vol. Volume.

II.—ABBREVIATIONS OF TITLES.

Acta SS. *Acta Sanctorum* (Bollandists).
Ann. pont. cath. Battandier, *Annuaire pontifical catholique*.
Bibl. Dict. Eng. Cath. Gillow, *Bibliographical Dictionary of the English Catholics*.
Dict. Christ. Antiq. Smith and Cheetham (ed.), *Dictionary of Christian Antiquities*.

Dict. Christ. Biog. . . Smith and Wace (ed.), *Dictionary of Christian Biography*.
Dict. d'arch. chrét. . . Cabrol (ed.), *Dictionnaire d'archéologie chrétienne et de liturgie*.
Dict. de théol. cath. . Vacant and Mangenot (ed.), *Dictionnaire de théologie catholique*.
Dict. Nat. Biog. Stephen (ed.), *Dictionary of National Biography*.
Hast., Dict. of the Bible Hastings (ed.), *A Dictionary of the Bible*.
Kirchenlex. Wetzer and Welte, *Kirchenlexicon*.
P. G. Migne (ed.), *Patres Græci*.
P. L. Migne (ed.), *Patres Latini*.
Vig., Dict. de la Bible. Vigouroux (ed.), *Dictionnaire de la Bible*.

NOTE I.—Large Roman numerals standing alone indicate volumes. Small Roman numerals standing alone indicate chapters. Arabic numerals standing alone indicate pages. In other cases the divisions are explicitly stated. Thus "Rashdall, *Universities of Europe*, I, ix" refers the reader to the ninth chapter of the first volume of that work; "I, p. ix" would indicate the ninth page of the preface of the same volume.

NOTE II.—Where St. Thomas (Aquinas) is cited without the name of any particular work the reference is always to "*Summa Theologica*" (not to "*Summa Philosophiæ*"). The divisions of the "*Summa Theol.*" are indicated by a system which may best be understood by the following example: "I-II, Q. vi, a. 7, ad 2^{um}" refers the reader to the *seventh* article of the *sixth* question in the *first* part of the *second* part, in the response to the *second* objection.

NOTE III.—The abbreviations employed for the various books of the Bible are obvious. Ecclesiasticus is indicated by *Ecclus.*, to distinguish it from Ecclesiastes (*Eccles.*). It should also be noted that I and II Kings in D. V. correspond to I and II Samuel in A. V.; and I and II Par. to I and II Chronicles. Where, in the spelling of a proper name, there is a marked difference between the D. V. and the A. V., the form found in the latter is added, in parentheses.

THE CATHOLIC ENCYCLOPEDIA

P

Philip II (**AUGUSTUS**), King of France, b. 22 or 25 Aug., 1165; d. at Mantes, 14 July, 1223, son of Louis VII and Alix de Champagne. He was saved from a serious illness after a pilgrimage made by his father to the tomb of Thomas a Becket; he succeeded to the throne 18 Sept., 1180. His marriage with Isabella of Hainault, niece of the Count of Flanders, the conflicts which he afterwards sustained against the latter, and the deaths of the Countess (1182) and Count of Flanders (1185), increased the royal power in the north of France. His strife with Henry II of England in concert with the sons of that monarch, Henry, Richard, and John, resulted in 1189 in the Treaty of Azay-sur-Cher, which enhanced the royal power in the centre of France. The struggle with the Plantagenets was the ruling idea of Philip II's whole policy. Richard Cœur de Lion having become King of England, 6 July, 1189, was at first on amicable terms with Philip. Together they undertook the Third Crusade, but quarrelled in Palestine, and on his return Philip II accused Richard of having attempted to poison him. As Richard had supported in Sicily the claims of Tancred of Lecce against those of the Emperor Henry VI, the latter resolved to be avenged. Richard, having been taken captive on his return from the Crusade by the Duke of Austria, was delivered to Henry VI, who held him prisoner. Philip II sent William, Archbishop of Reims, to Henry VI to request that Richard should remain the captive of Germany or that he should be delivered to Philip as his prisoner. Without loss of time Philip reached an agreement with John Lackland, Richard's brother. Normandy was delivered up by a secret treaty and John acknowledged himself Philip's vassal. But, when in Feb., 1194, Richard was set free by Henry VI, John Lackland followed reconciled with him and endless conflict followed between Richard and Philip. On 13 Jan., 1199, Innocent III imposed on them a truce of five years. Shortly after this Richard died. Subsequently Philip defended against John, Richard's successor, the claims of the young Arthur of Brittany, and then those of Hugh de Lusignan, Count of La Marche, whose betrothed had been abducted by John. The war between Philip and John, interrupted by the truces imposed by the papal legates, became a national war; and in 1206 John lost his possessions in central France. Philip was sometimes displeased with the pontifical intervention between France and the Plantagenets, but the prestige of Innocent III forced him to accept it. Protracted difficulties took place between him and the pope owing to the tenacity with which Innocent III compelled respect for the indissolubility of even royal marriages.

In 1190 Philip lost his wife, Isabella of Hainault, whom he had married in order to inherit Artois, and in 1193 he married Ingeburga, sister of Canute VI, King of Denmark. As he immediately desired to repudiate

her, an assembly of complaisant barons and bishops pronounced the divorce, but Ingeburga appealed to Rome. Despite the remonstrances of Celestine III, Philip, having imprisoned Ingeburga, married Agnes de Méran, daughter of a Bavarian nobleman. Innocent III, recently elected, called upon him to repudiate Agnes and take back Ingeburga, and on the king's refusal the legate, Peter of Capua, placed the kingdom under an interdict (1198). Most of the bishops refused to publish the sentence. The Bishops of Paris and Senlis, who published it, were punished by having their goods confiscated. At the end of nine months Philip appeared to yield; he feigned reconciliation with Ingeburga, first before the legate, Octavian, and then before the Council of Soissons (May, 1201), but he did not dismiss Agnes de Méran. She died in August, 1201, and Innocent III consented to legitimize the two children she had borne the king, but Philip persisted that Rome should pronounce his divorce from Ingeburga, whom he held prisoner at Etampes. Rome refused and Philip dismissed the papal legate (1209). In 1210 he thought of marrying a princess of Thuringia, and in 1212 renewed his importunities for the divorce with the legate, Robert de Courçon. Then, in 1213, having need of the aid of the pope and the King of Denmark, he suddenly restored Ingeburga to her station as queen.

Another question which at first caused discord between Philip II and Innocent III, and regarding which they had later a common policy, was the question of Germany. Otto of Brunswick, who was Innocent III's candidate for the dignity of emperor, was the nephew of Richard and John Lackland. This was sufficient to cause Philip to interfere in favour of Philip of Suabia. They formed an alliance in June, 1198, and when Philip of Suabia was assassinated in 1208 Philip put forward the candidacy of Henry of Brabant. However, the whole of Germany rallied to Otto of Brunswick, who became emperor as Otto IV, and in 1209 Philip feared that the new emperor would invade France. But Otto IV quarrelled with Innocent III and was excommunicated, and the pope by an unexpected move called upon Philip for subsidies and troops to aid him against Otto. They agreed to proclaim as emperor Frederick of Hohenstaufen, the future Frederick II, Philip giving Frederick 20,000 "mares" to defray the cost of his election (Nov., 1212). Thus was inaugurated the policy by which France meddled in the affairs of Germany and for the first time the French king claimed, like the pope, to have a voice in the imperial election.

The accord established between Innocent and Philip with regard to the affairs of Germany subsequently extended to those of England. Throughout his reign Philip dreamed of a landing in England. As early as 1209 he had negotiated with the English barons who were hostile to John Lackland, and in 1212 with the

Irish and the Welsh. When John Lackland subjected to cruel persecution the English bishops who, in spite of him, recognized Stephen Langton as Archbishop of Canterbury, Innocent III in 1212 placed England under interdict, and the legate, Pandulphus, declared that John Lackland had forfeited his throne. Then Philip, who received at his court all the exiles from England, consented to go to England in the name of Innocent III to take away the crown from John Lackland. It was to be given to his son, the future Louis VIII. On 22 May, 1213, the French expedition was to embark at Gravelines, when it was learned that John Lackland had become reconciled with Rome, and some months later he became a vassal of the pope. Thus failed, on the eve of its realization, the project of the French invasion of England. But the legate of Innocent III induced Philip to punish Ferrand, Count of Flanders, who was the ally of all the enemies of the king. At the battle of Bouvines (27 July, 1214) Ferrand, who supported Otto IV, was taken prisoner. This battle is regarded as the first French national victory. Philip II, asserting that he had on both sides two great and terrible lions, Otto and John, excused himself from taking part in the Crusade against the Albigenses. He permitted his son Louis to make two expeditions into Languedoc to support Simon de Montfort in 1215, and Amaury de Montfort in 1219, and again in 1222 he sent Amaury de Montfort two hundred knights and ten thousand foot soldiers under the Archbishop of Bourges and the Count of La Marche. He foresaw that the French monarchy would profit by the defeat of the Albigenses.

Philip's reign was characterized by a gigantic advance of the French monarchy. Before his time the King of France reigned only over the Ile de France and Berri, and had no communication with the sea. To this patrimony Philip II added Artois, Amienois, Valois, Vermandois, a large portion of Beauvaisis, Normandy, Maine, Anjou, Touraine, and a part of Poitou and Saintonge. His bailiffs and seneschals established the royal power firmly in these countries. Paris became a fortified city and attracted to its university students from different countries. Thanks to the possession of Dieppe, Rouen, and certain parts of Saintonge, the French monarchy became a maritime and commercial power, and Philip invited foreign merchants to France. Flanders, Ponthieu, and Auvergne became subject fiefs, supervised by agents of the king. He exercised a sort of protectorate over Champagne and Burgundy. Brittany was in the hands of Pierre de Dreux, a Capetian of the younger branch. "History", writes M. Luchaire, "does not present so many, such rapid, and such complete changes in the fortune of a State".

Philip Augustus did not interfere in episcopal elections. In Normandy, where the Plantagenets had assumed the custom of directly nominating the bishops, he did not follow their example. Guillaume Le Breton, in his poem the "Philippide", makes him say: "I leave to the men of God the things that pertain to the service of God". He favoured the emancipation of communes, desiring to be liked by the middle classes of the districts he annexed. He often exacted a tax in exchange for the communal charter. But he did not allow the communes to infringe on the property of clerics or the episcopal right of jurisdiction. At Noyen he intervened formally in behalf of the bishop, who was threatened by the commune. He undertook a campaign in defence of the bishops and abbots against certain feudal lords whom he himself desired to humiliate or weaken. In 1180, before he was king, he undertook an expedition into Berri to punish the Lord of Charenton, the enemy of the monks, and into Burgundy where the Count of Chalon and the Lord of Beaujeu were persecuting the Church. In 1186, on the complaint of the monks, he took possession of Chatillon-sur-Seine, in the Duchy of Burgundy,

and forced the duke to repair the wrongs he had committed against the Church. In 1210 he sent troops to protect the Bishop of Clermont, who was threatened by the Count of Auvergne.

But on the other hand, in virtue of the preponderance which he wished royalty to have over feudalism, he exacted of the bishops and abbots the performance of all their feudal duties, including military service; although for certain territories he was the vassal of the bishops of Picardy, he refused to pay them homage. Moreover, he declared with regard to Manasses, Bishop of Orléans, that the royal court was entitled to judge at the trials of bishops, and he made common cause with lay feudalism in the endless discussions regarding the province of ecclesiastical tribunals, which at the beginning of the thirteenth century were disposed to extend their jurisdiction. An ordinance issued about 1206 at the instance of the king, executed in Normandy and perhaps elsewhere, stipulated that in certain cases lay judges might arrest and try guilty clerics, that the right of asylum of religious buildings should be limited, that the Church might not excommunicate those who did business on Sunday or held intercourse with Jews, and that a citizen having several children should not give more than half of his estate to that one of his sons who was a cleric. Finally he imposed on the clergy heavy financial exactions. He was the first king who endeavoured to compel clerics to pay the king a tenth of their income. In 1188 the archdeacon Peter of Blois defeated this claim, but in 1215 and 1218 Philip renewed it, and by degrees the resistance of the clergy gave way. Philip, however, was pious in his own way, and in the advice which St. Louis gave to his son he said that Philip, because of "God's goodness and mercy would rather lose his throne than dispute with the servants of Holy Church". Thus the reputation left by Philip II was quite different from that of Philip IV, or Frederick II of Germany. He never carried out towards the Church a policy of trickery or petty vexations, on the contrary he regarded it as his collaborator in the foundation of French unity.

GEORGES GOYAU.

Philip II, King of Spain, only son of the Emperor Charles V, and Isabella of Portugal, b. at Valladolid, 21 May, 1527; d. at the Escorial, 13 Sept., 1598. He was carefully educated in the sciences, learned French and Latin, though he never spoke anything but Castilian, and also showed much interest in architecture and music. In 1543 he married his cousin, Maria of Portugal, who died at the birth of Don Carlos (1535). He was appointed regent of Spain with a council by Charles V. In 1554 he married Mary Tudor, Queen of England, who was eleven years his senior. This political marriage gave Spain an indirect influence on the affairs of England, recently restored to Catholicism; but in 1555 Philip was summoned to the Low Countries, and Mary's death in the same year severed the connexion between the two countries. At a solemn conference held at Brussels, 22 Oct., 1555, Charles V ceded to Philip the Low Countries, the crowns of Castille, Aragon, and Sicily, on 16 Jan., 1556, and the countship of Burgundy on the tenth of June. He even thought of securing for him the imperial crown, but the opposition of his brother Ferdinand caused him to abandon that project. Having become king, Philip, devoted to Catholicism, defended the Faith throughout the world and opposed the progress of heresy, and

these two things are the key to his whole reign. He did both by means of absolutism. His reign began unpleasantly for a Catholic sovereign. He had signed with France the Treaty of Vaucelles (5 Feb., 1556), but it was soon broken by France, which joined Paul IV against him. Like Julius II this pope longed to drive the foreigners out of Italy. Philip had two wars on his hands at the same time, in Italy and in the Low Countries. In Italy the Duke of Alva, Viceroy of Naples, defeated the Duke of Guise and reduced the pope to such distress that he was forced to make peace. Philip granted this on the most favourable terms and the Duke of Alva was even obliged to ask the pope's pardon for having invaded the Pontifical States. In the Low Countries Philip defeated the French at Saint Quentin (1557) and Gravelines (1558) and afterwards signed the Peace of Cateau-Cambresis (3 April, 1559), which was sealed by his marriage with Elizabeth of Valois, daughter of Henry II. Peace concluded, Philip, who had been detained in the Low Countries, returned to Spain. For more than forty years he directed from his cabinet the affairs of the monarchy. He resided alternately at Madrid which he made the capital of the kingdom and in *villégiatures*, the most famous of which is the Escorial, which he built in fulfillment of a vow made at the time of the battle of Saint Quentin.

In Spain, Philip continued the policy of the Catholic Ferdinand and Isabella. He was merciless in the suppression of the Lutheran heresy, which had appeared in various parts of the country, notably at Valladolid and Seville. "If my own son were guilty like you", he replied to a gentleman condemned to death for heresy who had reproached him for his cruelty, "I should lead him with my own hands to the stake". He succeeded in exterminating Protestantism in Spain, but encountered another enemy no less dangerous. The Moriscoes of the ancient Kingdom of Granada had been conquered, but they remained the implacable enemies of their conquerors, from whom they were separated by religion, language, dress, and manners, and they plotted incessantly with the Mussulmans outside the country. Philip wished to force them to renounce their language and dress, whereupon they revolted and engaged in a bloody struggle against Spain which lasted three years (1567-70) until ended by Don Juan, natural son of Charles V. The defeated Moriscoes were transplanted in great numbers to the interior of the country. Another event of historical importance in Philip's reign was the conquest of Portugal in 1580. After the death of the young King Sebastian at the battle of Alcazar (1578) and that of his successor the aged Cardinal Henry (1580), Philip II, who through his mother was a grandson of King Emmanuel, pleaded his title of heir and sent the Duke of Alva to occupy the country. This was the only conquest of the reign. Iberian unity, thus realized, lasted from 1580 to 1640. Other events were the troubles in Aragon, which were fomented by Antonio Perez, former secretary of the king. Being pursued for high treason he sought refuge in his native country, and appealed for protection to its *fueros* that he might not be delivered to the Castilian judges, nor to the Inquisition. The inhabitants of Saragossa defended him by force of arms and he succeeded in escaping abroad, but Philip sent an army to punish Aragon, infringing on the *fueros* and established absolutism in the Kingdom of Aragon, hitherto proud of its freedom (1592).

In the Low Countries, where Philip had committed the government to his aunt, Margaret of Parma, the nobles, chafed because of their want of influence, plotted and trumped up grievances. They protested against the presence in the country of several thousands of Spanish soldiers, against Cardinal de Granvelle's influence with the regent, and against the severity of Charles V's decrees against heresy. Philip recalled the Spanish soldiers and the Cardinal de Granvelle, but he refused to mitigate the decrees and

declared that he did not wish to reign over a nation of heretics. The difficulties with the Iconoclasts having broken out he swore to punish them and sent thither the Duke of Alva with an army, whereupon Margaret of Parma resigned. Alva behaved as though in a conquered country, caused the arrest and execution of Count Egmont and de Hornes, who were accused of complicity with the rebels, created the Council of Troubles, which was popularly styled the "Council of Blood", defeated the Prince of Orange and his brother who had invaded the country with German mercenaries, but could not prevent the "Sea-beggars" from capturing Brille. He followed up his military successes but was recalled in 1573. His successor Requesens could not recover Leyden. Influenced by the Prince of Orange the provinces concluded the "Pacification of Ghent" which regulated the religious situation in the Low Countries without royal intervention. The new governor, Don Juan, upset the calculations of Orange by accepting the "Pacification", and finally the Prince of Orange decided to proclaim Philip's deposition by the revolted provinces. The king replied by placing the prince under the ban; shortly afterwards he was slain by an assassin (1584). Nevertheless, the united provinces did not submit and were lost to Spain. Those of the South, however, were recovered one after another by the new governor, Alexander Farnese, Prince of Parma. But he having died in 1592 and the war becoming more difficult against the rebels, led by the great general Maurice of Nassau, son of William of Orange, Philip II realized that he must change his policy and ceded the Low Countries to his daughter Isabella, whom he espoused to the Archduke Albert of Austria, with the provision that the provinces would be returned to Spain in case there were no children by this union (1598). (See ALVA; EGMONT; GRANVELLE; NETHERLANDS.) The object of Philip's reign was only partly realized. He had safeguarded the religious unity of Spain and had exterminated heresy in the southern Low Countries, but the northern Low Countries were lost to him forever.

Philip had three enemies to contend with abroad, Islam, England, and France. Islam was master of the Mediterranean, being in possession of the Balkan Peninsula, Asia Minor, Egypt, all the coast of northern Africa (Tunis, Algiers, Morocco); it had just conquered the Island of Cyprus and laid siege to the Island of Malta (1505), which had valiantly repulsed the assault. Dragut, the Ottoman admiral, was the terror of the Mediterranean. On several occasions Philip had fought against the Mussulman peril, meeting alternately with success and defeat. He therefore eagerly joined the Holy League organized by Pius V to resist Islam, and which Venice consented to join. The fleet of the League, commanded by Don Juan, brother of Philip II, inflicted on the Turkish fleet the terrible defeat of Lepanto (7 Oct., 1571), the results of which would have been greater had Venice not proved false and if Pius V had not died in 1572. Nevertheless, the Turkish domination of the Mediterranean was ended and in 1578 Philip concluded a treaty with the Turks which lasted till the end of his reign. Relations of intimacy with England had ceased at the death of Mary Tudor. Philip attempted to renew them by his chimerical project of marriage with Elizabeth, who had not yet become the cruel persecutor of Catholicism. When she constituted herself the protectress of Protestant interests throughout the world and did all in her power to encourage the revolt of the Low Countries, Philip thought of contending with her in her own country by espousing the cause of Mary Stuart, but Elizabeth did away with the latter in 1587, and furnished relief to the Low Countries against Philip, who thereupon armed an immense fleet (the Invincible Armada) against England. But being led by an incompetent commander it accomplished nothing and

was almost wholly destroyed by storms (1588). This was an irreparable disaster which inaugurated Spain's naval decline. The English corsairs could with impunity pillage her colonies and under Drake even her own coast; in 1596 the Duke of Essex pillaged the flourishing town of Cadiz, and the sceptre of the seas passed from Spain to England. From 1559 Philip II had been at peace with France, and had contented himself with urging it to crush out heresy. French intervention in favour of the Low Countries did not cause him to change his attitude, but when at the death of Henry III in 1589 the Protestant Henry of Bourbon became heir to the throne of France, Philip II allied himself with the Guises, who were at the head of the League, supplied them with money and men, and on several occasions sent to their relief his great general Alexander Farnese. He even dreamed of obtaining the crown of France for his daughter Isabella, but this daring project was not realized. The conversion of Henry IV (1593) to Catholicism removed the last obstacle to his accession to the French throne. Apparently Philip II failed to grasp the situation, since he continued for two years more the war against Henry IV, but his fruitless efforts were finally terminated in 1595 by the absolution of Henry IV by Clement VIII.

No sovereign has been the object of such diverse judgments. While the Spaniards regarded him as their Solomon and called him "the prudent king" (*el rey prudente*), to Protestants he was the "demon of the south" (*demon meridiano*) and most cruel of tyrants. This was because, having constituted himself the defender of Catholicism throughout the world, he encountered innumerable enemies, not to mention such adversaries as Antonio Perez and William of Orange who maligned him so as to justify their treason. Subsequently poets (Schiller in his "Don Carlos"), romance-writers, and publicists repeated these calumnies. As a matter of fact Philip II joined great qualities to great faults. He was industrious, tenacious, devoted to study, serious, simple-mannered, generous to those who served him, the friend and patron of arts. He was a dutiful son, a loving husband and father, whose family worshipped him. His piety was fervent, he had a boundless devotion to the Catholic Faith and was, moreover, a zealous lover of justice. His stoical strength in adversity and the courage with which he endured the sufferings of his last illness are worthy of admiration. On the other hand he was cold, suspicious, secretive, scrupulous to excess, indecisive and procrastinating, little disposed to clemency or forgetfulness of wrongs. His religion was austere and sombre. He could not understand opposition to heresy except by force. Imbued with ideas of absolutism, as were all the rulers of his time, he was led into acts disapproved by the moral law. His cabinet policy, always behind-hand with regard to events and ill-informed concerning the true situation, explains his failures to a great extent. To sum up we may cite the opinion of Baumstark: "He was a sinner, as we all are, but he was also a king and a Christian king in the full sense of the term".

GODEFROID KURTH.

Philip IV, surnamed LE BEL (THE FAIR), King of France, b. at Fontainebleau, 1268; d. there, 29 Nov., 1314; son of Philip III and Isabel of Aragon; became king, 5 Oct., 1285, on the death of his father, and was consecrated at Reims, 6 Jan., 1286, with his wife Jeanne, daughter of Henry I, King of Navarre, Count of Champagne and Brie; this marriage united these

territories to the royal domain. Having taken Viviers and Lyons from the empire, Valenciennes, the inhabitants of which united themselves voluntarily with France, La Marche and Angoumois, which he seized from the lawful heirs of Hugues de Lusignan, Philip wished to expel Edward I of England from Guienne, all of which province, with the exception of Bordeaux and Bayonne, was occupied in 1294 and 1295. By the Treaty of Montreuil, negotiated by Boniface VIII, he gave Guienne as a gift to his daughter Isabel, who married the son of Edward I, on condition that this young prince should hold the province as Philip's vassal. Philip wished to punish Count Guy of Flanders, an ally of England, and caused Charles of Valois to invade his territory, but he was defeated at Coutrai by the Flemings, who were roused by the heavy taxes imposed on them by Philip; he took his revenge on the Flemings at the naval victory of Zierichzee and the land victory of Mons en Puelle; then in 1305 he recognized Robert, Guy's son, as his vassal and retained possession of Lille, Douai, Orchies, and Valenciennes. Having thus extended his kingdom, Philip endeavoured energetically to centralize the government and impose a very rigorous fiscal system. Legists like Enguerrand, Philippe de Marigny, Pierre de Latilly, Pierre Flotte, Raoul de Presle, and Guillaume de Plassan, helped him to establish firmly this royal absolutism and set up a tyrannical power.

These legists were called the *chevaliers de l'hôtel*, the *chevaliers à lois*, the *milites regis*; they were not nobles, neither did they bear arms, but they ranked as knights. The appearance of these legists in the Government of France is one of the leading events of the reign of Philip IV. Renan explains its significance in these words: "An entirely new class of politicians, owing their fortune entirely to their own merit and personal efforts, unreservedly devoted to the king who had made them, and rivals of the Church, whose place they hoped to fill in many matters, thus appeared in the history of France, and were destined to work a profound change in the conduct of public affairs".

It was these legists who incited and supported Philip IV in his conflict with the papacy and the trial of the Templars. In the articles BONIFACE VIII; CLEMENT V; MOLAI; TEMPLARS, will be found an account of the relations of Philip IV with the Holy See; M. Lizerand, in 1910, has given us a study on Philip IV and Clement V, containing thirty-seven unpublished letters written by the two sovereigns. The principal adviser of Philip in his hostile relations with the Curia was the legist Guillaume de Nogaret (q. v.). Renan, who made a close study of Nogaret's dealings with Boniface VIII, Clement V, and the Templars, thinks that despite his ardent profession of Catholic fidelity he was somewhat hypocritical, at all events "he was not an honest man", and that "he could not have been deceived by the false testimony which he stirred up and the sophisms he provoked". Nogaret's methods of combating Boniface VIII and the Templars are better understood when we examine, in Gaston Paris's work, the curious trial of Guichard, Bishop of Troyes, for witchcraft.

Another important personage whose curious writings must be read to understand the policy of Philip correctly is Pierre Dubois. He had been a pupil of St. Thomas Aquinas at the University of Paris, and was a lawyer at Coutances. In 1300 Dubois wrote a work on the means of shortening the wars and conflicts of France; in 1302 he published several virulent pamphlets against Boniface VIII; between 1304 and 1308, he wrote a very important work "De recuperatione Terræ Sanctæ"; in 1309 alone, he wrote on the question of the Holy Roman Empire, on the Eastern question, and against the Templars. Dubois started from the idea that France ought to subdue the papacy, after which it would be easy for the King of France to use the papal influence for his own advantage. He

PHILIP II
TITIAN, THE PRADO, MADRID

wished his king to become master of the Papal States, to administer them, to reduce the castles and cities of this state to his obedience, and to force Tuscany, Sicily, England, and Aragon, vassal countries of the Holy See, to do homage to the King of France; in return the king was to grant the pope the revenues of the Papal States. "It depends on the pope", wrote he in his work of 1302, "to rid himself of his worldly occupations and to preserve his revenues without having any trouble about them; if he does not wish to accept such an advantageous offer, he will incur universal reproach for his cupidity, pride, and rash presumption." "Clement V", continued Dubois in his treatise "*De recuperatione Terræ Sanctæ*", "after having given up his temporal possessions to the King of France, would be protected against the miasma of Rome, and would live long in good health, in his native land of France, where he would create a sufficient number of French cardinals to preserve the

papacy from the rapacious hands of the Romans." Dubois desired not only that the King of France should subjugate the papacy, but that the empire should be forced to cede to France the left bank of the Rhine, Provence, Savoy, and all its rights in Liguria, Venice, and Lombardy.

In 1308, after the death of the Emperor Albert I, he even thought of having the pope confer the imperial crown on the French Capets. He also devised plans for subjugating Spain. Thus re-organized by France Christian Europe was (in the mind of Pierre Dubois) to undertake the Crusade; the Holy Land would be reconquered, and on the return, the Palæologi, who reigned at Constantinople, would be replaced by the Capetian, Charles of Valois, representing the rights of Catherine de Courtenay to the Latin Empire of Constantinople. The personal influence of Pierre Dubois on Philip IV must not be exaggerated. Although all his writings were presented to the king, Dubois never had an official place in Philip's council. However, there is an indisputable parallelism between his ideas and certain political manoeuvres of Philip IV. For instance on 9 June, 1308, Philip wrote to Henry of Carinthia, King of Bohemia, to propose Charles of Valois as a candidate for the crown of Germany; and on 11 June he sent three knights into Germany to offer money to the electors. This was fruitless labour, however, for Henry of Luxemburg was elected and Clement V, less subservient to the King of France than certain enemies of the papacy have said, hastened to confirm the election.

Philip IV was not really a free-thinker; he was religious, and even made pilgrimages: his attitude towards the inquisition is not that of a free-thinker, as is especially apparent in the trial of the Franciscan Bernard Délicieux. The latter brought the deputies of Carcassonne and Albi to Philip IV at Senlis, to complain of the Dominican inquisitors of Languedoc; the result of his action was an ordinance of Philip putting the Dominican inquisitors under the control of the bishops. On the receipt of this news Languedoc became inflamed against the Dominicans; Bernard Délicieux in 1303 headed the movement in Carcassonne, and when in 1304 Philip and the queen visited Toulouse and Carcassonne, he organized tumultuous manifestations. The king was displeased, and discontin-

ued his proceedings against the Dominicans. Then Bernard Délicieux and some of the people of Carcassonne conspired to deliver the town into the hands of Prince Fernand, Infant of Majorca; Philip caused sixteen of the inhabitants to be hanged, and imposed a heavy fine on the town; and this conspiracy of Bernard Délicieux against the king and the Inquisition was one of the reasons of his condemnation later in 1318 to perpetual *In Pace*, or monastic imprisonment.

Philip IV was not therefore in any way a systematic adversary of the inquisition. On the other hand, recently published documents show that he was sincerely attached to the idea of a Crusade. From the memoirs of Rabban Cauma, ambassador of Argoun, King of the Tatars, translated from the Syriac by Abbé Chabot, we learn that Philip said to Rabban in Sept., 1287: "If the Mongolians, who are not Christians, fight to capture Jerusalem, we have much more reason to fight; if it be God's will, we will go with an

army." And the news of the fall of Saint-Jean d'Acre (1291), which induced so many provincial councils to express a desire for a new crusade was certainly calculated to strengthen this resolution of the king. We have referred to Dubois's zeal for the conquest of the Holy Land; Nogaret was perhaps a still stronger advocate of the project; but in the plan which he outlined about 1310, the first step, according to him, was to place all the money of the Church of France in the king's hands.

The French Church under Philip IV displayed very little independence; it was in reality enslaved to the royal will. Almost every year it contributed to the treasury with or without the pope's approval, a tenth and sometimes a fifth of its revenues; these pecuniary sacrifices were consented to by the clergy in the provincial councils, which in return asked certain concessions or favours of the king; but Philip's fiscal agents, if they met with resistance, laid down the principle that the king could by his own authority collect from all his

subjects, especially in case of necessity, whatever taxes he wished. His officers frequently harassed the clergy in a monstrous manner; and the documents by which Philip confirmed the immunities of the Church always contained subtle restrictions which enabled the king's agents to violate them.

A list of the *gravamina* of the Churches and the clerics, discussed at the Council of Vienne (1311), contains ample proof of the abuse of authority to which the Church was subjected, and the writer of the poem "*Avisemens pour le roy Loys*", composed in 1315 for Louis X, exhorted this new king to live in peace with the Church, which Philip IV had not done. To concentrate in his hands all the wealth of the French Church for the Crusade, and then to endeavour to make an agreement with the papacy for the control and disposition of the income of the Universal Church, was the peculiar policy of Philip IV. Recently some verses have been discovered, written by a contemporary on a leaf of the register of the deliberations of Notre-Dame de Chartres, which reveal the impression produced by this policy on the minds of certain contemporaries:

Jam Petri navis titubat, racio quia clavis.
Errat; rex, papa, facti sunt unica capa,
Declarant, do, des, Pilatus et alter Herodes.

PHILIP IV AS HE ENTERED PARIS IN 1304 AFTER CONQUERING THE FLEMISH COMMUNES. STATUE PLACED IN THE CATHEDRAL OF NOTRE-DAME AND DESTROYED IN 1772. FACSIMILE OF A WOODCUT FROM THEVET'S "*COSMOGRAPHIE UNIVERSELLE*", 1575.

Philip IV, by his formal condemnation of the memory of Boniface VIII, appointed himself judge of the orthodoxy of the popes. It was laid down as a principle, says Geoffrey of Paris, that "the king is to submit to the spiritual power only if the pope is in the right faith". The adversaries of the "theocracy" of the Middle Ages hail Philip IV as its destroyer; and in their enthusiasm for him, by an extraordinary error, they proclaim him a precursor of modern liberty. On the contrary he was an absolutist in the fullest sense of the term. The *Etats généraux* of 1302, in which the Third Estate declared that the king had no superior on earth, were the precursors of the false Gallican theories of Divine right, so favourable to the absolutism of sovereigns.

The civilization of the Middle Ages was based on a great principle, an essentially liberal principle, from which arose the political liberty of England; according to that principle, taxes before being raised by royal authority, ought to be approved by the tax-payers. Boniface VIII in the conflict of 1302 was only maintaining this principle, when he insisted on the consent of the clergy to the collection of the tithes. In the struggle between Philip and Boniface, Philip represents absolutism, Boniface the old medieval ideas of autonomy. "The reign of Philip IV", writes Renan, "is the reign which contributed most to form the France of the five succeeding centuries, with its good and bad qualities. The *militēs regis*, those ennobled plebeians, became the agents of all important political business; the princes of the royal blood alone remained superior to or on an equality with them; the real nobility, which elsewhere established the parliamentary governments, was excluded from participating in the public policy." Renan is right in declaring that the first act of the French magistracy was "to diminish the power of the Church *per fas et nefas*" to establish the absolutism of the king; and that such conduct was for this magistracy "an original sin".

GEORGES GOYAU.

Philip, ACTS OF SAINT. See APOCRYPHA, sub-title III.

Philip, ANTIPOPE. See STEPHEN IV, POPE.

Philip Benizi, SAINT, propagator and fifth General of the Servite Order, b. at Florence, Italy, 15 Aug., 1233; d. at Todi, in Umbria, 23 Aug., 1285. His parents were scions of the renowned Benizi and Frescobaldi families. After many years of married life had left them childless, Philip was granted to them in answer to their prayers. When but five months old, on beholding St. Alexis and St. Buonagiunta approaching in quest of alms, he exclaimed: "Mother, here come our Lady's Servants; give them an alms for the love of God". At thirteen years of age, in view of his precocious genius, he was sent to the University of Paris. Here he led a life of study and edification, and after a brilliant career, completed his course in medicine at the University of Padua. He practised medicine at Florence for one year, chiefly for the benefit of the poor. As a layman he lived like a member of a religious community, entertaining high

ideals. In a vision of the Blessed Virgin he was finally directed to enter the order of her servants, known as the Servites. St. Philip was received into the order in 1254 by St. Buonfiglio, its first superior. Because of his purity and deep humility, he asked to be enrolled as a simple brother, and was sent to Mt. Senario near Florence, there to continue his life of penance and sacrifice. The miraculous fountain that sprang forth in his grotto is still seen enclosed in a small Byzantine chapel built on the native rock. In 1258 while on a journey to Siena, his great ability and learning, hitherto concealed from his brethren, was accidentally discovered. He was at once ordered to prepare for Holy Orders.

The following year he was ordained to the priesthood by Bishop John Mangiadoro of Florence. He made great progress in sanctity, drawing his inspiration to holiness and virtue principally from the Passion of Jesus and the Sorrows of Mary. His ability was so recognized that he rose rapidly from one post in the order to another, until finally on 5 June, 1267, he was unanimously chosen Superior General. In this position his administrative powers and apostolic zeal enjoyed a broad field for development. He travelled throughout Europe preaching and working miracles. Under his care the order grew in numbers and holiness, many of his spiritual children having been raised to the honours of the altar. The greatest perhaps was St. Juliana Falconieri, foundress of the Servite Nuns. After the death of Clement IV in 1268, the cardinals were about to choose St. Philip as his successor, but the saint, learning of their intention, fled secretly and remained in solitude until another choice had been made. In 1274 he was present at the Council of Lyons, where he possessed the rare and apostolic gift of tongues. When the furious strife between Guelph and Ghibelline was at its height, Philip was active everywhere as a peace-maker, especially in Florence, Pistoia, Arezzo, Forlì, and Bologna. God having revealed to him his approaching end, he placed the government of the order in the hands of Blessed Lotharingus. He then repaired to Todi, where he selected the smallest and poorest convent for the scene of his death, which occurred after a short illness. Many miracles were wrought at his intercession; even the dead were raised to life. He was canonized by Clement IX in 1671.

CHARLES F. MCGINNIS.

Philip of Hesse. See HESSE; LUTHER, MARTIN.

Philip of Jesus, SAINT, b. in Mexico, date unknown; d. at Nagasaki early in February, 1597. Though unusually frivolous as a boy, he joined the Discalced Franciscans of the Province of St. Didacus, founded by St. Peter Baptista, with whom he suffered martyrdom later. After some months in the Order, Philip grew tired of monastic life, left the Franciscans in 1589, took up a mercantile career, and went to the Philippines, where he led a life of pleasure. Later he desired to re-enter the Franciscans and was again admitted at Manila in 1590. After some years he was to have been ordained at the monastery in Mexico, the episcopal See of Manila being at that time vacant. He sailed, 12 July, 1596, but a storm drove the vessel upon the coast of Japan. The governor of the province confiscated the ship and imprisoned its crew and passengers, among whom were another Franciscan, Juan de Zamorra, two Augustinians, and a Dominican. The discovery of soldiers, cannon, and ammunition on the ship led to the suspicion that it was intended for the conquest of Japan, and that the missionaries were merely to prepare the way for the soldiers. This was also said, falsely and unwarrant-

ably, by one of the crew (cf. JAPAN, CHRISTIANITY IN JAPAN, *Catholicism*). This enraged the Japanese Emperor Hideyoshi, generally called Taicosama by Europeans. He commanded, 8 December, 1596, the arrest of the Franciscans in the monastery at Miako, now Kyoto, whither St. Philip had gone. The religious were kept prisoners in the monastery until 30 December, when they were transferred to the city prison. There were six Franciscans, seventeen Japanese tertiaries, and the Japanese Jesuit, Paul Miki, with his two native servants. The ears of the prisoners were cropped on 3 January, 1597, and they were paraded through the streets of Kyoto; on 21 January they were taken to Osaka, and thence to Nagasaki, which they reached on 5 February. They were taken to a mountain near the city, "Mount of the Martyrs", bound upon crosses, after which they were pierced with spears. St. Philip was beatified in 1627 by Urban VIII, and, with his companions, canonized 8 June, 1862, by Pius IX. He is the patron saint of the city of Mexico.

MICHAEL BIHL

Philip of the Blessed Trinity (ESPRIT JULIEN), Discalced Carmelite, theologian, b. at Malaucene, near Avignon, 1603; d. at Naples, 28 February, 1671. He took the habit at Lyons where he made his profession, 8 September, 1621. Choosing the missionary life, he studied two years at the seminary in Rome and proceeded in February, 1629, to the Holy Land and Persia, and thence to Goa where he became prior, and teacher of philosophy and theology. After the martyrdom of Dionysius a Nativitate, his pupil, and Redemptus a Cruce, 29 Nov., 1638, Philip collected all available evidence and set out for Rome to introduce the cause of their beatification which, however, only terminated in 1900. He did not return to the mission, but was entrusted with important offices in France, in 1665, was elected general of the order with residence in Rome, and three years later, re-elected. While visiting all the provinces of his order, he was caught in a terrific gale off the coast of Calabria, and reached Naples in a dying condition. Besides the classical languages he spoke fluently French, Italian, Spanish, Portuguese, Persian, and Arabic. Of his numerous works the following have lasting value: "Summa philosophiæ", 4 vols., Lyons, 1648, in which he follows not only the spirit but also the method of St. Thomas Aquinas; "Summa theologiæ thomisticæ", 5 vols., Lyons, 1653; "Summa theologiæ mysticæ", Lyons, 1656, reprinted in 3 vols., Paris, 1884; "Itinerarium orientale", Lyons, 1649, also in Italian and French; "Decor Carmeli religiosi", the lives of the saints and saintly members of his Order, Lyons, 1665; "Theologia carmelitana", Rome, 1665. The two last named and some smaller works dealing to some extent with historical matters of a controversial nature, called forth a reply from Pierre-Joseph de Haitze, under the titles, "Des Moines empruntéz", and "Des Moines travestis".

B. ZIMMERMAN.

Philippe le Bel. See PHILIP IV, KING OF FRANCE.

Philippi (Gr. *φίλιπποι*, Lat. *Philippi*) was a Macedonian town, on the borders of Thracia. Situated on the summit of a hill, it dominated a large and fertile

plain, intersected by the Egnatian Way. It was north-west of Mount Pangea, near the River Gangites, and the Aegean Sea. In 358 B. C. it was taken, enlarged, and fortified by the King of Macedonia, Philip II, hence its name Philippi. Octavius Augustus (42 B. C.) conferred on it the *jus Italicum* (Acts, xiv, 12), which made the town a miniature Rome, and granted it the institutions and privileges of the citizens of Rome. That is why we find at Philippi, along with a remnant of the Macedonians, Roman colonists together with some Jews, the latter, however, so few that they had no synagogue, but only a place of prayer (*προσευχή*). Philippi was the first European town in which St. Paul preached the Faith. He arrived there with Silas, Timothy, and Luke about the end of 52 A. D., on the occasion of his second Apostolic voyage. The Acts mention in particular a woman called Lydia of Thyatira, a seller of purple, in whose house St. Paul probably dwelt during his stay at Philippi. His labours were rewarded by many conversions (Acts, xvi), the most important taking place among women of rank, who seem to have retained their influence for a long time. The Epistle to the Philippians deals in a special manner with a dispute that arose between two of them, Evodia and Syntyche (iv, 2). In a disturbance of the populace, Paul and Silas were beaten with rods and cast into prison, from which being miraculously delivered, they set out for Thessalonica. Luke, however, continued to work for five years.

The Philippians remained very attached and grateful to their Apostle and on several occasions sent him pecuniary aid (twice to Thessalonica, Phil., iv, 14-16; once to Corinth, II Cor., xi, 8-9; and once to Rome, Phil., iv, 10-18. See PHILIPPIANS, EPISTLE TO THE). Paul returned there later; he visited them on his second journey, about 58, after leaving Ephesus (Acts, xx, 1-2). It is believed that he wrote his Second Epistle to the Corinthians at Philippi, whither he returned on his way back to Jerusalem, passing Easter week there (Acts, xx, 5-6). He always kept in close communication with the inhabitants. Having been arrested at Cæsarea and brought to Rome, he wrote to them the Epistle we have in the New Testament, in which he dwells at great length on his predilection for them (i, 3, 7; iv, 1; etc.). Paul probably wrote them more letters than we possess; Polycarp, in his epistle to the Philippians (II, 1 sq.), seems to allude to several letters (though the Greek word, *ἐπιστολαί*, is used also in speaking of a single letter), and Paul himself (Phil., iii, 1) seems to refer to previous writings. He hoped (i, 26; ii, 24) to revisit Philippi after his captivity, and he may have written there his First Epistle to Timothy (Tim., i, 3). Little is known of the subsequent history of the town. Later it was destroyed by the Turks; to-day nothing remains but some ruins.

For bibliography see PHILIPPIANS, EPISTLE TO THE.

A. VANDER HEEREN.

Philippi, a titular metropolitan see in Macedonia. As early as the sixth century B. C. we learn of a region called Dato, overrun by the inhabitants of Thasos, in which there was an outlying post called Crenides (the little springs), and a seaport, Neapolis or Cavala. About 460 B. C. Crenides and the country lying inland fell into the hands of the Thracians, who doubtless were its original inhabitants. In 360 the Thasians, aided by Callistratus the Athenian and other exiles, re-established the town of Dato, just when the discovery of auriferous deposits was exciting the neighbouring peoples. Philip of Macedonia took possession of it, and gave it his name, Philippi in the plural, as there were different sections of the town scattered at the foot of Mount Pangæus. He erected there a fortress barring the road between the Pangæus and the Hæmus. The gold mines, called Asyla, which were

energetically worked, gave Philip an annual revenue of more than 1000 talents. In 168 B. C. the Romans captured the place. In the autumn of 42 B. C. the celebrated battle between the triumvirs and Brutus and Cassius was fought on the neighbouring marshy plain. In the first conflict Brutus triumphed over Octavius, whilst Antony repulsed Cassius, who committed suicide. Unable to maintain discipline in his army, and defeated twenty days later, Brutus also took his life. The same year a Roman colony was established there, which after the battle of Actium took the name of Colonia Augusta Julia Philippensis. When St. Ignatius of Antioch and the martyrs Zosimus and Rufus were passing through Philippi, St. Ignatius told the Christians of that town to send a letter of congratulation to the faithful of Antioch. They therefore wrote to Polycarp of Smyrna, asking him at the same time for the writings of St. Ignatius. Polycarp answered them in a letter, still extant, which was written before the death of St. Ignatius.

Although the Church of Philippi was of Apostolic origin, it was never very important; it was a suffragan bishopric of Thessalonica. Towards the end of the ninth century it ranked as a metropolitan see and had six suffragan dioceses; in the fifteenth century it had only one, the See of Eleutheropolis. The Archdiocese of Cavala was reunited to the metropolis in December, 1616. In 1619, after a violent dispute with the Metropolitan of Drama, Clement, the titular of Philippi, got permission to assume the title of Drama also, and this was retained by the Metropolitan of Philippi until after 1721, when it was suppressed and the metropolis of Drama alone continued. In the "Echos d'Orient", III, 262-72, the writer of this article compiled a critical list of the Greek titulars of Philippi, containing sixty-two names, whereas only eighteen are given in Le Quien, "Oriens christianus", II, 67-70. Some Latin titulars are cited in Eubel, "Hierarchia catholica medii ævi", I, 418; II, 238; III, 291; Le Quien, op. cit., III, 1045. In the middle of the fourteenth century, Philippi is mentioned in connexion with the wars between John V, Palæologus, and Çantacuzenus, who has left a description of it (P. G., CLIV, 336). The ruins of Philippi lie near the deserted hamlet of Filibedjik, fifteen kilometres from Cavala, in the vilayet of Salonica; they contain the remains of the acropolis, a theatre anterior to the Roman occupations, a temple of Syllvanus, and numerous sculptured rocks bearing inscriptions.

S. VAILHÉ.

Philippians, EPISTLE TO THE.—I. HISTORICAL CIRCUMSTANCES, OCCASION, AND CHARACTER (see also PHILIPPI).—The Philippians, who were much endeared to St. Paul (i, 3, 7; iv, 1), had already on former occasions and under various circumstances sent him pecuniary aid, and now on learning of his imprisonment at Rome (Acts, xxvii-xxviii) they sent to him Epaphroditus, one of their number, to bear him alms and minister to his needs (ii, 25-29; iv, 18). St. Paul received him gladly, rejoicing in the affectionate and Christian sentiments of the Philippians (iv, 10-19), and in the generally satisfactory condition of their Church as reported to him by Epaphroditus. It may be that Epaphroditus had been the Apostle's companion and assistant at Philippi (ii, 25); at least he became such at Rome (ii, 30), but he fell dangerously ill and was at the point of death (ii, 27). This news was distressing to the Philippians, and as soon as he recovered he was eager to return home (ii, 26). Paul therefore hastened to send him (ii, 26-28) and

profited by the opportunity to confide to him a letter to the faithful and the heads of his Church. In this letter, probably written by Timothy at his dictation, Paul expresses the sentiments of joy and gratitude which he cherishes in regard to the Philippians. This is the keynote of the letter. It is an outpouring of the heart, breathing a wholly spontaneous and paternal intimacy. In it the loving heart of the Apostle reveals itself completely, and the affectionate tone, sincerity, and delicacy of the sentiments must have charmed its readers and won their admiration and love. Hence this letter is much more epistolary in style than the other Epistles of St. Paul. Familiar expressions of joy and gratitude are mingled with dogmatic reflexions and moral exhortation, and it is useless to seek for orderly arrangement or strict sequence.

On the other hand, although the general condition of the Church of Philippi was excellent and St. Paul did not have to deal with grave vices, there were nevertheless certain things which were not altogether satisfactory or which aroused apprehension. Paul had heard that the pride and vainglory of some, especially of two women, Evodia and Syntyche, had aroused misunderstandings and rivalries. Moreover a greater and more serious danger threatened them, perhaps on the part of Judaizers, who, though there is no need to assume their presence or propaganda at Philippi itself, had, it seems, disseminated their baneful doctrines throughout the neighbouring regions. Hence the exhortations to fraternal charity and concord as well as to disinterestedness; these exhortations (i, 8, 27; ii, 2, 3, 14, 16; iv, 2 sq.) Paul bases on exalted dogmatic considerations taken from the example of Christ, and he also proposes to them the example of his own way of thinking and acting, which had but a single object, the glory of God and Christ. But when he warns the Philippians against the Judaizers he returns to the tone of deep sorrow and unmitigated indignation which characterizes the Epistle to the Galatians.

II. ANALYSIS.—For the reasons stated above a definite plan or clear division must not be sought in this Epistle. The Letter is a succession of exhortations and effusions which may be collected under the following heads:—

A. *Introduction.*—After the superscription, in which he addresses himself to bishops, deacons, and faithful (i, 1-2), St. Paul rejoices in the excellent condition of the Church of the Philippians and gives thanks that by their alms they have shared in the merits of his captivity and the spread of the Gospel (3-8); he loves them all with an intense love, ardently desiring and urgently entreating that God would deign to complete in them the work of perfection (9-11).

B. *Body of the Epistle.*—(1) Paul begins by giving news, as a whole very satisfactory—with regard to his own situation and that of the Church in Rome. But what he relates concerning himself must have been meant for a tacit but no less eloquent appeal to abnegation and detachment, for Paul depicts himself as seeking in all things not his own glory or personal advantage, but solely the glory of Christ. His captivity becomes to him a cause of joy, since it avails for the propagation of the Gospel (i, 12-14); what does it matter to him that some preach the Gospel out of unworthy zealotry, provided Christ be preached? (15-18); given a choice of life and death he knows not which he prefers, life which permits him to do good for souls, or death, which shall be a testimony for Christ and shall unite him to Him (19-25). He thinks, however, that he will be set free and may still labour for the spiritual progress of the Philippians.

(2) He exhorts them more directly to lead a life worthy of the Gospel (i, 27a), and especially to concord and abnegation (i, 27b-ii, 4) (i) by the example of Christ Who being in the Divine form and possessing

supreme independence nevertheless, for our good, annihilated himself and assumed the condition of a slave, even undergoing death; (ii) by the desire for a heavenly reward, such as Christ received (ii, 5-11). He concludes by repeating his general exhortation to Christian perfection and by affirming that to procure them this perfection he would gladly sacrifice his life.

(3) The Apostle tells the Philippians that as soon as he knows the outcome of his affairs he will send to them Timothy, his devoted companion, who is so well-disposed towards the Philippians (ii, 19-24); in the meantime he sends them Epaphroditus, his fellow-labourer and their delegate to him (see above); he asks them to receive him with joy and to honour him greatly, because of the love which he bears them and the danger of death to which he was exposed while fulfilling his mission (25-30).

(4) Desiring to end or abbreviate his Epistle Paul begins the conclusion (iii, 1a, the *τὸ λοιπόν*), but suddenly interrupts it in order again to put the Philippians on their guard against the Judaizing teachers, which he does by once more presenting to them his own example: Has he not all the benefits and titles in which the Judaizers are accustomed to glory and much more? But all this he has despised and rejected and counted as dung that he might gain true justice and perfection, which are secured, not by the works of the law, but by faith (iii, 1-11). This perfection, it is true, he had not yet attained, but he never ceased to press towards the mark and the prize to which God had called him, thus refuting by his own example those who in their pride call themselves perfect (12-16); he incites his readers to imitate him (17) and not to follow those who, loving the things of this world, have depraved habits (18-iv, 1).

(5) To this general exhortation Paul adds a special admonition. He binds two women, Evodia and Syntyche, to concord (iv, 2-3), and exhorts all to spiritual joy, urging the observance of goodness and gentleness among them (5), bidding them be disturbed by nothing, but have recourse to God in all their anxieties (6-7), and endeavour to attain to Christian perfection in all things (8-9).

C. *Epilogue*.—Paul concludes his Epistle by a more explicit renewal of thanks to the Philippians for their alms, using the most delicate expressions and making his manner of acceptance a final exhortation to detachment and abnegation (11-19). This is followed by the Doxology and salutations. Especially noteworthy are his salutations to those of the household of the emperor (20-23).

III. AUTHENTICITY, UNITY, AND INTEGRITY.—The authenticity of the Epistle as a whole, which was generally accepted until the middle of the nineteenth century, was first denied by the Tübingen School (Baur, 1845; Zeller; Volkmar). Their arguments, namely lack of originality, the evidence of a semi-Gnostic idea, a doctrine of justification which could not be that of St. Paul etc., were triumphantly refuted by Lünemann, Brückner, Schenkel etc. But other contradicators subsequently arose, such as van Manen and especially Holsten (for their chief arguments see below). At present the authenticity may be said to be universally admitted not only by Catholic exegetes but also by most Protestants and Rationalists (Hilgenfeld, Harnack, Zahn, Jülicher, Pfeiderer, Lightfoot, Gibb, Holtzmann).

(1) Arguments from external criticism permit no doubt on the subject. We will not deal with the quotations from or reminiscences of the Epistle which some authors profess to find in early ecclesiastical writers, such as Clement of Rome, Ignatius of Antioch, the Shepherd of Hermas, the Epistle to Diognetus etc. (see Cornely, "Introductio", IV, 491; Jacquier, p. 347; Toussaint in "Diet. de la Bible", s. v. Philippiens). About 120 St. Polycarp speaks explicitly to the Philippians of the letters (or the letter, *ἐπιστολὰί*)

which Paul had written to them, and some passages of his letter prove that he had read this Epistle to the Philippians. Subsequently the Muratorian Canon, St. Irenæus, Clement of Alexandria, Tertullian, and the Apostolicon of Marcion attribute it expressly to St. Paul. After Tertullian the testimonies become numerous and incontestable and the unanimity was maintained without the slightest exception until the middle of the nineteenth century.

(2) *Internal Criticism*.—The difficulties drawn from the Epistle itself, which some authors have urged against tradition, are misleading, as is now admitted by the most prominent Rationalists and Protestants.

(a) Language and style: the *ἅπασι λεγόμενα* (which occur about forty times) prove nothing against the Pauline origin of the Epistle, since they are met with in almost the same proportion in the certainly authentic Epistles. Moreover, certain words (about twenty) quite peculiar to the Epistles of St. Paul, certain forms of expression, figures, methods of style (i, 22, 27, 29; iii, 8, 14), and repetitions of words demonstrate the Pauline character of the Epistle.

(b) Doctrine: the two chief objections brought forward by Holsten (Jahrb. für Prot. theol., I, 125; II, 58, 282) have found little credit among exegetes, while Holsten himself in a more recent work ("Das Evangelium des Paulus", Berlin, 1898, II, 4) concedes that the theology of the Epistle to the Philippians is thoroughly Pauline. In fact (a) the Christology of the Epistle to the Philippians, which portrays Christ pre-existing in the form of God and made man through the Incarnation, does not contradict that of the First Epistle to the Corinthians (xv, 45), which depicts the Risen Christ as a heavenly Man, clothed with His glorified body, or that of the other Epistles which, in a simpler form, also show us Christ pre-existing as a Divine Being and made man through the Incarnation (Gal., iv, 4; Rom., viii, 3; II Cor., viii, 9). (b) The doctrine on justification by faith and not by works set forth in the Epistles to the Romans and the Galatians, is not contradicted here (iii, 6); if indeed St. Paul speaks here of legal justice it is obviously to show its powerlessness and nothingness (7-9).

The unity and integrity of the Epistle have also been denied or doubted by some authors. Völter and Spitta maintained that this Epistle is a compilation of another authentic Epistle to the Philippians and an apocryphal one written about A. D. 120. Clemen saw in it a compilation of two authentic Epistles. These theories met with little success, while the arguments which have been brought forward in their behalf, viz. the double conclusion (iii, 1, and iv, 4) mingled with personal details, moral counsels, doctrinal instructions etc., are sufficiently explained by the familiar and consequently free and unrestrained character of the Epistle.

Place and Date.—There is not the shadow of a doubt that the Epistle to the Philippians was written during the Apostle's captivity (i, 7, 13, 14, 17; ii, 24). Moreover, it is certain that it was written not at Cæsarea, as some have maintained, but at Rome (A. D. 62-64). Such is the nearly unanimous opinion even of those who claim that the three other Epistles of the Captivity were written at Cæsarea [see i, 13 (the *prætorium*); iv, 22 (the house of Cæsar); i, 17 sqq. (this supposes a more important Church than that of Cæsarea)]. Critics do not agree as to whether the Epistle was written at the beginning of the sojourn at Rome or at the end, before or after the other three Epistles of the captivity. Most of them incline towards the second view (Meyer, Weiss, Holtzmann, Zahn, Jülicher etc.). For the arguments pro and con see the works of the various critics. The present author, however, is of the opinion that it was written towards the end of the captivity.

The following are general works and commentaries, in which the reader will find a more extensive bibliography, and information concerning earlier works and commentaries.

Philippine Islands.—*Situation and Area.*—The Philippine Islands lie between 116° 40' and 126° 34' E. long., and 4° 40' and 21° 10' N. lat. The islands are washed by the China Sea on the north and west, the Pacific Ocean on the east, and the Sea of Celebes on the south. They are nearly south of Japan, and north of Borneo and the Celebes, with which they are connected by three partly-submerged isthmuses. The archipelago belongs to the same geographic region as Borneo, Sumatra, and Java, and therefore to Asia rather than to Oceanica. In all there are 3141 islands; 1668 of them are listed by name. Luzon has an area of 40,969 sq. miles; Mindanao, 36,292 sq. m. Nine islands have an area between 1000–10,000 sq. m.; 20 between 100 and 1000 sq. m.; 73 between 10 and 100 sq. m.; and 262 between 1 and 10 sq. m. The remaining 2775 islands are each less than 1 sq. m. The total area of the islands is 115,026 sq. m. The extent of the Earth's surface included by the boundaries of the treaty lines is about 800,000 sq. m.

Physical Geography—Fauna and Flora.—The scenery of the islands, especially Luzon, is very beautiful. The greatest known elevation, Mt. Apo, in Mindanao, is over 10,000 ft.; it was ascended for the first time by Father Mateo Gisbert, S.J., accompanied by two laymen, in 1880. There are twenty well-known and recent volcanic cones, twelve of them more or less active. Mayon Volcano, about 8000 ft., is probably the most beautiful symmetrical volcanic cone in the world. There are no very large rivers; the Cagayán of northern Luzon and the Rio Grande and the Agusan, both in Mindanao, are more than 200 miles in length. The largest lakes are Laguna de Bay, near Manila, and Laguna de Lanao, in Mindanao; the surface of the latter is 2200 ft. above sea-level. Laguna de Bombon, in Batangas Province, Luzon, is the crater of an immense volcano, of roughly elliptical shape, seventeen by twelve miles. On an island in the lake is the active volcano of Taal. The fauna of the Philippines resembles that of the neighbouring Malayan Islands to a certain extent. Two-thirds of the birds of the Philippines are peculiar to them; what is more strange is that of 286 species of birds found in Luzon, at least fifty-one are not to be met with in any other part of the archipelago. The flora of the islands is similar to that of Java, Sumatra, and Borneo, but with differences sufficiently numerous to give it a marked individuality. Forests form seven-tenths of the area of the archipelago; they embrace a great variety of woods, many of them highly valuable.

Mineral Resources.—Coal is found in many parts of the islands. Two mines are now in operation on the small island of Batan, Albay Province, Southern Luzon. The total output in the Philippines during 1909 was valued at nearly \$100,000. About \$250,000 worth of gold was mined the same year. Iron is also

found, the product in 1909 being worth a little more than \$15,000.

Climate.—The climate is, generally speaking, tropical, although there are points in the islands where it cannot strictly be so termed. The mean temperature in Manila during the period 1883–1902 was 80° F.; the average maximum during the same time was 97° and minimum 63°. The average rainfall in Manila is something more than 75 inches. Baguio, Province of Benguet, has been called the Simla of the Philippines. Climatic conditions are so favourable that the commission and assembly held their sessions there this year (1910) during the warm months. The mean minimum temperatures for four months of the year are lower in Baguio than at Simla, and almost equal for two other months. The monthly means are nearly equal for the two places during five months.

Railways.—Railway lines are in operation in Luzon, Panay, Cebú, and Negros, about four hundred miles in all.

Population.—A census of the islands taken in 1903 estimates the population at 7,635,426, of whom 6,987,686 are classed as civilized and 647,740 as wild.

There was no question in Spanish times about the number of Christians; but a difference of opinion prevails about the number of the wild people. An estimate published in Madrid in 1891 puts down the non-civilized tribes (Moros included) at 1,400,000. According to the Director of the Census of 1903, there has been tendency to exaggerate; he admits that the number, 647,740, is possibly too small, but that it is probably within ten per cent. of the true number.

Wild Tribes.—The Negritos are believed to have been the aborigines of the islands. There remain about 23,000 of these, leading to-day a primitive life, nomadic within a certain district, living in groups of twenty or thirty under a chief. They are a race of dwarfs, four feet eight inches in height. They are of a sooty black colour, their hair woolly, their toes almost as prehensile as fingers. The Negritos, it is thought, once occupied the entire archipelago, but were driven back into the mountains by the Malays.

Among other wild tribes may be mentioned the Igorottes in Northern Luzon, some of whom are head-hunters. They are an industrious and warlike race. Belgian missionaries have been working among them the past few years with considerable fruit. The Ibilao or Ilongot is noted for his bloodthirsty propensities; the Ifugaos are said to resemble the Japanese in appearance. They use the lasso with great dexterity, and with it capture the luckless traveller, decapitate him, and add the head to their collection. They wear as many rings in their ears as they have taken heads. In Palawan (Paragua) the most numerous tribe is that of the Tagbanuans, many of whom have been Christianized. The Manguianes occupy the interior of Mindoro; they are a docile race and do not flee from civilized man. Among the wild tribes of Mindanao may be mentioned the Manobos, Bagobos, Bukidnons, Tirurays, and Subanos. They are classed as Indonesians by some ethnologists. Slavery is practised, and human sacrifices are known to have taken place within the past few years.

The Moros or Mohammedan Malays chiefly inhabit Mindanao and the Sulu archipelago, though they are found also in Basilan and Palawan. They were professional pirates, and advanced as far as Manila at the time of the arrival of the Spaniards. They killed large numbers of Filipinos, and carried others into slavery. Until within about sixty years ago, when Spanish gunboats of light draught were introduced, they made marauding excursions into the Visayan islands (Panay, Negros, Cebú, Bohol, Leyte, Samar etc.), carrying off a thousand captives as slaves annually. They were the great obstacle to the civilization of Mindanao. The Moro is possessed of much physical strength, is indifferent to bloodshed,

too proud to work, and extremely fanatical. Many of them build their towns in the water, with movable bamboo bridges connected with the shore. Flanking their settlements they built *cottas* or forts. The walls of some of these were twenty-four feet thick and thirty feet high. The United States Government respects the Moro custom of discarding the hat, by permitting the Moro Constabulary (military police) to wear a Turkish fez and to go barefoot.

Extensive missionary work has been done by the Jesuits in Mindanao. Previous to the American occupation, they ministered to 200,000 Christians in various parts of the islands. Even among the Moros their efforts were successful and in one year (1892)

blance, mentally, morally, and physically, between individuals of the Visayas, but there is a great difference in their languages, a Visayan of Cebú, for instance, will not understand a Visayan of Panay. For all that, it is said that the Filipinos had a common racial origin and at one time a common language. Physically, the Filipinos are of medium height, although tall men are to be found among them, especially in the mountain districts. Generally speaking, they are of a brownish colour, with black eyes, prominent cheek bones, the nose flat rather than arched or straight, nostrils wide and full, mouth inclined to be large, lips full, good teeth, and round chin.

The following estimates of the Filipinos are selected

Archbishop's Palace San Carlos Seminary Jesuit Church San Ignacio Atenes Augustinian Monastery rented by government Augustinian Monastery

MANILA. THE WALLED CITY, FROM THE SEA

they baptized 3000 Moros in the district of Dávao. They established two large orphan asylums, one for boys and the other for girls, at Tamontaca, where liberated slave-children were trained to a useful life, and which later formed the basis of new Christian villages. For lack of support a great deal of this work had to be abandoned with the withdrawal of Spanish sovereignty from the islands.

Christian Tribes.—The inhabitants of Luzon and adjacent islands are the Tagalogs, Pampangans, Bicol, Pangasinans, Ilocanos, Ibanags or Cagayanes, and Zambales. The most important of these are the Tagalogs, who number about a million and a half; the Pampangans, about 400,000, excel in agriculture; the Bicol in South-eastern Luzon were, according to Blumentritt, the first Malays in the Philippines; the Pangasinans, in the province of that name, number about 300,000; the Ilocanos, an industrious race, occupy the north-western coast of Luzon; the Ibanags, said to be the finest race and the most valiant men in the islands (Sawyer), dwell in Northern and Eastern Luzon. The Zambales were famous head-hunters at the time of the Spanish conquest, and made drinking-cups out of their enemies' skulls. They number about 100,000. The Visayan Islands are inhabited by the Visayas, the most numerous tribe of the Philippines. Fewer wild people are found among them than in other portions of the archipelago. The population is about 3,000,000. There is a strong resem-

from the United States Census Report of 1903. The first gives an appreciation of the people shortly after the arrival of the Spaniards and before they were Christianized. The second and third are the views of an American and an Englishman, respectively, of the Christianized Filipino before and at the time of the American occupation.

(1) Legaspi, after four years' residence, writes thus of the natives of Cebú: "They are a crafty and treacherous race. . . . They are a people extremely vicious, fickle, untruthful, and full of other superstitions. No law binds relative to relative, parents to children, or brother to brother. . . . If a man in some time of need shelters a relative or a brother in his house, supports him, and provides him with food for a few days, he will consider that relative as his slave from that time on. . . . At times they sell their own children. . . . Privateering and robbery have a natural attraction for them. . . . I believe that these natives could be easily subdued by good treatment and the display of kindness".

(2) Hon. Dean C. Worcester was in the Philippines in 1887-88 and 1890-93. He says: "The traveller cannot fail to be impressed by his [the Filipino's] open-handed and cheerful hospitality. He will go to any amount of trouble, and often to no little expense, in order to accommodate some perfect stranger. If cleanliness be next to godliness, he has much to recommend him. Hardly less noticeable than the almost

universal hospitality are the well-regulated homes and the happy family life which one soon finds to be the rule. Children are orderly, respectful, and obedient to their parents. The native is self-respecting and self-restrained to a remarkable degree. . . . He is patient under misfortune and forbearing under provocation. . . . He is a kind father and a dutiful son. His aged relatives are never left in want, but are brought to his home and are welcome to share the best that it affords to the end of their days".

(3) Frederick II. Sawyer lived for fourteen years in the Philippines; he writes: "The Filipino possesses a great deal of self-respect, and his demeanour is quiet and decorous. He is polite to others and expects to be treated politely himself. He is averse to rowdyism or horseplay of any kind, and avoids giving offence. For an inhabitant of the tropics he is fairly industrious, sometimes even very hard-working. Those who have seen him poling *cascos* against the stream of the Pasig will admit this. He is a keen sportsman, and will readily put his money on his favourite horse or gamecock; he is also addicted to other forms of gambling. The position taken by women in a community is often considered as a test of the degree of civilization it has attained. Measured by this standard, the Filipinos come out well, for among them the wife exerts great influence in the family and the husband rarely completes any important business without her concurrence.

"The Filipinos treat their children with great kindness and forbearance. Those who are well-off show much anxiety to secure a good education for their sons and even for their daughters. Parental authority extends to the latest period in life. I have seen a man of fifty years come as respectfully as a child to kiss the hands of his aged parents when the vesper bell sounded, and this notwithstanding the presence of several European visitors in the house. Children, in return, show great respect to both parents, and come morning and evening to kiss their hands. They are trained in good manners from their earliest youth, both by precept and example".

History.—The islands were discovered 16 March, 1521, by Ferdinand Magellan. Several other expeditions followed, but they were fruitless. In 1564 Legaspi sailed from Mexico for the Philippines. He was accompanied by the Augustinian friar Urdaneta. As a layman this celebrated priest had accompanied the expedition of Loaisa in 1524, which visited Mindanao and the Moluccas. Legaspi landed in Cebu in 1565. The islands had been called San Lazaro by Magellan; Villalobos, who commanded an expedition from Mexico, called the island at which he touched Filipina, in honour of Prince Philip. This name was extended to the whole archipelago by Legaspi, who was sent out by the former prince then ruling as Philip II.

Though there were not wanting indications of hostility and distrust towards the Spaniards from the inhabitants of Cebu, Legaspi succeeded in winning their friendship after a few months. Later, in 1569, he removed the seat of government to Iloilo. He sent his nephew Juan Salcedo to explore the islands to the north. Salcedo's report to his uncle was favourable and in 1571 Legaspi, leaving the affairs of government in the hands of natives, proceeded north and founded the city of Maynila, later Manila. Legaspi immediately set about the organization of the new colony; he appointed rulers of provinces, arranged for yearly voyages to New Spain, and other matters pertaining to the welfare of the country. In his work of pacification he was greatly aided by the friars who were then beginning the work of Christian civilization in the Philippines which was to go on for several centuries. Legaspi died in 1574. To him belongs the glory of founding the Spanish sovereignty in the islands. He was succeeded by Lavezares.

About this time the Chinese pirate Li-ma-hon invaded Luzon, with a fleet of over sixty vessels and about 6000 people. A storm that met the fleet as it neared Manila wrecked some of his boats, but Li-ma-hon proceeded on his journey and landed 1500 men. Repulsed in two attacks by the Spaniards, Li-ma-hon went north and settled in Pangasinan province. The following year (1575) Salcedo was sent against them; he defeated them and drove the fleeing Chinese into the mountains.

A few years later the arrival of the first bishop is chronicled, the Dominican Salazar, one of the greatest figures in the history of the Philippines; he was accompanied by a few Jesuits (1581). The Augustinians had come with Legaspi, the Franciscans arrived in 1577, and the Dominicans in 1587. By unanimous vote of the entire colony the Jesuit Sanchez was sent to Spain to explain to Philip II the true state of affairs in the islands. His mission was entirely successful; Philip was persuaded to retain his new possessions, which many of his advisers were counselling him to relinquish. In 1591 an ambassador came from Japan demanding that tribute be paid that country. This the new governor Dasmariñas refused, but he drew up a treaty instead that was satisfactory to both parties. An expedition that started out against the Moluccas in 1593 ended disastrously. On the voyage some of the Chinese crew mutinied, killed Dasmariñas and took the ship to China. Dasmariñas built the fortress of Santiago, Manila, and fortified the city with stone walls. He was succeeded by his son Luis. During his governorship the convent of Santa Isabel, a school and home for children of Spanish soldiers, was founded (1594). It exists to this day. The Audiencia or Supreme Court was re-established about this time. As it was appointed from Mexico and supported from the islands it had proved too great a drain on the resources of the colony, and so had been suppressed after the visit of the Jesuit Sanchez to Philip II. The last years of the sixteenth and the beginning of the seventeenth centuries were marked by the seizure, by the Japanese, of a richly-laden Spanish vessel from the islands. It had sought shelter in a storm in a port of that country. The crew were put to death. Then there was a fruitless expedition against Cambodia; a naval fight against two Dutch pirate-ships, one of which was captured; and a conspiracy of the Chinese against the Spaniards. The force of the latter, 130 in number, was defeated, and every man of them decapitated. The Chinese were repulsed later, and it is said that 23,000 of them were killed. The Recollect Fathers arrived in Manila in 1606.

During the first half of the seventeenth century the colony had to struggle against internal and external foes; the Dutch in particular, the Japanese, the Chinese, the Moros, the natives of Bohol, Leyte, and Cagayan. A severe earthquake destroyed Manila in 1645. In spite of the difficulties against which the islands had to struggle, the work of evangelization went rapidly forward. The members of the various religious orders, with a heroism rarely paralleled even in the annals of Christian missions, penetrated farther and farther into the interior of the country, and established their missions in what had been centres of Paganism. The natives were won by the self-sacrificing lives of the missionaries, and accepted the teachings of Christianity in great numbers. Books were written in the native dialects, schools were everywhere established, and every effort employed for the material and moral improvement of the people. From the time of the fearless Salazar, the missionaries had always espoused the cause of the natives against the injustices and exactions of individual rulers. It is not strange, therefore, that trouble arose at times between the civil and ecclesiastical authorities. As these misunderstandings grew from the mistakes of individuals,

they were not of long duration, and they did not in any way interfere with the firmer control of the islands which Spain was year by year obtaining, or with the healthy growth of the Church throughout the archipelago.

Spanish sovereignty in the Philippines was threatened by the capture of Manila by the British under Draper in 1762. There were only 600 Spanish soldiers to resist a force of 6000 British with their Indian allies. Their depredations were so dreadful that Draper put a stop to them after three days. The city remained under British sovereignty until 1764.

There were several uprisings by the natives during the beginning of the nineteenth century. One of the most serious of these was that headed by Apolinario de La Cruz, who called himself King of the Tagalogs. By attributing to himself supernatural power, he gathered about him a large number of deluded fanatics, men, women, and children. He was apprehended and put to death. An event of great importance was the

introduction in 1860 of shallow-draught steel gunboats to be used against the piratical Moros of Mindanao. For centuries they had ravaged the Visayan islands, carrying off annually about a thousand prisoners. A severe earthquake in Manila in 1863 destroyed the chief public buildings, the cathedral, and other churches, except that of San Agustin.

Some native clergy participated in a serious revolt against Spanish authority which occurred at Cavite in 1872. Three Filipino priests

who were implicated in the uprising, Gomez, Zamora, and Burgos, were executed. It is said that the spirit of insurrection which manifested itself so strongly during the last quarter of the nineteenth century was the result of the establishment of certain secret societies. The first Masonic lodge of the Philippines was founded at Cavite in 1860. Lodges were later formed at Zamboanga (in Mindanao), Manila, and Cebu. Europeans only were admitted at first, but afterwards natives were received. The lodges were founded by anti-clericals, and naturally anti-clericals flocked largely to the standard. There was no idea then of separation from the mother country, but only of a more liberal form of government. After the insurrection at Cavite in 1872, the Spanish Masons separated themselves from the revolutionary ones. New societies were gradually formed, the most celebrated being the Liga Filipina, founded by the popular hero Dr. Rizal. Practically all the members were Masons, and men of means and education.

A more powerful society and a powerful factor in the insurrection of 1896, recalling the American Ku-Klux Klan, was the *Katipunan*. Its symbol KKK was literally anti-Spanish, for there is no K in Spanish. The full title of the society was "The Sovereign Worshipful Association of the Sons of the Country". The members (from 10,000 to 50,000) were poor people who subscribed little sums monthly for the purchase of arms, etc. Later a woman's lodge was organized. According to Sawyer "the *Katipunan* adopted some of the Masonic paraphernalia, and some of its initiatory ceremonies, but were in no sense Masonic

lodges" (p. 83). In 1896 another insurrection broke out near Manila, in Cavite province. Aguinaldo, a young school teacher, became prominent about this time. The spirit of revolt spread through the neighbouring provinces; there were several engagements, until finally, Aguinaldo, at the head of the remnant of rebels, left Cavite and took refuge near Angat in the Province of Bulacán. As it would have taken a long time to dislodge them, a method of conciliation was adopted. The result was the pact of Biaknabato, signed 14 Dec., 1897. By the terms of this agreement the Filipinos were not to plot against Spanish sovereignty for a period of three years; Aguinaldo and other followers were to be deported, for a period to be fixed by Spain. In return they were to receive the sum of \$500,000 as indemnity; and those who had not taken up arms were to be given \$350,000 as reimbursement for the losses they had incurred. The leaders of the insurrection of 1896 exercised despotic power, and ill-treated and robbed those of their coun-

trymen who would not join them. Andrés Bonifacio, the terrible president of the *Katipunan*, ultimately became a victim of these despots. 30,000 Filipinos are reported to have lost their lives in the rebellion of 1896.

In 1898 hostilities broke out between Spain and the United States. On 24 April, 1898, Aguinaldo met the American Consul at Singapore, Mr. Pratt; two days later he proceeded to Hong Kong. The American squadron under Commodore (now Admiral) Dewey destroyed the Span-

ish ships in Manila Bay. Aguinaldo and seventeen followers landed at Cavite from the United States vessel *Hugh McCullough* and were furnished arms by Dewey. Aguinaldo proclaimed dictatorial government, and asked recognition from foreign powers. The American troops took Manila on 13 August. A treaty of peace was signed at Paris by the terms of which the Philippines were ceded to the United States, and the latter paid Spain the sum of \$20,000,000. It was later discovered that certain islands near Borneo were not included in the boundaries fixed by the peace commission. These were also ceded to the United States, which paid an additional \$100,000. The Filipinos had organized a government of their own, the capital being at Malolos, in the Province of Bulacán. Fighting between them and the Americans began on 4 Feb., 1899; but by the end of the year, all organized opposition was practically at an end. Aguinaldo was captured in April, 1901, and on 1 July of the same year the insurrection was declared to be extinct, the administration was turned over to the civil Government, and Judge Taft (now President) was appointed governor.

American Government: General.—The Spanish laws remain in force to-day, except as changed by military order, Act of Congress, or Act of the Philippine Commission. The first Philippine Commission was appointed by President McKinley Jan., 1899. The second Philippine Commission was sent to the islands in 1900. Its object was to establish a civil government based on the recommendations of the first commission. The principles that were to guide this commission are

NEGritos OF MINDANAO.

thus expressed in the following instructions given them: "The Commission should bear in mind that the government that they are establishing is designed not for our satisfaction or for the expression of our theoretical views, but for the happiness, peace, and prosperity of the people of the Philippine Islands, and the measures adopted should be made to conform to their customs, their habits, and even their prejudices, to the fullest extent consistent with the indispensable requisites of just and effective government." "No laws shall be made respecting an establishment of religion or prohibiting the free exercise thereof, and that the free exercise and enjoyment of religious profession and worship without discrimination or preference shall for ever be allowed." This was confirmed by Act of Congress 1 July, 1902, in almost identical words (section 5). The members of the commission are appointed by the president, with the consent of the Senate; their tenure of office is at the pleasure of the president. There are nine commissioners, one of whom is the governor-general (the chief executive of the Philippine Islands), and four are secretaries of the departments of the Interior, of Commerce and Police, of Finance and Justice, and of Public Instruction. Each of these departments is divided into bureaus of which there are twenty-three in all. Through these the actual administration of the affairs of the Government is carried on.

On 16 Oct., 1907, the Philippine Assembly was inaugurated. The assembly shares legislative power with the commission over all parts of the islands "not inhabited by Moros or other non-Christian tribes". Over the Moros and the non-Christian tribes the commission alone has power. The legislative power of the commission and assembly over the Christian tribes is equal. No law may be made without the approval of both houses. If at any session the annual appropriation for the support of the Government shall not have been made, an amount equal to the last annual appropriation is considered thereby appropriated for the ensuing year. The members of the assembly are elected by popular vote. The right to this suffrage is extended to all male citizens of the Philippine Islands or of the United States, over twenty-three years of age, who possess at least one of the following qualifications: (1) ability to speak, read, and write English or Spanish; (2) ownership of real property to the value of \$250 or the payment of \$15 annually of the established taxes; (3) holding of municipal office under the Spanish Government in the Philippines. All acts passed by the commission and by the assembly are enacted by authority of the United States Congress, which reserves the power and authority to annul them. The assembly may consist of not less than fifty nor more than a hundred members. Each province is entitled to one delegate; and if its population is more than 90,000, to an additional member for every extra 90,000 and major fraction thereof. There are at present eighty delegates. Manila is counted as a province. Thirty-one delegates are from the Visayan Islands, and forty-four from Luzon. The commission and assembly are authorized to send two commissioners to the United States to represent the interests of the Philippines at Washington.

American Government: Provincial.—According to their form of government, the islands are divided into three classes: the Christian provinces, the non-Christian provinces, and the Moro provinces. The officers of the Christian province are the governor, the treasurer, the third member of the provincial board, and the fiscal or district attorney. The governor and third member are elected to office; the treasurer and fiscal are appointed by the governor of the Philippine Islands with the consent of the Commission; the tenure of their office depends upon the governor-general. Any provincial officer may be suspended or removed from office by the governor-

general for sufficient cause. The provincial governor, the treasurer, and the third member form the provincial board, which legislates in a limited way for the province. The non-Christian tribes are under a governor, secretary, treasurer, supervisor and fiscal. In some provinces there is also a lieutenant-governor. These officers are appointed by the governor-general with the consent of the commission. The Moro province includes the greater part of Mindanao, the whole of the Sulu Archipelago, and smaller groups of islands. The inhabitants number 500,000, half of them Moros; the remainder, with the exception of some thousand Christians, are wild tribes. The Government of the Moro province is civil-military. It is divided into five districts, each with its governor and secretary, appointed by the governor of the province. On the legislative council of the entire province there is, besides the governor, a secretary, treasurer, and attorney. While the governor-general appoints these officers, the two first named are usually officers of the United States army detailed for this purpose. The district officers are also usually detailed from the army.

Courts of Justice.—There is no trial by jury in the Philippine Islands. There are three classes of courts of justice: justice-of-the-peace courts, courts of first instance, and the supreme court; a justice of the peace must be at least twenty-three years of age. He is appointed by the governor from a number of individuals whose names are presented by a judge of the court of first instance, and by the director of education. Among his powers is that of performing marriage ceremonies. The courts of first instance try appeals from the lower court and cases in which they have original jurisdiction. These judges are appointed by the governor with the approval of the commission.

Supreme Court.—This court is composed of one chief justice and six associates. Important cases may be appealed from it to the Supreme Court of the United States. The supreme court rarely hears witnesses, but examines the written testimony made before the lower court, and listens to arguments of the opposing lawyers. The supreme court may not merely reverse or affirm the decision of the lower court, but it may even change the degree and kind of punishment. A defendant, for instance, sentenced to imprisonment for life or for twenty years may, and sometimes does, have his sentence changed on appeal to the supreme court to the death penalty.

Religion.—Before the arrival of the Spaniards the religion of the islands was similar to that of the majority of the Chinese, Japanese, and Malaysians. They were worshippers of the souls of their ancestors, of the sun, the moon, the stars, plants, birds, and animals. Among the deities of the Tagalogs were: a blue bird, called *Bathala* (divinity); the crow, called *Maylupa* (lord of the earth); the alligator, called *Nono* (grandfather). They adored in common with other Malaysians the tree *Balete*, which they did not dare cut. They had idols in their houses, called *anito*, and by the Visayans, *diwata*. There were *anitos* of the country who permitted them to pass over it; *anitos* of the fields who gave fertility to the soil; *anitos* of the sea who fed the fishes and guarded boats; and *anitos* to look after the house and newly-born infants. The *anitos* were supposed to be the souls of their ancestors. Their story of the origin of the world was that the sky and the water were walking together; a kite came between them, and in order to keep the waters from rising to the sky, placed upon them the islands, the Filipinos' idea of the world. The origin of man came about in the following manner: a piece of bamboo was floating on the water; the water cast it at the feet of a kite; the kite in anger broke the bamboo with its beak; out of one piece came man, and out of the other, woman. The souls of the dead were supposed to feed on rice and tuba (a native

liquor), thus food was placed at the graves of the dead, a custom which still survives among some of the uncivilized tribes of Mindanao.

The ministers of religion were priestesses—crafty and diabolical old women, who offered sacrifices of animals and even of human beings. Sacrifices of animals still occur among the tribes; and accounts of recent human sacrifice will be found in the reports of the Philippine Commission. The superstitions of the Filipinos were numerous. In Supreme Case no. 5381 there is given the testimony of Igorrotes, who before starting to murder a man, a couple of years ago, killed some chickens and examined their entrails to discover if the time was favourable for the slaying of a man. The hooting of owls, the hissing of lizards, and the sight of a serpent had a supernatural signification. One of the most feared of the evil spirits was the *asuang*, which was supposed to capture children or lonely travellers. A fuller description of these superstitions is given in Delgado, "Historia General de las Islas Filipinas" (Manila, 1894), bk. III, xvi, xvii, and in Blumentritt, "Mythological Dictionary". As might be expected from idolatrous tribes in a tropical climate, the state of morality was low; wives were bought and sold, and children did not hesitate to enslave their own parents. It was on material such as this that the Spanish missionaries had to work. A Christian Malay race, a people that from the lowest grade of savagery had advanced to the highest form of civilization, was the result of their efforts.

Up to the year 1896 the Augustinians had founded 242 towns, with a population of more than 2,000,000. There were 310 religious of the order; this includes (and the same applies to the following figures) lay brothers, students, and invalids. The Franciscans numbered 455 in 153 towns, with a population of a little more than a million; there were 206 Dominicans in 69 towns, with about 700,000 inhabitants; 192 Recollects in 194 towns, with a population of 1,175,000; 167 Jesuits who ministered to about 200,000 Christians in the missions of Mindanao. The total religious therefore in 1906 was 1330 to look after a Catholic population of more than 5,000,000, while secular clergy were in charge of nearly a million more. The members of religious orders in the Philippines in 1906 did not amount to 500. The condition of the Filipino people, as they were prior to the revolution of 1896, forms the best argument in favour of the labours of the religious orders. The islands were not conquered by force; the greater part of the fighting was to protect the natives from enemies from without. It was not until 1822 that there was a garrison of Spanish troops in the archipelago. And, as all impartial historians admit, the small number of troops needed was due solely to the religious influence of the priests over the people. The total strength of American regiments in the Philippines in 1910, including the Philippine Scouts, was 17,102. To this should be added more than 4000 members of the Philippine Constabulary, a military police necessary for the maintenance of order.

Besides their far-reaching influence for peace, the religious orders did notable work in literature and

science. Father Manuel Blance, an Augustinian, was the author of "Flora Filipina", a monumental work in four folio volumes, illustrated with hundreds of coloured plates reproduced from water-colour paintings of the plants of the Philippines. Father Rodrigo Aganduru Moriz, a Recollect (Augustinian Discalced), (1584–1626), after evangelizing the natives of Bataan, and founding houses of his order in Manila and Cebú, and missions in Mindanao, set sail from the Philippines. He spent some time in Persia, where he brought back numerous schismatics to the Faith and converted many infidels. Arriving in Rome, Urban VIII wished to send him back to Persia as Apostolic delegate with some religious of his order, but he died a few months later at the age of forty-two. Among his works are: "A General History of the Philippines", in two volumes; "The Persecution in Japan"; a book of sermons; a grammar and dictionary of a native dialect; "Origin of the Oriental Empires"; "Chronology of Oriental Kings and Kingdoms"; a narrative of his travels written for Urban VIII; a collection of maps of various islands, seas, and provinces; the work of the Augustinians (Discalced) in the conversion of the Philippines and of Japan; a family book of medicine for the use of Filipinos.

The number of Augustinian authors alone, until 1780 was 131, and the books published by them more than 200 in nine native dialects, more than 100 in Spanish, besides a number of volumes in the Chinese and Japanese languages. How extensive and how varied were the missionary, literary, and

A VILLAGE MISSION CHURCH, MINDANAO

scientific works of the members of the religious orders may be gathered from their chronicles. The Philippines constitute an ecclesiastical province, of which the Archbishop of Manila is the metropolitan. The suffragan sees are: Jaro; Nueva Cáceres; Nueva Segovia; Cebú; Calbayog; Lipa; Tuguegarao; Zamboanga; and the Prefecture Apostolic of Palawan. There are over a thousand priests, and a Catholic population of 6,000,000. (See CEBÚ; JARO; MANILA, ARCHDIOCESE OF; MANILA OBSERVATORY; NUEVA CÁCERES; NUEVA SEGOVIA; PALAWAN; SAMAR AND LEYTE; TUGUEGARAO; ZAMBOANGA.)

DIOCESE OF LIPA (LIPENSIS), erected 10 April, 1910, comprises the Provinces of Batangas, La Laguna, Tayabas (with the Districts of Infanta and Principe), Mindoro, and the sub-Province of Marinduque, formerly parts of the Archdiocese of Manila. Rt. Rev. Joseph Petrelli, D.D., the first bishop, was appointed 12 April, 1910, and consecrated at Manila, 12 June, 1910. There are 95 parishes; the Discalced Augustinians have charge of 14, and the Capuchins of 6. The diocese comprises 12,208 sq. m.; about 640,000 Christians; and 9000 non-Christians.

Aglipayanism.—The Aglipayano sect caused more annoyance than damage to the Church in the Philippines. The originator of the schism was a native priest, Gregorio Aglipay. He was employed as a servant in the Augustinian house, Manila, and being of ingratiating manners was educated and ordained priest. Later he took the field as an insurgent general. Being hard pressed by the American troops he surrendered and was paroled in 1901. In 1902 he arro-

gated to himself the title of "Pontifex Maximus", and through friendship or fear drew to his allegiance some native priests. Those of the latter who were his friends he nominated "bishops". Simeon Mandac, one of the two lay pillars of the movement, is now serving a term of twenty years in the penitentiary for murder and rebellion. At first the schism seemed to make headway in the north, chiefly for political reasons. With the restoration of the churches under order of the Supreme Court in 1906-07 the schism began to dwindle, and its adherents are now inconsiderable.

Religious Policy of the Government.—Freedom of worship and separation of Church and State is a principle of the American Government. In a country where there was the strictest union of Church and

PATEROS CHURCH, DESTROYED DURING A FILIPINO INSURRECTION

State for more than three centuries, this policy is not without serious difficulties. At times ignorant officials may act as if the Church must be separated from her rights as a lawful corporation existing in the State. In some such way as this several Catholic churches were seized, with the connivance or the open consent of municipal officers, by adherents of the Aglipayano sect. It required time and considerable outlay of money for the Church to regain possession of her property through the courts. And even then the aggressors often succeeded in damaging as much as possible the church buildings or its belongings before surrendering them. There is no distinction or privilege accorded clergymen, except that they are precluded from being municipal councillors. However: "there shall be exempt from taxation burying grounds, churches and their adjacent parsonages or convents, and lands and buildings used exclusively for religious, charitable, scientific, or educational purposes and not for private profit". This does not apply to land or buildings owned by the Church to procure revenue for religious purposes, e. g. the support of a hospital, orphan asylum, etc., so that glebe land is taxable. The only exception made in the matter of free imports for church purposes is that Bibles and hymn books are admitted free of duty. Practically everything

needed in the services of the Catholic Church, vestments, sacred vessels, altars, statues, pictures, etc. pay duty, if such goods are not purchased from or manufactured in the United States. Religious corporations or associations, of whatever sect or denomination, were authorized to hold land by an act of the commission passed in October, 1901.

In April, 1906, the law of corporations came into force. Under this Act (no. 1459) a bishop, chief priest, or presiding elder of any religious denomination, can become a corporation sole by filing articles of incorporation holding property in trust for the denomination. Authority is also given to any religious society or order, or any diocese, synod, or organization to incorporate under specified conditions to administer its temporalities. The same act empowers colleges and institutes of learning to incorporate. All cemeteries are under the control of the Bureau of Health. By an Act passed in Feb., 1906, existing cemeteries and burial grounds were to be closed unless authorized by the director of health; municipalities were empowered, subject to the same authority, to set apart land for a municipal burial ground, and to make by-laws without discriminating against race, nationality, or religion. The church burial grounds had generally to be enlarged or new ones consecrated, and individual graves indicated and allotted. The right to hold public funerals and to take the remains into church was not to be abridged or interfered with, except in times of epidemics or in case of contagious or infectious diseases, when a public funeral might be held at the grave after an hour had elapsed from the actual interment. The right of civil marriage was established in 1898, by order of General Otis. The certificate of marriage, by whomsoever celebrated, must be filed with the civil authorities. The forbidden degrees extend to half-blood and step-parents. A subsequent marriage while husband or wife is alive is illegal and void, unless the former marriage has been annulled or dissolved, or by presumption of death after seven years' absence. There is no express provision for divorce; but marriages may be annulled by order of judges of the court of first instance for impediments existing at the time of marriage, such as being under the age of consent (fourteen years for boys, twelve years for girls), insanity, etc.

The local health officer shall report to the municipal president "all births that may come to his knowledge", the date, and names of parents. The parochial clergy have generally complete and carefully-kept registers of baptisms, and furnish certified copies to those who need them. The property of deceased persons was in general formerly distributed at a family council, with the approval of the courts. But it appears that at the present time the estates of deceased persons must be administered under direction of the courts of first instance. Testaments are made and property devolves in accordance with the provisions of the Spanish civil code.

Education.—The Spanish missionaries established schools immediately on reaching the islands. Wherever they penetrated, church and school went together. The Jesuits had two universities in Manila, besides colleges at Cavite, Marinduque, Arévalo, Cebú, and Zamboanga. The Dominicans had their flourishing University of S. Tomás, Manila, existing to this day, and their colleges in other large towns. There was no Christian village without its school; all the young people attended. On the Jesuits' return to the islands in 1859, the cause of higher education received a new impetus. They established the college of the Ateneo de Manila, where nearly all those who have been prominent in the history of their country during the last half-century were educated. They opened a normal school which sent its trained Filipino teachers over all parts of the islands. The normal school graduated during the thirty years of its exist-

tence 1948 teachers. After the American occupation a public-school system, modelled on that of the United States, was established by the Government. The total number of schools in operation for 1909-10 was 4531, an increase of 107 over the preceding year. The total annual enrolment was 587,317, plus 4946 in the schools of the Moro Province. The average monthly enrolment however was 427,165, and the average monthly attendance only 337,307; of these, 2300 were pupils of secondary schools, 15,487 of intermediate schools and 319,520 of primary schools. There were 732 American teachers, 8130 Filipino teachers, and 145 Filipino apprentices—teachers who serve without pay.

Act 74, sec. 16, provides: "No teacher or other person shall teach or criticize the doctrines of any church, religious sect, or denomination, or shall attempt to influence pupils for or against any church or religious sect in any public school. If any teacher shall intentionally violate this section he or she shall, after due hearing, be dismissed from the public service; provided: however, that it shall be lawful for the priest or minister of any church established in the town wherein a public school is situated, either in person or by a designated teacher of religion, to teach for one-half hour three times a week, in the school building, to those public-school pupils whose parents or guardians desire it and express their desire therefor in writing filed with the principal teacher of the school, to be forwarded to the division superintendent, who shall fix the hours and rooms for such teaching. But no public-school teachers shall either conduct religious exercises, or teach religion, or act as a designated religious teacher in the school building under the foregoing authority, and no pupil shall be required by any public-school teacher to attend and receive the religious instruction herein permitted. Should the opportunity thus given to teach religion be used by the priest, minister, or religious teacher for the purpose of arousing disloyalty to the United States, or of discouraging the attendance of pupils at any such public school, or creating a disturbance of public order, or of interfering with the discipline of the school, the division superintendent, subject to the approval of the director of education, may, after due investigation and hearing, forbid such offending priest, minister, or religious teacher from entering the public-school building thereafter."

That the religion of the Filipino people must inevitably suffer from the present system of education is evident to anyone conversant with existing conditions. To the religious disadvantages common to the public school of the United States must be added the imitative habit characteristic of the Filipino, and the proselytizing efforts of American Protestant missionaries. The place in which the greatest amount of harm can be done to the religion of the Filipino is the secondary school. Despite the best intentions on the part of the Government, the very fact that the vast majority of the American teachers in these schools are not Catholics incapacitates a great number of them from giving the Catholic interpretation of points of history connected with the Reformation, the preaching of indulgences, the reading of the Bible, etc. Accustomed to identify his religion and his Government, the step towards concluding that the American Government must be a Protestant Government is an easy one for the young Filipino. Further, as the secondary schools are only situated in the provincial capitals, the students leave home to live in the capital of their province. It is among these young people particularly that the American Protestant missionary works. Even though he does not make the student a member of this or that particular sect, a spirit of indifferentism is generated which does not bode well for the future of the country, temporally or spiritually. A nation that is only three centuries

distant from habits of idolatry and savagery cannot be removed from daily religious education and still be expected to prosper. That the majority of the Filipino people desires a Christian education for their children may be seen from this, that the Catholic colleges, academies, and schools established in all the dioceses are overcrowded. For the present, and for many years to come, the majority of Filipinos cannot afford to pay a double school tax, and hence must accept the educational system imposed upon them by the United States.

PHILIP M. FINEGAN.

Philippopolis, titular metropolitan see of Thracia Secunda. The city was founded by Philip of Macedon in 342 B. C. on the site of the legendary Eumolpias. As he sent thither 2000 culprits in addition to the colony of veterans, the town was for some time known as Ponropolis as well as by its official designation. During Alexander's expedition, the entire country fell again under the sway of Seuthes III, King of the Odrysians, and it was only in 313 that the Hellenic supremacy was re-established by Lysimachus. In 200 B. C. the Thracians, for a brief interval it is true, drove back the Macedonian garrisons; later they passed under the protectorate and afterwards the domination of Rome in the time of Tiberius. The city was now called Trimontium, but only for a very short time (Pliny, "Hist. Nat." IV, xviii). From the reign of Septimius Severus, Philippopolis bears the title of metropolis on coins and in inscriptions. It was there that the *conventus* of Thrace assembled. In 172 Marcus Aurelius fortified the city with walls; in 248 Philip granted it the title of colony, two years before its destruction by the Goths, who slaughtered 100,000 men there (Ammianus Marcellinus, XXVI, x). Restored again, it became the metropolis of Thracia Secunda.

The exact date of the establishment of Christianity in this town is unknown; the oldest testimony, quite open to criticism, however, is in connexion with thirty-seven martyrs, whose feast is celebrated on 20 August, and who are said to have

been natives of Philippopolis, though other towns of Thrace are frequently given as their native place. In 344 was held at Philippopolis the *conciliabulum* of the Eusebians, which brought together 76 bishops separated from their colleagues of Sardica, or Sofia, and adversaries of St. Athanasius and his friends. Among its most celebrated ancient metropolitans is Silvanus, who asked the Patriarch Proclus to transfer him to Troas on account of the severity of the climate, and whose name was inserted by Baronius in the Roman Martyrology for 2 December. Philippopolis, which from the fifth century at the latest was the ecclesiastical metropolis of Thracia Secunda and dependent on the Patriarchate of Constantinople, had three suffragan bishoprics in the middle of the seventh century (Gelzer, "Ungedruckte . . . Texte der Notitiæ episcopatum", 542); in the tenth century it had ten (*ibid.*, 577); towards the end of the fifteenth century it had none (*ibid.*). The Greek metropolitan see has continued to exist, in spite of the occupation of the Bulgarians. The latter, however, have erected there an orthodox metropolitan see of their own. Though generally held by the Byzantines Philippopolis was often captured by other peoples—Huns, Avars, Slavs, Bulgarians, and the Franks who retained it from 1204 till 1235. It was taken by the Turks in 1370 and finally came under the sway of the Bulgarians in 1885. By transporting thither on several occasions Armenian and Syrian colonists, the Byzantines made it an advanced fortress to oppose the Bulgarians; unfortunately these colonists were nearly all Monophysites and especially Paulicians, so the city became the great centre of Manichæism in the Middle Ages. These heretics converted by the Capuchins in the seventeenth century have become fervent Catholics of the Latin rite. The city called Plovdiv in Bulgarian contains at present 47,000 inhabitants, of whom about 4000 are Catholics. The Greeks and Turks are fairly numerous; the Catholic parish is in charge of secular priests; there is a seminary, which however has only from 20 to 25 students. The Assumptionists, who number about 30, have had since 1884 a college with a commercial department, attended by 250 pupils; the primary school for boys was established in 1863 by the Assumptionist Sisters; the Sisters of St. Joseph have a boarding-school and a primary school for girls; the Sisters of Charity of Agram have an hospital.

S. VAILHÉ.

Philippopolis, titular see in Arabia, suffragan of Bostra. Its bishop, Hormisdas, was present at the Council of Chalcedon in 451 (Le Quien, "Oriens christianus", II, 861). An inscription makes known another bishop, Basil, in 553 ("Echos d'Orient", XII, 1909, 103). Philippopolis figures as a see in the "Notitiæ Episcopatum" in the sixth century (*op. cit.*, X, 1907, 145). There were also several titular bishops in the fifteenth and sixteenth centuries (Eubel, "Hierarchia catholica mediæ ævi", II, 238; III, 291). The ancient name of this place is unknown. The Emperor Philip (244-9) founded this town and gave it his name (Aurelius Victor, "De Cæsar.", 28). Thenceforth it grew very rapidly as evidenced by the fine ruins, remains of the colonnades of a temple and colossal baths, discovered on its site at Shohba in the Hauran.

S. VAILHÉ.

Philip Romolo Neri, SAINT, APOSTLE OF ROME, b. at Florence, Italy, 22 July, 1515; d. 27 May, 1595.

Philip's family originally came from Castelfranco but had lived for many generations in Florence, where not a few of its members had practised the learned professions, and therefore took rank with the Tuscan nobility. Among these was Philip's own father, Francesco Neri, who eked out an insufficient private fortune with what he earned as a notary. A circumstance which had no small influence on the life of the saint was Francesco's friendship with the Dominicans; for it was from the friars of S. Marco, amid the memories of Savonarola, that Philip received many of his early religious impressions. Besides a younger brother, who died in early childhood, Philip had two younger sisters, Caterina and Elisabetta. It was with them that "the good Pippo", as he soon began to be called, committed his only known fault. He gave a slight push to Caterina, because she kept interrupting him and Elisabetta, while they were reciting psalms together, a practice of which, as a boy, he was remarkably fond. One incident of his childhood is dear to his early biographers as the first visible intervention of Providence on his behalf, and perhaps dearer still to his modern disciples, because it reveals the human characteristics of a boy amid the supernatural graces of a saint. When about eight years old he was left alone in a courtyard to amuse himself; seeing a donkey laden with fruit, he jumped on its back; the beast bolted, and both tumbled into a deep cellar. His parents hastened to the spot and extricated the child, not dead, as they feared, but entirely uninjured.

From the first it was evident that Philip's career would run on no conventional lines; when shown his family pedigree he tore it up, and the burning of his father's house left him unconcerned. Having studied the humanities under the best scholars of a scholarly generation, at the age of sixteen he was sent to help his father's cousin in business at S. Germano, near Monte Cassino. He applied himself with diligence, and his kinsman soon determined to make him his heir. But he would often withdraw for prayer to a little mountain chapel belonging to the Benedictines of Monte Cassino, built above the harbour of Gaeta in a cleft of rock which tradition says was among those rent at the hour of Our Lord's death. It was here that his vocation became definite: he was called to be the Apostle of Rome. In 1533 he arrived in Rome without any money. He had not informed his father of the step he was taking, and he had deliberately cut himself off from his kinsman's patronage. He was, however, at once befriended by Galeotto Caccia, a Florentine resident, who gave him a room in his house and an allowance of flour, in return for which he undertook the education of his two sons. For seventeen years Philip lived as a layman in Rome, probably without thinking of becoming a priest. It was perhaps while tutor to the boys, that he wrote most of the poetry which he composed both in Latin and in Italian. Before his death he burned all his writings, and only a few of his sonnets have come down to us. He spent some three years, beginning about 1535, in the study of philosophy at the Sapienza, and of theology in the school of the Augustinians. When he considered that he had learnt enough, he sold his books, and gave the price to the poor. Though he never again made study his regular occupation, whenever he was called upon to cast aside his habitual reticence, he would surprise the most learned with the depth and clearness of his theological knowledge.

He now devoted himself entirely to the sanctification of his own soul and the good of his neighbour. His active apostolate began with solitary and unobtrusive visits to the hospitals. Next he induced others to accompany him. Then he began to frequent the shops, warehouses, banks, and public places of Rome, melting the hearts of those whom he chanced to meet.

and exhorting them to serve God. In 1544, or later, he became the friend of St. Ignatius. Many of his disciples tried and found their vocations in the infant Society of Jesus; but the majority remained in the world, and formed the nucleus of what afterwards became the Brotherhood of the Little Oratory. Though he "appeared not fasting to men", his private life was that of a hermit. His single daily meal was of bread and water, to which a few herbs were sometimes added, the furniture of his room consisted of a bed, to which he usually preferred the floor, a table, a few chairs, and a rope to hang his clothes on; and he disciplined himself frequently with small chains. Tried by fierce temptations, diabolical as well as human, he passed through them all unscathed, and the purity of his soul manifested itself in certain striking physical traits. He prayed at first mostly in the church of S. Eustachio, hard by Caccia's house.

Next he took to visiting the Seven Churches. But it was in the catacomb of S. Sebastiano—confounded by early biographers with that of S. Callisto—that he kept the longest vigils and received the most abundant consolations. In this catacomb, a few days before Pentecost in 1544, the well-known miracle of his heart took place. Bacci describes it thus: "While he was with the greatest earnestness asking of the Holy Ghost His gifts, there appeared to him a globe of fire, which entered into his mouth and lodged in his breast; and thereupon he was suddenly surprised with such a fire of love, that, unable to bear it, he threw himself on the ground, and, like one trying to cool himself, bared his breast to temper in some measure the flame which he felt. When he had remained so for some time, and was a little recovered, he rose up full of unwonted joy, and immediately all his body began to shake with a violent tremour; and putting his hand to his bosom, he felt by the side of his heart, a swelling about as big as a man's fist, but neither then nor afterwards was it attended with the slightest pain or wound." The cause of this swelling was discovered by the doctors who examined his body after death. The saint's heart had been dilated under the sudden impulse of love, and in order that it might have sufficient room to move, two ribs had been broken, and curved in the form of an arch. From the time of the miracle till his death, his heart would palpitate violently whenever he performed any spiritual action.

During his last years as a layman, Philip's apostolate spread rapidly. In 1548, together with his confessor, Persiano Rosa, he founded the Confraternity of the Most Holy Trinity for looking after pilgrims and convalescents. Its members met for Communion, prayer, and other spiritual exercises in the church of S. Salvatore, and the saint himself introduced exposition of the Blessed Sacrament once a month (see FORTY HOURS' DEVOTION). At these devotions Philip preached, though still a layman, and we learn that on one occasion alone he converted no less than thirty dissolute youths. In 1550 a doubt occurred to

him as to whether he should not discontinue his active work and retire into absolute solitude. His perplexity was set at rest by a vision of St. John the Baptist, and by another vision of two souls in glory, one of whom was eating a roll of bread, signifying God's will that he should live in Rome for the good of souls as though he were in a desert, abstaining as far as possible from the use of meat.

In 1551, however, he received a true vocation from God. At the bidding of his confessor—nothing short of this would overcome his humility—he entered the priesthood, and went to live at S. Girolamo, where a staff of chaplains was supported by the Confraternity of Charity. Each priest had two rooms assigned to him, in which he lived, slept, and ate, under no rule save that of living in charity with his brethren. Among Philip's new companions, besides Persiano Rosa, was Buonsignore Cacciaguerra (see "A Precursor of St. Philip" by Lady Amabel Kerr, London), a remarkable penitent, who was at that time carrying on a vigorous propaganda in favour of frequent Communion. Philip, who as a layman had been quietly encouraging the frequent reception of the sacraments, expended the whole of his priestly energy in promoting the same cause; but unlike his precursor, he recommended the young especially to confess more often than they communicated. The church of S. Girolamo was much frequented even before the coming of Philip, and his confessional there soon became the centre of a mighty apostolate. He stayed in church, hearing confessions or ready to hear them, from daybreak till nearly midday, and not content with this, he usually confessed some forty persons in his room before dawn. Thus he laboured untiringly throughout his long priesthood. As a physician of souls he received marvellous gifts from God. He would sometimes tell a penitent his most secret sins without his confessing them; and once he converted a young nobleman by showing him a vision of hell. Shortly before noon he would leave his confessional to say Mass. His devotion to the Blessed Sacrament, like the miracle of his heart, is one of those manifestations of sanctity which are peculiarly his own. So great was the fervour of his charity, that, instead of recollecting himself before Mass, he had to use deliberate means of distraction in order to attend to the external rite. During the last five years of his life he had permission to celebrate privately in a little chapel close to his room. At the "Agnus Dei" the server went out, locked the doors, and hung up a notice: "Silence, the Father is saying Mass". When he returned in two hours or more, the saint was so absorbed in God that he seemed to be at the point of death.

Philip devoted his afternoons to men and boys, inviting them to informal meetings in his room, taking them to visit churches, interesting himself in their amusements, hallowing with his sweet influence every department of their lives. At one time he had a long-

him as to whether he should not discontinue his active work and retire into absolute solitude. His perplexity was set at rest by a vision of St. John the Baptist, and by another vision of two souls in glory, one of whom was eating a roll of bread, signifying God's will that he should live in Rome for the good of souls as though he were in a desert, abstaining as far as possible from the use of meat.

Philip devoted his afternoons to men and boys, inviting them to informal meetings in his room, taking them to visit churches, interesting himself in their amusements, hallowing with his sweet influence every department of their lives. At one time he had a long-

ing desire to follow the example of St. Francis Xavier, and go to India. With this end in view, he hastened the ordination of some of his companions. But in 1557 he sought the counsel of a Cistercian at Tre Fontane; and as on a former occasion he had been told to make Rome his desert, so now the monk communicated to him a revelation he had had from St. John the Evangelist, that Rome was to be his India. Philip at once abandoned the idea of going abroad, and in the following year the informal meetings in his room developed into regular spiritual exercises in an oratory, which he built over the church. At these exercises laymen preached and the excellence of the discourses, the high quality of the music, and the charm of Philip's personality attracted not only the humble and lowly, but men of the highest rank and distinction in Church and State. Of these, in 1590, Cardinal Nicolò Sfondrato, became Pope Gregory XIV, and the extreme reluctance of the saint alone prevented the pontiff from forcing him to accept the cardinalate. In 1559, Philip began to organize regular visits to the Seven Churches, in company with crowds of men, priests and religious, and laymen of every rank and condition. These visits were the occasion of a short but sharp persecution on the part of a certain malicious faction, who denounced him as "a setter-up of new sects". The cardinal vicar himself summoned him, and without listening to his defence, rebuked him in the harshest terms. For a fortnight the saint was suspended from hearing confessions; but at the end of that time he made his defence, and cleared himself before the ecclesiastical authorities. In 1562, the Florentines in Rome begged him to accept the office of rector of their church, S. Giovanni dei Fiorentini, but he was reluctant to leave S. Girolamo. At length the matter was brought before Pius IV, and a compromise was arrived at (1564). While remaining himself at S. Girolamo, Philip became rector of S. Giovanni, and sent five priests, one of whom was Baronius, to represent him there. They lived in community under Philip as their superior, taking their meals together, and regularly attending the exercises at S. Girolamo. In 1574, however, the exercises began to be held in an oratory at S. Giovanni. Meanwhile the community was increasing in size, and in 1575 it was formally recognised by Gregory XIII as the Congregation of the Oratory, and given the church of S. Maria in Vallicella. (See ORATORY.) The fathers came to live there in 1577, in which year they opened the Chiesa Nuova, built on the site of the old S. Maria, and transferred the exercises to a new oratory. Philip himself remained at S. Girolamo till 1583, and it was only in obedience to Gregory XIII that he then left his old home and came to live at the Vallicella.

The last years of his life were marked by alternate sickness and recovery. In 1593, he showed the true greatness of one who knows the limits of his own endurance, and resigned the office of superior which had been conferred on him for life. In 1594, when he was in an agony of pain, the Blessed Virgin appeared to him, and cured him. At the end of March, 1595, he had a severe attack of fever, which lasted throughout April; but in answer to his special prayer God gave him strength to say Mass on 1 May in honour of SS. Philip and James. On the following 12 May he was seized with a violent hæmorrhage, and Cardinal Baronius, who had succeeded him as superior, gave him Extreme Unction. After that he seemed to revive a little and his friend Cardinal Frederick Borromeo brought him the Viaticum, which he received with loud protestations of his own unworthiness. On the next day he was perfectly well, and till the actual day of his death went about his usual duties, even reciting the Divine Office, from which he was dispensed. But on 15 May he predicted that he had only ten more days to live. On 25 May, the feast of Corpus Christi, he went to say Mass in his little chapel, two hours earlier

than usual. "At the beginning of his Mass", writes Bacci, "he remained for some time looking fixedly at the hill of S. Onofrio, which was visible from the chapel, just as if he saw some great vision. On coming to the *Gloria in Excelsis* he began to sing, which was an unusual thing for him, and sang the whole of it with the greatest joy and devotion, and all the rest of the Mass he said with extraordinary exultation, and as if singing." He was in perfect health for the rest of that day, and made his usual night prayer; but when in bed, he predicted the hour of the night at which he would die. About an hour after midnight Father Antonio Gallonio, who slept under him, heard him walking up and down, and went to his room. He found him lying on the bed, suffering from another hæmorrhage. "Antonio, I am going", he said; Gallonio thereupon fetched the medical men and the fathers of the congregation. Cardinal Baronius made the commendation of his soul, and asked him to give the fathers his final blessing. The saint raised his hand slightly, and looked up to heaven. Then inclining his head towards the fathers, he breathed his last. Philip was beatified by Paul V in 1615, and canonized by Gregory XV in 1622.

It is perhaps by the method of contrast that the distinctive characteristics of St. Philip and his work are brought home to us most forcibly (see Newman, "Sermons on Various Occasions", n. xii; "Historical Sketches", III, end of ch. vii). We hail him as the patient reformer, who leaves outward things alone and works from within, depending rather on the hidden might of sacrament and prayer than on drastic policies of external improvement; the director of souls who attaches more value to the mortification of the reason than to bodily austerities, protests that men may become saints in the world no less than in the cloister, dwells on the importance of serving God in a cheerful spirit, and gives a quaintly humorous turn to the maxims of ascetical theology; the silent watcher of the times, who takes no active part in ecclesiastical controversies and is yet a motive force in their development, now encouraging the use of ecclesiastical history as a bulwark against Protestantism, now insisting on the abolition of a monarch, whom other counsellors would fain exclude from the sacraments (see BARONIUS), now praying that God may avert a threatened condemnation (see SAVONAROLA) and receiving a miraculous assurance that his prayer is heard (see Letter of Ercolani referred to by Capececelatro); the founder of a Congregation, which relies more on personal influence than on disciplinary organization, and prefers the spontaneous practice of counsels of perfection to their enforcement by means of vows; above all, the saint of God, who is so irresistibly attractive, so eminently lovable in himself, as to win the title of the "Amabile santo".

GALLONIO, companion of the saint, was the first to produce a *Life of St. Philip*, published in Latin (1600) and in Italian (1601), written with great precision, and following a strictly chronological order. Several medical treatises were written on the saint's palpitation and fractured ribs, e. g. ANGELO DA BAGNAREA'S *Medica disputatio de palpitacione cordis, fractura costarum, aliisque affectionibus B. Philippi Neri* . . . qua ostenditur prædictas affectiones fuisse supra naturam, dedicated to Card. Frederick Borromeo (Rome, 1613). BACCI wrote an Italian *Life* and dedicated it to Gregory XV (1622). His work is the outcome of a minute examination of the processes of canonization, and contains important matter not found in GALLONIO. BROCCHI'S *Life of St. Philip*, contained in his *Vite de' santi e beati Fiorentini* (Florence, 1742), includes the saint's pedigree, and gives the Florentine tradition of his early years; for certain chronological discrepancies between GALLONIO, BACCI, and BROCCHI, see notes on the chronology in ANTROBUS' ed. of BACCI. Other *Lives* are by RICCI (Rome, 1670), whose work is an enlargement of BACCI, and includes his own *Lives of the Companions of St. Philip*; MARCIANO (1693); SONZONIO (1727); BERNABEI (d. 1662), whose work was published for the first time by the BOLLANDISTS (*Acta SS.*, May, VII); RAMIREZ, who adapts the language of Scripture to St. Philip in a Latin work called the *Via lactea*, dedicated to Innocent XI (Valencia, 1682); and BAYLE (1859). GOETHE at the end of his *Italien. Reise* (Italian Journey) gives a sketch of the saint, entitled *Filippo Neri, der humoristische Heilige*. The most important modern *Life* is that of CAPECELATRO (1879), treating fully of the saint's relations with the persons

and events of his time. There is an English *Life* by HOPE (London, New York, Cincinnati, Chicago). An abridged English translation of BACCI appeared in penal times (Paris, 1656), a fact which shows our Catholic forefathers' continued remembrance of the saint, who used to greet the English College students with the words, "Salvete, flores martyrum." FABER'S *Modern Saints* (1847) includes translations of an enlarged ed. of BACCI, and of RICCI'S *Lives of the Companions*. Of the former there is a new and revised edition by ANTROBUS (London, 1902). CAPECELATRO'S work has been translated by POPE (London, 1882). English renderings of two of St. Philip's sonnets by RYDER are published at the end of the recent English editions of BACCI and CAPECELATRO, together with translations of St. Philip's letters. These were originally published in BISCONTI'S *Raccolta di lettere di santi e beati Fiorentini* (Florence, 1737); but since that time twelve other letters have come to light.

C. SEBASTIAN RITCHIE.

Philips, PETER (also known as PETRUS PHILIPPUS, PIETRO PHILLIPO), b. in England about 1560; date and place of death unknown. It is generally accepted that Philips, remaining faithful to the Church, left England for the Netherlands, whence he went to Rome, and afterwards, returning to Antwerp, became organist at the Court of the governor, Duke Albert. Having entered Holy orders, he held a canonry at Bethune, in Flanders, which he exchanged for a similar honour at Soignes in 1612. It has been pointed out that the title-pages of his published works are the best index to his movements and abiding places, and they are various. Philips ranks in importance as a musician with Tallys, Byrd, Morley, and Orlando Gibbons, and is considered one of the great masters of his time. Besides *canzoni* and madrigals for six and eight voices, he left innumerable instrumental works which have been preserved in the libraries of Antwerp, Leyden, Strasburg, and London. Nineteen of these are contained in "The Fitz-William Virginal Book" by J. A. Fuller-Maitland and W. B. Squire. To the Church, however, Philips devoted his best efforts. Besides single numbers found in various collections of his period, a volume of five-part motets; another of similar works for eight voices; "Gemmulae sacrae" for two and three voices and figured bass; "Les rossignols spirituels", a collection of two- and four-part pieces, some to Latin words, but most of them to French; "Deliciae sacrae", forty-one compositions for two and three parts, are preserved in the British Museum. The library of John IV of Portugal contains Philips's posthumous works—masses for six, eight, and nine voices, and motets for eight voices. His "Cantiones sacrae" have recently been made available for modern use, and have been added to the repertoire of the choir of Westminster Cathedral.

BERGMANS, *L'Organiste des archiducs Albert et Isabelle* (Ghent, 1903); SQUIRE in GROVE, *Dictionary of Music*, s. v.

JOSEPH OTTEN.

Philip the Arabian (PHILIPPUS), Emperor of Rome (244–249), the son of an Arab sheik, b. in Bosra. He rose to be an influential officer of the Roman army. In 243 the Emperor Gordianus III was at war with Persia; the administration of the army and the empire were directed with great success by his father-in-law Timesitheus. Timesitheus, however, died in 243 and the helpless Gordianus, a minor, appointed Marcus Julius Philippus as his successor. By causing a scarcity of provisions Philip increased the exasperation of the soldiers against the emperor and they proclaimed Philip emperor. Philip now had Gordianus secretly executed. However, as he erected a monument to Gordianus on the Euphrates and deified him, he deceived the Senate and obtained recognition as emperor. He abandoned the advantages Timesitheus had won from the Persian King Sapor. He withdrew from Asia, and recalled a large number of divisions of the army from Dacia, Rhaetia, and Britain to northern Italy to protect it against incursions from the East. On account of invasions by the Capri he hastened to the lower Danube, where he was successful in two battles. Consequently on coins he bears the surname of Carpius Maximus.

Philip gave high offices of State to his relations who misused these positions. He also made his son Philip, when seven years of age, co-ruler. The most important event of his reign was the celebration of the thousandth year of the existence of Rome in April, 248.

The insecurity of his authority in the outlying districts showed itself in the appearance of rival emperors proclaimed by the legions stationed there. The Goths sought to settle permanently in Roman territory; and as the army of the Danube could not defend itself without a centralized control, the soldiers, at the close of 248, forced Decius, sent to suppress the mutinies, to accept the position of emperor. Decius advanced into Italy, where he defeated Philip near Verona. Philip and his son were killed. During Philip's reign Christians were not disturbed. The emperor also issued police regulations for the maintenance of public morality. A statement of St. Jerome's caused Philip to be regarded in the Middle Ages as the first Christian Emperor of Rome.

KARL HOEBER.

Philistines (פְּלִשְׁתִּים; LXX φυλιστινῆς in the Pentateuch and Josue, elsewhere ἀλλόφυλοι, "foreigners"). In the Biblical account the Philistines come into prominence as the inhabitants of the maritime plain of Palestine from the time of the Judges onward. They are mentioned in the genealogy of the nations (Gen., x, 14; cf. I Par., i, 11, 12), where together with the Caphtorim they are set down as descendants of Mesraim. It is conjectured with probability that they came originally from Crete, sometimes identified with Caphtor, and that they belonged to a piratical, seafaring people. They make their first appearance in Biblical history late in the period of the Judges in connexion with the prophesied birth of the hero Samson. The angel appearing to Sarai, wife of Manue of the race of Dan, tells her that, though barren, she shall bear a son who "shall begin to deliver Israel from the hands of the Philistines" (Judges, xiii, 1–5); and we are informed in the same passage that the domination of the Philistines over Israel had lasted forty years. In the subsequent chapters graphic accounts are given of the encounters between Samson and these enemies of his nation who were encroaching upon Israel's western border. In the early days of Samuel we find the Philistines trying to make themselves masters of the interior of Palestine, and in one of the ensuing battles they succeeded in capturing the Ark of the Covenant (I Kings, iv). The coming of a pestilence upon them, however, induced them to return it, and it remained for many years in the house of Abinadab in Cariathiarim (I Kings, v; vi; vii). After Saul became king the Philistines tried to break his power, but were unsuccessful, chiefly owing to the bravery of Jonathan (I Kings, xiii; xiv). Their progress was not, however, permanently checked, for we are told (I Kings, xiv, 52) that there was a "great war against the Philistines all the days of Saul", and at the end of the latter's reign we find their army still in possession of the rich plain of Jezrael including the city of Bethsan on its eastern border (I Kings, xxxi, 10). They met with a severe defeat, however, early in the reign of David (II Kings, v, 20–25), who succeeded in reducing them to a state of vassalage (II Kings, viii, 1). Prior to this date the power of the Philistines seems to have been concentrated in the hands of the rulers of the cities of Gaza, Ascalon, Azotus (Ashdod), Accaron, and Geth, and a peculiar title signifying "Lord of the Philistines" was borne by each of these petty kings. The Philistines regained their independence at the end of the reign of David, probably about the time of the schism, for we find the Kings of Israel in the ninth century endeavouring to wrest from them Gebbethon, a city

on the border of the maritime plain (III Kings, xv, 27; xvi, 15). Towards the close of the same century the Assyrian ruler, King Adad-Nirari, placed them under tribute and began the long series of Assyrian interference in Philistine affairs. In Amos (i, 6, 8) we find a denunciation of the Philistine monarchies as among the independent kingdoms of the time.

During the latter part of the eighth century and during the whole of the seventh the history of the Philistines is made up of a continual series of conspiracies, conquests, and rebellions. Their principal foes were the Assyrians on the one side and the Egyptians on the other. In the year of the fall of Samaria (721 B. C.) they became vassals of Sargon. They rebelled, however, ten years later under the leadership of Ashdod, but without permanent success. Another attempt was made to shake off the Assyrian yoke at the end of the reign of Sennacherib. In this conflict the Philistine King of Accaron, who remained faithful to Sennacherib, was cast into prison by King Ezechias of Juda. The allies who were thus brought together were defeated at Eltekeh and the result was the siege of Jerusalem by Sennacherib (IV Kings, xviii-xix). Esarhaddon and Asurbanipal in their western campaigns crossed the territory of the Philistines and held it in subjection, and after the decline of Assyria the encroachments of the Assyrians gave place to those of the Egyptians under the Twenty-sixth Dynasty. It is probable that the Philistines suffered defeat at the hands of Nabuchodonosor, though no record of his conquest of them has been preserved. The old title "Lords of the Philistines" has now disappeared, and the title "King" is bestowed by the Assyrians on the Philistine rulers. The siege of Gaza, which held out against Alexander the Great, is famous, and we find the Ptolemies and Seleucids frequently fighting over Philistine territory. The land finally passed under Roman rule, and its cities had subsequently an important history. After the time of the Assyrians the Philistines cease to be mentioned by this name. Thus Herodotus speaks of the "Arabians" as being in possession of the lower Mediterranean coast in the time of Cambyses. From this it is inferred by some that at that time the Philistines had been supplanted. In the ebb and flow of warring nations over this land it is more than probable that they were gradually absorbed and lost their identity.

It is generally supposed that the Philistines adopted in the main the religion and civilization of the Chanaanites. In I Kings, v, 2, we read: "And the Philistines took the ark of God, and brought it into the temple of Dagon, and set it by Dagon", from which we infer that their chief god was this Semitic deity. The latter appears in the Tel el-Amarna Letters and also in the Babylonian inscriptions. At Ascalon likewise there was a temple dedicated to the Semitic goddess Ishtar, and as the religion of the Philistines was thus evidently Semitic, so also were probably the other features of their civilization.

JAMES F. DRISCOLL.

Phillip, ROBERT, priest, d. at Paris, 4 Jan., 1647. He was descended from the Scottish family of Phillip of Sanquhar, but nothing is known of his early life. Ordained in Rome, he returned in 1612 to Scotland where he was betrayed by his father, seized while saying Mass, and tried at Edinburgh as a seminary priest, 14 Sept., 1613. The sentence of death was commuted to banishment, and he withdrew to France, where he joined the French Oratory recently founded by Cardinal de Bérulle. In 1628 he went to England as confessor to Queen Henrietta Maria, and at her request he besought the pope for financial aid against the king's enemies. The subsequent negotiations were

discovered, and Phillip was impeached on the charge of being a papal spy and of having endeavoured to pervert Prince Charles, but proceedings dropped owing to the displeasure of Richelieu at the introduction of his own name into the matter. Later he was committed to the Tower for refusing to be sworn on the Anglican Bible on 2 Nov., 1641, when he had been summoned by the Lords' committee to be examined touching State matters. Released through the queen's influence, he accompanied her to The Hague in March, 1642, and remained with her in Paris till his death.

EDWIN BURTON.

Phillips, GEORGE, canonist, b. at Königsberg, 6 Sept., 1804; d. at Vienna, 6 September, 1872, was the son of James Phillips, an Englishman who had acquired wealth as a merchant in Königsberg, and of a Scotchwoman *née* Hay. On completing his course at the gymnasium, George studied law at the Universities of Berlin and Göttingen (1822-24); his principal teachers were von Savigny and Eichhorn, and, under the influence of the latter, he devoted himself mainly to the study of Germanic law. After obtaining the degree of Doctor of Law at Göttingen in 1824, he paid a long visit to England. In 1826 he qualified at Berlin as *Privatdozent* (tutor) for German law, and in 1827 was appointed professor extraordinary in this faculty. In the same year he married Charlotte Housselle, who belonged to a French Protestant family settled in Berlin. Phillips formed a close friendship with his colleague K. E. Järcke, professor at Berlin since 1825, who had entered the Catholic Church in 1824. Järcke's influence and his own searching studies into medieval Germany led to the conversion of Phillips and his wife in 1828 (14 May). Järcke having removed to Vienna in 1832, Phillips accepted in 1833 a call to Munich as counsel in the Bavarian Ministry of the Interior. In 1834 he was named professor of history, and a few months later professor of law at the University of Munich. He now joined that circle of illustrious men including the two Görres, Möhler, Döllinger, and Ringseis, who, filled with enthusiasm for the Church, laboured for the renewal of the religious life, the defence of Catholic rights and religious freedom, and the revival of Catholic scholarship. In 1838 he founded with Guido Görres the still flourishing militant "Historischpolitische Blätter". His lectures, notable for their excellence and form, treated with unusual fullness subjects connected with ecclesiastical interests. In consequence of the Lola Montez affair, in connexion with which Phillips signed, with six other Munich professors, an address of sympathy with the dismissed minister Abel, he was relieved of his chair in 1847. In 1848 he was elected deputy of a Münster district for the National Assembly of Frankfurt, at which he energetically upheld the Catholic interests. In 1850, after declining a call as professor to Würzburg, he accepted the chair of German law at Innsbruck, and there resumed his academic activity. Invited to fill the same chair in Vienna in 1851, he removed to the Austrian capital, and remained there until his death. Once (1862-7) he accepted a long leave of absence to complete his "Kirchenrecht". He always maintained his relations with his friends in Munich and other cities of Germany, and never relaxed his activity in furthering Catholic interests. As a writer, his labours lay in the domain of German law, canon law, and their respective histories. At first his activity was directed mainly to the first-mentioned, his principal contributions on the subject being: "Versuch einer Darstellung des angelsächsischen Rechtes" (Göttingen, 1825); "Englische Reichs- und Rechtsgeschichte", of which two volumes

(dealing with the period 1066–1189) appeared (Berlin, 1827–8); “*Deutsche Geschichte mit besonderer Rücksicht auf Religion, Recht und Verfassung*”, of which two volumes alone were issued (Berlin, 1832–4), deals with Merovingian and Carolingian times; “*Grundsätze des gemeinen deutschen Privatrechts mit Einschluss des Lehnrechts*” (Berlin, 1838); “*Deutsche Reichs- und Rechtsgeschichte*” (Munich, 1845). After his call to Munich, however, Phillips recognized his chief task in the treatment of canon law from the strictly Catholic standpoint. In addition to numerous smaller treatises, he published in this domain: “*Die Diözesansynode*” (Freiburg, 1849), and especially his great “*Kirchenrecht*”, which appeared in seven volumes (Ratisbon, 1845–72), and was continued by Vering (vol. VIII, i, Ratisbon, 1889). This comprehensive and important work exercised a great influence on the study of canon law and its principles. Phillips also published a “*Lehrbuch des Kirchenrechts*” (Ratisbon, 1859–62; 3rd ed. by Moufang, 1881) and “*Vermischte Schriften*” (3 vols., Ratisbon, 1856–60).

J. P. KIRSCH.

Philocalian Calendar. See CALENDAR, CHRISTIAN.

Philo Judæus, b. about 25 B. C. His family, of a sacerdotal line, was one of the most powerful of the populous Jewish colony of Alexandria. His brother Alexander Lysimachus was steward to Anthony's second daughter, and married one of his sons to the daughter of Herod Agrippa, whom he had put under financial obligations. Alexander's son, Tiberius Alexander, apostatized and became procurator of Judea and Prefect of Egypt. Philo must have received a Jewish education, studying the laws and national traditions, but he followed also the Greek plan of studies (grammar with reading of the poets, geometry, rhetoric, dialectics) which he regarded as a preparation for philosophy. Notwithstanding the lack of direct information about his philosophical training, his works show that he had a first hand knowledge of the stoical theories then prevailing, Plato's dialogues, the neo-Pythagorean works, and the moral popular literature, the outcome of Cynicism. He remained, however, profoundly attached to the Jewish religion with all the practices which it implied among the Jews of the dispersion and of which the basis was the unity of worship at the Temple in Jerusalem. Toward the Alexandrine community and the duties which it required of him, his attitude was perhaps changeable; he possessed in his youth a taste for an exclusively contemplative life and solitary retreats; and he complains of an official function which forced him to abandon his studies. Later he became engrossed with the material and moral interests of the community. His “*Allegorical Commentary*” often alludes to the vexations to which the Alexandrine Jews were subjected; a special treatise is devoted to the persecution of Flaccus, Prefect of Egypt. The best-known episode of his life is the voyage he made to Rome in 39; he had been chosen as head of the embassy which was to lay before Emperor Caius Caligula the complaints of the Jews regarding the introduction of statues of the emperor in the synagogues. This hardship, due to the Alexandrians, was all the more grievous to the Jews, as they had long been known for their loyalty, and their attachment to the empire was doubtless one of the chief causes of anti-Semitism at Alexandria. The drawing up of the account of the embassy shortly after the death of Caius (41) is the latest known fact in the life of Philo.

Writings.—These contain most valuable information, not only on the intellectual and moral situation of the Jewish community at Alexandria, but still

more on the philosophical and religious syncretism prevailing in Greek civilization. They may be divided: (1) exposition of the Jewish Law; (2) apologetical works; (3) philosophical treatises.

(1) The expositions of the Law are in three works of varied character: (a) “*The Exposition of the Law*”, which begins by a treatise on the creation of the world (Commentaries on the first chapter of Genesis) and continues with treatises on Abraham, Isaac, Jacob, and Joseph (those on Isaac and Jacob are lost). Each of the patriarchs is considered as a type of a virtue and his life as a natural or unwritten law. Then follows a series of treatises on the laws written by Moses, grouped in order according to the Ten Commandments. The Exposition closes with the laws referring to general virtues (On Justice and Courage), and a treatise on the reward reserved to those who obey the Law. (See “*De Præmiis et Pœnis*”, §§ 1, 2.) (b) The great “*Allegorical Commentary on Genesis*” is the chief source of information regarding Philo's ideas; in it he applies systematically the method of allegorical interpretation. The commentary follows the order of verses from Gen., ii, 1, to iv, 17, with some more or less important lacunæ. It is not known whether the work began by a treatise on chapter 1, concerning creation; in any case, it can be seen from the allusions to this chapter that Philo had a system of interpretation on this point. Notwithstanding its form, this work is not a series of interpretations strung together verse by verse; the author considers Genesis in its entirety as a history of the soul from its formation in the intelligible world to the complete development of wisdom after its fall and its restoration by repentance (see ed. Mangey, “*De Posteritate Caini*”, p. 259). The object of the allegorical method is to discern in each person and in his actions the symbol of some phase either in the fall or in the restoration of the soul. (c) “*Questions and Solutions*” are a series of questions set down at each verse of the Mosaic books. An Armenian translation has preserved the questions on Genesis (Gen., ii, 4–xxiii, 8, with lacunæ) and the questions on Exodus (Ex., xii, 2–xxviii, 38), some Greek fragments of these works and of the questions on Leviticus, a very mediocre Latin translation of the last part of the questions on Genesis (iv, 154 sq.). In these treatises as well as in the short discourses on Samson and Jonas, there is much less unity than in the preceding ones. This first group of works is addressed to readers already initiated in the Mosaic Law, i. e. to the author's coreligionists.

(2) It is quite different with his apologetical writings. The “*Life of Moses*” is a résumé of the Jewish Law, intended for a larger public. The treatise “*On Repentance*” was written for the edification of the newly converted. The treatise “*On Humanity*” which followed that “*On Piety*” seems from its introduction to pertain to the “*Life of Moses*” and not to the “*Exposition of the Law*” as tradition and some contemporaneous scholars maintain. The “*Ἐποθετικά*” (fragments in Eusebius, “*Evangelical Preparation*”, VIII, v, vi) as well as the “*Apology for the Jews*” (ibid., VIII, x) were written to defend his coreligionists against calumnies, while the “*Contemplative Life*” was to cultivate the best fruits of the Mosaic worship. The “*Against Flaccus*” and the “*Embassy to Caius*”, with another work lost in the persecution of Sejanus, were intended to establish the truth about the pretended impiety of the Jews.

(3) Finally, we have purely philosophical treatises: “*On the Liberty of the Wise*”, “*On the Incorruptibility of the World*” (authenticity contested by Bernays, but generally admitted now), “*On Providence*”, “*On Animals*” (these last two in the Armenian translations). The small treatise “*De Mundo*” is merely a compilation of passages from other works. The question of chronology is more difficult than that

of classification. The solution of the difficulty would be of great value especially for the subdivisions of the first group of writings, in order to understand the development of Philo's doctrines; but on this point there is a wide divergence of opinion. It is probable, however, that the "Exposition of the Law" with its frequent appeals to the authority of the masters and its cautious way of introducing the allegorical interpretation is anterior to the "Allegorical Commentary" which shows more assurance and independence of thought.

Doctrine.—Philo's work belongs for the most part to the immense literature of commentaries on the Law, and it is especially as a commentator that he must be considered. But in this regard he holds a unique place. First of all, he uses the Greek translation of the Septuagint. The variations that have been pointed out between his text and that which we now possess of the Septuagint may be explained to our satisfaction, not by the reading of the Hebrew text (Ritter), but by the fact that our recension is of a later date than the one he used. Furthermore, his method of interpretation appears as something new and original among the juridical commentaries of the Palestinian rabbis. Eliminating what formed the common basis of all commentaries of this kind—the interpretation of the Hebrew proper names (Philo gives them at times a Greek etymology), the particular rules for the signs which indicate that Moses intended us to look beyond the literal sense (Siegfried), the oral traditions added to the account of the Pentateuch (and again, at the beginning of the "Life of Moses" these traditions are clearly of Alexandrine origin), and the prescriptions of the worship in Jerusalem—two essential features remain: first, the conviction that the Jewish law is identical with the natural; and then the allegorical interpretation. The first, according to which the acts of the prophets and the prescriptions of Moses are regarded as ideals conformable to nature (in the Stoic sense), gives to the Jewish religion a universality incompatible with the narrow national Messianism of the Jewish sibyls. Philo thus abandons entirely the Messianic promises; there is no national tradition to exclude the Gentile from Judaism. To find his precursors one must go back to the Prophets; tradition he revives, but only with serious modifications. To the idea of moral universality he adds the idea of nature which he received from the Stoics. His interpretation is wholly bent on identifying the Mosaic prescription with natural law.

The second feature is the allegorical interpretation. Without doubt Philo had his predecessors among the Alexandrines. The proof of this is found not in the fragments of Aristobulus (which are grossly false and later than Philo), but in the work of Philo himself, which is based sometimes on the authority of his predecessors, in the "Wisdom of Solomon" (an Alexandrine work of the first century B. C., which contains some traces of this method), and finally in the description Philo has given us of the occupations of the Therapeutæ and the Essenes. The tradition, however, thus formed cannot have amounted to much, for it does not prevail against personal inspiration and it lacks unity. This interpretation appears to us rather as a day-by-day creation of that age, and in Philo's works we can follow an allegory in process of formation, e. g. the interpretation of man "after the image of God". The development of the interior moral life as Philo conceived it is always bound up with his allegorical method. This method differs from that of most of his Greek predecessors who sought an artificial means to bring out the philosophical conceptions in time-honoured texts, such as that of Homer. As a rule he does not search in the sacred text for any strictly philosophical theory; more often he puts forth these theories directly on their own merits.

Though at times enthusiastic in his admiration of Greek philosophers, he does not try to represent them as unavowed disciples of Moses. What he seeks in Genesis is not this or that truth, but the description of the attitudes of the soul towards God, such as innocence, sin, repentance. The allegorical method of Philo neither proves nor attempts to prove anything. It is not a mode of apologetic; in the "Life of Moses" e. g. this method is seldom employed; the only apologetic feature is the presentation of the high moral import of the Jewish laws taken in their literal sense. But the method is indispensable for the interior life; it gives the concrete image which the mystic needs to explain his effusions, and it makes the Jewish books profitable in the spiritual life. The spiritual life consists in the feeling of confidence which gives us faith in God, a feeling which coincides with that of the nothingness of man left to his own strength. Faith in God is not in itself the condition but the end or crowning of this life, and human life oscillates between confidence in self and confidence in God. This God conceived in His relations with the moral needs of man has the omnipotence and infinite goodness of the God of the prophets; it is by no means the God of the Stoics, in direct relation with the cosmos rather than with man.

Under this influence the Philonian cult became an eminently moral one: the originality of Philonism consists in its moral interpretation of the actions of the divinity upon the world, which till then had been regarded more in their physical aspect. The fundamental idea is here that of Divine power conceived according to the manner of the Jews as goodness and sovereignty in relation to man. It is remarkable that with this idea the cosmic power of philosophy or of Greek religion is transformed by Philo into moral power. Divine wisdom is without doubt like the Isis in Plutarch's treatise, mother of the world, but above all mother of goodness in the virtuous soul. The "Man of God" is the moral consciousness of man rather than the prototype or ideal. The Divine spirit is transformed from the material ether into the principle of moral inspiration. We recognize, it is true, the traces of the cosmic origin of the Divine intermediaries; the angels are material intermediaries as well as spiritual, and Philo accepts the belief in the power of the heavenly bodies as an inferior degree of wisdom. Nevertheless he did his best to suppress every material intermediary between man and God. This is quite evident in the celebrated theory of the Logos of God. This Logos, which according to the Stoics is the bond between the different parts of the world, and according to the Heracliteans the source of the cosmic oppositions, is regarded by Philo as the Divine word which reveals God to the soul and calms the passions (see Logos). It is finally from this point of view of the interior life that Philo transforms the moral conception of the Greeks which he knew mainly in the most popular forms (cynical diatribes); he discovers in them the idea of the moral conscience accepted though but slightly developed by philosophers up to that time. A very interesting point of view is the consideration of the various moral systems of the Greeks, not simply as true or false, but as so many indications of the soul's progress or recoil at different stages.

Consult various editions of Philo's works: MANGEY (2 vols., London, 1742); COHN and WENDLAND, I-V (Berlin, 1896-1906); CUMONT, *De Aeternitate Mundi* (Berlin, 1891); CONYBEARE, *Philo about Contemplative Life* (Oxford, 1895); HARRIS, *Fragments of Philo Judæus* (Cambridge, 1886); WENDLAND, *Neuentdeckte Fragmente Philos* (Berlin, 1891). *Writings*: GROSSMANN, *De Philonis operum continua serie*, I (Leipzig, 1841), II (1842); MASSEBIEAU, *Le Classement des Œuvres de Philon in Biblioth. de l'Ecole des hautes études*, I (1889), 1-91; MASSEBIEAU and BRÉHIER, *Chronologie de la Vie et des Œuvres de Philon in Revue d'hist. des relig.* (1906), 1-3. *Doctrine*: DRUMMOND, *Philo Judæus* (2 vols., London, 1888); HENRIOT, *Philon le Juif; Essai sur l'Ecole Juive d'Alexandrie* (Paris, 1898); MARTIN, *Philon* (Paris, 1907); BRÉHIER, *Les Idées Philosophiques et Religieuses*

EMILE BRÉHIER.

Philomelium, titular see in Pisidia, suffragan of Antioch. According to ancient writers Philomelium was situated in the south-west of Phrygia near the frontier of Lycaonia, on the road from Synnada to Iconium. It formed part of the "conventus" of Synnada. Its coins show that it was allied with the neighbouring city of Mandropolis (now Mandra). In the sixth century it formed part of Pisidia, the inhabitants of which pronounced its name Philomede or Philomene. In the Middle Ages it is often mentioned by Byzantine historians in connexion with the wars with the Seljukian sultans of Iconium. In the twelfth century it was one of the chief cities of the sultanate; from this time it bore the Turkish name of Ak-Sheher (white city), and to-day is the chief town of the caza of the vilayet of Konieh, numbering 4000 inhabitants, nearly all Mussulmans, and is a station on the railway from Eski-Shehr to Konieh. The ancient ruins are unimportant; they include a few inscriptions, some of them Christian. In a suburb is the tomb of Nasr Eddin Hodja, famous for his sanctity among the Turks. Christianity was introduced into Philomelium at an early date. In 196 the Church of Smyrna wrote to the Church of Philomelium announcing the martyrdom of St. Polycarp (Eusebius "Hist. Eccl.", IV, xix). Seven of its bishops are known: Theosebuis, present at the Council of Constantinople (381); Paul, at Chalcedon (451); Marcianus, who signed the letter to Emperor Leo from the bishops of Pisidia (458); Aristodemus, present at the Council of Constantinople (553); Marinus, at Constantinople (680 and 692); Sisinnius, at Nicæa (787); Euthymius at the Photian Council of Constantinople (879). In the Greek "Notitiæ episcopatum" Philomelium is first mentioned among the suffragan sees of Antioch in Pisidia, and in the ninth century among those of Amorium in Phrygia. It receives mention until the thirteenth century.

DIDOT, I, 831.

S. PÉTRIDÈS

Philomena, SAINT.—On 25 May, 1802, during the quest for the graves of Roman martyrs in the Catacomb of Priscilla, a tomb was discovered and opened; as it contained a glass vessel it was assumed to be the grave of a martyr. The view, then erroneously entertained in Rome, that the presence of such vessels (supposed to have contained the martyr's blood) in a grave was a symbol of martyrdom, has been rejected in practice since the investigations of De Rossi (cf. Leclercq in "Dict. d'archéol. chrét. et de liturg.", s. v. Ampoules de sang). The remains found in the above-mentioned tomb were shown to be those of a young maiden, and, as the name Filumena was discovered on the earthenware slabs closing the grave, it was assumed that they were those of a virgin martyr named Philumena. On 8 June, 1805, the relics were translated to the church of Mugnano, Diocese of Nola (near Naples), and enshrined under one of its altars. In 1827 Leo XII presented the church with the three earthenware tiles with the inscription, which may be seen in the church even to-day. On the basis of alleged revelations to a nun in Naples, and of an entirely fanciful and indefensible explanation of the allegorical paintings, which were found on the slabs beside the inscription, a canon of the church in Mugnano, named Di Lucia, composed a purely fictitious and romantic account of the supposed martyrdom of St. Philomena, who is not mentioned in any of the ancient sources. In consequence of the wonderful favours received in answer to prayer before the relics of the saint at Mu-

gnano, devotion to them spread rapidly, and, after instituting investigations into the question, Gregory XVI appointed a special feast to be held on 9 September, "in honorem s. Philumenæ virginis et martyris" (cf. the lessons of this feast in the Roman Breviary). The earthenware plates were fixed in front of the grave as follows: LUMENA PAX TECUM FI. The plates were evidently inserted in the wrong order, and the inscription should doubtless read PAX TECUM FILUMENA. The letters are painted on the plates with red paint, and the inscription belongs to the primitive class of epigraphical memorials in the Catacomb of Priscilla, thus dating from about the middle or second half of the second century. The disarrangement of the inscription proves that it must have been completed before the plates were put in position, although in the numerous other examples of this kind in the same catacomb the inscription was added only after the grave had been closed. Consequently, since the disarrangement of the plates can scarcely be explained as arising from an error, Marucchi seems justified in concluding that the inscription and plates originally belonged to an earlier grave, and were later employed (now in the wrong order) to close another. Apart from the letters, the plates contain three arrows, either as a decoration or as punctuation, a leaf as decoration, two anchors, and a palm as the well-known Christian symbols. Neither these signs nor the glass vessel discovered in the grave can be regarded as a proof of martyrdom.

I. DEFINITION OF PHILOSOPHY.—According to its etymology, the word "philosophy" (*φιλοσοφία*, from *φιλεῖν*, to love, and *σοφία*, wisdom) means "the love of wisdom". This sense appears again in *sapientia*, the word used in the Middle Ages to designate philosophy. In the early stages of Greek, as of every other, civilization, the boundary line between philosophy and other departments of human knowledge was not sharply defined, and philosophy was understood to mean "every striving towards knowledge". This sense of the word survives in Herodotus (I, xxx) and Thucydides (II, xl). In the ninth century of our era, Alcuin, employing it in the same sense, says that philosophy is "naturarum inquisitio, rerum humanarum divinarumque cognitio quantum homini possibile est æstimare"—investigation of nature, and such knowledge of things human and Divine as is possible for man (P. L., CI, 952).

In its proper acceptance, philosophy does not mean the aggregate of the human sciences, but "the general science of things in the universe by their ultimate determinations and reasons"; or again, "the intimate knowledge of the causes and reasons of things", the profound knowledge of the universal order. Without here enumerating all the historic

definitions of philosophy, some of the most significant may be given. Plato calls it "the acquisition of knowledge", *κτήσις ἐπιστήμης* (Euthydemus, 288 d). Aristotle, mightier than his master at compressing ideas, writes: *τὴν ὀνομαζομένην σοφίαν περὶ τὰ πρῶτα αἰτία καὶ τὰς ἀρχὰς ὑπολαμβάνουσι πάντες*—"All men consider philosophy as concerned with first causes and principles" (Metaph., I, i). These notions were perpetuated in the post-Aristotelean schools (Stoicism, Epicureanism, neo-Platonism), with this difference, that the Stoics and Epicureans accentuated the moral bearing of philosophy ("Philosophia studium summæ virtutis", says Seneca in "Epist.", lxxxix, 7), and the neo-Platonists its mystical bearing (see section V below). The Fathers of the Church and the first philosophers of the Middle Ages seem not to have had a very clear idea of philosophy for reasons which we will develop later on (section IX), but its conception emerges once more in all its purity among the Arabic philosophers at the end of the twelfth century and the masters of Scholasticism in the thirteenth. St. Thomas, adopting the Aristotelean idea, writes: "Sapientia est scientia quæ considerat causas primas et universales causas; sapientia causas primas omnium causarum considerat"—"Wisdom [i. e. philosophy] is the science which considers first and universal causes; wisdom considers the first causes of all causes" (In metaph., I, lect. ii).

In general, modern philosophers may be said to have adopted this way of looking at it. Descartes regards philosophy as wisdom: "Philosophiæ voce sapientiæ studium denotamus"—"By the term philosophy we denote the pursuit of wisdom" (Princ. philos., preface); and he understands by it "cognitio veritatis per primas suas causas"—"knowledge of truth by its first causes" (ibid.). For Locke, philosophy is the true knowledge of things; for Berkeley, "the study of wisdom and truth" (Princ.). The many conceptions of philosophy given by Kant reduce it to that of a science of the general principles of knowledge and of the ultimate objects attainable by knowledge—"Wissenschaft von den letzten Zwecken der menschlichen Vernunft". For the numerous German philosophers who derive their inspiration from his criticism—Fichte, Hegel, Schelling, Schleiermacher, Schopenhauer, and the rest—it is the general teaching of science (*Wissenschaftslehre*). Many contemporary authors regard it as the synthetic theory of the particular sciences: "Philosophy", says Herbert Spencer, "is completely unified knowledge" (First Principles, § 37). Ostwald has the same idea. For Wundt, the object of philosophy is "the acquisition of such a general conception of the world and of life as will satisfy the exigencies of the reason and the needs of the heart"—"Gewinnung einer allgemeinen Welt- und Lebensanschauung, welche die Forderungen unserer Vernunft und die Bedürfnisse unseres Gemüths befriedigen soll" (Einleit. in d. Philos., 1901, p. 5). This idea of philosophy as the ultimate science of values (*Wertlehre*) is emphasized by Windelband, Döring, and others.

The list of conceptions and definitions might be indefinitely prolonged. All of them affirm the eminently synthetic character of philosophy. In the opinion of the present writer, the most exact and comprehensive definition is that of Aristotle. Face to face with nature and with himself, man reflects and endeavours to discover what the world is, and what he is himself. Having made the real the object of studies in detail, each of which constitutes science (see section VIII), he is led to a study of the whole, to inquire into the principles or reasons of the totality of things, a study which supplies the answers to the last *Why's*. The last *Why* of all rests upon all that is and all that becomes: it does not apply, as in any one

particular science (e. g. chemistry), to this or that process of becoming, or to this or that being (e. g. the combination of two bodies), but to all being and all becoming. All being has within it its constituent principles, which account for its substance (constitutive material and formal causes); all becoming, or change, whether superficial or profound, is brought about by an efficient cause other than its subject; and lastly things and events have their bearings from a finality, or final cause. The harmony of principles, or causes, produces the universal order. And thus philosophy is the profound knowledge of the universal order, in the sense of having for its object the simplest and most general principles, by means of which all other objects of thought are, in the last resort, explained. By these principles, says Aristotle, we know other things, but other things do not suffice to make us know these principles (*διὰ γὰρ ταῦτα καὶ ἐκ τούτων τ' ἄλλα γνωρίζεται, ἀλλ' οὐ ταῦτα διὰ τῶν ὑποκειμένων*—Metaph., I). The expression *universal order* should be understood in the widest sense. Man is one part of it: hence the relations of man with the world of sense and with its Author belong to the domain of philosophy. Now man, on the one hand, is the responsible author of these relations, because he is free, but he is obliged by nature itself to reach an aim, which is his moral end. On the other hand, he has the power of reflecting upon the knowledge which he acquires of all things, and this leads him to study the logical structure of science. Thus philosophical knowledge leads to philosophical acquaintance with morality and logic. And hence we have this more comprehensive definition of philosophy: "The profound knowledge of the universal order, of the duties which that order imposes upon man, and of the knowledge which man acquires from reality"—"La connaissance approfondie de l'ordre universel, des devoirs qui en résultent pour l'homme et de la science que l'homme acquiert de la réalité" (Mercier, "Logique", 1904, p. 23).—The development of these same ideas under another aspect will be found in section VIII of this article.

II. DIVISION OF PHILOSOPHY.—Since the universal order falls within the scope of philosophy (which studies only its first principles, not its reasons in detail), philosophy is led to the consideration of all that is: the world, God (or its cause), and man himself (his nature, origin, operations, moral end, and scientific activities).

It would be out of the question to enumerate here all the methods of dividing philosophy that have been given: we confine ourselves to those which have played a part in history and possess the deepest significance.

A. In Greek Philosophy.—Two historical divisions dominate Greek philosophy: the Platonic and the Aristotelean.

(1) Plato divides philosophy into dialectic, physics, and ethics. This division is not found in Plato's own writings, and it would be impossible to fit his dialogues into the triple frame, but it corresponds to the spirit of the Platonic philosophy. According to Zeller, Xenocrates (314 B.C.) his disciple, and the leading representative of the Old Academy, was the first to adopt this triadic division, which was destined to go down through the ages (Grundriss d. Geschichte d. griechischen Philosophie, 144), and Aristotle follows it in dividing his master's philosophy. Dialectic is the science of objective reality, i. e., of the Idea (*ἰδέα, εἶδος*), so that by Platonic dialectic we must understand metaphysics. Physics is concerned with the manifestations of the Idea, or with the Real, in the sensible universe, to which Plato attributes no real value independent of that of the Idea. Ethics has for its object human acts. Plato deals with logic, but has no system of logic; this was a product of Aristotle's genius.

Plato's classification was taken up by his school (the Academy), but it was not long in yielding to the influence of Aristotle's more complete division and according a place to logic. Following the inspirations of the old Academics, the Stoics divided philosophy into physics (the study of the real), logic (the study of the structure of science), and morals (the study of moral acts). This classification was perpetuated by the neo-Platonists, who transmitted it to the Fathers of the Church, and through them to the Middle Ages.

(2) Aristotle, Plato's illustrious disciple, the most didactic, and at the same time the most synthetic, mind of the Greek world, drew up a remarkable scheme of the divisions of philosophy. The philosophical sciences are divided into theoretic, practical, and poetic, according as their scope is pure speculative knowledge, or conduct (*πρᾶξις*), or external production (*ποίησις*). Theoretic philosophy comprises: (a) physics, or the study of corporeal things which are subject to change (*ἀχώριστα μὲν ἀλλ' οὐκ ἀκίνητα*); (b) mathematics, or the study of extension, i. e., of a corporeal property not subject to change and considered, by abstraction, apart from matter (*ἀκίνητα μὲν οὐχώριστα δ' ὥσως, ἀλλ' ὡς ἐν ὄλῃ*); (c) metaphysics, called theology, or first philosophy, i. e. the study of being in its unchangeable and (whether naturally or by abstraction) incorporeal determinations (*χώριστα καὶ ἀκίνητα*). Practical philosophy comprises ethics, economics, and politics, the second of these three often merging into the last. Poetic philosophy is concerned in general with the external works conceived by human intelligence. To these may conveniently be added logic, the vestibule of philosophy, which Aristotle studied at length, and of which he may be called the creator.

To metaphysics Aristotle rightly accords the place of honour in the grouping of philosophical studies. He calls it "first philosophy". His classification was taken up by the Peripatetic School and was famous throughout antiquity; it was eclipsed by the Platonic classification during the Alexandrine period, but it reappeared during the Middle Ages.

B. *In the Middle Ages.*—Though the division of philosophy into its branches is not uniform in the first period of the Middle Ages in the West, i. e. down to the end of the twelfth century, the classifications of this period are mostly akin to the Platonic division into logic, ethics, and physics. Aristotle's classification of the theoretic sciences, though made known by Boethius, exerted no influence for the reason that in the early Middle Ages the West knew nothing of Aristotle except his works on logic and some fragments of his speculative philosophy (see section V below). It should be added here that philosophy, reduced at first to dialectic, or logic, and placed as such in the Trivium, was not long in setting itself above the liberal arts.

The Arab philosophers of the twelfth century (Avicenna, Averroes) accepted the Aristotelean classification, and when their works—particularly their translations of Aristotle's great original treatises—penetrated into the West, the Aristotelean division definitively took its place there. Its coming is heralded by Gundissalinus (see section XII), one of the Toletan translators of Aristotle, and author of a treatise, "*De divisione philosophiæ*", which was imitated by Michael Scott and Robert Kilwardby. St. Thomas did no more than adopt it and give it a precise scientific form. Later on we shall see that, conformably with the medieval notion of *sapientia*, to each part of philosophy corresponds the preliminary study of a group of special sciences. The general scheme of the division of philosophy in the thirteenth century, with St. Thomas's commentary on it, is as follows:

There are as many parts of philosophy as there are distinct domains in the order submitted to the

philosopher's reflection. Now there is an order which the intelligence does not form but only considers; such is the order realized in nature. Another order, the practical, is formed either by the acts of our intelligence, or by the acts of our will, or by the application of those acts to external things in the arts: hence the division of practical philosophy into logic, moral philosophy, and æsthetics, or the philosophy of the arts ("*Ad philosophiam naturalem pertinet considerare ordinem rerum quem ratio humana considerat sed non facit; ita quod sub naturali philosophia comprehendamus et metaphysicam. Ordo autem quem ratio considerando facit in proprio actu, pertinet ad rationalem philosophiam, cujus est considerare ordinem partium orationis ad invicem et ordinem principiorum ad invicem et ad conclusiones. Ordo autem actionum voluntariarum pertinet ad considerationem moralis philosophiæ. Ordo autem quem ratio considerando facit in rebus exterioribus per rationem humanam pertinet ad artes mechanicas.*") To natural philosophy pertains the consideration of the order of things which human reason considers but does not create—just as we include metaphysics also under natural philosophy. But the order which reason creates of its own act by consideration pertains to rational philosophy, the office of which is to consider the order of the parts of a speech with reference to one another and the order of the principles with reference to one another and to the conclusions. The order of voluntary actions pertains to the consideration of moral philosophy, while the order which the reason creates in external things through the human reason pertains to the mechanical arts.—"In X Ethic. ad. Nic.", I, lect. i). The philosophy of nature, or speculative philosophy, is divided into metaphysics, mathematics, and physics, according to the three stages traversed by the intelligence in its effort to attain a synthetic comprehension of the universal order, by abstracting from movement (physics), intelligible quantity (mathematics), being (metaphysics) (In lib. Boeth. de Trinitate, Q. v., a. 1). In this classification it is to be noted that, man being one element of the world of sense, psychology ranks as a part of physics.

C. *In Modern Philosophy.*—The Scholastic classification may be said, generally speaking, to have lasted, with some exceptions, until the seventeenth century. Beginning with Descartes, we find a multitude of classifications arising, differing in the principles which inspire them. Kant, for instance, distinguishes metaphysics, moral philosophy, religion, and anthropology. The most widely accepted scheme, that which still governs the division of the branches of philosophy in teaching, is due to Wolff (1679–1755), a disciple of Leibniz, who has been called the educator of Germany in the eighteenth century. This scheme is as follows:

- | | | | | | | | | |
|-------------------------------------|--|-----------------------------------|-------------------------------------|--------------------------------|---|------------------------------|-------------------------------------|--------------------------------|
| (1) Logic. | | | | | | | | |
| (2) Speculative Philosophy | <table border="0"> <tr> <td>Ontology, or General Metaphysics.</td> <td></td> </tr> <tr> <td>Special Metaphysics</td> <td> <table border="0"> <tr> <td>Theodicy (the study of God).</td> </tr> <tr> <td>Cosmology (the study of the World).</td> </tr> <tr> <td>Psychology (the study of Man).</td> </tr> </table> </td> </tr> </table> | Ontology, or General Metaphysics. | | Special Metaphysics | <table border="0"> <tr> <td>Theodicy (the study of God).</td> </tr> <tr> <td>Cosmology (the study of the World).</td> </tr> <tr> <td>Psychology (the study of Man).</td> </tr> </table> | Theodicy (the study of God). | Cosmology (the study of the World). | Psychology (the study of Man). |

| Economics | | | | | | | | |

Wolff broke the ties binding the particular sciences to philosophy, and placed them by themselves; in his view philosophy must remain purely rational. It is easy to see that the members of Wolff's scheme are found in the Aristotelean classification, wherein theodicy is a chapter of metaphysics and psychology a chapter of physics. It may even be said that the Greek classification is better than Wolff's in regard to speculative philosophy, where the ancients were guided by the formal object of the study—i. e. by

the degree of abstraction to which the whole universe is subjected, while the moderns always look at the material object—i. e., the three categories of beings which it is possible to study, God, the world of sense, and man.

D. *In Contemporary Philosophy*.—The impulse received by philosophy during the last half-century gave rise to new philosophical sciences, in the sense that various branches have been detached from the main stems. In psychology this phenomenon has been remarkable: criteriology, or epistemology (the study of the certitude of knowledge) has developed into a special study. Other branches which have formed themselves into new psychological sciences are: physiological psychology, or the study of the physiological concomitants of psychic activities; didactics, or the science of teaching; pedagogy, or the science of education; collective psychology and the psychology of peoples (*Völkerpsychologie*), studying the psychic phenomena observable in human groups as such, and in the different races. An important section of logic (called also noetic, or canonic) is tending to sever itself from the main body, viz., methodology, which studies the special logical formation of various sciences. On moral philosophy, in the wide sense, have been grafted the philosophy of law, the philosophy of society, or social philosophy (which is much the same as sociology), and the philosophies of religion and of history.

III. THE PRINCIPAL SYSTEMATIC SOLUTIONS.—From what has been said above it is evident that philosophy is beset by a great number of questions. It would not be possible here to enumerate all those questions, much less to detail the divers solutions which have been given to them. The solution of a philosophic question is called a philosophic doctrine, or theory. A philosophic system (from *συστήσις*, put together) is a complete and organized group of solutions. It is not an incoherent assemblage or an encyclopedic amalgamation of such solutions; it is dominated by an organic unity. Only those philosophic systems which are constructed conformably with the exigencies of organic unity are really powerful: such are the systems of the Upanishads, of Aristotle, of neo-Platonism, of Scholasticism, of Leibniz, Kant, and Hume. So that one or several theories do not constitute a system; but some theories, i. e. answers to a philosophic question, are important enough to determine the solution of other important problems of a system. The scope of this section is to indicate some of these theories.

A. *Monism, or Pantheism, and Pluralism, Individualism, or Theism*.—Are there many beings distinct in their reality, with one Supreme Being, God, at the summit of the hierarchy; or is there but one reality (*μονάς*, hence monism), one All-God (*πᾶν-θεός*), of whom each individual is but a member or fragment (Substantialistic Pantheism), or else a force, or energy (Dynamic Pantheism)? Here we have an important question of metaphysics the solution of which reacts upon all other domains of philosophy. The systems of Aristotle, of the Scholastics, and of Leibniz are Pluralistic and Theistic; the Indian, neo-Platonic, and Hegelian are Monistic. Monism is a fascinating explanation of the real, but it only postpones the difficulties which it imagines itself to be solving (e. g. the difficulty of the interaction of things), to say nothing of the objection, from the human point of view, that it runs counter to our most deeply-rooted sentiments.

B. *Objectivism and Subjectivism*.—Does being, whether one or many, possess its own life, independent of our mind, so that to be known by us is only accidental to being, as in the objective system of metaphysics (e. g. Aristotle, the Scholastics, Spinoza)? Or has being no other reality than the mental and subjective

presence which it acquires in our representation of it as in the Subjective system (e. g. Hume)? It is in this sense that the "Revue de métaphysique et de morale" (see bibliography) uses the term metaphysics in its title. Subjectivism cannot explain the passivity of our mental representations, which we do not draw out of ourselves, and which therefore oblige us to infer the reality of a non-ego.

C. *Substantialism and Phenomenism*.—Is all reality a flux of phenomena (Heraclitus, Berkeley, Hume, Taine), or does the manifestation appear upon a basis, or substance, which manifests itself, and does the phenomenon demand a noumenon (the Scholastics)? Without an underlying substance, which we only know through the medium of the phenomenon, certain realities, as walking, talking, are inexplicable, and such facts as memory become absurd.

D. *Mechanism and Dynamism (Pure and Modified)*.—Natural bodies are considered by some to be aggregations of homogeneous particles of matter (atoms) receiving a movement which is extrinsic to them, so that these bodies differ only in the number and arrangement of their atoms (the Atomism, or Mechanism, of Democritus, Descartes, and Hobbes). Others reduce them to specific, unextended, immaterial forces, of which extension is only the superficial manifestation (Leibniz). Between the two is Modified Dynamism (Aristotle), which distinguishes in bodies an immanent specific principle (form) and an indeterminate element (matter) which is the source of limitation and extension. This theory accounts for the specific characters of the entities in question as well as for the reality of their extension in space.

E. *Materialism, Agnosticism, and Spiritualism*.—That everything real is material, that whatever might be immaterial would be unreal, such is the cardinal doctrine of Materialism (the Stoics, Hobbes, De Lamettrie). Contemporary Materialism is less outspoken: it is inspired by a Positivist ideology (see section VI), and asserts that, if anything supra-material exists, it is unknowable (Agnosticism, from *ἀ-γνώσις*, knowledge. Spencer, Huxley). Spiritualism teaches that incorporeal, or immaterial, beings exist or that they are possible (Plato, Aristotle, St. Augustine, the Scholastics, Descartes, Leibniz). Some have even asserted that only spirits exist: Berkeley, Fichte, and Hegel are exaggerated Spiritualists. The truth is that there are bodies and spirits; among the latter we are acquainted (though less well than with bodies) with the nature of our soul, which is revealed by the nature of our immaterial acts, and with the nature of God, the infinite intelligence, whose existence is demonstrated by the very existence of finite things. Side by side with these solutions relating to the problems of the real, there is another group of solutions, not less influential in the orientation of a system, and relating to psychical problems or those of the human ego.

F. *Sensualism and Rationalism, or Spiritualism*.—These are the opposite poles of the ideogenetic question, the question of the origin of our knowledge. For Sensualism the only source of human knowledge is sensation: everything reduces to transformed sensations. This theory, long ago put forward in Greek philosophy (Stoicism, Epicureanism), was developed to the full by the English Sensualists (Locke, Berkeley, Hume) and the English Associationists (Brown, Hartley, Priestley); its modern form is Positivism (John Stuart Mill, Huxley, Spencer, Comte, Taine, Littré etc.). Were this theory true, it would follow that we can know only what falls under our senses, and therefore cannot pronounce upon the existence or non-existence, the reality or unreality, of the super-sensible. Positivism is more logical than Materialism. In the New World, the term Agnosticism has been very happily employed

to indicate this attitude of reserve towards the super-sensible. Rationalism (from *ratio*, reason), or Spiritualism, establishes the existence in us of concepts higher than sensations, i. e. of abstract and general concepts (Plato, Aristotle, St. Augustine, the Scholastics, Descartes, Leibniz, Kant, Cousin etc.). Ideologic Spiritualism has won the adherence of humanity's greatest thinkers. Upon the spirituality, or immateriality, of our higher mental operations is based the proof of the spirituality of the principle from which they proceed and, hence, of the immortality of the soul.

G. *Scepticism, Dogmatism, and Criticism*.—So many answers have been given to the question: whether man can attain truth, and what is the foundation of certitude, that we will not attempt to enumerate them all. Scepticism declares reason incapable of arriving at the truth, and holds certitude to be a purely subjective affair (Sextus Empiricus, *Ænesidemus*). Dogmatism asserts that man can attain to truth, and that, in measure to be further determined, our cognitions are certain. The motive of certitude is, for the Traditionalists, a Divine revelation, for the Scotch School (Reid) it is an inclination of nature to affirm the principles of common sense; it is an irrational, but social, necessity of admitting certain principles for practical dogmatism (Balfour in his "Foundations of Belief" speaks of "non-rational impulse", while Mallock holds that "certitude is found to be the child, not of reason but of custom" and Brunetière writes about "the bankruptcy of science and the need of belief"); it is an affective sentiment, a necessity of wishing that certain things may be verities (Voluntarism; Kant's Moral Dogmatism), or the fact of living certain verities (contemporary Pragmatism and Humanism; William James, Schiller). But for others—and this is the theory which we accept—the motive of certitude is the very evidence of the connexion which appears between the predicate and the subject of a proposition, an evidence which the mind perceives, but which it does not create (Moderate Dogmatism). Lastly for Criticism, which is the Kantian solution of the problem of knowledge, evidence is created by the mind by means of the structural functions with which every human intellect is furnished (the categories of the understanding). In conformity with these functions we connect the impressions of the senses and construct the world. Knowledge, therefore, is valid only for the world as represented to the mind. Kantian Criticism ends in excessive Idealism, which is also called Subjectivism, or Phenomenalism, and according to which the mind draws all its representations out of itself, both the sensory impressions and the categories which connect them: the world becomes a mental poem, the object is created by the subject as representation (Fichte, Schelling, Hegel).

H. *Nominalism, Realism, and Conceptualism* are various answers to the question of the real objectivity of our predications, or of the relation of fidelity existing between our general representations and the external world (see NOMINALISM, REALISM, CONCEPTUALISM).

I. *Determinism and Indeterminism*.—Has every phenomenon or fact its adequate cause in an antecedent phenomenon or fact (Cosmic Determinism)? And, in respect to acts of the will, are they likewise determined in all their constituent elements (Moral Determinism, Stoicism, Spinoza)? If so, then liberty disappears, and with it human responsibility, merit, and demerit. Or, on the contrary, is there a category of volitions which are not necessitated, and which depend upon the discretionary power of the will to act or not to act and in acting to follow a freely chosen direction? Does liberty exist? Most Spiritualists of all schools have adopted a liber-

tarian philosophy, holding that liberty alone gives the moral life an acceptable meaning; by various arguments they have confirmed the testimony of conscience and the data of common consent. In physical nature causation and determinism rule; in the moral life, liberty. Others, by no means numerous, have even pretended to discover cases of indeterminism in physical nature (the so-called Contingentist theories, e. g. Boutroux).

J. *Utilitarianism and the Morality of Obligation*.—What constitutes the foundation of morality in our actions? Pleasure or utility say some, personal or egoistic pleasure (Egoism—Hobbes, Bentham, and "the arithmetic of pleasure"); or again, in the pleasure and utility of all (Altruism—John Stuart Mill). Others hold that morality consists in the performance of duty for duty's sake, the observance of law because it is law, independently of personal profit (the Formalism of the Stoics and of Kant). According to another doctrine, which in our opinion is more correct, utility, or personal advantage, is not incompatible with duty, but the source of the obligation to act is in the last analysis, as the very exigencies of our nature tell us, the ordinance of God.

IV. *PHILOSOPHICAL METHODS*.—Method (*μεθ' ὁδός*) means a path taken to reach some objective point. By philosophical method is understood the path leading to philosophy, which, again, may mean either the process employed in the construction of a philosophy (constructive method, method of invention), or the way of teaching philosophy (method of teaching, didactic method). We will deal here with the former of these two senses; the latter will be treated in section XI. Three methods can be, and have been, applied to the construction of philosophy.

A. *Experimental (Empiric, or Analytic) Method*.—The method of all Empiric philosophers is to observe facts, accumulate them, and co-ordinate them. Pushed to its ultimate consequences, the empirical method refuses to rise beyond observed and observable fact; it abstains from investigating anything that is absolute. It is found among the Materialists, ancient and modern, and is most unreservedly applied in contemporary Positivism. Comte opposes the "positive mode of thinking", based solely upon observation, to the theological and metaphysical modes. For Mill, Huxley, Bain, Spencer, there is not one philosophical proposition but is the product, pure and simple, of experience: what we take for a general idea is an aggregate of sensations; a judgment is the union of two sensations; a syllogism, the passage from particular to particular (Mill, "A System of Logic, Rational and Inductive", ed. Lubbock, 1892; Bain, "Logic", New York, 1874). Mathematical propositions, fundamental axioms such as $a=a$, the principle of contradiction, the principle of causality are only "generalizations from facts of experience" (Mill, *op. cit.*, vii, §5). According to this author, what we believe to be superior to experience in the enunciation of scientific laws is derived from our subjective incapacity to conceive its contradictory; according to Spencer, this inconceivability of the negation is developed by heredity.

Applied in an exaggerated and exclusive fashion, the experimental method mutilates facts, since it is powerless to ascend to the causes and the laws which govern facts. It suppresses the character of objective necessity which is inherent in scientific judgments, and reduces them to collective formulæ of facts observed in the past. It forbids our asserting, e. g., that the men who will be born after us will be subject to death, seeing that all certitude rests on experience, and that by mere observation we cannot reach the unchangeable nature of things. The empirical method, left to its own resources, checks the upward

movement of the mind towards the causes or objects of the phenomena which confront it.

B. *Deductive, or Synthetic a Priori, Method.*—At the opposite pole to the preceding, the deductive method starts from very general principles, from higher causes, to descend (Lat. *deducere*, to lead down) to more and more complex relations and to facts. The dream of the Deductionist is to take as the point of departure an intuition of the Absolute, of the Supreme Reality—for the Theists, God; for the Monists, the Universal Being—and to draw from this intuition the synthetic knowledge of all that depends upon it in the universe, in conformity with the metaphysical scale of the real. Plato is the father of deductive philosophy: he starts from the world of Ideas, and from the Idea of the Sovereign Good, and he would know the reality of the world of sense only in the Ideas of which it is the reflection. St. Augustine, too, finds his satisfaction in studying the universe, and the least of the beings which compose it, only in a synthetic contemplation of God, the exemplary, creative, and final cause of all things. So, too, the Middle Ages attached great importance to the deductive method. "I propose", writes Boethius, "to build science by means of concepts and maxims, as is done in mathematics." Anselm of Canterbury draws from the idea of God, not only the proof of the real existence of an infinite being, but also a group of theorems on His attributes and His relations with the world. Two centuries before Anselm, Scotus Eriugena, the father of anti-Scholasticism, is the completest type of the Deductionist: his metaphysics is one long description of the Divine Odyssey, inspired by the neo-Platonic, monistic conception of the descent of the One in its successive generations. And, on the very threshold of the thirteenth century, Alain de Lille would apply to philosophy a mathematical methodology. In the thirteenth century Raymond Lully believed that he had found the secret of "the Great Art" (*ars magna*), a sort of syllogism-machine, built of general tabulations of ideas, the combination of which would give the solution of any question whatsoever. Descartes, Spinoza, and Leibniz are Deductionists: they would construct philosophy after the manner of geometry (*more geometrico*), linking the most special and complicated theorems to some very simple axioms. The same tendency appears among the Ontologists and the post-Kantian Pantheists in Germany (Fichte, Schelling, Hegel), who base their philosophy upon an intuition of the Absolute Being.

The deductive philosophers generally profess to disdain the sciences of observation. Their great fault is the compromising of fact, bending it to a preconceived explanation or theory assumed a priori, whereas the observation of the fact ought to precede the assignment of its cause or of its adequate reason. This defect in the deductive method appears glaringly in a youthful work of Leibniz's, "*Specimen demonstrationum politicarum pro rege Polonorum eligendo*", published anonymously in 1669, where he demonstrates by geometrical methods (*more geometrico*), in sixty propositions, that the Count Palatine of Neuburg ought to be elected to the Polish Throne.

C. *Analytico-Synthetic Method.*—This combination of analysis and synthesis, of observation and deduction, is the only method appropriate to philosophy. Indeed, since it undertakes to furnish a general explanation of the universal order (see section I), philosophy ought to begin with complex effects, facts known by observation, before attempting to include them in one comprehensive explanation of the universe. This is manifest in psychology, where we begin with a careful examination of activities, notably of the phenomena of sense, of intelligence, and of appetite; in cosmology, where we observe the

series of changes, superficial and profound, of bodies; in moral philosophy, which sets out from the observation of moral facts; in theodicy, where we interrogate religious beliefs and feelings; even in metaphysics, the starting-point of which is really existing being. But observation and analysis once completed, the work of synthesis begins. We must pass onward to a synthetic psychology that shall enable us to comprehend the destinies of man's vital principle; to a cosmology that shall explain the constitution of bodies, their changes, and the stability of the laws which govern them; to a synthetic moral philosophy establishing the end of man and the ultimate ground of duty; to a theodicy and deductive metaphysics that shall examine the attributes of God and the fundamental conceptions of all being. As a whole and in each of its divisions, philosophy applies the analytic-synthetic method. Its ideal would be to give an account of the universe and of man by a synthetic knowledge of God, upon whom all reality depends. This panoramic view—the eagle's view of things—has allured all the great geniuses. St. Thomas expresses himself admirably on this synthetic knowledge of the universe and its first cause.

The analytico-synthetic process is the method, not only of philosophy, but of every science, for it is the natural law of thought, the proper function of which is unified and orderly knowledge. "*Sapientis est ordinare.*" Aristotle, St. Thomas, Pascal, Newton, Pasteur, thus understood the method of the sciences. Men like Helmholtz and Wundt adopted synthetic views after doing analytical work. Even the Positivists are metaphysicians, though they do not know it or wish it. Does not Herbert Spencer call his philosophy synthetic? and does he not, by reasoning, pass beyond that domain of the "observable" within which he professes to confine himself?

V. THE GREAT HISTORICAL CURRENTS.—Among the many peoples who have covered the globe philosophic culture appears in two groups: the Semitic and the Indo-European, to which may be added the Egyptians and the Chinese. In the Semitic group (Arabs, Babylonians, Assyrians, Aramæans, Chaldeans) the Arabs are the most important; nevertheless, their part becomes insignificant when compared with the intellectual life of the Indo-Europeans. Among the latter, philosophic life appears successively in various ethnic divisions, and the succession forms the great periods into which the history of philosophy is divided; first, among the people of India (since 1500 B. C.); then among the Greeks and the Romans (sixth century B. C. to sixth century of our era); again, much later, among the peoples of Central and Northern Europe.

A. *Indian Philosophy.*—The philosophy of India is recorded principally in the sacred books of the Veda, for it has always been closely united with religion. Its numerous poetic and religious productions carry within themselves a chronology which enables us to assign them to three periods. (1) The Period of the Hymns of the Rig Veda (1500–1000 B. C.). This is the most ancient monument of Indo-Germanic civilization; in it may be seen the progressive appearance of the fundamental theory that a single Being exists under a thousand forms in the multiplied phenomena of the universe (Monism). (2) The Period of the Brâhmânas (1000–500 B. C.). This is the age of Brahminical civilization. The theory of the one Being remains, but little by little the concrete and anthropomorphic ideas of the one Being are replaced by the doctrine that the basis of all things is in oneself (*âtman*). Psychological Monism appears in its entirety in the Upanishads: the absolute and adequate identity of the Ego—which is the constitutive basis of our individuality (*âtman*)—and of all things, with Brahman, the eternal being exalted above time, space, number,

and change, the generating principle of all things, in which all things are finally reabsorbed—such is the fundamental theme to be found in the Upanishads under a thousand variations of form. To arrive at the *âtman*, we must not stop at empirical reality, which is multiple and cognizable; we must pierce this husk, penetrate to the unknowable and ineffable superessence, and identify ourselves with it in an unconscious unity. (3) The Post-Vedic, or Sanskrit, Period (since 500 B. C.). From the germs of theories contained in the Upanishads, a series of systems spring up, orthodox or heterodox. Of the orthodox systems, Vedanta is the most interesting; in it we find the principles of the Upanishads developed in an integral philosophy which comprises metaphysics, cosmology, psychology, and ethics (transmigration, metempsychosis). Among the systems not in harmony with the Vedic dogmas, the most celebrated is Buddhism, a kind of Pessimism which teaches liberation from pain in a state of unconscious repose, or an extinction of personality (*Nirvâna*). Buddhism spread in China, where it lives side by side with the doctrines of Lao Tsee and that of Confucius. It is evident that even the systems which are not in harmony with the Veda are permeated with religious ideas.

B. Greek Philosophy.—This philosophy, which occupied six centuries before, and six after, Christ, may be divided into four periods, corresponding with the succession of the principal lines of research: (1) From Thales of Miletus to Socrates (seventh to fifth centuries B. C.—preoccupied with cosmology); (2) Socrates, Plato, and Aristotle (fifth to fourth centuries B. C.—psychology); (3) From the death of Aristotle to the rise of neo-Platonism (end of the fourth century B. C. to third century after Christ—moral philosophy); (4) neo-Platonic School (from the third century after Christ, or, including the systems of the forerunners of neo-Platonism, from the first century after Christ, to the end of Greek philosophy in the seventh century—mysticism).

(1) The pre-Socratic philosophers either seek for the stable basis of things—which is water, for Thales of Miletus; air, for Anaximenes of Miletus; air endowed with intelligence, for Diogenes of Apollonia; number, for Pythagoras (sixth century B. C.); abstract and immovable being, for the Eleatics—or they study that which changes: while Parmenides and the Eleatics assert that everything is, and nothing changes or becomes. Heraclitus (about 535–475) holds that everything becomes, and nothing is unchangeable. Democritus (fifth century) reduces all beings to groups of atoms in motion, and this movement, according to Anaxagoras, has for its cause an intelligent being. (2) The Period of Apogee: Socrates, Plato, Aristotle. When the Sophists (Protagoras, Gorgias) had demonstrated the insufficiency of these cosmologies, Socrates (470–399) brought philosophical investigation to bear on man himself, studying man chiefly from the moral point of view. From the presence in us of abstract ideas Plato (427–347) deduced the existence of a world of supersensible realities or ideas, of which the visible world is but a pale reflection. These ideas, which the soul in an earlier life contemplated, are now, because of its union with the body, but faintly perceived. Aristotle (384–322), on the contrary, shows that the real dwells in the objects of sense. The theory of act and potentiality, of form and matter, is a new solution of the relations between the permanent and the changing. His psychology, founded upon the principle of the unity of man and the substantial union of soul and body, is a creation of genius. And as much may be said of his logic. (3) The Moral Period. After Aristotle (end of the fourth century B. C.) four schools are in evidence: Stoic, Epicurean, Platonic, and Aristotelean. The Stoics

(Zeno of Citium, Cleanthes, Chrysippus), like the Epicureans, make speculation subordinate to the quest of happiness, and the two schools, in spite of their divergencies, both consider happiness to be an *âraçia* or absence of sorrow and preoccupation. The teachings of both on nature (Dynamistic Monism with the Stoics, and Pluralistic Mechanism with the Epicureans) are only a prologue to their moral philosophy. After the latter half of the second century B. C. we perceive reciprocal infiltrations between the various schools. This issues in Eclecticism. Seneca (first century B. C.) and Cicero (106–43 B. C.) are attached to Eclecticism with a Stoic basis; two great commentators of Aristotle, Andronicus of Rhodes (first century B. C.) and Alexander of Aphrodisias (about 200), affect a Peripatetic Eclecticism. Parallel with Eclecticism runs a current of Scepticism (*Ænesidemus*, end of first century B. C., and Sextus Empiricus, second century A. D.). (4) The Mystical Period. In the first century B. C. Alexandria had become the capital of Greek intellectual life. Mystical and theurgic tendencies, born of a longing for the ideal and the beyond, began to appear in a current of Greek philosophy which originated in a restoration of Pythagorism and its alliance with Platonism (Plutarch of Chæronea, first century B. C.; Apuleius of Madaura; Numenius, about 160 and others), and still more in the Græco-Judaic philosophy of Philo the Jew (30 B. C. to A. D. 50). But the dominance of these tendencies is more apparent in neo-Platonism. The most brilliant thinker of the neo-Platonic series is Plotinus (A. D. 204–70). In his “*Enneads*” he traces the paths which lead the soul to the One, and establishes, in keeping with his mysticism, an emanationist metaphysical system. Porphyry of Tyre (232–304), a disciple of Plotinus, popularizes his teaching, emphasizes its religious bearing, and makes Aristotle’s “*Organon*” the introduction to neo-Platonic philosophy. Later on, neo-Platonism, emphasizing its religious features, placed itself, with Jamblichus, at the service of the pagan pantheon which growing Christianity was ruining on all sides, or again, as with Themistius at Constantinople (fourth century), Proclus and Simplicius at Athens (fifth century), and Ammonius at Alexandria, it took an Encyclopedic turn. With Ammonius and John Philoponus (sixth century) the neo-Platonic School of Alexandria developed in the direction of Christianity.

C. Patristic Philosophy.—In the closing years of the second century and, still more, in the third century, the philosophy of the Fathers of the Church was developed. It was born in a civilization dominated by Greek ideas, chiefly neo-Platonic, and on this side its mode of thought is still the ancient. Still, if some, like St. Augustine, attach the greatest value to the neo-Platonic teachings, it must not be forgotten that the Monist or Pantheistic and Emanationist ideas, which have been accentuated by the successors of Plotinus, are carefully replaced by the theory of creation and the substantial distinction of beings; in this respect a new spirit animates Patristic philosophy. It was developed, too, as an auxiliary of the dogmatic system which the Fathers were to establish. In the third century the great representatives of the Christian School of Alexandria are Clement of Alexandria and Origen. After them Gregory of Nyssa, Gregory of Nazianzus, St. Ambrose, and, above all, St. Augustine (354–430) appear. St. Augustine gathers up the intellectual treasures of the ancient world, and is one of the principal intermediaries for their transmission to the modern world. In its definitive form Augustinism is a fusion of intellectualism and mysticism, with a study of God as the centre of interest. In the fifth century, pseudo-Dionysius perpetuates many a neo-Platonic doctrine adapted to Christianity, and his writings exercise a powerful influence in the Middle Ages.

D. Medieval Philosophy.—The philosophy of the Middle Ages developed simultaneously in the West, at Byzantium, and in divers Eastern centres; but the Western philosophy is the most important. It built itself up with great effort on the ruins of barbarism: until the twelfth century, nothing was known of Aristotle, except some treatises on logic, or of Plato, except a few dialogues. Gradually, problems arose, and, foremost, in importance, the question of universals in the ninth, tenth, and eleventh centuries (see NOMINALISM). St. Anselm (1033–1109) made a first attempt at systematizing Scholastic philosophy, and developed a theodicy. But as early as the ninth century an anti-Scholastic philosophy had arisen with Eriugena who revived the neo-Platonic Monism. In the twelfth century Scholasticism formulated new anti-Realist doctrines with Adelard of Bath, Gauthier de Mortagne, and, above all, Abelard and Gilbert de la Porrée, whilst extreme Realism took shape in the schools of Chartres. John of Salisbury and Alain de Lille, in the twelfth century, are the co-ordinating minds that indicate the maturity of Scholastic thought. The latter of these waged a campaign against the Pantheism of David of Dinant and the Epicureanism of the Albigenses—the two most important forms of anti-Scholastic philosophy. At Byzantium, Greek philosophy held its ground throughout the Middle Ages, and kept apart from the movement of Western ideas. The same is true of the Syrians and Arabs. But at the end of the twelfth century the Arabic and Byzantine movement entered into relation with Western thought, and effected, to the profit of the latter, the brilliant philosophical revival of the thirteenth century. This was due, in the first place, to the creation of the University of Paris; next, to the foundation of the Dominican and Franciscan orders; lastly, to the introduction of Arabic and Latin translations of Aristotle and the ancient authors. At the same period the works of Avicenna and Averroes became known at Paris. A pleiad of brilliant names fills the thirteenth century—Alexander of Hales, St. Bonaventure, Bl. Albertus Magnus, St. Thomas Aquinas, Godfrey of Fontaines, Henry of Ghent, Giles of Rome, and Duns Scotus bring Scholastic synthesis to perfection. They all wage war on Latin Averroism and anti-Scholasticism, defended in the schools of Paris by Siger of Brabant. Roger Bacon, Lully, and a group of neo-Platonists occupy a place apart in this century, which is completely filled by remarkable figures. In the fourteenth century Scholastic philosophy betrays the first symptoms of decadence. In place of individualities we have schools, the chief being the Thomist, the Scotist, and the Terminist School of William of Occam, which soon attracted numerous partisans. With John of Jandun, Averroism perpetuates its most audacious propositions; Eckhart and Nicholas of Cusa formulate philosophies which are symptomatic of the approaching revolution. The Renaissance was a troublous period for philosophy. Ancient systems were revived: the Dialectic of the Humanistic philosophers (Laurentius Valla, Vivès), Platonism, Aristoteleanism, Stoicism. Telesius, Campanella, and Giordano Bruno follow a naturalistic philosophy. Natural and social law are renewed with Thomas More and Grotius. All these philosophies were leagued together against Scholasticism, and very often against Catholicism. On the other hand, the Scholastic philosophers grew weaker and weaker, and, excepting for the brilliant Spanish Scholasticism of the sixteenth century (Bañez, Suarez, Vasquez, and so on), it may be said that ignorance of the fundamental doctrine became general. In the seventeenth century there was no one to support Scholasticism: it fell, not for lack of ideas, but for lack of defenders.

E. Modern Philosophy.—The philosophies of the Renaissance are mainly negative: modern philosophy is, first and foremost, constructive. The latter is emancipated from all dogma; many of its syntheses are powerful; the definitive formation of the various nationalities and the diversity of languages favour the tendency to individualism. The two great initiators of modern philosophy are Descartes and Francis Bacon. The former inaugurates a spiritualistic philosophy based on the data of consciousness, and his influence may be traced in Malebranche, Spinoza, and Leibniz. Bacon heads a line of Empiricists, who regarded sensation as the only source of knowledge. In the seventeenth and eighteenth centuries, a Sensualist philosophy grew up in England, based on Baconian Empiricism, and soon to develop in the direction of Subjectivism. Hobbes, Locke, Berkeley, and David Hume mark the stages of this logical evolution. Simultaneously an Associationist psychology appeared also inspired by Sensualism, and, before long, it formed a special field of research. Brown, David Hartley, and Priestley developed the theory of association of ideas in various directions. At the outset Sensualism encountered vigorous opposition, even in England, from the Mystics and Platonists of the Cambridge School (Samuel Parker and, especially, Ralph Cudworth). The reaction was still more lively in the Scotch School, founded and chiefly represented by Thomas Reid, to which Adam Ferguson, Oswald, and Dugald Stewart belonged in the seventeenth and eighteenth centuries, and which had great influence over Eclectic Spiritualism, chiefly in America and France. Hobbes's "selfish" system was developed into a morality by Bentham, a partisan of Egoistic Utilitarianism, and by Adam Smith, a defender of Altruism, but provoked a reaction among the advocates of the moral sentiment theory (Shaftesbury, Hutcheson, Samuel Clarke). In England, also, Theism or Deism was chiefly developed, instituting a criticism of all positive religion, which it sought to supplant with a philosophical religion. English Sensualism spread in France during the eighteenth century: its influence is traceable in de Condillac, de la Mettrie, and the Encyclopedists; Voltaire popularized it in France and with Jean-Jacques Rousseau it made its way among the masses, undermining their Christianity and preparing the Revolution of 1789. In Germany, the philosophy of the eighteenth century is, directly or indirectly, connected with Leibniz—the School of Wolff, the Æsthetic School (Baumgarten), the philosophy of sentiment. But all the German philosophers of the eighteenth century were eclipsed by the great figure of Kant.

With Kant (1724–1804) modern philosophy enters its second period and takes a critical orientation. Kant bases his theory of knowledge, his moral and æsthetic system, and his judgments of finality on the structure of the mind. In the first half of the eighteenth century, German philosophy is replete with great names connected with Kantianism—after it had been put through a Monistic evolution, however—Fichte, Schelling, and Hegel have been called the triumvirate of Pantheism; then again, Schopenhauer, while Herbart returned to individualism. French philosophy in the nineteenth century is at first dominated by an eclectic Spiritualistic movement with which the names of Maine de Biran and, especially, Victor Cousin are associated. Cousin had disciples in America (C. Henry), and in France he gained favour with those whom the excesses of the Revolution had alarmed. In the first half of the nineteenth century French Catholics approved the Traditionalism inaugurated by de Bonald and de Lamennais, while another group took refuge in Ontologism. In the same period Auguste Comte founded Positivism, to which Littré and Taine

adhered, though it rose to its greatest height in the English-speaking countries. In fact, England may be said to have been the second fatherland of Positivism; John Stuart Mill, Huxley, Alexander Bain, and Herbert Spencer expanded its doctrines, combined them with Associationism and emphasized its criteriological aspect, or attempted (Spencer) to construct a vast synthesis of human sciences. The Associationist philosophy at this time was confronted by the Scotch philosophy which, in Hamilton, combined the teachings of Reid and of Kant, and found an American champion in Noah Porter. Mansel spread the doctrines of Hamilton. Associationism regained favour with Thomas Brown and James Mill, but was soon enveloped in the larger conception of Positivism, the dominant philosophy in England. Lastly, in Italy, Hegel was for a long time the leader of nineteenth-century philosophical thought (Vera and d'Ercole), whilst Gioberti, the ontologist, and Rosmini occupy a distinct position. More recently, Positivism has gained numerous adherents in Italy. In the middle of the century, a large Krausist School existed in Spain, represented chiefly by Sanz del Rio (d. 1869) and N. Salmeron. Balmes (1810-48), the author of "Fundamental Philosophy", is an original thinker whose doctrines have many points of contact with Scholasticism.

VI. CONTEMPORARY ORIENTATIONS.—A. *Favourite Problems*.—Leaving aside social questions, the study of which belongs to philosophy in only some of their aspects, it may be said that in the philosophic interest of the present day psychological questions hold the first place, and that chief among them is the problem of certitude. Kant, indeed, is so important a factor in the destinies of contemporary philosophy, not only because he is the initiator of critical formalism, but still more because he obliges his successors to deal with the preliminary and fundamental question of the limits of knowledge. On the other hand, the experimental investigation of mental processes has become the object of a new study, psychophysiology, in which men of science co-operate with philosophers, and which meets with increasing success. This study figures in the programme of most modern universities. Originating at Leipzig (the School of Wundt) and Würzburg, it has quickly become naturalized in Europe and America. In America, "The Psychological Review" has devoted many articles to this branch of philosophy. Psychological studies are the chosen field of the Americans (Ladd, William James, Hall).

The great success of psychology has emphasized the subjective character of æsthetics, in which hardly anyone now recognizes the objective and metaphysical element. The solutions in vogue are the Kantian, which represents the æsthetic judgment as formed in accordance with the subjective, structural functions of the mind, or other psychologic solutions which reduce the beautiful to a psychic impression (the "sympathy", or *Einfühlung*, of Lipps; the "concrete intuition" of Benedetto Croce). These explanations are insufficient, as they neglect the objective aspect of the beautiful—those elements which, on the part of the object, are the cause of the æsthetic impression and enjoyment. It may be said that the neo-Scholastic philosophy alone takes into account the objective æsthetic factor.

The absorbing influence of psychology also manifests itself to the detriment of other branches of philosophy; first of all, to the detriment of metaphysics, which our contemporaries have unjustly ostracized—unjustly, since, if the existence or possibility of a thing-in-itself is considered of importance, it behooves us to inquire under what aspects of reality it reveals itself. This ostracism of metaphysics, moreover, is largely due to misconception and to a wrong understanding of the theories of substance,

of faculties, of causes etc., which belong to the traditional metaphysics. Then again, the invasion of psychology is manifest in logic: side by side with the ancient logic or dialectic, a mathematical or symbolic logic has developed (Peano, Russell, Peirce, Mitchell, and others) and, more recently, a genetic logic which would study, not the fixed laws of thought, but the changing process of mental life and its genesis (Baldwin).

We have seen above (section II, D) how the increasing cultivation of psychology has produced other scientific ramifications which find favour with the learned world.

Moral philosophy, long neglected, enjoys a renewed vogue notably in America, where ethnography is devoted to its service (see, e. g., the publications of the Smithsonian Institution). "The International Journal of Ethics" is a review especially devoted to this line of work. In some quarters, where the atmosphere is Positivist, there is a desire to get rid of the old morality, with its notions of value and of duty, and to replace it with a collection of empiric rules subject to evolution (Sidgwick, Huxley, Leslie Stephen, Durkheim, Levy-Bruhl).

As to the history of philosophy, not only are very extended special studies devoted to it, but more and more room is given it in the study of every philosophic question. Among the causes of this exaggerated vogue are the impulse given by the Schools of Cousin and of Hegel, the progress of historical studies in general, the confusion arising from the clash of rival doctrines, and the distrust engendered by that confusion. Remarkable works have been produced by Deussen, on Indian and Oriental philosophy; by Zeller, on Greek antiquity; by Denifle, Hauréau, Bäumer, and Mandonnet, on the Middle Ages; by Windelband, Kuno Fischer, Boutroux and Höffding, on the modern period; and the list might easily be considerably prolonged.

B. *The Opposing Systems*.—The rival systems of philosophy of the present time may be reduced to various groups: Positivism, neo-Kantianism, Monism, neo-Scholasticism. Contemporary philosophy lives in an atmosphere of Phenomenism, since Positivism and neo-Kantianism are at one on this important doctrine: that science and certitude are possible only within the limits of the world of phenomena, which is the immediate object of experience. Positivism, insisting on the exclusive rights of sensory experience, and Kantian criticism, reasoning from the structure of our cognitive faculties, hold that knowledge extends only as far as appearances; that beyond this is the absolute, the dark depths, the existence of which there is less and less disposition to deny, but which no human mind can fathom. On the contrary, this element of the absolute forms an integral constituent in neo-Scholasticism, which has revived, with sobriety and moderation, the fundamental notions of Aristotelean and Medieval metaphysics, and has succeeded in vindicating them against attack and objection.

(1) Positivism, under various forms, is defended in England by the followers of Spencer, by Huxley, Lewes, Tyndall, F. Harrison, Congreve, Beesby, J. Bridges, Grant Allen (James Martineau is a reactionary against Positivism); by Balfour, who at the same time propounds a characteristic theory of belief, and falls back on Fideism. From England Positivism passed over to America, where it soon dethroned the Scottish doctrines (Carus). De Roberty, in Russia, and Ribot, in France, are among its most distinguished disciples. In Italy it is found in the writings of Ferrari, Ardigò, and Morselli; in Germany, in those of Laas, Riehl, Guyau, and Durkheim. Less brutal than Materialism, the radical vice of Positivism is its identification of the knowable with the sensible. It seeks in vain to reduce general ideas to collective images, and to deny the abstract

and universal character of the mind's concepts. It vainly denies the super-experiential value of the first logical principles in which the scientific life of the mind is rooted; nor will it ever succeed in showing that the certitude of such a judgment as $2+2=4$ increases with our repeated additions of numbers of oxen or of coins. In morals, where it would reduce precepts and judgments to sociological data formed in the collective conscience and varying with the period and the environment, Positivism stumbles against the judgments of value, and the supersensible ideas of obligation, moral good, and law, recorded in every human conscience and unvarying in their essential data.

(2) Kantianism had been forgotten in Germany for some thirty years (1830-60); Vogt, Büchner, and Moleschott had won for Materialism an ephemeral vogue; but Materialism was swept away by a strong Kantian reaction. This reversion towards Kant (*Rückkehr zu Kant*) begins to be traceable in 1860 (notably as a result of Lange's "History of Materialism"), and the influence of Kantian doctrines may be said to permeate the whole contemporary German philosophy (Otto Liebmann, von Hartmann, Paulsen, Rehmke, Dilthey, Natorp, Eucken, the Immanentists, and the Empirico-criticists). French neo-Criticism, represented by Renouvier, was connected chiefly with Kant's second "Critique" and introduced a specific Voluntarism. Vacherot, Secrétan, Lachelier, Boutroux, Fouillée, and Bergson are all more or less under tribute to Kantianism. Ravaisson proclaims himself a follower of Maine de Biran. Kantianism has taken its place in the state programme of education and Paul Janet, who, with F. Bouillier and Caro, was among the last legates of Cousin's Spiritualism, appears, in his "Testament philosophique", affecting a Monism with a Kantian inspiration. All those who, with Kant and the Positivists, proclaim the "bankruptcy of science" look for the basis of our certitude in an imperative demand of the will. This Voluntarism, also called Pragmatism (William James), and, quite recently, Humanism (Schiller at Oxford), is inadequate to the establishment of the theoretic moral and social sciences upon an unshakable base: sooner or later, reflection will ask what this need of living and of willing is worth, and then the intelligence will return to its position as the supreme arbiter of certitude.

From Germany and France Kantianism has spread everywhere. In England it has called into activity the Critical Idealism associated with T. H. Green and Bradley. Hodgson, on the contrary, returns to Realism. S. Laurie may be placed between Green and Martineau. Emerson, Harris, Everett, and Royce spread Idealistic Criticism in America; Shadworth Hodgson, on the other hand, and Adamson tend to return to Realism, whilst James Ward emphasizes the function of the will.

(3) Monism.—With a great many Kantians, a stratum of Monistic ideas is superimposed on Criticism, the thing in itself being considered numerically one. The same tendencies are observable among Positivist Evolutionists like Clifford and Romanes, or G. T. Ladd.

(4) Neo-Scholasticism, the revival of which dates from the last third of the nineteenth century (Liberatore, Taparelli, Cornoldi, and others), and which received a powerful impulse under Leo XIII, is tending more and more to become the philosophy of Catholics. It replaces Ontologism, Traditionalism, Günther's Dualism, and Cartesian Spiritualism, which had manifestly become insufficient. Its syntheses, renewed and completed, can be set up in opposition to Positivism and Kantianism, and even its adversaries no longer dream of denying the worth of its doctrines. The bearings of neo-Scholasticism have been treated elsewhere (see NEO-SCHOLASTICISM).

VII. IS PROGRESS IN PHILOSOPHY INDEFINITE OR IS THERE A PHILOSOPHIA PERENNIS?—Considering the historic succession of systems and the evolution of doctrines from the remotest ages of India down to our own times, and standing face to face with the progress achieved by contemporary scientific philosophy, must we not infer the indefinite progress of philosophic thought? Many have allowed themselves to be led away by this ideal dream. Historic Idealism (Karl Marx) regards philosophy as a product fatally engendered by pre-existing causes in our physical and social environment. Auguste Comte's "law of the three states", Herbert Spencer's Evolutionism, Hegel's "indefinite becoming of the soul", sweep philosophy along in an ascending current toward an ideal perfection, the realization of which no one can foresee. For all these thinkers, philosophy is variable and relative: therein lies their serious error. Indefinite progress, condemned by history in many fields, is untenable in the history of philosophy. Such a notion is evidently refuted by the appearance of thinkers like Aristotle and Plato three centuries before Christ, for these men, who for ages have dominated, and still dominate, human thought, would be anachronisms, since they would be inferior to the thinkers of our own time. And no one would venture to assert this. History shows, indeed, that there are adaptations of a synthesis to its environment, and that every age has its own aspirations and its special way of looking at problems and their solutions; but it also presents unmistakable evidence of incessant new beginnings, of rhythmic oscillations from one pole of thought to the other. If Kant found an original formula of Subjectivism and the *reine Innerlichkeit*, it would be a mistake to think that Kant had no intellectual ancestors: he had them in the earliest historic ages of philosophy: M. Deussen has found in the Vedic hymn of the Upanishads the distinction between noumenon and phenomenon, and writes, on the theory of Mâyâ, "Kants Grunddogma, so alt wie die Philosophie" ("Die Philos. des Upanishads", Leipzig, 1899, p. 204).

It is false to say that all truth is relative to a given time and latitude, and that philosophy is the product of economic conditions in a ceaseless course of evolution, as historical Materialism holds. Side by side with these things, which are subject to change and belong to one particular condition of the life of mankind, there is a soul of truth circulating in every system, a mere fragment of that complete and unchangeable truth which haunts the human mind in its most disinterested investigations. Amid the oscillations of historic systems there is room for a *philosophia perennis*—as it were a purest atmosphere of truth, enveloping the ages, its clearness somehow felt in spite of cloud and mist. "The truth Pythagoras sought after, and Plato, and Aristotle, is the same that Augustine and Aquinas pursued. So far as it is developed in history, truth is the daughter of time; so far as it bears within itself a content independent of time, and therefore of history, it is the daughter of eternity" [Willmann, "Gesch. d. Idealismus", II (Brunswick, 1896), 550; cf. Commer. "Die immerwährende Philosophie" (Vienna, 1899)]. This does not mean that essential and permanent verities do not adapt themselves to the intellectual life of each epoch. Absolute immobility in philosophy, no less than absolute relativity, is contrary to nature and to history. It leads to decadence and death. It is in this sense that we must interpret the adage: *Vita in motu*.

VIII. PHILOSOPHY AND THE SCIENCES.—Aristotle of old laid the foundation of a philosophy supported by observation and experience. We need only glance through the list of his works to see that astronomy, mineralogy, physics and chemistry, biology, zoology, furnished him with examples and bases for his theories

on the constitution, of the heavenly and terrestrial bodies, the nature of the vital principle, etc. Besides, the whole Aristotelean classification of the branches of philosophy (see section II) is inspired by the same idea of making philosophy—general science—rest upon the particular sciences. The early Middle Ages, with a rudimentary scientific culture, regarded all its learning, built up on the Trivium (grammar, rhetoric, dialectic) and Quadrivium (arithmetic, geometry, astronomy, music), as a preparation for philosophy. In the thirteenth century, when Scholasticism came under Aristotelean influences, it incorporated the sciences in the programme of philosophy itself. This may be seen in a regulation issued by the Faculty of Arts of Paris, 19 March, 1255, "*De libris qui legendi essent*". This order prescribes the study of commentaries on various scientific treatises of Aristotle, notably those on the first book of the "*Meteorologica*", on the treatises on Heaven and Earth, Generation, the Senses and Sensations, Sleeping and Waking, Memory, Plants, and Animals. Here are amply sufficient means for the *magistri* to familiarize the "artists" with astronomy, botany, physiology, and zoology, to say nothing of Aristotle's "*Physics*", which was also prescribed as a classical text, and which afforded opportunities for numerous observations in chemistry and physics as then understood. Grammar and rhetoric served as preliminary studies to logic; Bible history, social science, and politics were introductory to moral philosophy. Such men as Albertus Magnus and Roger Bacon expressed their views on the necessity of linking the sciences with philosophy, and preached it by example. So that both antiquity and the Middle Ages knew and appreciated scientific philosophy.

In the seventeenth century the question of the relation between the two enters upon a new phase: from this period modern science takes shape and begins that triumphal march which it is destined to continue through the twentieth century, and of which the human mind is justly proud. Modern scientific knowledge differs from that of antiquity and the Middle Ages in three important respects: the multiplication of sciences; their independent value; the divergence between common knowledge and scientific knowledge. In the Middle Ages astronomy was closely akin to astrology, chemistry to alchemy, physics to divination; modern science has severely excluded all these fantastic connexions. Considered now from one side and again from another, the physical world has revealed continually new aspects, and each specific point of view has become the focus of a new study. On the other hand, by defining their respective limits, the sciences have acquired autonomy; useful in the Middle Ages only as a preparation for rational physics and for metaphysics, they are nowadays of value for themselves, and no longer play the part of handmaids to philosophy. Indeed, the progress achieved within itself by each particular science brings one more revolution in knowledge. So long as instruments of observation were imperfect, and inductive methods restricted, it was practically impossible to rise above an elementary knowledge. People knew, in the Middle Ages, that wine, when left exposed to the air, became vinegar; but what do facts like this amount to in comparison with the complex formulæ of modern chemistry? Hence it was that an Albertus Magnus or a Roger Bacon could flatter himself, in those days, with having acquired all the science of his time, a claim which would now only provoke a smile. In every department progress has drawn the line sharply between popular and scientific knowledge; the former is ordinarily the starting-point of the latter, but the conclusions and teachings involved in the sciences are unintelligible to those who lack the requisite preparation.

Do not, then, these profound modifications in the condition of the sciences entail modifications in the relations which, until the seventeenth century, had been accepted as existing between the sciences and philosophy? Must not the separation of philosophy and science widen out to a complete divorce? Many have thought so, both scientists and philosophers, and it was for this that in the eighteenth and nineteenth centuries so many savants and philosophers turned their backs on one another. For the former, philosophy has become useless; the particular sciences, they say, multiplying and becoming perfect, must exhaust the whole field of the knowable, and a time will come when philosophy shall be no more. For the philosophers, philosophy has no need of the immeasurable mass of scientific notions which have been acquired, many of which possess only a precarious and provisional value. Wolff, who pronounced the divorce of science from philosophy, did most to accredit this view, and he has been followed by certain Catholic philosophers who held that scientific study may be excluded from philosophic culture.

What shall we say on this question? That the reasons which formerly existed for keeping touch with science are a thousand times more imperative in our day. If the profound synthetic view of things which justifies the existence of philosophy presupposes analytical researches, the multiplication and perfection of those researches is certainly reason for neglecting them. The horizon of detailed knowledge widens incessantly; research of every kind is busy exploring the departments of the universe which it has mapped out. And philosophy, whose mission is to explain the order of the universe by general and ultimate reasons applicable, not only to a group of facts, but to the whole body of known phenomena, cannot be indifferent to the matter which it has to explain. Philosophy is like a tower whence we obtain the panorama of a great city—its plan, its monuments, its great arteries, with the form and location of each—things which a visitor cannot discern while he goes through the streets and lanes, or visits libraries, churches, palaces, and museums, one after another. If the city grows and develops, there is all the more reason, if we would know it as a whole, why we should hesitate to ascend the tower and study from that height the plan upon which its new quarters have been laid out.

It is, happily, evident that contemporary philosophy is inclined to be first and foremost a scientific philosophy; it has found its way back from its wanderings of yore. This is noticeable in philosophers of the most opposite tendencies. There would be no end to the list if we had to enumerate every case where this orientation of ideas has been adopted. "This union", says Boutroux, speaking of the sciences and philosophy, "is in truth the classic tradition of philosophy. But there had been established a psychology and a metaphysics which aspired to set themselves up beyond the sciences, by mere reflection of the mind upon itself. Nowadays all philosophers are agreed to make scientific data their starting-point" (Address at the International Congress of Philosophy in 1900; *Revue de Métaph. et de Morale*, 1900, p. 697). Boutroux and many others spoke similarly at the International Congress of Bologna (April, 1911). Wundt introduces this union into the very definition of philosophy, which, he says, is "the general science whose function it is to unite in a system free of all contradictions the knowledge acquired through the particular sciences, and to reduce to their principles the general methods of science and the conditions of knowledge supposed by them" ("*Einleitung in die Philosophie*", Leipzig, 1901, p. 19). And R. Eucken says: "The farther back the limits of the observable world recede, the more conscious are we

of the lack of an adequately comprehensive explanation" ["Gesammelte Aufsätze zur Philos. u. Lebensanschauung" (Leipzig, 1903), p. 157]. This same thought inspired Leo XIII when he placed the parallel and harmonious teaching of philosophy and of the sciences on the programme of the Institute of Philosophy created by him in the University of Louvain (see NEO-SCHOLASTICISM).

On their side, the scientists have been coming to the same conclusions ever since they rose to a synthetic view of that matter which is the object of their study. So it was with Pasteur, so with Newton. Ostwald, professor of chemistry at Leipzig, has undertaken to publish the "Annalen der Naturphilosophie", a review "devoted to the cultivation of the territory which is common to philosophy and the sciences". A great many men of science, too, are engaged in philosophy without knowing it: in their constant discussions of "Mechanism", "Evolutionism", "Transformism", they are using terms which imply a philosophical theory of matter.

If philosophy is the explanation as a whole of that world which the particular sciences investigate in detail, it follows that the latter find their culmination in the former, and that as the sciences are so will philosophy be. It is true that objections are put forward against this way of uniting philosophy and the sciences. Common observation, it is said, is enough support for philosophy. This is a mistake: philosophy cannot ignore whole departments of knowledge which are inaccessible to ordinary experience; biology, for example, has shed a new light on the philosophic study of man. Others again adduce the extent and the growth of the sciences to show that scientific philosophy must ever remain an unattainable ideal; the practical solution of this difficulty concerns the teaching of philosophy (see section XI).

IX. PHILOSOPHY AND RELIGION.—Religion presents to man, with authority, the solution of many problems which also concern philosophy. Such are the questions of the nature of God, of His relations with the visible world, of man's origin and destiny. Now religion, which precedes philosophy in the social life, naturally obliges it to take into consideration the points of religious doctrine. Hence the close connexion of philosophy with religion in the early stages of civilization, a fact strikingly apparent in Indian philosophy, which, not only at its beginning, but throughout its development, was intimately bound up with the doctrine of the sacred books (see above). The Greeks, at least during the most important periods of their history, were much less subject to the influences of pagan religions; in fact, they combined with extreme scrupulosity in what concerned ceremonial usage a wide liberty in regard to dogma. Greek thought soon took its independent flight; Socrates ridicules the gods in whom the common people believed; Plato does not banish religious ideas from his philosophy; but Aristotle keeps them entirely apart, his God is the *Actus purus*, with a meaning exclusively philosophic, the prime mover of the universal mechanism. The Stoics point out that all things obey an irresistible fatality and that the wise man fears no gods. And if Epicurus teaches cosmic determinism and denies all finality, it is only to conclude that man can lay aside all fear of divine intervention in mundane affairs. The question takes a new aspect when the influences of the Oriental and Jewish religions are brought to bear on Greek philosophy by neo-Pythagorism, the Jewish theology (end of the first century), and, above all, neo-Platonism (third century B. C.). A yearning for religion was stirring in the world, and philosophy became enamoured of every religious doctrine. Plotinus (third century after Christ), who must always remain the most perfect type of the

neo-Platonic mentality, makes philosophy identical with religion, assigning as its highest aim the union of the soul with God by mystical ways. This mystical need of the supernatural issues in the most bizarre lucubrations from Plotinus's successors, e. g. Jamblicus (d. about A. D. 330), who, on a foundation of neo-Platonism, erected an international pantheon for all the divinities whose names are known.

It has often been remarked that Christianity, with its monotheistic dogma and its serene, purifying morality, came in the fulness of time and appeased the inward unrest with which souls were afflicted at the end of the Roman world. Though Christ did not make Himself the head of a philosophical school, the religion which He founded supplies solutions for a group of problems which philosophy solves by other methods (e. g. the immortality of the soul). The first Christian philosophers, the Fathers of the Church, were imbued with Greek ideas and took over from the circumambient neo-Platonism the commingling of philosophy and religion. With them philosophy is incidental and secondary, employed only to meet polemic needs, and to support dogma; their philosophy is religious. In this Clement of Alexandria and Origen are one with St. Augustine and Pseudo-Dionysius the Areopagite. The early Middle Ages continued the same traditions, and the first philosophers may be said to have received neo-Platonic influences through the channel of the Fathers. John Scotus Eriugena (ninth century), the most remarkable mind of this first period, writes that "true religion is true philosophy and, conversely, true philosophy is true religion" (*De div. præd.*, I, I). But as the era advances a process of dissociation sets in, to end in the complete separation between the two sciences of Scholastic theology or the study of dogma, based fundamentally on Holy Scripture, and Scholastic philosophy, based on purely rational investigation. To understand the successive stages of this differentiation, which was not completed until the middle of the thirteenth century, we must draw attention to certain historical facts of capital importance.

(1) The origin of several philosophical problems, in the early Middle Ages, must be sought within the domain of theology, in the sense that the philosophical discussions arose in reference to theological questions. The discussion, e. g. of transubstantiation (Berengarius of Tours), raised the problem of substance and of change, or becoming. (2) Theology being regarded as a superior and sacred science, the whole pedagogic and didactic organization of the period tended to confirm this superiority (see section XI). (3) The enthusiasm for dialectics, which reached its maximum in the eleventh century, brought into fashion certain purely verbal methods of reasoning bordering on the sophistical. Anselm of Besata (Anselmus Peripateticus) is the type of this kind of reasoner. Now the dialecticians, in discussing theological subjects, claimed absolute validity for their methods, and they ended in such heresies as Gottschalk's on predestination, Berengarius's on transubstantiation, and Roscelin's Tritheism. Berengarius's motto was: "Per omnia ad dialecticam confugere". There followed an excessive reaction on the part of timorous theologians, practical men before all things, who charged dialectics with the sins of the dialecticians. This antagonistic movement coincided with an attempt to reform religious life. At the head of the group was Peter Damian (1007-72), the adversary of the liberal arts; he was the author of the saying that philosophy is the handmaid of theology. From this saying it has been concluded that the Middle Ages in general put philosophy under tutelage, whereas the maxim was current only among a narrow circle of reactionary theologians. Side by side with Peter Damian in Italy, were Manegold

of Lautenbach and Othloh of St. Emmeram, in Germany.

(4) At the same time a new tendency becomes discernible in the eleventh century, in Lanfranc, William of Hirschau, Rodulfus Ardens, and particularly St. Anselm of Canterbury; the theologian calls in the aid of philosophy to demonstrate certain dogmas or to show their rational side. St. Anselm, in an Augustinian spirit, attempted this justification of dogma, without perhaps invariably applying to the demonstrative value of his arguments the requisite limitations. In the thirteenth century these efforts resulted in a new theological method, the dialectic. (5) While these disputes as to the relations of philosophy and theology went on, many philosophical questions were nevertheless treated on their own account, as we have seen above (universals, St. Anselm's theodicy, Abelard's philosophy, etc.). (6) The dialectic method, developed fully in the twelfth century, just when Scholastic theology received a powerful impetus, is a theological, not a philosophical, method. The principal method in theology is the interpretation of Scripture and of authority; the dialectic method is secondary and consists in first establishing a dogma and then showing its reasonableness, confirming the argument from authority by the argument from reason. It is a process of apologetics. From the twelfth century onward, these two theological methods are fairly distinguished by the words *auctoritates*, *rationes*. Scholastic theology, condensed in the "summæ" and "books of sentences", is henceforward regarded as distinct from philosophy. The attitude of theologians towards philosophy is threefold: one group, the least influential, still opposes its introduction into theology, and carries on the reactionary traditions of the preceding period (e.g. Gauthier de Saint-Victor); another accepts philosophy, but takes a utilitarian view of it, regarding it merely as a prop of dogma (Peter Lombard); a third group, the most influential, since it includes the three theological schools of St. Victor, Abelard, and Gilbert de la Porrée, grants to philosophy, in addition to this apologetic rôle, an independent value which entitles it to be cultivated and studied for its own sake. The members of this group are at once both theologians and philosophers.

(7) At the opening of the thirteenth century one section of Augustinian theologians continued to emphasize the utilitarian and apologetic office of philosophy. But St. Thomas Aquinas created new Scholastic traditions, and wrote a chapter on scientific methodology in which the distinctness and independence of the two sciences is thoroughly established. Duns Scotus, again, and the Terminists exaggerated this independence. Latin Averroism, which had a brilliant but ephemeral vogue in the thirteenth and fourteenth centuries, accepted whole and entire in philosophy Averroistic Peripateticism, and, to safeguard Catholic orthodoxy, took refuge behind the sophism that what is true in philosophy may be false in theology, and conversely—wherein they were more reserved than Averroës and the Arab philosophers, who regarded religion as something inferior, good enough for the masses, and who did not trouble themselves about Moslem orthodoxy. Lully, going to extremes, maintained that all dogma is susceptible of demonstration, and that philosophy and theology coalesce. Taken as a whole, the Middle Ages, profoundly religious, constantly sought to reconcile its philosophy with the Catholic Faith. This bond the Renaissance philosophy severed. In the Reformation period a group of publicists, in view of the prevailing strife, formed projects of reconciliation among the numerous religious bodies. They convinced themselves that all religions possess a common fund of essential truths relating to God, and that their content is identical, in spite of divergent dogmas. Be-

sides, Theism, being only a form of Naturism applied to religion, suited the independent ways of the Renaissance. As in building up natural law, human nature was taken into consideration, so reason was interrogated to discover religious ideas. And hence the wide acceptance of Theism, not among Protestants only, but generally among minds that had been carried away with the Renaissance movement (Erasmus, Coornheert).

For this tolerance or religious indifferentism modern philosophy in more than one instance substituted a disdain of positive religions. The English Theism or Deism of the seventeenth and eighteenth centuries criticizes all positive religion and, in the name of an innate religious sense, builds up a natural religion which is reducible to a collection of theses on the existence of God and the immortality of the soul. The initiator of this movement was Herbert of Cheshire (1581-1648); J. Toland (1670-1722), Tindal (1656-1733), and Lord Bolingbroke took part in it. This criticizing movement inaugurated in England was taken up in France, where it combined with an outright hatred of Catholicism. Pierre Bayle (1646-1706) propounded the thesis that all religion is anti-rational and absurd, and that a state composed of Atheists is possible. Voltaire wished to substitute for Catholicism an incoherent mass of doctrines about God. The religious philosophy of the eighteenth century in France led to Atheism and paved the way for the Revolution. In justice to contemporary philosophy it must be credited with teaching the amplest tolerance towards the various religions; and in its programme of research it has included religious psychology, or the study of the religious sentiment.

For Catholic philosophy the relations between philosophy and theology, between reason and faith, were fixed, in a chapter of scientific methodology, by the great Scholastic thinkers of the thirteenth century. Its principles, which still retain their vitality, are as follows: (a) Distinctness of the two sciences.—The independence of philosophy in regard to theology, as in regard to any other science whatsoever, is only an interpretation of this undeniable principle of scientific progress, as applicable in the twentieth century as it was in the thirteenth, that a rightly constituted science derives its formal object, its principles, and its constructive method from its own resources, and that, this being so, it cannot borrow from any other science without compromising its own right to exist. (b) Negative, not positive, material, not formal, subordination of philosophy in regard to theology.—This means that, while the two sciences keep their formal independence (the independence of the principles by which their investigations are guided), there are certain matters where philosophy cannot contradict the solutions afforded by theology. The Scholastics of the Middle Ages justified this subordination, being profoundly convinced that Catholic dogma contains the infallible word of God, the expression of truth. Once a proposition, e.g. that two and two make four, has been accepted as certain, logic forbids any other science to form any conclusion subversive of that proposition. The material mutual subordination of the sciences is one of those laws out of which logic makes the indispensable guarantee of the unity of knowledge. "The truth duly demonstrated by one science serves as a beacon in another science." The certainty of a theory in chemistry imposes its acceptance on physics, and the physicist who should go contrary to it would be out of his course. Similarly, the philosopher cannot contradict the certain data of theology, any more than he can contradict the certain conclusions of the individual sciences. To deny this would be to deny the conformity of truth with truth, to contest the principle of contradiction, to surrender to a relativism which is destructive of all certitude. "It being supposed that

nothing but what is true is included in this science (sc. theology) . . . it being supposed that whatever is true by the decision and authority of this science can nowise be false by the decision of right reason: these things, I say, being supposed, as it is manifest from them that the authority of this science and reason alike rest upon truth, and one verity cannot be contrary to another, it must be said absolutely that reason can in no way be contrary to the authority of this Scripture, nay, all right reason is in accord with it" (Henry of Ghent, "Summa Theologica", X, iii, n. 4).

But when is a theory certain? This is a question of fact, and error is easy. In proportion as the principle is simple and absolute, so are its applications complex and variable. It is not for philosophy to establish the certitude of theological data, any more than to fix the conclusions of chemistry or of physiology. The certainty of those data and those conclusions must proceed from another source. "The preconceived idea is entertained that a Catholic savant is a soldier in the service of his religious faith, and that, in his hands, science is but a weapon to defend his *Credo*. In the eyes of a great many people, the Catholic savant seems to be always under the menace of excommunication, or entangled in dogmas which hamper him, and compelled, for the sake of loyalty to his Faith, to renounce the disinterested love of science and its free cultivation" (Mercier, "Rapport sur les études supér. de philos.", 1891, p. 9). Nothing could be more untrue.

X. THE CATHOLIC CHURCH AND PHILOSOPHY.—The principles which govern the doctrinal relations of philosophy and theology have moved the Catholic Church to intervene on various occasions in the history of philosophy. As to the Church's right and duty to intervene for the purpose of maintaining the integrity of theological dogma and the deposit of faith, there is no need of discussion in this place. It is interesting, however, to note the attitude taken by the Church towards philosophy throughout the ages, and particularly in the Middle Ages, when a civilization saturated with Christianity had established extremely intimate relations between theology and philosophy.

A. The censures of the Church have never fallen upon philosophy as such, but upon theological applications, judged false, which were based upon philosophical reasonings. John Scotus Eriugena, Roscelin, Berengarius, Abelard, Gilbert de la Porrée were condemned because their teachings tended to subvert theological dogmas. Eriugena denied the substantial distinction between God and created things; Roscelin held that there are three Gods; Berengarius, that there is no real transubstantiation in the Eucharist; Abelard and Gilbert de la Porrée essentially modified the dogma of the Trinity. The Church, through her councils, condemned their theological errors; with their philosophy as such she does not concern herself. "Nominalism", says Hauréau, "is the old enemy. It is, in fact, the doctrine which, because it best accords with reason, is most remote from axioms of faith. Denounced before council after council, Nominalism was condemned in the person of Abelard as it had been in the person of Roscelin" (Hist. philos. scol., I, 292).

No assertion could be more inaccurate. What the Church has condemned is neither the so-called Nominalism, nor Realism, nor philosophy in general, nor the method of arguing in theology, but certain applications of that method which are judged dangerous, i. e. matters which are not philosophical. In the thirteenth century a host of teachers adopted the philosophical theories of Roscelin and Abelard, and no councils were convoked to condemn them. The same may be said of the condemnation of David of Dinant (thirteenth century), who denied the distinc-

tion between God and matter, and of various doctrines condemned in the fourteenth century as tending to the negation of morality. It has been the same in modern times. To mention only the condemnations of Günther, of Rosmini, and of Ontologism in the nineteenth century, what alarmed the Church was the fact that the theses in question had a theological bearing.

B. The Church has never imposed any philosophical system, though she has anathematized many doctrines, or branded them as suspect.—This corresponds with the prohibitive, but not imperative, attitude of theology in regard to philosophy. To take one example, faith teaches that the world was created in time; and yet St. Thomas maintains that the concept of eternal creation (*ab æterno*) involves no contradiction. He did not think himself obliged to demonstrate creation in time: his teaching would have been heterodox only if, with the Averroists of his day, he had maintained the necessary eternity of the world. It may, perhaps, be objected that many Thomistic doctrines were condemned in 1277 by Etienne Tempier, Bishop of Paris. But it is well to note, and recent works on the subject have abundantly proved this, that Tempier's condemnation, in so far as it applied to Thomas Aquinas, was the issue of intrigues and personal animosity, and that, in canon law, it had no force outside of the Diocese of Paris. Moreover, it was annulled by one of Tempier's successors, Etienne de Borrière, in 1325.

C. The Church has encouraged philosophy.—To say nothing of the fact that all those who applied themselves to science and philosophy in the Middle Ages were churchmen, and that the liberal arts found an asylum in capitial and monastic schools until the twelfth century, it is important to remark that the principal universities of the Middle Ages were pontifical foundations. This was the case with Paris. To be sure, in the first years of the university's acquaintance with the Aristotelean encyclopædia (late twelfth century) there were prohibitions against reading the "Physics", the "Metaphysics", and the treatise "On the Soul". But these restrictions were of a temporary character and arose out of particular circumstances. In 1231, Gregory IX laid upon a commission of three consultors the charge to prepare an amended edition of Aristotle "ne utile per inutile vitietur" (lest what is useful suffer damage through what is useless). The work of expurgation was done, in point of fact, by the Albertine-Thomist School, and, beginning from the year 1255, the Faculty of Arts, with the knowledge of the ecclesiastical authority, ordered the teaching of all the books previously prohibited (see Mandonnet, "Siger de Brabant et l'averroïsme latin au XIII^e s.", Louvain, 1910). It might also be shown how in modern times and in our own day the popes have encouraged philosophic studies. Leo XIII, as is well known, considered the restoration of philosophic Thomism one of the chief tasks of his pontificate.

XI. THE TEACHING OF PHILOSOPHY.—The methods of teaching philosophy have varied in various ages. Socrates used to interview his auditors, and hold symposia in the market-place, on the porticoes, and in the public gardens. His method was interrogation, he whetted the curiosity of the audience and practised what had become known as Socratic irony and the maieutic art (*μαϊευτική τέχνη*), the art of delivering minds of their conceptions. His successors opened schools properly so called, and from the places occupied by these schools several systems took their names (the Stoic School, the Academy, the Lyceum). In the Middle Ages and down to the seventeenth century the learned language was Latin. The German discourses of Eckhart are mentioned as merely sporadic examples. From the ninth to the twelfth century teaching was confined to the monastic

and cathedral schools. It was the golden age of schools. Masters and students went from one school to another: Lanfranc travelled over Europe; John of Salisbury (twelfth century) heard at Paris all the then famous professors of philosophy; Abelard gathered crowds about his rostrum. Moreover: as the same subjects were taught everywhere, and from the same text-books scholastic wanderings were attended with few disadvantages. The books took the form of commentaries or monographs. From the time of Abelard a method came into use which met with great success, that of setting forth the pros and cons of a question, which was later perfected by the addition of a *solutio*. The application of this method was extended in the thirteenth century (e. g. in the "Summa theologia" of St. Thomas). Lastly, philosophy being an educational preparation for theology, the "Queen of the Sciences", philosophical and theological topics were combined in one and the same book, or even in the same lecture.

At the end of the twelfth century and the beginning of the thirteenth, the University of Paris was organized, and philosophical teaching was concentrated in the Faculty of Arts. Teaching was dominated by two principles: *internationalism* and *freedom*. The student was an apprentice-professor: after receiving the various degrees, he obtained from the chancellor of the university a licence to teach (*licentia docendi*). Many of the courses of this period have been preserved, the abbreviated script of the Middle Ages being virtually a stenographic system. The programme of courses drawn up in 1255 is well known: it comprises the exegesis of all the books of Aristotle. The commentary, or *lectio* (from *legere*, to read), is the ordinary form of instruction (whence the German *Vorlesungen* and the English *lecture*). There were also disputations, in which questions were treated by means of objections and answers; the exercise took a lively character, each one being invited to contribute his thoughts on the subject. The University of Paris was the model for all the others, notably those of Oxford and Cambridge. These forms of instruction in the universities lasted as long as Aristoteleanism, i. e. until the seventeenth century. In the eighteenth century—the *siècle des lumières* (*Erklärung*)—philosophy took a popular and encyclopedic form, and was circulated in the literary productions of the period. In the nineteenth century it resumed its didactic attitude in the universities and in the seminaries, where, indeed its teaching had long continued. The advance of philological and historical studies had a great influence on the character of philosophical teaching: critical methods were welcomed, and little by little the professors adopted the practice of specializing in this or that branch of philosophy—a practice which is still in vogue. Without attempting to touch on all the questions involved in modern methods of teaching philosophy, we shall here indicate some of the principal features.

A. *The Language of Philosophy*.—The earliest of the moderns—as Descartes or Leibniz—used both Latin and the vernacular, but in the nineteenth century (except in ecclesiastical seminaries and in certain academical exercises mainly ceremonial in character) the living languages supplanted Latin; the result has been a gain in clearness of thought and interest and vitality of teaching. Teaching in Latin too often contents itself with formulæ: the living language effects a better comprehension of things which must in any case be difficult. Personal experience, writes Fr. Hogan, formerly superior of the Boston Seminary, in his "Clerical Studies" (Philadelphia, 1895–1901), has shown that among students who have learned philosophy, particularly Scholastic, only in Latin, very few have acquired anything more than a mass of formulæ, which they hardly understand; though

this does not always prevent their adhering to their formulæ through thick and thin. Those who continue to write in Latin—as many Catholic philosophers, often of the highest worth, still do—have the sad experience of seeing their books confined to a very narrow circle of readers.

B. *Didactic Processes*.—Aristotle's advice, followed by the Scholastics, still retains its value and its force: before giving the solution of a problem, expound the reasons for and against. This explains, in particular, the great part played by the history of philosophy or the critical examination of the solutions proposed by the great thinkers. Commentary on a treatise still figures in some special higher courses; but contemporary philosophical teaching is principally divided according to the numerous branches of philosophy (see section II). The introduction of laboratories and practical seminaries (*séminaires pratiques*) in philosophical teaching has been of the greatest advantage. Side by side with libraries and shelves full of periodicals there is room for laboratories and museums, once the necessity of vivifying philosophy by contact with the sciences is admitted (see section VIII). As for the practical seminary, in which a group of students, with the aid of a teacher, investigate to some special problem, it may be applied to any branch of philosophy with remarkable results. The work in common, where each directs his individual efforts towards one general aim, makes each the beneficiary of the researches of all; it accustoms them to handling the instruments of research, facilitates the detection of facts, teaches the pupil how to discover for himself the reasons for what he observes, affords a real experience in the constructive methods of discovery proper to each subject, and very often decides the scientific vocation of those whose efforts have been crowned with a first success.

C. *The Order of Philosophical Teaching*.—One of the most complex questions is: With what branch ought philosophical teaching to begin, and what order should it follow? In conformity with an immemorial tradition, the beginning is often made with logic. Now logic, the science of science, is difficult to understand and unattractive in the earliest stages of teaching. It is better to begin with the sciences which take the real for their object: psychology, cosmology, metaphysics, and theodicy. Scientific logic will be better understood later on; moral philosophy presupposes psychology; systematic history of philosophy requires a preliminary acquaintance with all the branches of philosophy (see Mercier, "Manuel de philosophie", Introduction, third edition, Louvain, 1911).

Connected with this question of the order of teaching is another: viz. What should be the scientific teaching preliminary to philosophy? Only a course in the sciences specially appropriate to philosophy can meet the manifold exigencies of the problem. The general scientific courses of our modern universities include too much or too little: "too much in the sense that professional teaching must go into numerous technical facts and details with which philosophy has nothing to do; too little, because professional teaching often makes the observation of facts its ultimate aim, whilst, from our standpoint, facts are, and can be, only a means, a starting-point, towards acquiring a knowledge of the most general causes and laws" (Mercier, "Rapport sur les études supérieures de philosophie", Louvain, 1891, p. 25). M. Boutroux, a professor at the Sorbonne, solves the problem of philosophical teaching at the university in the same sense, and, according to him, the flexible and very liberal organization of the faculty of philosophy should include "the whole assemblage of the sciences, whether theoretic, mathematico-physical, or philologico-historical" ("Revue internationale de l'enseignement", Paris, 1901, p. 510).

The programme of courses of the Institute of Philosophy of Louvain is drawn up in conformity with this spirit.

GENERAL WORKS.—MERCIER, *Cours de philosophie. Logique. Critériologie générale. Ontologie. M. DE WULF.

Philoxenus (AKHSENĀYĀ) OF MABBOGH, b. at Tahal, in the Persian province of Beth-Garmai in the second quarter of the fifth century; d. at Gangra, in Paphlagonia, 523. He studied at Edessa when Ibas was bishop of that city (435-57). Shortly after he joined the ranks of the Monophysites and became their most learned and courageous champion. In 485 he was appointed Bishop of Hierapolis, or Mabbogh

(Manbidj) by Peter the Fuller. He continued to attack the Decrees of Chalcedon and to defend the "Henoticon" of Zeno. He twice visited Constantinople in the interests of his party, and in 512 he persuaded the Emperor Anastasius to depose Flavian of Antioch and to appoint Severus in his stead. His triumph, however, was short-lived. Anastasius died in 518 and was succeeded by the orthodox Justin I. By a decree of the new ruler the bishops who had been deposed under Zeno and Anastasius were restored to their sees, and Philoxenus, with fifty-three other Monophysites, was banished. He went to Philippopolis, in Thrace, and afterwards to Gangra where he was murdered.

Philoxenus is considered one of the greatest masters of Syriac prose. He wrote treatises on liturgy, exegesis, moral and dogmatic theology, besides many letters which are important for the ecclesiastical history of his time. Notice must be taken of the Philoxenian Syriac version of the Holy Scriptures. This version was not Philoxenus's own work, but was made, upon his request and under his direction, by the *chorepiscopus* Polycarp about 505. It seems to have been a free revision of the Peshitta according to the Lucian recension of the Septuagint. It is not known whether it extended to the whole Bible. Of the Philoxenian version of the Old Testament we have only a few fragments of the Book of Isaiah (xxviii, 3-17; xlii, 17-xlix, 18; lxvi, 11-23) preserved in Syr. MS. Add. 17106 of the British Museum, and published by Ceriani. Of the New Testament we have the Second Epistle of St. Peter, the Second and Third Epistles of St. John and the Epistle of St. Jude, all of which are printed in our Syriac Bibles. There remain also a few fragments of the Epistles of St. Paul (Rom., vi, 20; I Cor., i, 28; II Cor., vii, 13; x, 4; Eph., vi, 12), first published by Wiseman from Syr. MS. 153 of the Vatican. Gwynn is of the opinion that the Syriac text of the Apocalypse published by himself in 1897 probably belongs to the original Philoxenian.

A. A. VASCHALDE.

Phocæa, titular see in Asia, suffragan of Ephesus. The town of Phocæa was founded in the eleventh century B. C. by colonists from Phocidia led by two Athenians. They settled first on a small island on the neighbouring coast, a territory given by the Cymæans, between the Bays of Cymæus and Hermæus, 23 miles north of Smyrna. It was admitted to the Ionian Confederation after having accepted kings of the race of Codrus. Its fine position, its two ports, and the enterprising spirit of the inhabitants made it one of the chief maritime cities of ancient times. Historians speak of it but rarely before the Roman wars against Antiochus. The prætor Æmilius Regillus took possession of the town (189 B. C.); he disturbed neither its boundaries nor its laws. During the war against Aristonicus, who reclaimed the throne of Pergamum, the Phocæans took his part and, through the intervention of Massilia, escaped being severely punished by the Romans. At the time the

latter had definitively established his power in Asia, Phocæa was only a commercial town; its money was coined until the time of the later Empire; but its harbour gradually silted up and the inhabitants abandoned it. In 978 Theodore Carentenus built Bardas Sclerus near Phocæa. In 1090 the Turk Tchaga of Smyrna took possession of it for a short time. The Venetians traded there after 1082, but the Genoese quickly supplanted them.

In 1275 Michael VIII Palæologus gave Manuel Zaccharia the territory of the city and the right to exploit the neighbouring alum mines. In 1304 the Genoese, with the co-operation of the Greeks of the adjoining towns, erected a fortress to defend the town against the Turks, and some distance from the ancient Phocæa founded a city which they called New Phocæa. In 1336 Andronicus the Young, allied with Saroukhan, Sultan of Magnesia, besieged the two towns and obliged them to pay the tribute stipulated in 1275. They continued also to pay annually to Saroukhan 500 ducats. From 1340 to 1345 the Greeks occupied the two towns, and again in 1358 for a short period. At the time of the invasion of Timur in 1403, they purchased peace by the payment of money. In the midst of difficulties the Genoese colony continued until the end of 1455, when it passed into the hands of the Turks. In 1650 a naval battle between the Turks and Venetians took place in sight of Phocæa. To-day Phocæa, in Turkish Fotchatin, or Eski Fotcha (ancient Phocæa), is the capital of a caza of the vilayet of Smyrna, has about 6000 inhabitants (4500 Greeks), and exports salt. About six miles to the north, Yeni Fotcha (new Phocæa) is situated on the Gulf of Tchandarli; it has 4500 inhabitants (3500 Greeks), and exports agricultural products.

Seven Greek bishops of Phocæa are known by their signatures at the Councils; Mark, at Sardica (344); Theoctistus, at Ephesus (441); Quintus, at Chalcedon (451); John, at Constantinople (692); Leo, at Nice (787); Nicetas, at Constantinople (869); Paul, at Constantinople (879). In 1387 ancient Phocæa was separated from Ephesus and given to the suffragan of Smyrna. In 1403 it still had a titular. The Genoese colony had its Latin bishops, seven of whose names are recorded from 1346 to 1475; the later ones were undoubtedly non-residents: Bartholomew, 1346; John, 1383; John, before 1427; Nicholas, 1427; Ludovicus, about 1450; Stephanus, 1457; Ægidius, 1475.

Jahrhundert* (Leipzig, 1903), 63; CUINET, *La Turquie d'Asie*, III, 478-85.

S. PÉTRIDÈS.

Phœnicia is a narrow strip of land, about one hundred and fifty miles long and thirty miles wide, shut in between the Mediterranean on the west and the high range of Lebanon on the east, and consisting mostly of a succession of narrow valleys, ravines, and hills, the latter descending gradually towards the sea. On the north it is bounded by the River Orontes and Mount Casius, and by Mount Carmel on the south. The land is fertile and well irrigated by numerous torrents and streams deriving their waters mainly from the melting snows and rain-storms of the winter and spring seasons. The principal vegetation consists of the renowned cedars of Lebanon, cypresses, pines, palms, olive, vine, fig, and pomegranates. On this narrow strip of land, the Phœnicians had twenty-five cities of which the most important were Tyre, Sidon, Aradus, Byblus, Marathus, and Tripolis. Less important were Laodicea, Simyra, Arca, Aphaca, Berytus, Ecdippa, Akko, Dor, Joppa, Gabala, Betrys, and Sarepta. The name "Phœnicia" is in all probability of Greek origin, *φοινίκη* being a Greek derivative of *φόνος*, blood-red. Our principal sources of information concerning Phœnicia are: first, numerous Phœnician inscriptions found

in Phœnicia, Cyprus, Egypt, Greece, Sicily, Spain, Africa, Italy, and France, and published in the "Corpus Inscriptionum Semiticarum", the oldest being a simple one of the ninth century B. C.; the rest of little historical value, and of comparatively late date, i. e., from the fourth century B. C. down; second, Egyptian and Assyro-Babylonian historical inscriptions, especially the Tell-el-Amarna letters of the fifteenth century B. C., in which are found frequent and valuable references to Phœnicia and its political relations with Western Asia and Egypt; the Old Testament, especially in III Kings, v, xvi; Isaiah, xxiii; Jeremias, xxv, xxvii, and Ezechiel, xxvi-xxxii; finally, some Greek and Latin historians and writers, both ecclesiastical and pagan.

The oldest historical references to Phœnicia are found in the Egyptian inscriptions of the Pharaohs, Aahmes (1587-62 B. C.) and his successors, Thothmes I (1541-16 B. C.), and Thothmes III (1503-1449 B. C.) in which the Phœnicians are called "Dahe" or "Zahi", and "Fenkhu". In the Tell-el-Amarna letters is found much interesting information concerning their cities and especially Tyre, famous for her wealth. During all this period Egyptian suzerainty was more or less effective. Sidon was gradually eclipsed by the rising power and wealth of Tyre, against which the Philistines were powerless, though they constantly attacked the former. About the year 1250, after conquering Ashdod, Askelon, Ekron, Gaza, and Gath, they forced the Sidonians to surrender the city of Dor. At this time Tyre became foremost in Phœnicia and one of the greatest and wealthiest cities of the Mediterranean region. Its first king was Hiram, the son of Abi-Baal and contemporary of David and Solomon. His reign lasted some forty years, and to his energy Tyre owed much of its renown. He enlarged the city, surrounding it with massive walls, improved its harbours, and rebuilt the temple of Melkarth. He forced the Philistine pirates to retreat, thus securing prosperity in maritime commerce and caravan trade, and Phœnician colonization spread along the coast of Asia Minor, Sicily, Greece, and Africa. He established a commercial alliance with the Hebrews, and his Phœnician artists and craftsmen greatly aided them in building the temple, and palaces of Solomon. He quelled the revolt in Utica and established Phœnician supremacy in North Africa where Carthage, the most important of all Phœnician colonies, was later built.

Hiram was succeeded in 922 by his son, Abd-Starte I, who, after seven years of troubled reign, was murdered, and most of his successors also met with a violent end. About this time hostilities arose between Phœnicia and Assyria, although two centuries earlier Tiglath-pileser I, when marching through the northern part of Phœnicia, was hospitably entertained by the inhabitants of Aradus. In 880 Ithbaal became King of Phœnicia, contemporaneous with Asshur-nasir-pal in Assyria and Achab in Israel. He was succeeded by Baal-azar and Metten I. Metten reigned for nine years and died, leaving Pygmalion, an infant son, but nominating as his successor Sicharbas, the high priest of Melkarth, who was married to Elissa, his daughter. The tale runs that when Pygmalion came to manhood he killed Sicharbas, upon which Elissa, with such nobles as adhered to her, fled first to Cyprus and afterwards to Africa, where the colony of Carthage was founded (c. 850 B. C.). Asshur-nasir-pal and his son and successor Shalmaneser II nominally conquered Phœnicia; but in 745 B. C. Tiglath-pileser III compelled the northern tribes to accept Assyrian governors. As soon as this scheme of complete absorption became manifest a general conflict ensued, from which Assyria emerged victorious and several Phœnician cities were captured and destroyed. The invasion of Shalmaneser IV in 727 was frustrated, but in 722 he almost sacked the city of Tyre. Sargon, his successor and great general, compelled Elulæus, King of Tyre,

to come to honourable terms with him. In 701 Sennacherib conquered the revolting cities of Syria and Phœnicia. Elulæus fled to Cyprus and Tubaal was made king.

In 680 Abd-Melkarth, his successor, rebelled against the Assyrian domination, but fled before Esarhaddon, the son of Sennacherib. Sidon was practically destroyed, most of its inhabitants carried off to Assyria, and their places filled by captives from Babylonia and Elam. During the reign of Assurbanipal (668-625 B. C.) Tyre was once more attacked and conquered, but, as usual, honourably treated. In 606 the Assyrian empire itself was demolished by the allied Babylonians and Medes, and in 605 Nabuchodonosor, son and successor of Nabopolassar, after having conquered Elam and the adjacent countries, subdued (586 B. C.) Syria, Palestine, Phœnicia, and Egypt. As the Tyrians had command of the sea, it was thirteen years before their city surrendered, but the long siege crippled its commerce, and Sidon regained its ancient position as the leading city. Phœnicia was passing through its final stage of national independence and glory. From the fifth century on, it was continually harassed by the incursions of various Greek colonies who gradually absorbed its commerce and industry. It passed repeatedly under the rule of the Medo-Persian kings, Cyrus, Cambyses, Darius, and finally Xerxes, who attacked the Athenians at Salamis with the aid of the Phœnician navy, but their fleet was defeated and destroyed. In 332, it was finally and completely conquered by Alexander the Great, after whose death and subsequent to the partition of his great Macedonian empire amongst his four generals, it fell to Laodemon. In 314, Ptolemy attacked Laodemon and annexed Phœnicia to Egypt. In 198 B. C., it was absorbed by the Seleucid dynasty of Syria, after the downfall of which (65 A. D.), it became a Roman province and remained such till the Mohammedan conquest of Syria in the seventh century. Phœnicia now forms one of the most important Turkish vilayets of Syria with Beyrout as its principal city.

The whole political history and constitution of Phœnicia may be summarized as follows: The Phœnicians never built an empire, but each city had its little independent territory, assemblies, kings, and government, and for general state business sent delegates to Tyre. They were not a military, but essentially a seafaring and commercial people, and were successively conquered by the Egyptians, Assyrians, Babylonians, Persians, Greeks, and Romans, to whom, because of their great wealth, they fulfilled all their obligations by the payment of tribute. Although blessed with fertile land and well provided by nature, the Phœnicians, owing to their small territory and comparatively large population, were compelled, from the very remotest antiquity, to gain their livelihood through commerce. Hence, their numerous caravan routes to the East, and their wonderful marine commerce with the West. They were the only nation of the ancient East who had a navy. By land they pushed their trade to Arabia for gold, agate, onyx, incense, and myrrh; to India for pearls, spices, ivory, ebony, and ostrich plumes; to Mesopotamia for cotton and linen clothes; to Palestine and Egypt for grain, wheat, and barley; to the regions of the Black Sea for horses, slaves, and copper. By sea they encircled all the Mediterranean coast, along Syria, North Africa, Asia Minor, the Ægean Sea, and even Spain, France, and England. A logical result of this remarkable commercial activity was the founding in Cyprus, Egypt, Crete, Sicily, Africa, Malta, Sardinia, Spain, Asia Minor, and Greece of numerous colonies, which became important centres of Phœnician commerce and civilization, and in due time left their deep mark upon the history and civilization of the classical nations of the Mediterranean world.

Owing to this activity also, the Phœnicians developed neither literature nor arts. The work done by them for Solomon shows that their architectural and mechanical skill was great only in superiority to that of the Hebrews. The remains of their architecture are heavy and their æsthetic art is primitive in character. In literature, they left nothing worthy of preservation. To them is ascribed the simplification of the primitive, pictorial or ideographic, and syllabic systems of writing into an alphabetic one consisting of twenty-two letters and written from right to left, from which are derived all the later and modern Semitic and European alphabets. This tradition, however, must be accepted with some modification. There is also no agreement as to whether the basis of this Phœnician alphabet is of Egyptian (hieroglyphic and hieratic) or of Assyro-Babylonian (cuneiform) origin. Those who derive it from a Cypriot prototype have not as yet sufficiently demonstrated the plausibility and probability of their opinion. The recent discovery of numerous Minoan inscriptions in the Island of Crete, some of them dating as early as 2000 B. C., has considerably complicated the problem. Other inventions, or improvements, in science and mechanics, such as weights and measures, glass manufacture, coinage, the finding of the polar star, and navigation are perhaps justly attributed to the Phœnicians. Both ethnographically and linguistically, they belong to the so-called Semitic group. They were called Canaanites, and spoke a dialectal variety of the Canaanite group of Western Semitic tongues, closely akin to the dialects of the Semitic inhabitants of Syria, Palestine, and Canaan. A few specimens of their language, as it was spoken by the colonies in North Africa towards the end of the third century B. C., may still be read in Plautus, from which it appears to have already attained a great degree of consonantal and vocal decay. The dialect of the inscriptions is more archaic and less corrupt.

Our information concerning the religion of the Phœnicians is meagre and mainly found in the Old Testament, in classical traditions, and legends. Of special interest, however, are the votive inscriptions in which a great number of proper names generally construed with that of some divinity are found. Phœnician polytheism, like that of the other Semitic nations, was based partly on Animism and partly on the worship of the great powers of nature, mostly of astral origin. They deified the sun and the moon, which they considered the great forces that create and destroy, and called them Baal and Astaroth. Each city had its divine pair: at Sidon it was Baal Sidon (the sun) and Astarte (the moon); at Gebel, Baal Tummuz and Baaleth; at Carthage, Baal Hamon and Tanith. But the same god changed his name according as he was conceived as creator or destroyer; thus Baal as destroyer was worshipped at Carthage under the name of Moloch. These gods, represented by idols, had their temples, altars, and priests. As creators they were honoured with orgies and tumultuous feasts; as destroyers, by human victims. Astoreth (Venus), whom the Sidonians represented by the crescent of the moon and the dove, had her cult in the sacred woods. Baal Moloch was figured at Carthage as a bronze colossus with arms extended and lowered. To appease him children were laid in his arms, and fell at once into a pit of fire. When Agathocles besieged the city the principal Carthaginians sacrificed to Moloch as many as two hundred of their children. Although this sensual and sanguinary religion inspired the surrounding nations with horror, they, nevertheless, imitated it. Hence, the Hebrews frequently sacrificed to Baal on the mountains, and the Greeks adored Astarte of Sidon under the name of Aphrodite, and Baal Melkart of Tyre under the name of Herakles. The principal Phœnician divinities are Adonis, El, Eshmon, Baal,

Gad, Moloch, Melkarth, Sakan, Anath, Astaroth, Rasaph, Sad, and many others. (For the history of Christianity in Phœnicia and its present condition see SYRIA.)

GABRIEL OUSSANI.

Photinus, heretic of the fourth century, a Galatian and deacon to Marcellus, Metropolitan of Ancyra; d. 376. He became Bishop of Sirmium in Pannonia, an important position on account of the frequent residence of the Emperor Constantius there. The city was more Latin than Greek, and Photinus knew both languages. Marcellus was deposed by the Arian party, but was restored by Pope Julius and the Synod of Sardica (343), and was believed by them to be orthodox. But Photinus was obviously heretical, and the Eusebian court-party condemned them both at the Synod of Antioch (344), which drew up the "macrostich" creed. Three envoys were sent to the West and in a synod at Milan (345) Photinus was condemned, but not Marcellus; communion was refused to the envoys because they refused to anathematize Arius. It is evident from the way in which Pope Liberius mentions this synod that Roman legates were present, and St. Hilary calls its sentence a condemnation by the Romans. Two years later another synod, perhaps also at Milan, tried to obtain the deposition of Photinus but this was impossible owing to an outbreak of the populace in his favour. Another synod was held against him at Sirmium; some Arianizing propositions from it are quoted by St. Hilary. The heretic appealed to the emperor, who appointed judges before whom he should be heard. For this purpose a great synod assembled at Sirmium (351). Basil, the supplanter of Marcellus as Bishop of Ancyra and the future leader of the Semi-Arians, disputed with Photinus. The heretic was deposed, and twenty-seven anathematisms were agreed to. Photinus probably returned to his see at the accession of Julian, like the other exiled bishops, for St. Jerome says he was banished by Valentinian (364-75). Eventually he settled in Galatia. Epiphanius, writing at about the date of his death, considered his heresy dead in the West. In Pannonia there were still some Photinians in 381, and a Photinian named Marcus, driven from Rome under Innocent I, found adherents in Croatia. In later writers, e. g., St. Augustine, Photinian is the name for any who held Christ to be a mere man.

We obtain some knowledge of the heresies of Photinus from the twenty-seven anathematisms of the council of 351, of which all but 1, 10, 12, 13, 18, 23, 24, 25 (according to St. Hilary's order: 1, 10, 11, 12, 17, 22, 24, 25) and possibly 2 are directed against him. We have corroborative evidence from many writers, especially St. Epiphanius, who had before him the complete minutes of the disputation with Basil of Ancyra. The canons obviously misrepresent Photinus's doctrine in condemning it, in so far as they sometimes say "Son" where Photinus would have said "Word". He makes the Father and the Word one Person (πρόσωπον). The Word is equally with the Father unbegotten, or is called a part of the Father, eternally in Him as our logos is in us. The latent Word (ἐνδιάθετος) becomes the explicit Word (προφορικὸς) not, apparently, at the creation, but at the Incarnation, for only then is He really Son. The Divine Substance can be dilated and contracted (so

St. Hilary translates πλατύνεσθαι and συστέλλεσθαι, while Mercator's version of Nestorius's fourth sermon gives "extended and collected"). This is exactly the wording of Sabellius, who said that God πλατύνεται, is broadened out, into Son and Spirit. To Photinus the expansion forms the Son, who is not, until the human birth of Christ. Hence before the Incarnation there is no Son, and God is Father and Word, λογοπάτωρ. The Incarnation seems to have been conceived after a Nestorian fashion, for Photinus declared the Son of Mary to be mere man, and this is the best-known point in his teaching. He was consequently classed with Paul of Samosata; Jerome even calls him an Ebionite, probably because, like Mercator, he believed him to have denied the Virgin birth. But this is perhaps an error. He certainly said that the Holy Ghost descended upon Christ and that He was conceived by the Holy Ghost. By His union with the prophoric Word, Christ was the Son. The Holy Ghost is identified like the Word with the Unbegotten; He is a part of the Father and the Word, as the Word is a part of the Father. It is evident that Photinus went so far beyond Marcellus that it is unfair to call him his follower. In his Trinitarian doctrine he is a Modalist Monarchian, and in his Christology a Dynamistic Monarchian, combining the errors of Theodotus with those of Sabellius. But it is clear that his views were partly motivated by the desire to get away from the Ditheism which not only the Arians but even the Eastern moderates were unable to avoid, and he especially denounced the Arian doctrine that the Son is produced by the Will of the Father. His writings are lost; the chief of them were "Contra Gentes" and "Libri ad Valentinianum", according to St. Jerome; he wrote a work in both Greek and Latin against all the heresies, and an explanation of the Creed.

JOHN CHAPMAN.

Photius of Constantinople, chief author of the great schism between East and West, was b. at Constantinople c. 815 (Hergenröther says "not much earlier than 827", "Photius", I, 316; others, about 810); d. probably 6 Feb., 897. His father was a *spatharios* (lifeguard) named Sergius. Symeon Magister ("De Mich. et Theod.", Bonn ed., 1838, xxix, 668) says that his mother was an escaped nun and that he was illegitimate. He further relates that a holy bishop, Michael of Synnada, before his birth foretold that he would become patriarch, but would work so much evil that it would be better that he should not be born. His father then wanted to kill him and his mother, but the bishop said: "You cannot hinder what God has ordained. Take care for yourself." His mother also dreamed that she would give birth to a demon. When he was born the abbot of the Maximine monastery baptized him and gave him the name Photius (Enlightened), saying: "Perhaps the anger of God will be turned from him" (Symeon Magister, *ibid.*, cf. Hergenröther, "Photius", I, 318-19). These stories need not be taken seriously. It is certain that the future patriarch belonged to one of the great families of Constantinople; the Patriarch Tarasius (784-806), in whose time the seventh general council (Second of Nicæa, 787) was held, was either elder brother or uncle of his father (Photius: Ep. ii, P. G., CII, 609). The family was conspicuously orthodox and had suffered some persecution in Iconoclast times (under Leo V, 813-20). Photius says that in his youth he had had a passing inclination for the monastic life ("Ep. ad Orient. et Econ.", P. G., CII, 1020), but the prospect of a career in the world soon eclipsed it.

He early laid the foundations of that erudition which eventually made him one of the most famous scholars of all the Middle Ages. His natural aptitude

must have been extraordinary, his industry was colossal. Photius does not appear to have had any teachers worthy of being remembered; at any rate he never alludes to his masters. Hergenröther, however, notes that there were many good scholars at Constantinople while Photius was a child and young man, and argues from his exact and systematic knowledge of all branches of learning that he could not have been entirely self-taught (op. cit., I, 322). His enemies appreciated his learning. Nicetas, the friend and biographer of his rival Ignatius, praises Photius's skill in grammar, poetry, rhetoric, philosophy, medicine, law, "and all science" ("Vita S. Ignatii" in Mansi, XVI, 229). Pope Nicholas I, in the heat of the quarrel, writes to the Emperor Michael III: "Consider very carefully how Photius can stand, in spite of his great virtues and universal knowledge" (Ep. xcvi "Ad Mich.", P. G., CXIX, 1030). It is curious that so learned a man never knew Latin. While he was still a young man he made the first draft of his encyclopædic "Myrobiblion". At an early age, also, he began to teach grammar, philosophy, and theology in his own house to a steadily increasing number of students.

His public career was to be that of a statesman, coupled with a military command. His brother Sergius married Irene, the emperor's aunt. This connexion and his undoubted merit procured Photius speedy advancement. He became chief secretary of State (*πρωτοσηκρήτης*) and captain of the Life Guard (*πρωτοσπαθῆριος*). He was unmarried. Probably about 838 he was sent on an embassy "to the Assyrians" ("Myrobiblion", preface), i. e., apparently, to the Khalifa at Bagdad. In the year 857, then, when the crisis came in his life, Photius was already one of the most prominent members of the Court of Constantinople. That crisis is the story of the Great Schism (see GREEK CHURCH). The emperor was Michael III (842-67), son of the Theodora who had finally restored the holy images. When he succeeded his father Theophilus (829-842) he was only three years old; he grew to be the wretched boy known in Byzantine history as Michael the Drunkard (*ὁ μεθύστης*). Theodora, at first regent, retired in 856, and her brother Bardas succeeded, with the title of Cæsar. Bardas lived in incest with his daughter-in-law Eudocia, wherefore the Patriarch Ignatius (846-57) refused him Holy Communion on the Epiphany of 857. Ignatius was deposed and banished (Nov. 23, 857), and the more pliant Photius was intruded into his place. He was hurried through Holy Orders in six days; on Christmas Day, 857, Gregory Asbestas of Syracuse, himself excommunicate for insubordination by Ignatius, ordained Photius patriarch. By this act Photius committed three offences against canon law: he was ordained bishop without having kept the interstices, by an excommunicate consecrator, and to an already occupied see. To receive ordination from an excommunicate person made him too excommunicate *ipso facto*.

After vain attempts to make Ignatius resign his see, the emperor tried to obtain from Pope Nicholas I (858-67) recognition of Photius by a letter grossly misrepresenting the facts and asking for legates to come and decide the question in a synod. Photius also wrote, very respectfully, to the same purpose (Hergenröther, "Photius", I, 407-11). The pope sent two legates, Rodoald of Porto and Zachary of Anagni, with cautious letters. The legates were to hear both sides and report to him. A synod was held in St. Sophia's (May, 861). The legates took heavy bribes and agreed to Ignatius's deposition and Photius's succession. They returned to Rome with further letters, and the emperor sent his Secretary of State, Leo, after them with more explanations (Hergenröther, op. cit., I, 439-460). In all these letters both the emperor and Photius emphatically acknowledge the Roman primacy and categorically invoke the

pope's jurisdiction to confirm what has happened. Meanwhile Ignatius, in exile at the island Terebinth, sent his friend the Archimandrite Theognostus to Rome with an urgent letter setting forth his case (Hergenröther, I, 460-61). Theognostus did not arrive till 862. Nicholas, then, having heard both sides, decided for Ignatius, and answered the letters of Michael and Photius by insisting that Ignatius must be restored, that the usurpation of his see must cease (ibid., I, 511-16, 516-19). He also wrote in the same sense to the other Eastern patriarchs (510-11). From that attitude Rome never wavered: it was the immediate cause of the schism. In 863 the pope held a synod at the Lateran in which the two legates were tried, degraded, and excommunicated. The synod repeats Nicholas's decision, that Ignatius is lawful Patriarch of Constantinople; Photius is to be excommunicate unless he retires at once from his usurped place.

But Photius had the emperor and the Court on his side. Instead of obeying the pope, to whom he had appealed, he resolved to deny his authority altogether. Ignatius was kept chained in prison, the pope's letters were not allowed to be published. The emperor sent an answer dictated by Photius saying that nothing Nicholas could do would help Ignatius, that all the Eastern Patriarchs were on Photius's side, that the excommunication of the legates must be explained and that unless the pope altered his decision, Michael would come to Rome with an army to punish him. Photius then kept his place undisturbed for four years. In 867 he carried the war into the enemy's camp by excommunicating the pope and his Latins. The reasons he gives for this, in an encyclical sent to the Eastern patriarchs, are: that Latins (1) fast on Saturday, (2) do not begin Lent till Ash Wednesday (instead of three days earlier, as in the East), (3) do not allow priests to be married, (4) do not allow priests to administer confirmation, (5) have added the *filioque* to the creed. Because of these errors the pope and all Latins are: "forerunners of apostasy, servants of Antichrist who deserve a thousand deaths, liars, fighters against God" (Hergenröther, I, 642-46). It is not easy to say what the Melchite patriarchs thought of the quarrel at this juncture. Afterwards, at the Eighth General Council, their legates declared that they had pronounced no sentence against Photius because that of the pope was obviously sufficient.

Then, suddenly, in the same year (Sept., 867), Photius fell. Michael III was murdered and Basil I (the Macedonian, 867-86) seized his place as emperor. Photius shared the fate of all Michael's friends. He was ejected from the patriarch's palace, and Ignatius restored. Nicholas I died (Nov. 13, 867). Adrian II (867-72), his successor, answered Ignatius's appeal for legates to attend a synod that should examine the whole matter by sending Donatus, Bishop of Ostia, Stephen, Bishop of Nepi, and a deacon, Marinus. They arrived at Constantinople in Sept., 869, and in October the synod was opened which Catholics recognize as the Eighth General Council (Fourth of Constantinople). This synod tried Photius, confirmed his deposition, and, as he refused to renounce his claim, excommunicated him. The bishops of his party received light penances (Mansi, XVI, 308-409). Photius was banished to a monastery at Stenos on the Bosphorus. Here he spent seven years, writing letters to his friends, organizing his party, and waiting for another chance. Meanwhile Ignatius reigned as patriarch. Photius, as part of his policy, professed great admiration for the emperor and sent him a fictitious pedigree showing his descent from St. Gregory the Illuminator and a forged prophecy foretelling his greatness (Mansi, XVI, 284). Basil was so pleased with this that he recalled him in 876 and appointed him tutor to his son Constantine. Photius ingratiated himself with everyone and feigned recon-

ciliation with Ignatius. It is doubtful how far Ignatius believed in him, but Photius at this time never tires of expatiating on his close friendship with the patriarch. He became so popular that when Ignatius died (23 Oct., 877) a strong party demanded that Photius should succeed him; the emperor was now on their side, and an embassy went to Rome to explain that everyone at Constantinople wanted Photius to be patriarch. The pope (John VIII, 872-82) agreed, absolved him from all censure, and acknowledged him as patriarch.

This concession has been much discussed. It has been represented, truly enough, that Photius had shown himself unfit for such a post; John VIII's acknowledgment of him has been described as showing deplorable weakness. On the other hand, by Ignatius's death the See of Constantinople was now really vacant; the clergy had an undoubted right to elect their own patriarch; to refuse to acknowledge Photius would have provoked a fresh breach with the East, would not have prevented his occupation of the see, and would have given his party (including the emperor) just reason for a quarrel. The event proved that almost anything could have been better than to allow his succession, if it could be prevented. But the pope could not foresee that, and no doubt hoped that Photius, having reached the height of his ambition, would drop the quarrel.

In 878, then, Photius at last obtained lawfully the place he had formerly usurped. Rome acknowledged him and restored him to her communion. There was no possible reason now for a fresh quarrel. But he had identified himself so completely with that strong anti-Roman party in the East which he mainly had formed, and, doubtless, he had formed so great a hatred of Rome, that now he carried on the old quarrel with as much bitterness as ever and more influence. Nevertheless he applied to Rome for legates to come to another synod. There was no reason for the synod, but he persuaded John VIII that it would clear up the last remains of the schism and rivet more firmly the union between East and West. His real motive was, no doubt, to undo the effect of the synod that had deposed him. The pope sent three legates, Cardinal Peter of St. Chrysogonus, Paul, Bishop of Ancona, and Eugene, Bishop of Ostia. The synod was opened in St. Sophia's in November, 879. This is the "Pseudosynodus Photiana" which the Orthodox count as the Eighth General Council. Photius had it all his own way throughout. He revoked the acts of the former synod (869), repeated all his accusations against the Latins, dwelling especially on the *filioque* grievance, anathematized all who added anything to the Creed, and declared that Bulgaria should belong to the Byzantine Patriarchate. The fact that there was a great majority for all these measures shows how strong Photius's party had become in the East. The legates, like their predecessors in 861, agreed to everything the majority desired (Mansi, XVII, 374 sq.). As soon as they had returned to Rome, Photius sent the Acts to the pope for his confirmation. Instead John, naturally, again excommunicated him. So the schism broke out again. This time it lasted seven years, till Basil I's death in 886.

Basil was succeeded by his son Leo VI (886-912), who strongly disliked Photius. One of his first acts was to accuse him of treason, depose, and banish him (886). The story of this second deposition and banishment is obscure. The charge was that Photius had conspired to depose the emperor and put one of his own relations on the throne—an accusation which probably meant that the emperor wanted to get rid of him. As Stephen, Leo's younger brother, was made patriarch (886-93) the real explanation may be merely that Leo disliked Photius and wanted a place for his brother. Stephen's intrusion was as glaring an offence against canon law as had been that

of Photius in 857; so Rome refused to recognize him. It was only under his successor Antony II (893-95) that a synod was held which restored reunion for a century and a half, till the time of Michael Cærularius (1043-58). But Photius had left a powerful anti-Roman party, eager to repudiate the pope's primacy and ready for another schism. It was this party, to which Cærularius belonged, that triumphed at Constantinople under him, so that Photius is rightly considered the author of the schism which still lasts. After this second deposition Photius suddenly disappears from history. It is not even known in what monastery he spent his last years. Among his many letters there is none that can be dated certainly as belonging to this second exile. The date of his death, not quite certain, is generally given as 6 February, 897.

That Photius was one of the greatest men of the Middle Ages, one of the most remarkable characters in all church history, will not be disputed. His fatal quarrel with Rome, though the most famous, was only one result of his many-sided activity. During the stormy years he spent on the patriarch's throne, while he was warring against the Latins, he was negotiating with the Moslem Khalifa for the protection of the Christians under Moslem rule and the care of the Holy Places, and carrying on controversies against various Eastern heretics, Armenians, Paulicians etc. His interest in letters never abated. Amid all his cares he found time to write works on dogma, Biblical criticism, canon law, homilies, an encyclopædia of all kinds of learning, and letters on all questions of the day. Had it not been for his disastrous schism, he might be counted the last, and one of the greatest, of the Greek Fathers. There is no shadow of suspicion against his private life. He bore his exiles and other troubles manfully and well. He never despaired of his cause and spent the years of adversity in building up his party, writing letters to encourage his old friends and make new ones.

And yet the other side of his character is no less evident. His insatiable ambition, his determination to obtain and keep the patriarchal see, led him to the extreme of dishonesty. His claim was worthless. That Ignatius was the rightful patriarch as long as he lived, and Photius an intruder, cannot be denied by any one who does not conceive the Church as merely the slave of a civil government. And to keep this place Photius descended to the lowest depth of deceit. At the very time he was protesting his obedience to the pope he was dictating to the emperor insolent letters that denied all papal jurisdiction. He misrepresented the story of Ignatius's deposition with unblushing lies, and he at least connived at Ignatius's ill-treatment in banishment. He proclaimed openly his entire subservience to the State in the whole question of his intrusion. He stops at nothing in his war against the Latins. He heaps up accusations against them that he must have known were lies. His effrontery on occasions is almost incredible. For instance, as one more grievance against Rome, he never tires of inveighing against the fact that Pope Marinus I (882-84), John VIII's successor, was translated from another see, instead of being ordained from the Roman clergy. He describes this as an atrocious breach of canon law, quoting against it the first and second canons of Sardica; and at the same time he himself continually transferred bishops in his patriarchate. The Orthodox, who look upon him, rightly, as the great champion of their cause against Rome, have forgiven all his offences for the sake of this championship. They have canonized him, and on 6 Feb., when they keep his feast, their office overflows with his praise. He is the "far-shining radiant star of the church", the "most inspired guide of the Orthodox", "thrice blessed speaker for God", "wise and divine glory of the hierarchy, who broke the horns

of Roman pride" ("Menologion" for 6 Feb., ed. Maltzew, I, 916 sq.). The Catholic remembers this extraordinary man with mixed feelings. We do not deny his eminent qualities and yet we certainly do not remember him as a thrice blessed speaker for God. One may perhaps sum up Photius by saying that he was a great man with one blot on his character—his insatiable and unscrupulous ambition. But that blot so covers his life that it eclipses everything else and makes him deserve our final judgment as one of the worst enemies the Church of Christ ever had, and the cause of the greatest calamity that ever befell her.

Works.—Of Photius's prolific literary production part has been lost. A great merit of what remains is that he has preserved at least fragments of earlier Greek works of which otherwise we should know nothing. This applies especially to his "Myriobiblion".

(1) The "Myriobiblion" or "Bibliotheca" is a collection of descriptions of books he had read, with notes and sometimes copious extracts. It contains 280 such notices of books (or rather 279; no. 89 is lost) on every possible subject—theology, philosophy, rhetoric, grammar, physics, medicine. He quotes pagans and Christians, Acts of Councils, Acts of Martyrs, and so on, in no sort of order. For the works thus partially saved (otherwise unknown) see Krumbacher, "Byz. Litter.", 518–19. (2) The "Lexicon" (Λέξεων συναγωγή) was compiled, probably, to a great extent by his students under his direction (Krumbacher, *ibid.*, 521), from older Greek dictionaries (Pausanias, Harpokration, Diogenianos, Ælius Dionysius). It was intended as a practical help to readers of the Greek classics, the Septuagint, and the New Testament. Only one MS. of it exists, the defective "Codex Galeanus" (formerly in the possession of Thomas Gale, now at Cambridge), written about 1200. (3) The "Amphilochia", dedicated to one of his favourite disciples, Amphilochius of Cyzicus, are answers to questions on Biblical, philosophical, and theological difficulties, written during his first exile (867–77). There are 324 subjects discussed, each in a regular form—question, answer, difficulties, solutions—but arranged again in no order. Photius gives mostly the views of famous Greek Fathers, Epiphanius, Cyril of Alexandria, John Damascene, especially Theodoret.

(4) Biblical works.—Only fragments of these are extant, chiefly in Catenas. The longest are from Commentaries on St. Matthew and Romans. (5) Canon Law.—The classical "Nomocanon" (q. v.), the official code of the Orthodox Church, is attributed to Photius. It is, however, older than his time (see JOHN SCHOLASTICUS). It was revised and received additions (from the synods of 861 and 879) in Photius's time, probably by his orders. The "Collections and Accurate Expositions" (Συναγωγαι καὶ ἀποδείξεις ἀκριβεῖς) (Hergenröther, *op. cit.*, III, 165–70) are a series of questions and answers on points of canon law, really an indirect vindication of his own claims and position. A number of his letters bear on canonical questions.

(6) Homilies.—Hergenröther mentions twenty-two sermons of Photius (III, 232). Of these two were printed when Hergenröther wrote (in P. G., CII, 548 sq.), one on the Nativity of the Blessed Virgin, and one at the dedication of a new church during his second patriarchate. Later, S. Aristarches published eighty-three homilies of different kinds (Constantinople, 1900). (7) Dogmatic and polemical works.—Many of these bear on his accusations against the Latins and so form the beginning of the long series of anti-Catholic controversy produced by Orthodox theologians. The most important is "Concerning the Theology about the Holy Ghost" (Περὶ τῆς τοῦ ἁγίου πνεύματος μυσταγωγίας, P. G., CII, 264–541), a defence of the Procession from God the Father alone, based chiefly on John, xv, 26. An epitome of the same work, made by a later author and contained in Euthymius Zigabenus's "Panoplia", XIII, became

the favourite weapon of Orthodox controversialists for many centuries. The treatise "Against Those who say that Rome is the First See", also a very popular Orthodox weapon, is only the last part or supplement of the "Collections", often written out separately. The "Dissertation Concerning the Reappearance of the Manichæans" (Διήγησις περὶ τῆς μανιχαίων ἀναβλαστῆσεως, P. G., CII, 9–264), in four books, is a history and refutation of the Paulicians. Much of the "Amphilochia" belongs to this heading. The little work "Against the Franks and other Latins" (Hergenröther, "Monumenta", 62–71), attributed to Photius, is not authentic. It was written after Cæciliarius (Hergenröther, "Photius", III, 172–224). (8) Letters.—Migne, P. G., CII, publishes 193 letters arranged in three books; Balettas (London, 1864) has edited a more complete collection in five parts. They cover all the chief periods of Photius's life, and are the most important source for his history.

A. Ehrhard (in Krumbacher, "Byzantinische Literatur", 74–77) judges Photius as a distinguished preacher, but not as a theologian of the first importance. His theological work is chiefly the collection of excerpts from Greek Fathers and other sources. His erudition is vast, and probably unequalled in the Middle Ages, but he has little originality, even in his controversy against the Latins. Here, too, he only needed to collect angry things said by Byzantine theologians before his time. But his discovery of the *filioque* grievance seems to be original. Its success as a weapon is considerably greater than its real value deserves (Fortescue, "Orthodox Eastern Church", 372–84).

Editions.—The works of Photius known at the time were collected by Migne, P. G., CI–CV. J. Balettas, *Φωτίου ἐπιστολαὶ* (London, 1864), contains other letters (altogether 260) not in Migne. A. Papadopoulos-Kerameus, "S. Patris Photii Epistolæ XLV" (St. Petersburg, 1896) gives forty-five more, of which, however, only the first twenty-one are authentic. S. Aristarches, *Φωτίου λόγοι καὶ ὁμιλίες* 83 (Constantinople, 1900, 2 vols.), gives other homilies not in Migne. Oikonomos has edited the "Amphilochia" (Athens, 1858) in a more complete text. J. Hergenröther, "Monumenta græca ad Photium eiusque historiam pertinentia" (Ratisbon, 1869), and Papadopoulos-Kerameus, "Monumenta græca et latina ad historiam Photii patriarchæ pertinentia" (St. Petersburg, 2 parts, 1899 and 1901), add further documents.

The Acts of the Synods of 869 and 879 are the most important sources (Mansi, XVI and XVII). THEOGNOSTUS (Archimandrite at Constantinople), Διβελλος περιέχων πάντα τὰ κατὰ τὸν μέγαν Ἰγνατίου, a contemporary account of the beginning of the schism (in Mansi, XVI, 295 sq.); NIKETAS DAVID PAPHLAGON (d. 890); Βίος Ἰγνατίου (Mansi, XVI, 209 sq.). PAPADOPOULOS-KERAMEUS declared this to be a fourteenth-century forgery in the *Vizant. Vremennik* (1899), 13–38, Ψευδονικήτας ὁ παφλαγών; he was successfully refuted by VASILJEWSKI (*ibid.*, 39–56); cf. *Byzant. Zeitschrift*, IX (1900), 268 sq. GENESIOS, Βασιλείαι (written between 945–959), a history of the emperors and Court from Leo V (813–20) to Basil I (867–86), published in *Corpus Scriptorum Hist. Byzantine* (Bonn, 1834) and P. G., CIX, 985 sq.; THEOPHANES CONTINUATUS for 813–961 in *Corpus Script.*, 1838, and P. G., CIX, 15 sq.; LEO GRAMMATICUS, re-edition of SYMEON MAGISTER, *Chronicle*, in *Corpus Script.*, 1842, and P. G., CVIII, 1037 sqq.

HERGENRÖTHER, *Photius, Patriarch von Konstantinopel, sein Leben, seine Schriften u. das griechische Schisma* (Ratisbon, 1867–69) (the most learned and exhaustive work on the subject). DEMETRAKOPOULOS, Ἱστορία τοῦ σχίσματος τῆς λατινικῆς ἀπὸ τῆς ὀρθοδόξου ἐκκλησίας (Leipzig, 1867), is an attempted rejoinder to HERGENRÖTHER, as is also KREMOS, Ἱστορία τοῦ σχίσματος τῶν δυο ἐκκλησιῶν (Athens, 1905–07, two volumes published out of four). LÄMMER, *Papst Nikolaus u. die byzantinische Staatskirche seiner Zeit* (Berlin, 1857); PICHLER, *Geschichte der kirchlichen Trennung zwischen dem Orient u. Occident* (Munich, 1864–65); NORDEN, *Das Papsttum und Byzanz* (Berlin, 1903); KRUMBACHER, *Geschichte der Byzantinischen Litteratur* (Munich, 1897), 73–79, 515–524 (with copious bibliography); FORTESCUE, *The Orthodox Eastern Church* (London, 1907), 135–171; RUINAUT, *Le schisme de Photius* (Paris, 1910).

Phylacteries (φυλακτήριον, safeguard, amulet, or charm). The word occurs only once in the New Tes-

tament (Matt., xxiii, 5), in the great discourse of Our Lord against the Pharisees whom He reproaches with ostentation in the discharge of their religious and social duties: "For they make their phylacteries broad and enlarge their fringes". By the Jews the phylacteries are termed *tephillin*, plural of the word *tephillah*, "a prayer", and consist of two small square

ARM ENTWINED WITH PHYLACTERY

cases of leather, one of which is worn on the forehead, the other on the upper left arm. The case for the forehead holds four distinct compartments, that for the arm only one. They contain narrow strips of parchment on which are copied passages from the Pentateuch, viz., Ex., xiii, 1-10; and Deut., vi, 4-9; xi, 13-21. The practice of wearing the phylacteries at stated moments is still regarded as a sacred religious duty by the orthodox Jews.

KLEIN, *Die Totaphoth nach Bibel und Tradition in Jahrbücher f. Prot. Theol.* (Berlin, 1881), 666-689; VIGOUROUX, *Dict. de la Bible*, s. v. *Phylactères*.

Physics, HISTORY OF.—The subject will be treated under the following heads:—I. A Glance at Ancient Physics; II. Science and Early Christian Scholars; III. A Glance at Arabian Physics; IV. Arabian Tradition and Latin Scholasticism; V. The Science of Observation and Its Progress—Astronomers—The Statics of Jordanus—Thierry of Freiberg—Pierre of Maricourt; VI. The Articles of Paris (1277)—Possibility of Vacuum; VII. The Earth's Motion—Oresme; VIII. Plurality of Worlds; IX. Dynamics—Theory of Impetus—Inertia—Celestial and Sublunary Mechanics Identical; X. Propagation of the Doctrines of the School of Paris in Germany and Italy—Purbach and Regiomontanus—Nicholas of Cusa—Vinci; XI. Italian Averroism and its Tendencies to Routine—Attempts at Restoring the Astronomy of Homocentric Spheres; XII. The Copernican Revolution; XIII. Fortunes of the Copernican System in the Sixteenth Century; XIV. Theory of the Tides; XV. Statics in the Sixteenth Century—Stevinus; XVI. Dynamics in the Sixteenth Century; XVII. Galileo's Work; XVIII. Initial Attempts in Celestial Mechanics—Gilbert—Kepler; XIX. Controversies concerning Geostatics; XX. Descartes's Work; XXI. Progress of Experimental Physics; XXII. Undulatory Theory of Light; XXIII. Development of Dynamics; XXIV. Newton's Work; XXV. Progress of General and Celestial Mechanics in the Eighteenth Century; XXVI. Establishment of the Theory of Electricity and Magnetism; XXVII. Molecular Attraction; XXVIII. Revival of the Undulatory Theory of Light; XXIX. Theories of Heat.

I. A GLANCE AT ANCIENT PHYSICS.—Although at the time of Christ's birth Hellenic science had produced nearly all its masterpieces, it was still to give to the world Ptolemy's astronomy, the way for which had been paved for more than a century by the works of Hipparchus. The revelations of Greek thought on the nature of the exterior world ended with the "Almagest", which appeared about A. D. 145, and then began the decline of ancient learning. Those of its works that escaped the fires kindled by Mohammedan warriors were subjected to the barren interpretations of Mussulman commentators and, like parched seed, awaited the time when Latin Christianity would furnish a favourable soil in which they could once more flourish and bring forth fruit. Hence it is that the time when Ptolemy put the finishing

touches to his "Great Mathematical Syntax of Astronomy" seems the most opportune in which to study the field of ancient physics. An impassable frontier separated this field into two regions in which different laws prevailed. From the moon's orbit to the sphere enclosing the world, extended the region of beings exempt from generation, change, and death, of perfect, divine beings, and these were the star-sphere and the stars themselves. Inside the lunar orbit lay the region of generation and corruption, where the four elements and the mixed bodies generated by their mutual combinations were subject to perpetual change.

The science of the stars was dominated by a principle formulated by Plato and the Pythagoreans, according to which all the phenomena presented to us by the heavenly bodies must be accounted for by combinations of circular and uniform motions. Moreover, Plato declared that these circular motions were reducible to the rotation of solid globes all limited by spherical surfaces concentric with the World and the Earth, and some of these homocentric spheres carried fixed or wandering stars. Eudoxus of Cnidus, Calippus, and Aristotle vied with one another in striving to advance this theory of homocentric spheres, its fundamental hypothesis being incorporated in Aristotle's "Physics" and "Metaphysics". However, the astronomy of homocentric spheres could not explain all celestial phenomena, a considerable number of which showed that the wandering stars did not always remain at an equal distance from the Earth. Heraclides Ponticus in Plato's time, and Aristarchus of Samos about 280 B. C. endeavoured to account for all astronomical phenomena by a heliocentric system, which was an outline of the Copernican mechanics; but the arguments of physics and the precepts of theology proclaiming the Earth's immobility, readily obtained the ascendancy over this doctrine which existed in a mere outline. Then the labours of Apollonius Pergæus (at Alexandria, 205 B. C.), of Hipparchus (who made observation at Rhodes in 128 and 127 B. C.), and finally of Ptolemy (Claudius Ptolemaeus of Pelusium) constituted a new astronomical system that claimed the Earth to be immovable in the centre of the universe; a system that seemed, as it were, to reach its completion when, between A. D. 142 and 146, Ptolemy wrote a work called "*Μεγάλη μαθηματική σύνταξις τῆς ἀστρονομίας*", its Arabian title being transliterated by the Christians of the Middle Ages, who named it "Almagest". The astronomy of the "Almagest" explained all astronomical phenomena with a precision which for a long time seemed satisfactory, accounting for them by combinations of circular motions; but, of the circles described, some were eccentric to the World, whilst others were epicyclic circles, the centres of which described deferent circles concentric with or eccentric to the World; moreover, the motion on the deferent was no longer uniform, seeming so only when viewed from the centre of the equant. Briefly, in order to construct a kinematical arrangement by means of which phenomena could be accurately represented, the astronomers whose work Ptolemy completed had to set at naught the properties ascribed to the celestial substance by Aristotle's "Physics", and between this "Physics" and the astronomy of eccentrics and epicycles there ensued a violent struggle which lasted until the middle of the sixteenth century.

In Ptolemy's time the physics of celestial motion was far more advanced than the physics of sublunary bodies, as, in this science of beings subject to generation and corruption, only two chapters had reached any degree of perfection, namely, those on optics (called perspective) and statics. The law of reflection was known as early as the time of Euclid, about 320 B. C., and to this geometrician was attributed, although probably erroneously, a "Treatise on Mir-

rors", in which the principles of catoptrics were correctly set forth. Dioptrics, being more difficult, was developed less rapidly. Ptolemy already knew that the angle of refraction is not proportional to the angle of incidence, and in order to determine the ratio between the two he undertook experiments the results of which were remarkably exact.

Statics reached a fuller development than optics. The "Mechanical Questions" ascribed to Aristotle were a first attempt to organize that science, and they contained a kind of outline of the principle of virtual velocities, destined to justify the law of the equilibrium of the lever; besides, they embodied the happy idea of referring to the lever theory the theory of all simple machines. An elaboration, in which Euclid seems to have had some part, brought statics to the stage of development in which it was found by Archimedes (about 287-212 B. C.), who was to raise it to a still higher degree of perfection. It will here suffice to mention the works of genius in which the great Syracusan treated the equilibrium of the weights suspended from the two arms of a lever, the search for the centre of gravity, and the equilibrium of liquids and floating bodies. The treatises of Archimedes were too scholarly to be widely read by the mechanicians who succeeded this geometrician; these men preferred easier and more practical writings as, for instance, those on the lines of Aristotle's "Mechanical Questions". Various treatises by Heron of Alexandria have preserved for us the type of these decadent works.

II. SCIENCE AND EARLY CHRISTIAN SCHOLARS.—Shortly after the death of Ptolemy, Christian science took root at Alexandria with Origen (about 180-253), and a fragment of his "Commentaries on Genesis", preserved by Eusebius, shows us that the author was familiar with the latest astronomical discoveries, especially the precession of the equinoxes. However, the writings in which the Fathers of the Church comment upon the work of the six days of Creation, notably the commentaries of St. Basil and St. Ambrose, borrow but little from Hellenic physics; in fact, their tone would seem to indicate distrust in the teachings of Greek science, this distrust being engendered by two prejudices: in the first place, astronomy was becoming more and more the slave of astrology, the superstitions of which the Church diligently combatted; in the second place, between the essential propositions of peripatetic physics and what we believe to be the teaching of Holy Writ, contradictions appeared; thus Genesis was thought to teach the presence of water above the heaven of the fixed stars (the firmament) and this was incompatible with the Aristotelean theory concerning the natural place of the elements. The debates raised by this question gave St. Augustine an opportunity to lay down wise exegetical rules, and he recommended Christians not to put forth lightly, as articles of faith, propositions contradicted by physical science based upon careful experiments. St. Isidore of Seville (d. 636), a bishop, considered it legitimate for Christians to desire to know the teachings of profane science, and he laboured to satisfy this curiosity. His "Etymologies" and "De naturarum" are merely compilations of fragments borrowed from all the pagan and Christian authors with whom he was acquainted. In the height of the Latin Middle Ages these works served as models for numerous encyclopædias, of which the "De naturarum" by Bede (about 672-735) and the "De universo" by Rabanus Maurus (776-856) were the best known.

However, the sources from which the Christians of the West imbibed a knowledge of ancient physics became daily more numerous, and to Pliny the Elder's "Natural History", read by Bede, were added Chalcidius's commentary on Plato's "Timæus" and Martianus Capella's "De Nuptiis Philologiæ et Mercurii", these different works inspiring the physics of

John Scotus Eriugena. Prior to A. D. 1000 a new Platonic work by Macrobius, a commentary on the "Somnium Scipionis", was in great favour in the schools. Influenced by the various treatises already mentioned, Guillaume of Conches (1080-1150 or 1154) and the unknown author of "De mundi constitutione liber", which, by the way, has been falsely attributed to Bede, set forth a planetary theory making Venus and Mercury satellites of the sun, but Eriugena went still further and made the sun also the centre of the orbits of Mars and Jupiter. Had he but extended this hypothesis to Saturn, he would have merited the title of precursor of Tycho Brahe.

III. A GLANCE AT ARABIAN PHYSICS.—The authors of whom we have heretofore spoken had only been acquainted with Greek science through the medium of Latin tradition, but the time came when it was to be much more completely revealed to the Christians of the West through the medium of Mussulman tradition.

There is no Arabian science. The wise men of Mohammedanism were always the more or less faithful disciples of the Greeks, but were themselves destitute of all originality. For instance, they compiled many abridgments of Ptolemy's "Almagest", made numerous observations, and constructed a great many astronomical tables, but added nothing essential to the theories of astronomical motion; their only innovation in this respect, and, by the way, quite an unfortunate one, was the doctrine of the oscillatory motion of the equinoctial points, which the Middle Ages ascribed to Thâbit ibn Kûrrah (836-901), but which was probably the idea of Al-Zarkali, who lived much later and made observations between 1060 and 1080. This motion was merely the adaptation of a mechanism conceived by Ptolemy for a totally different purpose.

In physics, Arabian scholars confined themselves to commentaries on the statements of Aristotle, their attitude being at times one of absolute servility. This intellectual servility to Peripatetic teaching reached its climax in Abul ibn Roshd, whom Latin scholastics called Averroës (about 1120-98) and who said: Aristotle "founded and completed logic, physics, and metaphysics . . . because none of those who have followed him up to our time, that is to say, for four hundred years, have been able to add anything to his writings or to detect therein an error of any importance". This unbounded respect for Aristotle's work impelled a great many Arabian philosophers to attack Ptolemy's "Astronomy" in the name of Peripatetic physics. The conflict between the hypotheses of eccentrics and epicycles was inaugurated by Ibn Bâdja, known to the scholastics as Avempace (d. 1138), and Abu Bekr ibn el-Tofeil, called Abubacer by the scholastics (d. 1185), and was vigorously conducted by Averroës, the protégé of Abubacer. Abu Ishâk ibn al-Bitrogî, known by the scholastics as Alpetragius, another disciple of Abubacer and a contemporary of Averroës, advanced a theory on planetary motion wherein he wished to account for the phenomena peculiar to the wandering stars, by compounding rotations of homocentric spheres; his treatise, which was more neo-Platonic than Peripatetic, seemed to be a Greek book altered, or else a simple plagiarism. Less inflexible in his Peripateticism than Averroës and Alpetragius, Moses ben Maimon, called Maimonides (1139-1204), accepted Ptolemy's astronomy despite its incompatibility with Aristotelean physics, although he regarded Aristotle's sublunary physics as absolutely true.

IV. ARABIAN TRADITION AND LATIN SCHOLASTICISM.—It cannot be said exactly when the first translations of Arabic writings began to be received by the Christians of the West, but it was certainly previously to the time of Gerbert (Sylvester II; about 930-1003). Gerbert used treatises translated from the Arabic,

and containing instructions on the use of astronomical instruments, notably the astrolabe, to which instrument Hermann the Lame (1013-54) devoted part of his researches. In the beginning of the twelfth century the contributions of Mohammedan science and philosophy to Latin Christendom became more and more frequent and important. About 1120 or 1130 Adelard of Bath translated the "Elements" of Euclid, and various astronomical treatises; in 1141 Peter the Venerable, Abbot of Cluny, found two translators, Hermann the Second (or the Dalmatian) and Robert of Rétines, established in Spain; he engaged them to translate the Koran into Latin, and in 1143 these same translators made Christendom acquainted with Ptolemy's planisphere. Under the direction of Raimond (Archbishop of Toledo, 1130; d. 1150), Domingo Gondisalvi (Gonsalvi; Gundissalinus), Archdeacon of Segovia, began to collaborate with the converted Jew, John of Luna, erroneously called John of Seville (Johannes Hispalensis). While John of Luna applied himself to works in mathematics, he also assisted Gondisalvi in translating into Latin a part of Aristotle's physics, the "De Cælo" and the "Metaphysics", besides treatises by Avicenna, Al-Gazâli, Al-Fârâbî, and perhaps Salomon ibn Gebirol (Avicebron). About 1134 John of Luna translated Al-Fergânî's treatise "Astronomy", which was an abridgement of the "Almagest", thereby introducing Christians to the Ptolemaic system, while at the same time his translations, made in collaboration with Gondisalvi, familiarized the Latins with the physical and metaphysical doctrines of Aristotle. Indeed the influence of Aristotle's "Physics" was already apparent in the writings of the most celebrated masters of the school of Chartres (from 1121 until before 1155), and of Gilbert de la Porrée (1070-1154).

The abridgement of Al-Fergânî's "Astronomy", translated by John of Luna, does not seem to have been the first work in which the Latins were enabled to read the exposition of Ptolemy's system; it was undoubtedly preceded by a more complete treatise, the "De Scientia stellarum" of Albategnius (Al-Battâni), latinized by Plato of Tivoli about 1120. However, the "Almagest" itself was still unknown. Moved by a desire to read and translate Ptolemy's immortal work, Gerard of Cremona (d. 1187) left Italy and went to Toledo, eventually making the translation which he finished in 1175. Besides the "Almagest", Gerard rendered into Latin other works, of which we have a list comprising seventy-four different treatises. Some of these were writings of Greek origin, and included a large portion of the works of Aristotle, a treatise by Archimedes, Euclid's "Elements" (completed by Hypsicles), and books by Hippocrates. Others were Arabic writings, such as the celebrated "Book of Three Brothers", composed by the Beni Mûsa, "Optics" by Ibn Al-Haitam (the Alhazen of the Scholastics), "Astronomy" by Geber, and "De motu octavaræ sphaeræ" by Thâbit ibn Kûrrah. Moreover, in order to spread the study of Ptolemaic astronomy, Gerard composed at Toledo his "Theoricæ planetarum", which during the Middle Ages became one of the classics of astronomical instruction. Beginners who obtained their first cosmographic information through the study of the "Sphaera", written about 1230 by Joannes de Sacrobosco, could acquire a knowledge of eccentrics and epicycles by reading the "Theoricæ planetarum" of Gerard of Cremona. In fact, until the sixteenth century, most astronomical treatises assumed the form of commentaries, either on the "Sphaera", or the "Theoricæ planetarum".

"Aristotle's philosophy", wrote Roger Bacon in 1267, "reached a great development among the Latins when Michael Scot appeared about 1230, bringing with him certain parts of the mathematical and physical treatises of Aristotle and his learned commen-

tators". Among the Arabic writings made known to Christians by Michael Scot (before 1291; astrologer to Frederick II) were the treatises of Aristotle and the "Theory of Planets", which Alpetragius had composed in accordance with the hypothesis of homocentric spheres. The translation of this last work was completed in 1217. By propagating among the Latins the commentaries on Averroës and on Alpetragius's theory of the planets, as well as a knowledge of the treatises of Aristotle, Michael Scot developed in them an intellectual disposition which might be termed Averroism, and which consisted in a superstitious respect for the word of Aristotle and his commentator.

There was a metaphysical Averroism which, because professing the doctrine of the substantial unity of all human intellects, was in open conflict with Christian orthodoxy; but there was likewise a physical Averroism which, in its blind confidence in Peripatetic physics, held as absolutely certain all that the latter taught on the subject of the celestial substance, rejecting in particular the system of epicycles and eccentrics in order to commend Alpetragius's astronomy of homocentric spheres.

Scientific Averroism found partisans even among those whose purity of faith constrained them to struggle against metaphysical Averroism, and who were very often Peripatetics in so far as was possible without formally contradicting the teaching of the Church. For instance, William of Auvergne (d. 1249), who was the first to combat "Aristotle and his sectarians" on metaphysical grounds, was somewhat misled by Alpetragius's astronomy, which, moreover, he understood but imperfectly. Albertus Magnus (1193 or 1205-1280) followed to a great extent the doctrine of Ptolemy, although he was sometimes influenced by the objections of Averroës or affected by Alpetragius's principles. Vincent of Beauvais in his "Speculum quadruplex", a vast encyclopædic compilation published about 1250, seemed to attach great importance to the system of Alpetragius, borrowing the exposition of it from Albertus Magnus. Finally, even St. Thomas Aquinas gave evidence of being extremely perplexed by the theory (1227-74) of eccentrics and epicycles which justified celestial phenomena by contradicting the principles of Peripatetic physics, and the theory of Alpetragius which honoured these principles but did not go so far as to represent their phenomena in detail.

This hesitation, so marked in the Dominican school, was hardly less remarkable in the Franciscan. Robert Grosseteste or Greathead (1175-1253), whose influence on Franciscan studies was so great, followed the Ptolemaic system in his astronomical writings, his physics being imbued with Alpetragius's ideas. St. Bonaventure (1221-74) wavered between doctrines which he did not thoroughly understand, and Roger Bacon (1214-92) in several of his writings weighed with great care the arguments that could be made to count for or against each of these two astronomical theories, without eventually making a choice. Bacon, however, was familiar with a method of figuration in the system of eccentrics and epicycles which Alhazen had derived from the Greeks; and in this figuration all the motions acknowledged by Ptolemy were traced back to the rotation of solid orbs accurately fitted one into the other. This representation, which refuted most of the objections raised by Averroës against Ptolemaic astronomy, contributed largely to propagate the knowledge of this astronomy, and it seems that the first of the Latins to adopt it and expatiate on its merits was the Franciscan Bernard of Verdun (end of thirteenth century), who had read Bacon's writings. In sublunary physics the authors whom we have just mentioned did not show the hesitation that rendered astronomical doctrines so perplexing, but on almost all points adhered closely to Peripatetic opinions.

V. THE SCIENCE OF OBSERVATION AND ITS PROGRESS—ASTRONOMERS—THE STATICS OF JORDANUS—THIERRY OF FREIBERG—PIERRE OF MARICOURT.—Averroism had rendered scientific progress impossible, but fortunately in Latin Christendom it was to meet with two powerful enemies: the unhampered curiosity of human reason, and the authority of the Church. Encouraged by the certainty resulting from experiments, astronomers rudely shook off the yoke which Peripatetic physics had imposed upon them. The School of Paris in particular was remarkable for its critical views and its freedom of attitude towards the argument of authority. In 1290 William of Saint-Cloud determined with wonderful accuracy the obliquity of the ecliptic and the time of the vernal equinox, and his observations led him to recognize the inaccuracies that marred the "Tables of Toledo", drawn up by Al-Zarkali. The theory of the precession of the equinoxes, conceived by the astronomers of Alfonso X of Castile, and the "Alphonsine Tables" set up in accordance with this theory, gave rise in the first half of the fourteenth century to the observations, calculations, and critical discussions of Parisian astronomers, especially of Jean des Linières and his pupil John of Saxonia or Connaught.

At the end of the thirteenth century and the beginning of the fourteenth, sublunary physics owed great advancement to the simultaneous efforts of geometers and experimenters—their method and discoveries being duly boasted of by Roger Bacon who, however, took no important part in their labours. Jordanus de Nemore, a talented mathematician who, not later than about the beginning of the thirteenth century, wrote treatises on arithmetic and geometry, left a very short treatise on statics in which, side by side with erroneous propositions, we find the law of the equilibrium of the straight lever very correctly established with the aid of the principle of virtual displacements. The treatise, "*De ponderibus*", by Jordanus provoked research on the part of various commentators, and one of these, whose name is unknown and who must have written before the end of the thirteenth century, drew, from the same principle of virtual displacements, demonstrations, admirable in exactness and elegance, of the law of the equilibrium of the bent lever, and of the apparent weight (*gravitas secundum situm*) of a body on an inclined plane.

Alhazen's "Treatise on Perspective" was read thoroughly by Roger Bacon and his contemporaries, John Peckham (1228–91), the English Franciscan, giving a summary of it. About 1270 Witelo (or Witek; the *Thuringopolonus*), composed an exhaustive ten-volume treatise on optics, which remained a classic until the time of Kepler, who wrote a commentary on it.

Albertus Magnus, Roger Bacon, John Peckham, and Witelo were deeply interested in the theory of the rainbow, and, like the ancient meteorologists, they all took the rainbow to be the image of the sun reflected in a sort of a concave mirror formed by a cloud resolved into rain. In 1300 Thierry of Freiberg proved by means of carefully-conducted experiments in which he used glass balls filled with water, that the rays which render the bow visible have been reflected on the inside of the spherical drops of water, and he traced with great accuracy the course of the rays which produce the rainbows respectively.

The system of Thierry of Freiberg, at least that part relating to the primary rainbow, was reproduced about 1360 by Themon, "Son of the Jew" (*Themo ju dæi*), and, from his commentary on "Metecors", it passed on down to the days of the Renaissance when, having been somewhat distorted, it reappeared in the writings of Alessandro Piccolomini, Simon Porta, and Marco and Antonio de Dominis, being thus propagated until the time of Descartes.

The study of the magnet had also made great

progress in the course of the thirteenth century; the permanent magnetization of iron, the properties of the magnetic poles, the direction of the Earth's action exerted on these poles or of their action on one another, are all found very accurately described in a treatise written in 1269 by Pierre of Maricourt (Petrus Peregrinus). Like the work of Thierry of Freiberg on the rainbow, the "*Epistola de magnete*" by Maricourt was a model of the art of logical sequence between experiment and deduction.

VI. THE ARTICLES OF PARIS (1277)—POSSIBILITY OF VACUUM.—The University of Paris was very uneasy because of the antagonism existing between Christian dogmas and certain Peripatetic doctrines, and on several occasions it combated Aristotelean influence. In 1277 Etienne Tempier, Bishop of Paris, acting on the advice of the theologians of the Sorbonne, condemned a great number of errors, some of which emanated from the astrology, and others from the philosophy of the Peripatetics. Among these errors considered dangerous to faith were several which might have impeded the progress of physical science, and hence it was that the theologians of Paris declared erroneous the opinion maintaining that God Himself could not give the entire universe a rectilinear motion, as the universe would then leave a vacuum behind it, and also declared false the notion that God could not create several worlds. These condemnations destroyed certain essential foundations of Peripatetic physics; because, although, in Aristotle's system, such propositions were ridiculously untenable, belief in Divine Omnipotence sanctioned them as possible, whilst waiting for science to confirm them as true. For instance, Aristotle's physics treated the existence of an empty space as a pure absurdity; in virtue of the "Articles of Paris" Richard of Middleton (about 1280) and, after him, many masters at Paris and Oxford admitted that the laws of nature are certainly opposed to the production of empty space, but that the realization of such a space is not, in itself, contrary to reason; thus, without any absurdity, one could argue on vacuum and on motion in a vacuum. Next, in order that such arguments might be legitimized, it was necessary to create that branch of mechanical science known as dynamics.

VII. THE EARTH'S MOTION—ORESME.—The "Articles of Paris" were of about the same value in supporting the question of the Earth's motion as in furthering the progress of dynamics by regarding vacuum as something conceivable.

Aristotle maintained that the first heaven (the firmament) moved with a uniform rotary motion, and that the Earth was absolutely stationary, and as these two propositions necessarily resulted from the first principles relative to time and place, it would have been absurd to deny them. However, by declaring that God could endow the World with a rectilinear motion, the theologians of the Sorbonne acknowledged that these two Aristotelean propositions could not be imposed as a logical necessity and thenceforth, whilst continuing to admit that, as a fact, the Earth was immovable and that the heavens moved with a rotary diurnal motion, Richard of Middleton and Duns Scotus (about 1275–1308) began to formulate hypotheses to the effect that these bodies were animated by other motions, and the entire school of Paris adopted the same opinion. Soon, however, the Earth's motion was taught in the School of Paris, not as a possibility, but as a reality. In fact, in the specific setting forth of certain information given by Aristotle and Simplicius, a principle was formulated which for three centuries was to play a great rôle in statics, viz. that every heavy body tends to unite its centre of gravity with the centre of the Earth.

When writing his "Questions" on Aristotle's "*De Cælo*" in 1368, Albert of Helmstadt (or of Saxony) admitted this principle, which he applied to the entire

mass of the terrestrial element. The centre of gravity of this mass is constantly inclined to place itself in the centre of the universe, but, within the terrestrial mass, the position of the centre of gravity is incessantly changing. The principal cause of this variation is the erosion brought about by the streams and rivers that continually wear away the land surface, deepening its valleys and carrying off all loose matter to the bed of the sea, thereby producing a displacement of weight which entails a ceaseless change in the position of the centre of gravity. Now, in order to replace this centre of gravity in the centre of the universe, the Earth moves without ceasing; and meanwhile a slow but perpetual exchange is being effected between the continents and the oceans. Albert of Saxony ventured so far as to think that these small and incessant motions of the Earth could explain the phenomena of the precession of the equinoxes. The same author declared that one of his masters, whose name he did not disclose, announced himself in favour of the daily rotation of the Earth, inasmuch as he refuted the arguments that were opposed to this motion. This anonymous master had a thoroughly convinced disciple in Nicole Oresme who, in 1377, being then Canon of Rouen and later Bishop of Lisieux, wrote a French commentary on Aristotle's treatise "De Cælo", maintaining with quite as much force as clearness that neither experiment nor argument could determine whether the daily motion belonged to the firmament of the fixed stars or to the Earth. He also showed how to interpret the difficulties encountered in "the Sacred Scriptures wherein it is stated that the sun turns, etc. It might be supposed that here Holy Writ adapts itself to the common mode of human speech, as also in several places, for instance, where it is written that God repented Himself, and was angry and calmed Himself and so on, all of which is, however, not to be taken in a strictly literal sense". Finally, Oresme offered several considerations favourable to the hypothesis of the Earth's daily motion. In order to refute one of the objections raised by the Peripatetics against this point, Oresme was led to explain how, in spite of this motion, heavy bodies seemed to fall in a vertical line; he admitted their real motion to be composed of a fall in a vertical line and a diurnal rotation identical with that which they would have if bound to the Earth. This is precisely the principle to which Galileo was afterwards to turn.

VIII. PLURALITY OF WORLDS.—Aristotle maintained the simultaneous existence of several worlds to be an absurdity, his principal argument being drawn from his theory of gravity, whence he concluded that two distinct worlds could not coexist and be each surrounded by its elements; therefore it would be ridiculous to compare each of the planets to an earth similar to ours. In 1277 the theologians of Paris condemned this doctrine as a denial of the creative omnipotence of God; Richard of Middletown and Henry of Ghent (who wrote about 1280), Guillaume Varon (who wrote a commentary on the "Sentences" about 1300), and, towards 1320, Jean de Bassols, William of Occam (d. after 1347), and Walter Burley (d. about 1343) did not hesitate to declare that God could create other worlds similar to ours. This doctrine, adopted by several Parisian masters, exacted that the theory of gravity and natural place developed by Aristotle be thoroughly changed; in fact, the following theory was substituted for it. If some part of the elements forming a world be detached from it and driven far away, its tendency will be to move towards the world to which it belongs and from which it was separated; the elements of each world are inclined so to arrange themselves that the heaviest will be in the centre and the lightest on the surface. This theory of gravity appeared in the writings of Jean Buridan of Béthune, who became rector of the University of Paris in 1327,

teaching at that institution until about 1360; and in 1377 this same theory was formally proposed by Oresme. It was also destined to be adopted by Copernicus and his first followers, and to be maintained by Galileo, William Gilbert, and Otto von Guericke.

IX. DYNAMICS—THEORY OF IMPETUS—INERTIA—CELESTIAL AND SUBLUNARY MECHANICS IDENTICAL.—If the School of Paris completely transformed the Peripatetic theory of gravity, it was equally responsible for the overthrow of Aristotelean dynamics. Convinced that, in all motion, the mover should be directly contiguous to the body moved, Aristotle had proposed a strange theory of the motion of projectiles. He held that the projectile was moved by the fluid medium, whether air or water, through which it passed and this, by virtue of the vibration brought about in the fluid at the moment of throwing, and spread through it. In the sixth century of our era this explanation was strenuously opposed by the Christian Stoic, Joannes Philoponus, according to whom the projectile was moved by a certain power communicated to it at the instant of throwing; however, despite the objections raised by Philoponus, Aristotle's various commentators, particularly Averroës, continued to attribute the motion of the projectile to the disturbance of the air, and Albertus Magnus, St. Thomas Aquinas, Roger Bacon, Gilles of Rome, and Walter Burley persevered in maintaining this error. By means of most spirited argumentation, William of Occam made known the complete absurdity of the Peripatetic theory of the motion of projectiles. Going back to Philoponus's thesis, Buridan gave the name *impetus* to the virtue or power communicated to the projectile by the hand or instrument throwing it; he declared that in any given body in motion, this impetus was proportional to the velocity, and that, in different bodies in motion propelled by the same velocity, the quantities of impetus were proportional to the mass or quantity of matter defined as it was afterwards defined by Newton.

In a projectile, impetus is gradually destroyed by the resistance of air or other medium and is also destroyed by the natural gravity of the body in motion, which gravity is opposed to the impetus if the projectile be thrown upward; this struggle explains the different peculiarities of the motion of projectiles. In a falling body, gravity comes to the assistance of impetus which it increases at every instant, hence the velocity of the fall is increasing incessantly.

With the assistance of these principles concerning impetus, Buridan accounts for the swinging of the pendulum. He likewise analyses the mechanism of impact and rebound and, in this connexion, puts forth very correct views on the deformations and elastic reactions that arise in the contiguous parts of two bodies coming into collision. Nearly all this doctrine of impetus is transformed into a very correct mechanical theory if one is careful to substitute the expression *vis viva* for impetus. The dynamics expounded by Buridan were adopted in their entirety by Albert of Saxony, Oresme, Marsile of Inghem, and the entire School of Paris. Albert of Saxony appended thereto the statement that the velocity of a falling body must be proportional either to the time elapsed from the beginning of the fall or to the distance traversed during this time. In a projectile, the impetus is gradually destroyed either by the resistance of the medium or by the contrary tendency of the gravity natural to the body. Where these causes of destruction do not exist, the impetus remains perpetually the same, as in the case of a millstone exactly centred and not rubbing on its axis; once set in motion it will turn indefinitely with the same swiftness. It was under this form that the law of inertia at first became evident to Buridan and Albert of Saxony.

The conditions manifested in this hypothetic millstone are realized in the celestial orbs, as in these neither friction nor gravity impedes motion; hence it may be admitted that each celestial orb moves indefinitely by virtue of a suitable impetus communicated to it by God at the moment of creation. It is useless to imitate Aristotle and his commentators by attributing the motion of each orb to a presiding spirit. This was the opinion proposed by Buridan and adopted by Albert of Saxony; and whilst formulating a doctrine from which modern dynamics was to spring, these masters understood that the same dynamics governs both celestial and sublunary bodies. Such an idea was directly opposed to the essential distinction established by ancient physics between these two kinds of bodies. Moreover, following William of Occam, the masters of Paris rejected this distinction; they acknowledged that the matter constituting celestial bodies was of the same nature as that constituting sublunary bodies and that, if the former remained perpetually the same, it was not because they were, by nature, incapable of change and destruction, but simply because the place in which they were contained no agent capable of corrupting them. A century elapsed between the condemnations pronounced by Etienne Tempier (1277) and the editing of the "Traité du Ciel et du Monde" by Oresme (1377) and, within that time, all the essential principles of Aristotle's physics were undermined, and the great controlling ideas of modern science formulated. This revolution was mainly the work of Oxford Franciscans like Richard of Middletown, Duns Scotus, and William of Occam, and of masters in the School of Paris, heirs to the tradition inaugurated by these Franciscans; among the Parisian masters Buridan, Albert of Saxony, and Oresme were in the foremost rank.

X. PROPAGATION OF THE DOCTRINES OF THE SCHOOL OF PARIS IN GERMANY AND ITALY—PURBACH AND REGIOMONTANUS—NICHOLAS OF CUSA—VINCI.—The great Western Schism involved the University of Paris in politico-religious quarrels of extreme violence; the misfortunes brought about by the conflict between the Armagnacs and Burgundians and by the Hundred Years' War, completed what these quarrels had begun, and the wonderful progress made by science during the fourteenth century in the University of Paris suddenly ceased. However, the schism contributed to the diffusion of Parisian doctrines by driving out of Paris a large number of brilliant men who had taught there with marked success. In 1386 Marsile of Inghem (d. 1396), who had been one of the most gifted professors of the University of Paris, became rector of the infant University of Heidelberg, where he introduced the dynamic theories of Buridan and Albert of Saxony.

About the same time, another master, reputedly of Paris, Heinrich Heimbuch of Langenstein, or of Hesse, was chiefly instrumental in founding the University of Vienna and, besides his theological knowledge, brought thither the astronomical tradition of Jean des Linières and John of Saxony. This tradition was carefully preserved in Vienna, being magnificently developed there throughout the fifteenth century, and paving the way for Georg Purbach (1423–61) and his disciple Johann Müller of Königsberg, surnamed Regiomontanus (1436–76). It was to the writing of theories calculated to make the Ptolemaic system known, to the designing and constructing of exact instruments, to the multiplying of observations, and the preparing of tables and almanacs (ephemerides), more accurate than those used by astronomers up to that time, that Purbach and Regiomontanus devoted their prodigious energy. By perfecting all the details of Ptolemy's theories, which they never called in question, they were most helpful in bringing to light the defects of these theories and in preparing the materials by means of which Copernicus was to build up his new astronomy.

Averroism flourished in the Italian Universities of Padua and Bologna, which were noted for their adherence to Peripatetic doctrines. Still from the beginning of the fifteenth century the opinions of the School of Paris began to find their way into these institutions, thanks to the teaching of Paolo Nicoletti of Venice (flourished about 1420). It was there developed by his pupil Gaetan of Tiene (d. 1465). These masters devoted special attention to propagating the dynamics of impetus in Italy.

About the time that Paola of Venice was teaching at Padua, Nicholas of Cusa came there to take his doctorate in law. Whether it was then that the latter became initiated in the physics of the School of Paris matters little, as in any event it was from Parisian physics that he adopted those doctrines that smacked least of Peripateticism. He became thoroughly conversant with the dynamics of impetus and, like Buridan and Albert of Saxony, attributed the motion of the celestial spheres to the impetus which God had communicated to them in creating them, and which was perpetuated because, in these spheres, there was no element of destruction. He admitted that the Earth moved incessantly, and that its motion might be the cause of the precession of the equinoxes. In a note discovered long after his death, he went so far as to attribute to the Earth a daily rotation. He imagined that the sun, the moon, and the planets were so many systems, each of which contained an earth and elements analogous to our Earth and elements, and to account for the action of gravity in each of these systems he followed closely the theory of gravity advanced by Oresme.

Leonardo da Vinci (1452–1519) was perhaps more thoroughly convinced of the merits of the Parisian physics than any other Italian master. A keen observer, and endowed with insatiable curiosity, he had studied a great number of works, amongst which we may mention the various treatises of the School of Jordanus, various books by Albert of Saxony, and in all likelihood the works of Nicholas of Cusa; then, profiting by the learning of these scholars, he formally enunciated or else simply intimated many new ideas. The statics of the School of Jordanus led him to discover the law of the composition of concurrent forces stated as follows: the two component forces have equal moments as regards the direction of the resultant, and the resultant and one of the components have equal moments as regards the direction of the other component. The statics derived from the properties which Albert of Saxony attributed to the centre of gravity caused Vinci to recognize the law of the polygon of support and to determine the centre of gravity of a tetrahedron. He also presented the law of the equilibrium of two liquids of different density in communicating tubes, and the principle of virtual displacements seems to have occasioned his acknowledgement of the hydrostatic law known as Pascal's. Vinci continued to meditate on the properties of impetus, which he called *impeto* or *forza*, and the propositions that he formulated on the subject of this power very often showed a fairly clear discernment of the law of the conservation of energy. These propositions conducted him to remarkably correct and accurate conclusions concerning the impossibility of perpetual motion. Unfortunately he misunderstood the pregnant explanation, afforded by the theory of impetus, regarding the acceleration of falling bodies, and like the Peripatetics attributed this acceleration to the impulsion of the encompassing air. However, by way of compensation, he distinctly asserted that the velocity of a body that falls freely is proportional to the time occupied in the fall, and he understood in what way this law extends to a fall on an inclined plane. When he wished to determine how the path traversed by a falling body is connected with the time occupied in the fall, he was confronted by a difficulty which, in the

seventeenth century, was likewise to baffle Baliani and Gassendi.

Vinci was much engrossed in the analysis of the deformations and elastic reactions which cause a body to rebound after it has struck another, and this doctrine, formulated by Buridan, Albert of Saxony, and Marsile of Inghem he applied in such a way as to draw from it the explanation of the flight of birds. This flight is an alternation of falls during which the bird compresses the air beneath it, and of rebounds due to the elastic force of this air. Until the great painter discovered this explanation, the question of the flight of birds was always looked upon as a problem in statics, and was likened to the swimming of a fish in water. Vinci attached great importance to the views developed by Albert of Saxony in regard to the Earth's equilibrium. Like the Parisian master, he held that the centre of gravity within the terrestrial mass is constantly changing under the influence of erosion and that the Earth is continually moving so as to bring this centre of gravity to the centre of the World. These small, incessant motions eventually bring to the surface of the continents those portions of earth that once occupied the bed of the ocean and, to place this assertion of Albert of Saxony beyond the range of doubt, Vinci devoted himself to the study of fossils and to extremely cautious observations which made him the creator of Stratigraphy. In many passages in his notes Vinci asserts, like Nicholas of Cusa, that the moon and the other wandering stars are worlds analogous to ours, that they carry seas upon their surfaces, and are surrounded by air; and the development of this opinion led him to talk of the gravity binding to each of these stars the elements that belonged to it. On the subject of this gravity he professed a theory similar to Oresme's. Hence it would seem that, in almost every particular, Vinci was a faithful disciple of the great Parisian masters of the fourteenth century, of Buridan, Albert of Saxony, and Oresme.

XI. ITALIAN AVERROISM AND ITS TENDENCIES TO ROUTINE—ATTEMPTS AT RESTORING THE ASTRONOMY OF HOMOCENTRIC SPHERES.—Whilst, through the anti-Peripatetic influence of the School of Paris, Vinci reaped a rich harvest of discoveries, innumerable Italians devoted themselves to the sterile worship of defunct ideas with a servility that was truly astonishing. The Averroists did not wish to acknowledge as true anything out of conformity with the ideas of Aristotle as interpreted by Averroës; with Pompanazzi (1462–1526), the Alexandrists, seeking their inspiration further back in the past, refused to understand Aristotle otherwise than he had been understood by Alexander of Aphrodisias; and the Humanists, solicitous only for purity of form, would not consent to use any technical language whatever and rejected all ideas that were not sufficiently vague to be attractive to orators and poets; thus Averroists, Alexandrists, and Humanists proclaimed a truce to their vehement discussions so as to combine against the “language of Paris”, the “logic of Paris”, and the “physics of Paris”. It is difficult to conceive the absurdities to which these minds were led by their slavish surrender to routine. A great number of physicists, rejecting the Parisian theory of impetus, returned to the untenable dynamics of Aristotle, and maintained that the projectile was moved by the ambient air. In 1499 Nicolò Vernias of Chieti, an Averroist professor at Padua, taught that if a heavy body fell it was in consequence of the motion of the air surrounding it.

A servile adoration of Peripateticism prompted many so-called philosophers to reject the Ptolemaic system, the only one which, at that time, could satisfy the legitimate exigencies of astronomers, and to re-adopt the hypothesis of homocentric spheres. They held as null and void the innumerable observations that showed changes in the distance of each planet

from the Earth. Alessandro Achillini of Bologna (1463–1512), an uncompromising Averroist and a strong opponent of the theory of impetus and of all Parisian doctrines, inaugurated, in his treatise “*De orbibus*” (1498), a strange reaction against Ptolemaic astronomy; Agostino Nifo (1473–1538) laboured for the same end in a work that has not come down to us; Girolamo Fracastorio (1483–1553) gave us, in 1535, his book “*De homocentricis*”, and Gianbattista Amico (1536), and Giovanni Antonio Delfino (1559) published small works in an endeavour to restore the system of homocentric spheres.

XII. THE COPERNICAN REVOLUTION.—Although directed by tendencies diametrically opposed to the true scientific spirit, the efforts made by Averroists to restore the astronomy of homocentric spheres were perhaps a stimulus to the progress of science, inasmuch as they accustomed physicists to the thought that the Ptolemaic system was not the only astronomical doctrine possible, or even the best that could be desired. Thus, in their own way, the Averroists paved the way for the Copernican revolution. The movements forecasting this revolution were noticeable in the middle of the fourteenth century in the writings of Nicholas of Cusa, and in the beginning of the fifteenth century in the notes of Vinci, both of these eminent scientists being well versed in Parisian physics.

Celio Calcagnini proposed, in his turn, to explain the daily motion of the stars by attributing to the Earth a rotation from West to East, complete in one sidereal day. His dissertation, “*Quod cœlum stet, terra vero moveatur*”, although seeming to have been written about 1530, was not published until 1544, when it appeared in a posthumous edition of the author's works. Calcagnini declared that the Earth, originally in equilibrium in the centre of the universe, received a first impulse which imparted to it a rotary motion, and this motion, to which nothing was opposed, was indefinitely preserved by virtue of the principle set forth by Buridan and accepted by Albert of Saxony and Nicholas of Cusa. According to Calcagnini the daily rotation of the Earth was accompanied by an oscillation which explained the movement of the precession of the equinoxes. Another oscillation set the waters of the sea in motion and determined the ebb and flow of the tides. This last hypothesis was to be maintained by Andrea Cesalpino (1519–1603) in his “*Quæstiones peripateticæ*” (1569), and to inspire Galileo, who, unfortunately, was to seek in the phenomena of the tides his favourite proof of the Earth's rotation.

The “*De revolutionibus orbium cœlestium libri sex*” were printed in 1543, a few months after the death of Copernicus (1473–1543), but the principles of the astronomic system proposed by this man of genius had been published as early as 1539 in the “*Narratio prima*” of his disciple, Joachim Rhæticus (1514–76). Copernicus adhered to the ancient astronomical hypotheses which claimed that the World was spherical and limited, and that all celestial motions were decomposable into circular and uniform motions; but he held that the firmament of fixed stars was immovable, as also the sun, which was placed in the centre of this firmament. To the Earth he attributed three motions: a circular motion by which the centre of the Earth described with uniform velocity a circle situated in the plane of the ecliptic and eccentric to the sun; a daily rotation on an axis inclined towards the ecliptic, and finally, a rotation of this axis around an axis normal to the ecliptic and passing through the centre of the Earth. The time occupied by this last rotation was a little longer than that required for the circular motion of the centre of the Earth which produced the phenomenon of the precession of the equinoxes. To the five planets Copernicus ascribed motions analogous to

those with which the Earth was provided, and he maintained that the moon moved in a circle around the Earth.

Of the Copernican hypotheses, the newest was that according to which the Earth moved in a circle around the sun. From the days of Aristarchus of Samos and Seleucus no one had adopted this view. Medieval astronomers had all rejected it, because they supposed that the stars were much too close to the Earth and the sun, and that an annual circular motion of the Earth might give the stars a perceptible parallax. Still, on the other hand, we have seen that various authors had proposed to attribute to the Earth one or the other of the two motions which Copernicus added to the annual motion. To defend the hypothesis of the daily motion of the Earth against the objections formulated by Peripatetic physics, Copernicus invoked exactly the same reasons as Oresme, and in order to explain how each planet retains the various parts of its elements, he adopted the theory of gravity proposed by the eminent master. Copernicus showed himself the adherent of Parisian physics even in the following opinion, enunciated accidentally: the acceleration of the fall of heavy bodies is explained by the continual increase which impetus receives from gravity.

XIII. FORTUNES OF THE COPERNICAN SYSTEM IN THE SIXTEENTH CENTURY.—Copernicus and his disciple Rhæticus very probably regarded the motions which their theory ascribed to the Earth and the planets, the sun's rest and that of the firmament of fixed stars, as the real motions or real rest of these bodies. The "*De revolutionibus orbium cælestium libri sex*" appeared with an anonymous preface which inspired an entirely different idea. This preface was the work of the Lutheran theologian Osiander (1498–1552), who therein expressed the opinion that the hypotheses proposed by philosophers in general, and by Copernicus in particular, were in no wise calculated to acquaint us with the reality of things: "*Neque enim necesse est eas hypotheses esse veras, imo, ne verisimiles quidem, sed sufficit hoc unum si calculum observationibus congruentem exhibeant*". Osiander's view of astronomical hypotheses was not new. Even in the days of Grecian antiquity a number of thinkers had maintained that the sole object of these hypotheses was to "save appearances", *σώζειν τὰ φαινόμενα*; and in the Middle Ages, as well as in antiquity, this method continued to be that of philosophers who wished to make use of Ptolemaic astronomy whilst at the same time upholding the Peripatetic physics absolutely incompatible with this astronomy. Osiander's doctrine was therefore readily received, first of all by astronomers who, without believing the Earth's motion to be a reality, accepted and admired the kinetic combinations conceived by Copernicus, as these combinations provided them with better means than could be offered by the Ptolemaic system for figuring out the motion of the moon and the phenomena of the precession of the equinoxes.

One of the astronomers who most distinctly assumed this attitude in regard to Ptolemy's system was Erasmus Reinhold (1511–53), who, although not admitting the Earth's motion, professed a great admiration for the system of Copernicus and used it in computing new astronomical tables, the "*Prutenicæ tabulæ*" (1551), which were largely instrumental in introducing to astronomers the kinetic combinations originated by Copernicus. The "*Prutenicæ tabulæ*" were especially employed by the commission which in 1582 effected the Gregorian reform of the calendar. Whilst not believing in the Earth's motion, the members of this commission did not hesitate to use tables founded on a theory of the precession of the equinoxes and attributing a certain motion to the earth.

However, the freedom permitting astronomers to

use all hypotheses qualified to account for phenomena was soon restricted by the exigencies of Peripatetic philosophers and Protestant theologians. Osiander had written his celebrated preface to Copernicus's book with a view to warding off the attacks of theologians, but in this he did not succeed. Martin Luther, in his "*Tischrede*", was the first to express indignation at the impiety of those who admitted the hypothesis of solar rest. Melanchthon, although acknowledging the purely astronomical advantages of the Copernican system, strongly combatted the hypothesis of the Earth's motion (1549), not only with the aid of arguments furnished by Peripatetic physics but likewise, and chiefly, with the assistance of numerous texts taken from Holy Writ. Kaspar Peucer (1525–1602), Melanchthon's son-in-law, whilst endeavouring to have his theory of the planets harmonize with the progress which the Copernican system had made in this regard, nevertheless rejected the Copernican hypotheses as absurd (1571).

It then came to be exacted of astronomical hypotheses that not only, as Osiander had desired, the result of their calculations be conformable to facts, but also that they be not refuted "either in the name of the principles of physics or in the name of the authority of the Sacred Scriptures". This criterion was explicitly formulated in 1578 by a Lutheran, the Danish astronomer Tycho Brahe (1546–1601), and it was precisely by virtue of these two requirements that the doctrines of Galileo were to be condemned by the Inquisition in 1616 and 1633. Eager not to admit any hypothesis that would conflict with Aristotelean physics or be contrary to the letter of the Sacred Scriptures, and yet most desirous to retain all the astronomical advantages of the Copernican system, Tycho Brahe proposed a new system which virtually consisted in leaving the Earth motionless and in moving the other heavenly bodies in such a way that their displacement with regard to the Earth might remain the same as in the system of Copernicus. Moreover, although posing as the defender of Aristotelean physics, Tycho Brahe dealt it a disastrous blow. In 1572 a star, until then unknown, appeared in the constellation of Cassiopeia, and in showing accurate observations that the new astral body was really a fixed star, Tycho Brahe proved conclusively that the celestial world was not, as Aristotle would have had us believe, formed of a substance exempt from generation and destruction.

The Church had not remained indifferent to the hypothesis of the Earth's motion until the time of Tycho Brahe, as it was amongst her members that this hypothesis had found its first defenders, counting adherents even in the extremely orthodox University of Paris. At the time of defending this hypothesis, Oresme was Canon of Rouen, and immediately after he was promoted to the Bishopric of Lisieux; Nicholas of Cusa was Bishop of Brixen and cardinal, and was entrusted with important negotiations by Eugenius IV, Nicholas V, and Pius II; Calcagnini was prothonotary Apostolic; Copernicus was Canon of Thorn, and it was Cardinal Schomberg who urged him to publish his work, the dedication of which was accepted by Paul III. Besides, Oresme had made clear how to interpret the Scriptural passages claimed to be opposed to the Copernican system, and in 1584 Didacus a Stunica of Salamanca found in Holy Writ texts which could be invoked with just as much certainty in favour of the Earth's motion. However, in 1595 the Protestant senate of the University of Tübingen compelled Kepler to retract the chapter in his "*Mysterium cosmographicum*", in which he had endeavoured to make the Copernican system agree with Scripture.

Christopher Clavius (1537–1612), a Jesuit, and one of the influential members of the commission that reformed the Gregorian Calendar, seemed to be the

first Catholic astronomer to adopt the double test imposed upon astronomical hypotheses by Tycho Brahe, and to decide (1581) that the suppositions of Copernicus were to be rejected, as opposed both to Peripatetic physics and to Scripture; on the other hand, at the end of his life and under the influence of Galileo's discoveries, Clavius appeared to have assumed a far more favourable attitude towards Copernican doctrines. The enemies of Aristotelean philosophy gladly adopted the system of Copernicus, considering its hypotheses as so many propositions physically true, this being the case with Pierre de La Ramée, called Petrus Ramus (1502-72), and especially with Giordano Bruno (about 1550-1600). The physics developed by Bruno, in which he incorporated the Copernican hypothesis, proceeded from Nicole, Oresme, and Nicholas of Cusa; but chiefly from the physics taught in the University of Paris in the fourteenth century. The infinite extent of the universe and the plurality of worlds were admitted as possible by many theologians at the end of the thirteenth century, and the theory of the slow motion which gradually causes the central portions of the Earth to work to the surface had been taught by Albert of Saxony before it attracted the attention of Vinci. The solution of Peripatetic arguments against the Earth's motion and the theory of gravity called forth by the comparison of the planets with the Earth would appear to have been borrowed by Bruno from Oresme. The apostasy and heresies for which Bruno was condemned in 1600 had nothing to do with the physical doctrines he had espoused, which included in particular Copernican astronomy. In fact it does not seem that, in the sixteenth century, the Church manifested the slightest anxiety concerning the system of Copernicus.

XIV. THEORY OF THE TIDES.—It is undoubtedly to the great voyages that shed additional lustre on the close of the fifteenth century that we must attribute the importance assumed in the sixteenth century by the problem of the tides, and the great progress made at that time towards the solution of this problem. The correlation existing between the phenomenon of high and low tide and the course of the moon was known even in ancient times. Posidonius accurately described it; the Arabian astronomers were also familiar with it, and the explanation given of it in the ninth century by Albumazar in his "Introductorium magnum ad Astronomiam" remained a classic throughout the Middle Ages. The observation of tidal phenomena very naturally led to the supposition that the moon attracted the waters of the ocean and, in the thirteenth century, William of Auvergne compared this attraction to that of the magnet for iron. However, the mere attraction of the moon did not suffice to account for the alternation of spring and neap tides, which phenomenon clearly indicated a certain intervention of the sun. In his "Questions sur les livres des Météores", which appeared during the latter half of the fourteenth century, Themon, "Son of the Jew", introduced in a vague sort of way the idea of superposing two tides, the one due to the sun and the other to the moon.

In 1528 this idea was very clearly endorsed by Federico Grisogone of Zara, a Dalmatian who taught medicine at Padua. Grisogone declared that, under the action of the moon exclusively, the sea would assume an ovoid shape, its major axis being directed towards the centre of the moon; that the action of the sun would also give it an ovoid shape, less elongated than the first, its major axis being directed towards the centre of the sun; and that the variation of sea level, at all times and in all places, was obtained by adding the elevation or depression produced by the solar tide to the elevation or depression produced by the lunar tide. In 1557 Girolamo Cardano accepted and briefly explained Grisogone's theory.

In 1559 a posthumous work by Delfino gave a description of the phenomena of the tides, identical with that deduced from the mechanism conceived by Grisogone. The doctrine of the Dalmatian physician was reproduced by Paolo Gallucci in 1588, and by Annibale Raimondo in 1589; and in 1600 Claude Duret, who had plagiarized Delfino's treatise, published in France the description of the tides given in that work.

XV. STATICS IN THE SIXTEENTH CENTURY—STEVINUS.—When writing on statics Cardano drew upon two sources, the writings of Archimedes and the treatises of the School of Jordanus; besides, he probably plagiarized the notes left by Vinci, and it was perhaps from this source that he took the theorem: a system endowed with weight is in equilibrium when the centre of gravity of this system is the lowest possible.

Niccolo Tartaglia (about 1500-57), Cardano's antagonist, shamelessly purloined a supposedly forgotten treatise by one of Jordanus's commentators. Ferrari, Cardano's faithful disciple, harshly rebuked Tartaglia for the theft, which nevertheless had the merit of re-establishing the vogue of certain discoveries of the thirteenth century, especially the law of the equilibrium of a body supported by an inclined plane. By another and no less barefaced plagiarism, Tartaglia published under his own name a translation of Archimedes's "Treatise on floating bodies" made by William of Moerbeke at the end of the thirteenth century. This publication, dishonest though it was, helped to give prominence to the study of Archimedes's mechanical labours, which study exerted the greatest influence over the progress of science at the end of the sixteenth century, the blending of Archimedean mathematics with Parisian physics, generating the movement that terminated in Galileo's work. The translation and explanation of the works of Archimedes enlisted the attention of geometers such as Francesco Maurolycus of Messina (1494-1575) and Federico Commandino of Urbino (1509-75), and these two authors, continuing the work of the great Syracusan, determined the position of the centre of gravity of various solids; in addition Commandino translated and explained Pappus's mathematical "Collection", and the fragment of "Mechanics" by Heron of Alexandria appended thereto. Admiration for these monuments of ancient science inspired a number of Italians with a profound contempt for medieval statics. The fecundity of the principle of virtual displacements, so happily employed by the School of Jordanus, was ignored; and, deprived of the laws discovered by this school and of the additions made to them by Vinci, the treatises on statics written by over-enthusiastic admirers of the Archimedean method were notably deficient. Among the authors of these treatises Guidobaldo dal Monte (1545-1607) and Giovanni Battista Benedetti (1530-90) deserve special mention.

Of the mathematicians who, in statics, claimed to follow exclusively the rigorous methods of Archimedes and the Greek geometers, the most illustrious was Simon Stevinus of Bruges (1548-1620). Through him the statics of solid bodies recovered all that had been gained by the School of Jordanus and Vinci, and lost by the contempt of such men as Guidobaldo dal Monte and Benedetti. The law of the equilibrium of the lever, one of the fundamental propositions of which Stevinus made use, was established by him with the aid of an ingenious demonstration which Galileo was also to employ, and which is found in a small anonymous work of the thirteenth century. In order to confirm another essential principle of his theory, the law of the equilibrium of a body on an inclined plane, Stevinus resorted to the impossibility of perpetual motion, which had been affirmed with great precision by Vinci and Cardano. Stevinus's chief

glory lay in his discoveries in hydrostatics; and the determining of the extent and point of application of the pressure on the slanting inner side of a vessel by the liquid contained therein was in itself sufficient to entitle this geometrician from Bruges to a foremost place among the creators of the theory of the equilibrium of fluids. Benedetti was on the point of enunciating the principle known as Pascal's Law, and an insignificant addition permitted Mersenne to infer this principle and the idea of the hydraulic press from what the Italian geometrician had written. Benedetti had justified his propositions by using as an axiom the law of the equilibrium of liquids in communicating vessels, and prior to this time Vinci had followed the same logical proceeding.

XVI. DYNAMICS IN THE SIXTEENTH CENTURY.—The geometricians who, in spite of the stereotyped methods of Averroism and the banter of Humanism, continued to cultivate the Parisian dynamics of impetus, were rewarded by splendid discoveries. Dissipating the doubt in which Albert of Saxony had remained enveloped, Vinci had declared the velocity acquired by a falling body to be proportional to the time occupied by the fall, but he did not know how to determine the law connecting the time consumed in falling with the space passed over by the falling body. Nevertheless to find this law it would have sufficed to invoke the following proposition: in a uniformly varied motion, the space traversed by the moving body is equal to that which it would traverse in a uniform motion whose duration would be that of the preceding motion, and whose velocity would be the same as that which affected the preceding motion at the mean instant of its duration. This proposition was known to Oresme, who had demonstrated it exactly as it was to be demonstrated later by Galileo; it was enunciated and discussed at the close of the fourteenth century by all the logicians who, in the University of Oxford, composed the school of William of Heytesbury, Chancellor of Oxford in 1375; it was subsequently examined or invoked in the fifteenth century by all the Italians who became the commentators of these logicians; and finally, the masters of the University of Paris, contemporaries of Vinci, taught and demonstrated it as Oresme had done.

This law which Vinci was not able to determine was published in 1545 by a Spanish Dominican, Domingo Soto (1494–1560), an *alumnus* of the University of Paris, and professor of theology at Alcalá de Henares, and afterwards at Salamanca. He formulated these two laws thus:

The velocity of a falling body increases proportionally to the time of the fall.

The space traversed in a uniformly varied motion is the same as in a uniform motion occupying the same time, its velocity being the mean velocity of the former.

In addition Soto declared that the motion of a body thrown vertically upward is uniformly retarded. It should be mentioned that all these propositions were formulated by the celebrated Dominican as if in relation to truths generally admitted by the masters among whom he lived.

The Parisian theory, maintaining that the accelerated fall of bodies was due to the effect of a continual increase of impetus caused by gravity, was admitted by Julius Cæsar Scaliger (1484–1558), Benedetti, and Gabriel Vasquez (1551–1604), the celebrated Jesuit theologian. The first of these authors presented this theory in such a way that uniform acceleration of motion seemed naturally to follow from it.

Soto, Tartaglia, and Cardano made strenuous efforts, after the manner of Vinci, to explain the motion of projectiles by appealing to the conflict between impetus and gravity, but their attempts were frustrated by a Peripatetic error which several

Parisian masters had long before rejected. They believed that the motion of the projectile was accelerated from the start, and attributed this initial acceleration to an impulse communicated by the vibrating air. Indeed, throughout the sixteenth century, the Italian Averroists continued to attribute to the ambient air the very transportation of the projectile. Tartaglia empirically discovered that a piece of artillery attained its greatest range when pointed at an angle of forty-five degrees to the horizon. Bruno insisted upon Oresme's explanation of the fact that a body appears to fall in a vertical line in spite of the Earth's motion; to obtain the trajectory of this body it is necessary to combine the action of its weight with the impetus which the Earth has imparted to it. It was as follows that Benedetti set forth the law followed by such an impetus. A body whirled in a circle and suddenly left to itself will move in a straight line tangent to the circle at the very point where the body happened to be at the moment of its release. For this achievement Benedetti deserves to be ranked among the most valuable contributors to the discovery of the law of inertia. In 1553 Benedetti advanced the following argument: in air, or any fluid whatever, ten equal stones fall with the same velocity as one of their number; and if all were combined they would still fall with the same velocity; therefore, in a fluid two stones, one of which is ten times heavier than the other, fall with the same velocity. Benedetti lauded the extreme novelty of this argument with which, in reality, many scholastics had been familiar, but which they had all claimed was not conclusive, because the resistance which the air offered to the heavier stone could certainly not be ten times that which it opposed to the lighter one. Achillini was one of those who clearly maintained this principle. That it might lead to a correct conclusion, Benedetti's argument had to be restricted to the motion of bodies in a vacuum, and this is what was done by Galileo.

XVII. GALILEO'S WORK.—Galileo Galilei (1564–1642) had been in youth a staunch Peripatetic, but was later converted to the Copernican system, and devoted most of his efforts to its defence. The triumph of the system of Copernicus could only be secured by the perfecting of mechanics, and especially by solving the problem presented by the fall of bodies, when the earth was supposed to be in motion. It was towards this solution that many of Galileo's researches were directed, and to bring his labours to a successful issue he had to adopt certain principles of Parisian dynamics. Unfortunately, instead of using them all, he left it to others to exhaust their fecundity.

Galilean statics was a compromise between the incorrect method inaugurated in Aristotle's "Mechanical Questions" and the correct method of virtual displacements successfully applied by the School of Jordanus. Imbued with ideas that were still intensely Peripatetic, it introduced the consideration of a certain *impeto* or *momento*, proportional to the velocity of the moving body and not unlike the impetus of the Parisians. Galilean hydrostatics also showed an imperfect form of the principle of virtual displacements, which seemed to have been suggested to the great Pisan by the effectual researches made on the theory of running water by his friend Benedetto Castelli, the Benedictine (1577–1644). At first Galileo asserted that the velocity of a falling body increased proportionally to the space traversed, and afterwards, by an ingenious demonstration, he proved the utter absurdity of such a law. He then taught that the motion of a freely falling body was uniformly accelerated; in favour of this law, he contented himself with appealing to its simplicity without considering the continual increase of impetus under the influence of gravity. Gravity creates, in

equal periods, a new and uniform impetus which, added to that already acquired, causes the total impetus to increase in arithmetical progression according to the time occupied in the fall; hence the velocity of the falling body. This argument towards which all Parisian tradition had been tending and which, in the last place, had been broached by Scaliger, leads to our modern law: a constant force produces uniformly accelerated motion. In Galileo's work there is no trace either of the argument or of the conclusion deduced therefrom; however, the argument itself was carefully developed by Galileo's friend, Giambattista Baliani (1582-1666).

From the very definition of velocity, Baliani endeavoured to deduce the law according to which the space traversed by a falling body is increased proportionally to the time occupied in the fall. Here he was confronted by a difficulty that had also baffled Vinci; however, he eventually anticipated its solution, which was given, after similar hesitation, by another of Galileo's disciples, Pierre Gassendi (1592-1655). Galileo had reached the law connecting the time occupied in the fall with the space traversed by a falling body, by using a demonstration that became celebrated as the "demonstration of the triangle". It was textually that given by Oresme in the fourteenth century and, as we have seen, Soto had thought of using Oresme's proposition in the study of the accelerated fall of bodies. Galileo extended the laws of freely falling bodies to a fall down an inclined plane and subjected to the test of experiment the law of the motion of a weight on an inclined plane.

A body which, without friction or resistance of any kind, would describe the circumference of a circle concentric with the Earth would retain an invariable *impeto* or *momento*, as gravity would in no wise tend to increase or destroy this *impeto*: this principle, which belonged to the dynamics of Buridan and Albert of Saxony, was acknowledged by Galileo. On a small surface, a sphere concentric with the Earth is apparently merged into a horizontal plane; a body thrown upon a horizontal plane and free from all friction would therefore assume a motion apparently rectilinear and uniform. It is only under this restricted and erroneous form that Galileo recognized the law of inertia and, in this, he was the faithful disciple of the School of Paris.

If a heavy body moved by an *impeto* that would make it describe a circle concentric with the Earth is, moreover, free to fall, the *impeto* of uniform rotation and gravity are component forces. Over a small extent the motion produced by this *impeto* may be assumed to be rectilinear, horizontal, and uniform; hence the approximate law may be enunciated as follows: a heavy body, to which a horizontal initial velocity has been imparted at the very moment that it is abandoned to the action of gravity, assumes a motion which is sensibly the combination of a uniform horizontal motion with the vertical motion that it would assume without initial velocity. Galileo then demonstrated that the trajectory of this heavy body is a parabola with vertical axis. This theory of the motion of projectiles rests upon principles in no wise conformable to an exact knowledge of the law of inertia and which are, at bottom, identical with those invoked by Oresme when he wished to explain how, despite the Earth's rotation, a body seems to fall vertically. The argument employed by Galileo did not permit him to state how a projectile moves when its initial velocity is not horizontal.

Evangelista Torricelli (1608-47), a disciple of Castelli and of Galileo, extended the latter's method to the case of a projectile whose initial velocity had a direction other than horizontal, and proved that the trajectory remained a parabola with a vertical axis. On the other hand Gassendi showed that in this problem of the motion of projectiles, the real

law of inertia which had just been formulated by Descartes should be substituted for the principles admitted by the Parisian dynamics of the fourteenth century.

Mention should be made of Galileo's observations on the duration of the oscillation of the pendulum, as these observations opened up to dynamics a new field. Galileo's progress in dynamics served as a defence of the Copernican system and the discoveries which, with the aid of the telescope, he was able to make in the heavens contributed to the same end. The spots on the sun's surface and the mountains, similar to those upon the Earth, that hid from view certain portions of the lunar disc, gave ample proof of the fact that the celestial bodies were not, as Aristotelean physics had maintained, formed of an incorruptible substance unlike sublunary elements; moreover, the rôle of satellite which, in this heliocentric astronomy, the moon played in regard to the Earth was carried out in relation to Jupiter by the two "Medicean planets", which Galileo had been the first to discover. Not satisfied with having defeated the arguments opposed to the Copernican system by adducing these excellent reasons, Galileo was eager to establish a positive proof in favour of this system. Inspired perhaps by Calcagnini, he believed that the phenomenon of the tides would furnish him the desired proof and he consequently rejected every explanation of ebb and flow founded on the attraction of the sun and the moon, in order to attribute the motion of the seas to the centrifugal force produced by terrestrial rotation. Such an explanation would connect the period of high tide with the sidereal instead of the lunar day, thus contradicting the most ordinary and ancient observations. This remark alone ought to have held Galileo back and prevented him from producing an argument better calculated to overthrow the doctrine of the Earth's rotation than to establish and confirm it.

On two occasions, in 1616 and 1633, the Inquisition condemned what Galileo had written in favour of the system of Copernicus. The hypothesis of the Earth's motion was declared *falsa in Philosophia et ad minus erronea in fide*; the hypothesis of the sun being stationary was adjudged *falsa in Philosophia et formaliter hæretica*. Adopting the doctrine formulated by Tycho Brahe in 1578, the Holy Office forbade the use of all astronomical hypotheses that did not agree both with the principles of Aristotelean physics, and with the letter of the Sacred Scriptures (see GALILEI, GALILEO).

XVIII. INITIAL ATTEMPTS IN CELESTIAL MECHANICS—GILBERT—KEPLER.—Copernicus had endeavoured to describe accurately the motion of each of the celestial bodies, and Galileo had striven to show that the views of Copernicus were correct; but neither Copernicus nor Galileo had attempted to extend to the stars, what they knew concerning the dynamics of sublunary motions, or to determine thereby the forces that sustain celestial motions. They were satisfied with holding that the daily rotation of the Earth is perpetuated by virtue of an impetus given once for all; that the various parts of an element belonging to a star tend towards the centre of this star by reason of a gravity peculiar to each of the celestial bodies through which the body is enabled to preserve its entirety. Thus, in celestial mechanics, these two great scientists contributed scarcely anything to what had already been taught by Buridan, Oresme, and Nicholas of Cusa. About Galileo's time we notice the first attempts to constitute celestial mechanics, that is to say, to explain the motion of the stars by the aid of forces analogous to those the effects of which we feel upon earth; the most important of these initial attempts were made by William Gilbert (1540-1603), and Johann Kepler (1571-1631).

To Gilbert we are indebted for an exhaustive treatise on magnetism, in which he systematically incorporated what was known in medieval times of electrical and magnetic phenomena, without adding thereto anything very essential; he also gave the result of his own valuable experiments. It was in this treatise that he began to expound his "Magnetic Philosophy", that is to say his celestial mechanics, but the work in which he fully developed it was not published until 1651, long after his death. Like Oresme and Copernicus, Gilbert maintained that in each star there was a particular gravity through which the material parts belonging to this star, and these only, tended to rejoin the star when they had been separated from it. He compared this gravity, peculiar to each star, to the action by which a piece of iron flies towards the magnet whose nature it shares. This opinion, held by so many of Gilbert's predecessors and adopted by a great number of his imitators, led Francis Bacon astray. Bacon was the enthusiastic herald of the experimental method which, however, he never practised and of which he had an utterly false conception. According to Gilbert, the Earth, sun, and the stars were animated, and the animating principle of each communicated to the body the motion of perpetual rotation. From a distance, the sun exerted an action perpendicular to the radius vector which goes from the centre of the sun to a planet, and this action caused the planet to revolve around the sun just as a horse turns the horse-mill to which it is yoked.

Kepler himself admitted that in his first attempts along the line of celestial mechanics he was under the influence of Nicholas of Cusa and Gilbert. Inspired by the former of these authors, he attributed the Earth's rotation on its axis to an impetus communicated by the Creator at the beginning of time; but, under the influence of Gilbert's theory, he declared that this impetus ended by being transformed into a soul or an animating principle. In Kepler's earliest system, as in Gilbert's, the distant sun was said to exercise over each planet a power perpendicular to the radius vector, which power produced the circular motion of the planet. However, Kepler had the happy thought of submitting a universal attraction for the magnetic attraction that Gilbert had considered peculiar to each star. He assumed that every material mass tended towards every other material mass, no matter to what celestial body each one of them belonged; that a portion of matter placed between two stars would tend towards the larger and nearer one, although it might never have belonged to it; that, at the moment of high tide, the waters of the sea rose towards the moon, not because they had any special affinity for this humid star, but by virtue of the general tendency that draws all material masses towards one another.

In the course of numerous attempts to explain the motion of the stars, Kepler was led to complicate his first celestial mechanics. He assumed that all celestial bodies were plunged into an ethereal fluid, that the rotation of the sun engendered a vortex within this fluid the reactions of which interposed to deflect each planet from the circular path. He also thought that a certain power, similar to that which directs the magnetic needle, preserved invariable in space the direction of the axis around which the rotation of each planet is effected. The unstable and complicated system of celestial mechanics taught by Kepler sprang from very deficient dynamics which, on many points, was more akin to that of the Peripatetics than to that of the Parisians. However, these many vague hypotheses exerted an incontestable influence on the attempts of scientists from Kepler to Newton to determine the forces that move the stars. If, indeed, Kepler prepared the way for Newton's work, it was mainly by the discovery

of the three admirable laws that have immortalized his name; and, by teaching that the planets described ellipses instead of circles, he produced in astronomy a revolution greater by far than that caused by Copernicus; he destroyed the last time-honoured principle of ancient physics, according to which all celestial motions were reducible to circular motion.

XIX. CONTROVERSIES CONCERNING GEOSTATICS.—The "magnetic" philosophy adopted and developed by Gilbert was not only rejected by Kepler but badly abused in a dispute over the principles of statics. A number of the Parisian Scholastics of the fourteenth century, and Albert of Saxony in particular, had accepted the principle that in every body there is a fixed, determined point which tends to join the centre of the World, this point being identical with the centre of gravity as considered by Archimedes. From this principle various authors, notably Vinci, deduced corollaries that retained a place in statics. The Copernican revolution had modified this principle but little, having simply substituted, for the centre of the universe, a particular point in each star, towards which point tended the centre of gravity of each mass belonging to this star. Copernicus, Galileo, and Gilbert admitted the principle thus modified, but Kepler rejected it. In 1635 Jean de Beaugrand deduced from this principle a paradoxical theory on the gravity of bodies, and particularly on the variation in the weight of a body whose distance from the centre of the universe changes. Opinions similar to those proposed by Beaugrand in his geostatics were held in Italy by Castelli, and in France by Pierre Fermat (1608-65). Fermat's doctrine was discussed and refuted by Etienne Pascal (1588-1651) and Gilles Persone de Roberval (1602-75), and the admirable controversy between these authors and Fermat contributed in great measure to the clear exposition of a certain number of ideas employed in statics, amongst them, that of the centre of gravity.

It was this controversy which led Descartes to revive the question of virtual displacements in precisely the same form as that adopted by the School of Jordanus, in order that the essential propositions of statics might be given a stable foundation. On the other hand, Torricelli based all his arguments concerning the laws of equilibrium on the axiom quoted above, viz.: a system endowed with weight is in equilibrium when the centre of gravity of all the bodies forming it is the lowest possible. Cardano and perhaps Vinci had derived this proposition from the doctrine of Albert of Saxony, but Torricelli was careful to use it only under circumstances in which all verticals are considered parallel to one another and, in this way, he severed all connexion between the axiom that he admitted and the doubtful hypotheses of Parisian physics or magnetic philosophy. Thenceforth the principles of statics were formulated with accuracy, John Wallis (1616-1703), Pierre Varignon (1654-1722), and Jean Bernoulli (1667-1748) having merely to complete and develop the information provided by Stevinus, Roberval, Descartes, and Torricelli.

XX. DESCARTES'S WORK.—We have just stated what part Descartes took in the building of statics by bringing forward the method of virtual displacements, but his active interest in the building up of dynamics was still more important. He clearly formulated the law of inertia as observed by Benedetti: every moving body is inclined, if nothing prevent it, to continue its motion in a straight line and with constant velocity; a body cannot move in a circle unless it be drawn towards the centre, by centripetal movement in opposition to the centrifugal force by which this body tends to fly away from the centre. Because of the similarity of the views held by Des-

cartes and Benedetti concerning this law, we may conclude that Descartes's discovery was influenced by that of Benedetti, especially as Benedetti's works were known to Marin Mersenne (1588–1648), the faithful friend and correspondent of Descartes. Descartes connected the following truth with the law of inertia: a weight constant in size and direction causes a uniformly accelerated motion. Besides, we have seen how, with the aid of Descartes's principles, Gassendi was able to rectify what Galileo had taught concerning falling bodies and the motion of projectiles.

In statics a heavy body can very often be replaced by a material point placed at its centre of gravity; but in dynamics the question arises whether the motion of a body be treated as if this body were entirely concentrated in one of these points, and also which point this is? This question relative to the existence and finding of a centre of impulsion had already engrossed the attention of Vinci and, after him, of Bernardino Baldi (1553–1617). Baldi asserted that, in a body undergoing a motion of translation, the centre of impulsion does not differ from the centre of gravity. Now, is there a centre of impulsion and, if so, where is it to be found in a body undergoing a motion other than that of translation, for instance, by a rotation around an axis? In other words, is there a simple pendulum that moves in the same way as a given compound pendulum? Inspired, no doubt, by reading Baldi, Mersenne laid this problem before Roberval and Descartes, both of whom made great efforts to solve it but became unfriendly to each other because of the difference in their respective propositions. Of the two, Descartes came nearer to the truth, but the dynamic principles that he used were not sufficiently accurate to justify his opinion in a convincing manner; the glory was reserved to Christian Huygens.

The Jesuits, who at the College of La Flèche had been the preceptors of Mersenne and Descartes, did not teach Peripatetic physics in its stereotyped integrity, but Parisian physics; the treatise that guided the instruction imparted at this institution being represented by the "Commentaries" on Aristotle, published by the Jesuits of Coimbra at the close of the seventeenth century. Hence it can be understood why the dynamics of Descartes had many points in common with the dynamics of Buridan and the Parisians. Indeed, so close were the relations between Parisian and Cartesian physics that certain professors at La Flèche, such as Étienne Noël (1581–1660), became Cartesians. Other Jesuits attempted to build up a sort of a combination of Galilean and Cartesian mechanics with the mechanics taught by Parisian Scholasticism, and foremost among these men must be mentioned Honoré Fabri (1606–88), a friend of Mersenne.

In every moving body Descartes maintained the existence of a certain power to continue its motion in the same direction and with the same velocity and this power, which he called the quantity of motion, he measured by estimating the product of the mass of the moving body by the velocity that impels it. The affinity is close between the rôle which Descartes attributed to this quantity of motion, and that which Buridan ascribed to impetus. Fabri was fully aware of this analogy and the momentum that he discussed was at once the impetus of the Parisians, and Descartes's quantity of motion. In statics he identified this momentum with what Galileo called *momento* or *impeto*, and this identification was certainly conformable to the Pisan's idea. Fabri's synthesis was well adapted to make this truth clear, that modern dynamics, the foundations of which were laid by Descartes and Galileo, proceeded almost directly from the dynamics taught during the fourteenth century in the University of Paris.

If the special physical truths demonstrated or anticipated by Descartes were easily traceable to the philosophy of the fourteenth century, the principles on which the great geometrician wished to base these truths were absolutely incompatible with this philosophy. In fact, denying that in reality there existed anything qualitative, Descartes insisted that matter be reduced to extension and to the attributes of which extension seemed to him susceptible, namely, numerical proportions and motion; and it was by combinations of different figures and motions that all the effects of physics could be explained according to his liking. Therefore the power by virtue of which a body tends to preserve the direction and velocity of its motion is not a quality distinct from motion, such as the impetus recognized by the scholastics; it is nothing else than the motion itself, as was taught by William of Occam at the beginning of the fourteenth century. A body in motion and isolated would always retain the same quantity of motion, but there is no isolated body in a vacuum, because matter being identical with extension, vacuum is inconceivable, as is also compressibility. The only conceivable motions are those which can be produced in the midst of incompressible matter, that is to say, vortical motions confined within their own bulk.

In these motions bodies drive one another from the place they have occupied and, in such a transmission of motion, the quantity of motion of each of these bodies varies; however, the entire quantity of motion of all the bodies that impinge on one another remains constant, as God always maintains the same sum total of motion in the world. This transmission of motion by impact is the only action that bodies can exert over one another and in Cartesian, as well as in Aristotelean physics, a body cannot put another in motion unless it touch it, immediate action at a distance being beyond conception.

There are various species of matter, differing from one another only in the size and shape of the contiguous particles of which they are formed. The space that extends between the different heavenly bodies is filled with a certain subtile matter, the very fine particles of which easily penetrate the interstices left between the coarser constituents of other bodies. The properties of subtile matter play an important part in all Cartesian cosmology. The vortices in which subtile matter moves, and the pressure generated by these vortical motions, serve to explain all celestial phenomena. Leibniz was right in supposing that for this part of his work Descartes had drawn largely upon Kepler. Descartes also strove to explain, with the aid of the figures and motions of subtile and other matter, the different effects observable in physics, particularly the properties of the magnet and of light. Light is identical with the pressure which subtile matter exerts over bodies and, as subtile matter is incompressible, light is instantly transmitted to any distance, however great.

The suppositions by the aid of which Descartes attempted to reduce all physical phenomena to combinations of figures and motions had scarcely any part in the discoveries that he made in physics; therefore the identification of light with the pressure exerted by subtile matter plays no part in the invention of the new truths which Descartes taught in optics. Foremost amongst these truths is the law of the refraction of light passing from one medium to another, although the question still remains whether Descartes discovered this law himself, or whether, as Huygens accused him of doing, he borrowed it from Willebrord Snellius (1591–1626), without any mention of the real author. By this law Descartes gave the theory of refraction through a prism, which permitted him to measure the indices of refraction; moreover, he greatly perfected the study of lenses, and finally completed the explanation of the rainbow,

no progress having been made along this line from the year 1300, when Thierry of Freiberg had given his treatise on it. However, the reason why the rays emerging from the drops of water are variously coloured was no better known by Descartes than by Aristotle; it remained for Newton to make the discovery.

XXI. PROGRESS OF EXPERIMENTAL PHYSICS.—Even in Descartes's work the discoveries in physics were almost independent of Cartesianism. The knowledge of natural truths continued to advance without the influence of this system and, at times, even in opposition to it, although those to whom this progress was due were often Cartesians. This advancement was largely the result of a more frequent and skilful use of the experimental method. The art of making logically connected experiments and of deducing their consequences is indeed very ancient; in a way the works produced by this art were no more perfect than the researches of Pierre of Maricourt on the magnet or Thierry of Freiberg on the rainbow. However, if the art remained the same, its technic continued to improve; more skilled workmen and more powerful processes furnishing physicists with more intricate and better made instruments, and thus rendering possible more delicate experiments. The rather imperfect tests made by Galileo and Mersenne in endeavouring to determine the specific weight of air mark the beginning of the development of the experimental method, which was at once vigorously pushed forward by discussions in regard to vacuum.

In Peripatetic physics the possibility of an empty space was a logical contradiction; but, after the condemnation pronounced at Paris in 1277 by Tempier, the existence of a vacuum ceased to be considered absurd. It was simply taught as a fact that the powers of nature are so constructed as to oppose the production of an empty space. Of the various conjectures proposed concerning the forces which prevent the appearance of a vacuum, the most sensible and, it would seem, the most generally received among sixteenth-century Parisians, was the following: contiguous bodies adhere to one another, and this adhesion is maintained by forces resembling those by which a piece of iron adheres to the magnet which it touches. In naming this force *horror vacui*, there was no intention of considering the bodies as animate beings. A heavy piece of iron detaches itself from the magnet that should hold it up, its weight having conquered the force by which the magnet retained it; in the same way, the weight of too heavy a body can prevent the *horror vacui* from raising this body. This very logical corollary of the hypothesis we have just mentioned was formulated by Galileo, who saw therein the explanation of a fact well-known to the cistern makers of his time; namely, that a suction-pump could not raise water higher than thirty-two feet. This corollary entailed the possibility of producing an empty space, a fact known to Torricelli who, in 1644, made the celebrated experiment with mercury that was destined to immortalize his name. However, at the same time, he anticipated a new explanation of this experiment; the mercury is supported in the tube not by the *horror vacui* that does not exist, but by the pressure which the heavy air exerts on the exterior surface of the basin.

Torricelli's experiment quickly attracted the attention of physicists. In France, thanks to Mersenne, it called forth on his part, and on that of those who had dealings with him, many experiments in which Roberval and Pascal (1623-62) vied with each other in ingenuity, and in order to have the resources of technic more easily at his disposal, Pascal made his startling experiments in a glass factory at Rouen. Among the numerous inquirers interested in Torricelli's experiment some accepted the explanation offered by the "column of air", and advanced by the

great Italian geometrician himself; whereas others, such as Roberval, held to the ancient hypothesis of an attraction analogous to magnetic action. At length, with a view to settling the difference, an experiment was made which consisted in measuring at what height the mercury remained suspended in Torricelli's tube; observing it first of all at the foot of a mountain and then at its summit. The idea of this experiment seemed to have suggested itself to several physicists, notably Mersenne, Descartes, and Pascal and, through the instrumentality of the last named and the courtesy of Périer, his brother-in-law, it was made between the base and summit of Puy-de-Dôme, 19 Sept., 1648. The "*Traité de l'équilibre de liqueurs et de la pesanteur de la masse de l'air*", which Pascal subsequently composed, is justly cited as a model of the art of logically connected experiments with deductions. Between atomists and Cartesians there were many discussions as to whether the upper part of Torricelli's tube was really empty or filled with subtle matter; but these discussions bore little fruit. However, fortunately for physics, the experimental method so accurately followed by Torricelli, Pascal, and their rivals continued to progress.

Otto von Guericke (1602-86) seems to have preceded Torricelli in the production of an empty space, since, between 1632 and 1638, he appears to have constructed his first pneumatic machine, with the aid of which instrument he made in 1654 the celebrated Magdeburg experiments, published in 1657 by his friend Caspar Schoot, S.J. (1608-60). Informed by Schoot of Guericke's researches, Robert Boyle (1627-91) perfected the pneumatic machine and, assisted by Richard Townley, his pupil, pursued the experiments that made known the law of the compressibility of perfect gases. In France these experiments were taken up and followed by Mariotte (1620-84). The use of the dilatation of a fluid for showing the changes of temperature was already known to Galileo, but it is uncertain whether the thermoscope was invented by Galileo or by some one of the numerous physicists to whom the priority is attributed, among these being Santorio, called Santorius (1560-1636), Fra Paolo Sarpi (1552-1623), Cornelis van Drebbel (1572-1634), and Robert Fludd (1574-1637). Although the various thermoscopes for air or liquid used in the very beginning admitted of only arbitrary graduation, they nevertheless served to indicate the constancy of the temperature or the direction of its variations, and consequently contributed to the discovery of a number of the laws of physics. Hence this apparatus was used in the Accademia del Cimento, opened at Florence 19 June, 1657, and devoted to the study of experimental physics. To the members of this academy we are especially indebted for the demonstration of the constancy of the point of fusion of ice and of the absorption of heat accompanying this fusion. Observations of this kind, made by means of the thermoscope, created an ardent desire for the transformation of this apparatus into a thermometer, by the aid of a definite graduation so arranged that everywhere instruments could be made which would be comparable with one another. This problem, one of the most important in physics, was not solved until 1702 when Guillaume Amontons (1663-1705) worked it out in the most remarkable manner. Amontons took as a starting-point these two laws, discovered or verified by him: the boiling point of water under atmospheric pressure is constant. The pressures sustained by any two masses of air, heated in the same way in any two constant volumes, have a relation independent of the temperature. These two laws enabled Amontons to use the air thermometer under constant volume and to graduate it in such a way that it gave what we to-day call absolute temperature. Of all the defini-

tions of the degree of temperature given since Amon-ton's time, he, at the first stroke, found the most perfect. Equipped with instruments capable of measuring pressure and registering temperature, experimental physics could not but make rapid progress, this being still further augmented by reason of the interest shown by the learned societies that had been recently founded. The Accademia del Cimento was discontinued in 1667, but the Royal Society of London had begun its sessions in 1663, and the Académie des Sciences at Paris was founded or rather organized by Colbert in 1666. These different academies immediately became the enthusiastic centres of scientific research in regard to natural phenomena.

XXII. UNDULATORY THEORY OF LIGHT.—It was to the Académie des Sciences of Paris that, in 1678, Christian Huygens (1629–95) presented his "Treatise on Light". According to the Cartesian system, light was instantly transmitted to any distance through the medium of incompressible subtile matter. Descartes did not hesitate to assure Fermat that his entire philosophy would give way as soon as it should be demonstrated that light is propagated with a limited velocity. In 1675 Ole Römer (1644–1710), the Danish astronomer, announced to the Académie des Sciences the extent of the considerable but finite velocity with which light traverses the space that separates the planets from one another, the study of the eclipses of Jupiter's satellites having brought him to this conclusion. Descartes's optical theory was destroyed, and Huygens undertook to build up a new theory of light. He was constantly guided by the supposition that, in the midst of compressible ether, substituted for incompressible subtile matter, light is propagated by waves exactly similar to those which transmit sound through a gaseous medium. This comparison led him to an explanation, which is still the standard one, of the laws of reflection and refraction. In this explanation the index of the refraction of light passing from one medium to another equals the ratio of the velocity of propagation in the first medium to the velocity of propagation in the second. In 1850 this fundamental law was confirmed by Foucault's experiments.

However, Huygens did not stop here. In 1669 Erasmus Berthelsen, known as Bartholinus (1625–98), discovered the double refraction of Iceland spar. By a generalization, as ingenious as it was daring, of the theory he had given for non-crystallized media, Huygens succeeded in tracing the form of the surface of a luminous wave inside of a crystal such as spar or quartz, and in defining the apparently complex laws of the double refraction of light in the interior of these crystals. At the same time, he called attention to the phenomena of polarization which accompany this double refraction; he was, however, unable to draw from his optical theory the explanation of these effects. The comparison between light and sound caused Malebranche (1638–1715) to make some very effective conjectures in 1699. He assumed that light is a vibratory motion analogous to that produced by sound; the greater or less amplitude of this motion, as the case may be, generates a greater or less intensity but, whilst in sound each period corresponds to a particular note, in light it corresponds to a particular colour. Through this analogy Malebranche arrived at the idea of monochromatic light, which Newton was to deduce from admirably conducted experiments; moreover, he established between simple colour and the period of the vibration of light, the connexion that was to be preserved in the optics of Young and Fresnel.

XXIII. DEVELOPMENTS OF DYNAMICS.—Both Cartesians and atomists maintained that impact was the only process by which bodies could put one another in motion; hence, to Cartesians and atomists, the

theory of impact seemed like the first chapter of rational physics. This theory had already enlisted the attention of Galileo, Marcus Marci (1639), and Descartes when, in 1668, the Royal Society of London proposed it as the subject of a competition and, of the three important memoirs submitted to the criticism of this society by John Wallis, Christopher Wren (1632–1723), and Huygens, the last is the only one that we can consider. In his treatise Huygens adopted the following principle: if a material body, subject merely to the action of gravity, starts from a certain position, with initial velocity equal to zero, the centre of gravity of this body can at no time rise higher than it was at the outset of the motion. Huygens justified this principle by observing that, if it were false, perpetual motion would be possible. To find the origin of this axiom it would be necessary to go back to "De Subtilitate" by Cardano, who had probably drawn it from the notes of Vinci; the proposition on which Torricelli had based his statics was a corollary from this postulate. By maintaining the accuracy of this postulate, even in the case where parts of the system clash; by combining it with the law of the accelerated fall of bodies, taken from Galileo's works, and with another postulate on the relativity of motion, Huygens arrived at the law of the impact of hard bodies. He showed that the quantity the value of which remains constant in spite of this impact is not, as Descartes declared, the total quantity of motion, but that which Leibniz called the quantity of *vis viva* (living force).

The axiom that had so happily served Huygens in the study of the impact of bodies he now extended to a body oscillating around a horizontal axis and his "Horologium oscillatorium", which appeared in 1673, solved in the most elegant and complete manner the problem of the centres of oscillation previously handled by Descartes and Roberval. That Huygens's axiom was the subversion of Cartesian dynamics was shown by Leibniz in 1686. If, like Descartes, we measure the efficiency of a force by the work that it does, and if, moreover, we admit Huygens's axiom and the law of falling bodies, we find that this efficiency is not measured by the increase in the quantity of motion of the moving body, but by the increase in half the product of the mass of the moving body and the square of its velocity. It was this product that Leibniz called *vis viva*. Huygens's "Horologium oscillatorium" not only gave the solution of the problem of the centre of oscillation but likewise a statement of the laws which, in circular motion, govern the magnitude of centrifugal force, and thus it was that the eminent physicist prepared the way for Newton, the lawgiver of dynamics.

XXIV. NEWTON'S WORK.—Most of the great dynamical truths had been discovered between the time of Galileo and Descartes, and that of Huygens and Leibniz. The science of dynamics required a Euclid who would organize it as geometry had been organized, and this Euclid appeared in the person of Isaac Newton (1642–1727) who, in his "Philosophiæ naturalis principia mathematica", published in 1687, succeeded in deducing the entire science of motion from three postulates: inertia; the independence of the effects of previously acquired forces and motions; and the equality of action and reaction. Had Newton's "Principia" contained nothing more than this co-ordination of dynamics into a logical system, they would nevertheless have been one of the most important works ever written; but, in addition, they gave the grandest possible application of this dynamics in utilizing it for the establishment of celestial mechanics. In fact, Newton succeeded in showing that the laws of bodies falling to the surface of the earth, the laws that preside over the motion of planets around the sun, and of satellites around the planets which they accompany, finally, the laws that govern

the form of the Earth and of the other stars, as also the high and low tides of the sea, are but so many corollaries from this unique hypothesis: two bodies, whatever their origin or nature, exert over each other an attraction proportional to the product of their masses and in inverse ratio to the square of the distance that separates them.

The dominating principle of ancient physics declared the essential distinction between the laws that directed the motions of the stars—beings exempt from generation, change, and death—and the laws presiding over the motions of sublunary bodies subject to generation and corruption. From the birth of Christian physics and especially from the end of the thirteenth century, physicists had been endeavouring to destroy the authority of this principle and to render the celestial and sublunary worlds subject to the same laws, the doctrine of universal gravitation being the outcome of this prolonged effort. In proportion as the time approached, when Newton was to produce his system, attempts at cosmology were multiplied, so many forerunners, as it were, of this discovery. When in 1672 Guericke again took up Kepler's celestial mechanics, he made but one correction therein, which unfortunately caused the disappearance of the only proposition by which this work led up to Newton's discoveries. Kepler had maintained that two material masses of any kind attract each other, but, in imitation of Copernicus, Gilbert, and Galileo, Guericke limited this mutual attraction to parts of the same star, so that, far from being attracted by the Earth, portions of the moon would be repelled by the Earth if placed upon its surface. But, in 1644, under the pseudonym of Aristarchus of Samos, Roberval published a system of celestial mechanics, in which the attraction was perhaps mutual between two masses of no matter what kind; in which, at all events, the Earth and Jupiter attracted their satellites with a power identical with the gravity with which they endow their own fragments. In 1665, on the pretence of explaining the motions of Jupiter's satellites, Giovanni Alfonso Borelli (1608–79) tried to advance a theory which simultaneously comprised the motions of the planets around the sun and of the satellites around the planets. He was the first of modern scientists (Plutarch having preceded him) to hold the opinion that the attraction which causes a planet to tend towards the sun and a satellite to tend towards the star which it accompanies, is in equilibrium with the centrifugal force produced by the circular motion of the planet or satellite in question. In 1674 Robert Hooke (1635–1702) formulated the same idea with great precision. Having already supposed the attraction of two masses to vary inversely as the square of their distance, he was in possession of the fundamental hypotheses of the theory of universal gravitation, which hypotheses were held by Wren about the same time. However, neither of these scientists was able to deduce therefrom celestial mechanics, as both were still unacquainted with the laws of centrifugal force, published just at this time by Huygens. In 1684 Edmund Halley (1656–1742) strove to combine Huygens's theories with Hooke's hypotheses, but, before his work was finished, Newton presented his "Principia" to the Royal Society, having for twenty years silently pursued his meditations on the system of the world. Halley, who could not forestall Newton, had the glory of broadening the domain of universal gravitation by making it include comets (1705).

Not satisfied with creating celestial mechanics, Newton also contributed largely to the progress of optics. From ancient times the colouring of the spectrum, produced by the passage of white light through a glass prism, had elicited the wonder of observers and appealed to the acumen of physicists

without, however, being satisfactorily explained. Finally, a complete explanation was given by Newton who, in creating a theory of colours, accomplished what all the philosophers from Aristotle down had laboured in vain to achieve. The theory advanced by the English physicist agreed with that proposed by Malebranche at the same time. However, Malebranche's theory was nothing more than a hypothesis suggested by the analogy between light and sound, whereas Newton's explanation was drawn from experiments, as simple as they were ingenious, its exposition by the author being one of the most beautiful examples of experimental induction. Unfortunately Newton disregarded this analogy between sound and light that had furnished Huygens and Malebranche with such fruitful discoveries. Newton's opinion was to the effect that light is formed of infinitely small projectiles thrown off with extreme velocity by incandescent bodies. The particles of the medium in which these projectiles move exert over them an attraction similar to universal attraction; however, this new attraction does not vary inversely as the square of the distance but according to another function of the distance, and in such a way that it exercises a very great power between a material particle and a luminous corpuscle that are contiguous. Nevertheless this attraction becomes altogether insensible as soon as the two masses between which it operates are separated from each other by a perceptible interval.

This action exerted by the particles of a medium on the luminous corpuscles pervading them changes the velocity with which these bodies move and the direction which they follow at the moment of passing from one medium to another; hence the phenomenon of refraction. The index of refraction is the ratio of the velocity of light in the medium which it enters, to the velocity it had in the medium which it leaves. Now, as the index of refraction so understood was precisely the reverse of that attributed to it by Huygens's theory, in 1850 Foucault submitted both to the test of experiment, with the result that Newton's theory of emission was condemned. Newton explained the experimental laws that govern the colouring of thin laminæ, such as soap bubbles, and succeeded in compelling these colours, by suitable forms of these thin laminæ, to assume the regular order known as "Newton's Rings". To explain this phenomenon he conceived that luminous projectiles have a form that may, at the surface of contact of two media, either pass easily or be easily reflected, according to the manner of their presentation at the moment of passage; a rotary motion causes them to pass alternately by "fits of easy transmission or of easy reflection".

Newton thought that he had accounted for the principal optical phenomena by supposing that, besides this universal attraction, there existed an attraction, sensible only at a very short distance, exerted by the particles of bodies on luminous corpuscles, and naturally he came to believe that these two kinds of attraction would suffice to explain all physical phenomena. Action extending to a considerable distance, such as electric and magnetic action, must follow laws analogous to those which govern universal gravity; on the other hand, the effects of capillarity and cohesion, chemical decomposition and reaction must depend on molecular attraction extending only to extremely small distances and similar to that exerted over luminous corpuscles. This comprehensive hypothesis proposed by Newton in a "question" placed at the end of the second edition of his "Optics" (1717) gave a sort of outline of the programme which eighteenth-century physics was to attempt to carry out.

XXV. PROGRESS OF GENERAL AND CELESTIAL MECHANICS IN THE EIGHTEENTH CENTURY.—This

programme made three demands: first, that general mechanics and celestial mechanics advance in the way indicated by Newton; secondly, that electric and magnetic phenomena be explained by a theory analogous to that of universal gravitation; thirdly, that molecular attraction furnish the detailed explanations of the various changes investigated by physics and chemistry.

Many followed in the path outlined by Newton, and tried to extend the domain of general and celestial mechanics, but there were three who seem to have surpassed all the others: Alexis-Claude Clairaut (1713-65), Jean-Baptiste le Rond d'Alembert (1717-83), and Leonhard Euler (1707-83). The progress which, thanks to these three able men, was made in general mechanics, may be summed up as follows: In 1743, by his principle of the equilibrium of channels, which was easily connected with the principle of virtual displacements, Clairaut obtained the general equations of the equilibrium of liquids. In the same year d'Alembert formulated a rule whereby all problems of motion were reduced to problems of equilibrium and, in 1744, applied this rule to the equation of hydrostatics given by Clairaut and arrived at the equations of hydrodynamics. Euler transformed these equations and, in his studies on the motion of liquids, was enabled to obtain results no less important than those which he had obtained by analysing the motion of solids. Clairaut extended the consequences of universal attraction in all directions, and, in 1743, the equations of hydrostatics that he had established enabled him to perfect the theory of the figure of the earth. In 1752 he published his theory of lunar inequalities, which he had at first despaired of accounting for by Newton's principles. The methods that he devised for the study of the perturbations which the planets produce on the path of a star permitted him, in 1758, to announce with accuracy the time of the return of Halley's Comet. The confirmation of this prediction in which Clairaut had received assistance from Lalande (1732-1807) and Mme. Lepaute, both able mathematicians, placed beyond doubt the applicability of Newton's hypotheses to comets.

Great as were Clairaut's achievements in perfecting the system of universal attraction, they were not as important as those of d'Alembert. Newton could not deduce from his suppositions a satisfactory theory of the precession of the equinoxes, and this failure marred the harmony of the doctrine of universal gravitation. In 1749 d'Alembert deduced from the hypothesis of gravitation the explanation of the precession of the equinoxes and of the nutation of the earth's axis; and soon afterwards Euler, drawing upon the admirable resources of his mathematical genius, made still further improvements on d'Alembert's discovery. Clairaut, d'Alembert, and Euler were the most brilliant stars in an entire constellation of mechanical theorists and astronomers, and to this group there succeeded another, in which shone two men of surpassing intellectuality, Joseph-Louis Lagrange (1736-1813) and Pierre-Simon Laplace (1749-1827). Laplace was said to have been born to complete celestial mechanics, if, indeed, it were in the nature of a science to admit of completion; and quite as much could be said of Lagrange with regard to general mechanics. In 1787 Lagrange published the first edition of his "*Mécanique analytique*"; the second, which was greatly enlarged, was published after the author's death. Laplace's "*Mécanique céleste*" was published from 1799 to 1805, and both of these works give an account of the greater part of the mechanical conquests made in the course of the eighteenth century, with the assistance of the principles that Newton had assigned to general mechanics and the laws that he had imposed upon universal gravitation. However exhaustive and

effective these two treatises are, they do not by any means include all the discoveries in general and celestial mechanics for which we are indebted to their authors. To do Lagrange even meagre justice his able researches should be placed on a par with his "*Mécanique analytique*"; and our idea of Laplace's work would be very incomplete were we to omit the grand cosmogonic hypothesis with which, in 1796, he crowned his "*Exposition du système du monde*". In developing this hypothesis the illustrious geometer was unaware that in 1755 Kant had expressed similar suppositions which were marred by serious errors in dynamic theories.

XXVI. ESTABLISHMENT OF THE THEORY OF ELECTRICITY AND MAGNETISM.—For a long time the study of electric action was merely superficial and, in the beginning of the eighteenth century, it was still in the condition in which Thales of Miletus had left it, remaining far from the point to which the study of magnetic attraction and repulsion had been carried in the time of Pierre of Maricourt. When, in 1733 and 1734, Charles-François de Cisternay du Fay distinguished two kinds of electricity, resinous and vitreous, and when he proved that bodies charged with the same kind of electricity repel one another, whereas those charged with different kinds attract one another, electrical science was brought up to the level that magnetic science had long before attained, and thenceforth these two sciences, united by the closest analogy, progressed side by side. They advanced rapidly as, in the eighteenth century, the study of electrical phenomena became a popular craze. Physicists were not the only ones devoted to it; men of the world crowded the *salons* where popularizers of the science, such as the Abbé Nollet (1700-70), enlisted as votaries dandified marquesses and sprightly marchionesses. Numberless experimentalists applied themselves to multiplying observations on electricity and magnetism, but we shall restrict ourselves to mentioning Benjamin Franklin (1706-90) who, by his logically-conducted researches, contributed more than any other man to the formation of the theories of electricity and magnetism. The researches of Henry Cavendish (1731-1810) deserve to be placed in the same rank as Franklin's, though they were but little known before his death.

By means of Franklin's experiments and his own, Äpinus (Franz Ulrich Theodor Hoch, 1724-1802) was the first to attempt to solve the problem suggested by Newton and, by the hypothesis of attractive and repellent forces, to explain the distribution of electricity and magnetism over the bodies which they affect. His researches could not be pushed very far, as it was still unknown that these forces depend upon the distance at which they are exerted. Moreover, Äpinus succeeded in drawing still closer the connexion already established between the sciences of electricity and magnetism, by showing the polarization of each of the elements of the insulating plate which separates the two collecting plates of the condenser. The experiment he made in this line in 1759 was destined to suggest to Coulomb the experiment of the broken magnets and the theory of magnetic polarization, which is the foundation of the study of magnets; and was also to be the starting-point of an entire branch of electrical science, namely the study of dielectric bodies, which study was developed in the nineteenth century by Michael Faraday and James Clerk-Maxwell.

Their analogy to the fertile law of universal gravitation undoubtedly led physicists to suppose that electrical and magnetic forces vary inversely as the square of the distance that separates the acting elements; but, so far, this opinion had not been confirmed by experiment. However, in 1780 it received this confirmation from Charles-Augustin de Coulomb with the aid of the torsion balance. By the use of

this balance and the proof plane, he was enabled to make detailed experiments on the subject of the distribution of electricity over conductive bodies, no such tests having been previously made. Although Coulomb's experiments placed beyond doubt the elementary laws of electricity and magnetism, it still remained to be established by mathematical analysis how electricity was distributed over the surface of conductive bodies of given shape, and how a piece of soft iron was magnetized under given circumstances. The solution of these problems was attempted by Coulomb and also in 1787 by Haüy (q. v.), but neither of these two savants pushed his tests very far. The establishment of principles which would permit of an analysis of the distribution of electricity on conductors, and of magnetism on soft iron, required the genius of Simon-Denis Poisson (1781-1840).

In 1812 Poisson showed how the investigation of the distribution of electricity in equilibrium on conductors belonged to the domain of analysis, and he gave a complete solution of this problem in the case of two conductive spheres influencing each other, whether placed at given distances or in contact. Coulomb's experiments in connexion with contiguous spheres established the truth of Poisson's theory. In 1824 Poisson established on the subject of hollow conductors limited either interiorly or exteriorly by a spherical cavity, theorems which, in 1828, were extended by George Green (1793-1841) to all kinds of hollow conductors and which Faraday was subsequently to confirm through experimentation. Between 1813 and 1824 Poisson took up the study of magnetic forces and magnetization by impulsion and, in spite of a few inaccuracies which the future was to correct, the formulæ which he established remain at the basis of all the research of which magnetism has meanwhile been the object. Thanks to Poisson's memoirs, the theory of the forces exercised in inverse ratio to the square of the distance, by annexing the domain of static electricity and magnetism, markedly enlarged the field which at first included only celestial mechanics. The study of the action of the electric current was to open up to this theory a new and fertile territory.

The discoveries of Aloisio Galvani (1737-98) and Alessandro Volta (1745-1827) enriched physics with the voltaic battery. It would be impossible to enumerate, even briefly, the researches occasioned by this discovery. All physicists have compared the conductor, the seat of a current, to a space in which a fluid circulates. In his works on hydrodynamics Euler had established general formulæ which apply to the motion of all fluids and, imitating Euler's method, Jean-Baptiste-Joseph Fourier (1768-1830) began the study of the circulation of heat—then considered a fluid and called caloric—within conductive bodies. The mathematical laws to which he had recourse once more showed the extreme importance of the mathematical methods inaugurated by Lagrange and Laplace in the study of universal attraction, and at the same time extended by Poisson to the study of electrostatics. In order to treat mathematically of the circulation of electric fluid in the interior of conductive bodies, it sufficed to take up Fourier's analysis almost textually, substituting the word electricity for the word heat, this being done in 1827 by Georg Simon Ohm (1789-1854).

Meanwhile on 21 July, 1820, Hans Christian Oersted (1777-1851) had discovered the action of the electric current on the magnetic needle. To this discovery André-Marie Ampère (1775-1836) added that of the action exerted over each other by two conductors carrying electric currents and, to the study of electro-dynamic and electro-magnetic forces, he applied a method similar to that used by Newton when studying universal attraction. In 1826 Ampère gave the complete theory of all these forces in his

"Mémoire sur la théorie mathématique des phénomènes électro-dynamiques uniquement déduite de l'expérience", a work that can stand the test of comparison with the "*Philosophiæ naturalis principia mathematica*" and not be found wanting.

Not wishing to carry the history of electricity and magnetism beyond this date, we shall content ourselves with making another comparison between the two works we have just mentioned. As Newton's treatise brought about numerous discoveries on the part of his successors, Ampère's memoir gave the initial impetus to researches which have greatly broadened the field of electro-dynamics and electro-magnetism. Michael Faraday (1791-1867), an experimentalist whose activity, skill, and good fortune have perhaps never been equalled, established in 1831 the experimental laws of electro-dynamic and electro-magnetic induction, and, between 1845 and 1847, Franz Ernst Neumann (1798-1895) and Wilhelm Weber (1804-91), by closely following Ampère's method of studying electro-dynamic force, finally established the mathematical theory of these phenomena of induction. Michael Faraday was opposed to Newtonian doctrines, and highly disapproved the theory of action at a distance; in fact, when he applied himself to analysing the polarization of insulated media, which he called dielectrics, he hoped to eliminate the hypothesis of such action. Meantime by extending to dielectric bodies the formulæ that Poisson, Ampère, and Neumann had established for magnets and conductive bodies, James Clerk-Maxwell (1831-79) was enabled to create a new branch of electro-dynamics, and thereby bring to light the long-sought link connecting the sciences of electricity and optics. This wonderful discovery was not one of the least important conquests of the method defined and practised by Newton.

XXVII. MOLECULAR ATTRACTION.—While universal attraction, which varies proportionally as the product of the masses and inversely as the square of the distance, was being established throughout the science of astronomy, and while, thanks to the study of other forces also varying inversely as the square of the distance, electricity and magnetism were being organized, other parts of physics received no less light from another Newtonian hypothesis, namely, the supposition that, between two material particles, there is an attraction distinct from universal attraction and extremely powerful, while the two particles are contiguous, but ceasing to be appreciable as soon as the two masses which it acts upon are separated by a sensible distance. Among the phenomena to be explained by such attractions, Newton had already signalized the effect of capillarity in connexion with which Francis Hauksbee (d. 1705) had made interesting experiments. In 1718 James Jurin (1684-1750) tried to follow Newton's idea but without any marked success, and it was Clairaut who, in 1743, showed how hydrostatic methods permitted the application of this idea to the explanation of capillary phenomena. Unfortunately his able reasoning led to no important result, as he had ascribed too great a value to the extent of molecular action.

Chemical action also was one of the actions which Newton made subject to molecular attraction, and John Keill (1671-1721), John Freind (1675-1728), and Pierre-Joseph Macquer (1718-84) believed in the fruitfulness of this Newtonian opinion. The hypothesis of molecular attraction proved a great annoyance to a man whose scientific mediocrity had not prevented him from acquiring great influence, we mean Georges-Louis-Leclerc de Buffon (1707-88). Incapable of understanding that an attraction could be other than inversely proportional to the square of the distance, Buffon entered into a discussion of the subject with Clairaut, and fondly imagined that he had triumphed over the modest learning of his opponent.

Ruggiero Giuseppe Boscovich, S.J. (1711–87), published a detailed exposition of the views attacked by Buffon and defended by Clairaut, and, inspired alike by the opinions of Newton and Leibniz, he conceived a cosmology in which the universe is composed solely of material points, these being attracted to each other in pairs. When these points are separated by a sensible distance, their attraction is reduced to mere universal attraction, whereas when they are in very close proximity it assumes a dominant importance. Boscovich's cosmology provided physical theory with a programme which the geometers of the eighteenth century, and of a great portion of the nineteenth, laboured assiduously to carry out.

The efforts of Johann Andreas von Segner (1704–77), and subsequently of Thomas Young (1773–1829), again drew attention to capillary phenomena, and with the assistance of the hypothesis of molecular attraction, as also of Clairaut's method, Laplace advanced in 1806 and 1807 an admirable theory, which Karl Friedrich Gauss (1777–1855) improved in 1829. Being a thoroughly-convinced partisan of Boscovich's cosmological doctrine, Laplace communicated his convictions to numerous geometers, who surrendered to the ascendancy of his genius; we shall only mention Claude-Louis-Marie Navier (1785–1836), Poisson, and Augustin Cauchy (1789–1857). In developing the consequences of the hypothesis of molecular attraction Navier, Poisson, and Cauchy succeeded in building up the theory of the equilibrium and small motions of elastic bodies, one of the finest and most fruitful theories of modern physics. The discredit into which the progress of present-day thermodynamics has brought Boscovich's cosmology has, however, affected scarcely anything of what Laplace, Gauss, Navier, Poisson, Cauchy, and many others have deduced from the principles of this cosmology. The theories which they established have always been readily justified with the assistance of new methods, the way of bringing about this justification having been indicated by Cauchy himself and George Green. After Macquer, many chemists used the hypothesis of molecular attraction in an attempt to disentangle the laws of reaction which they studied, and among these scientists we may mention Torbern Bergman (1735–1784), and above all Claude-Louis Berthollet (1784–1822). When the latter published his "*Statique chimique*" in 1803, he believed that the science of chemical equilibria, subject at last to Newton's method, had found its true direction; however, it was not to enter upon this direction until much later on, when it would be guided by precepts altogether different and which were to be formulated by thermodynamics.

XXVIII. REVIVAL OF THE UNDULATORY THEORY OF LIGHT.—The emission theory of light not only led Newton to conceive the hypothesis of molecular attraction, but seemed to provide this hypothesis with an opportunity for further success by permitting Laplace to find, in the emission system, the laws of the double refraction of Iceland spar, which laws Huygens had discovered by the use of the undulatory theory. In this way Newton's optics appeared to rob Huygens's optics of the one advantage in which it glorified. However, at the very moment that Laplace's discovery seemed to ensure the triumph of the emission system, the undulatory theory carried off new and dazzling victories, won mainly through the efforts of Thomas Young and Augustin-Jean Fresnel (1788–1827). Between 1801 and 1803 Young made the memorable discoveries which provoked this revival of undulatory optics. The comparison of the ether that vibrates in a ray of light to the air that vibrates in a resonant tube led him to explain the alternately light and dark fringes that show in a place illumined by two equal beams slightly inclined to each other. The principle of interference, thus justified, allowed

him to connect with the undulatory theory the explanation of the colours of thin laminae that Newton had demanded of the "fits of easy transmission and easy reflection" of the particles of light.

In 1815 Fresnel, who combined this principle of interference with the methods devised by Huygens, took up the theory of the phenomena of diffraction which had been discovered by Francesco Maria Grimaldi, S.J. (1618–63), and had remained a mystery to opticians. Fresnel's attempts at explaining these phenomena led him to draw up in 1818 a memoir which in a marked degree revealed the essential character of his genius, namely, a strange power of divination exercised independently of all rules of deductive reasoning. Despite the irregularity of his procedure, Fresnel made known very complicated formulæ, the most minute details of which were verified by experiment, and long afterwards justified according to the logical method of mathematicians. Never did physicist conquer more important and more unthought-of truths, and yet never was there employed a method more capable of leading the common mind into error. Up to this time the vibrations of ether in a ray of light had been supposed to be longitudinal, as it is in the air of a resonant tube, but in 1808 Etienne-Louis Malus (1775–1812) discovered the polarization of light when reflected on glass, and, in 1817, when studying this phenomenon, Young was led to suppose that luminous vibrations are perpendicular to the ray which transmits them. Fresnel, who had conceived the same idea, completed an experiment (1816) in collaboration with Arago (1786–1853), which proved the view that luminous vibrations are transverse to the direction of propagation.

The hypothesis of transverse vibrations was, for Fresnel, the key to all the secrets of optics, and from the day that he adopted it he made discoveries with great rapidity. Among these discoveries were: (a) The complete theory of the phenomena of polarization accompanying the reflection or refraction of light on the surface of contact of two isotropic media. The peculiarities which accompany total reflection gave Fresnel an opportunity to display in a most striking manner his strange power of divination and thus throw out a veritable challenge to logic. This divination was no less efficient in the second discovery. (b). In studying double refraction, Huygens limited himself to determining the direction of luminous rays in the interior of crystals now called uniaxial, without, however, being able to account for the polarization of these rays; but with the aid of the wave-surface, Fresnel succeeded in giving the most elegant form to the law of the refraction of rays in biaxial crystals, and in formulating rules by which rays polarize in the interior of all crystals, uniaxial as well as biaxial.

Although all these wonderful theories destroyed the theory of emission, the hypothesis of molecular attraction was far from losing ground. In fact Fresnel thought he could find in the elasticity of the ether, which transmits luminous vibrations, the explanation of all the optical laws that he had verified by experiment, and he sought the explanation of this elasticity and its laws in the attraction which he believed to exist between the contiguous particles of this fluid. Being too little of a mathematician and too little of a mechanician to go very far in the analysis of such a problem, he left its solution to his successors. To this task, so clearly defined by Fresnel, Cauchy devoted the most powerful efforts of his genius as an algebraist and, thanks to this pupil of Laplace, the Newtonian physics of molecular attraction became an active factor in the propagation of the theory of undulatory optics. Fresnel's discoveries did not please all Newtonians as much as they did Cauchy. Arago could never admit that luminous vibrations were transverse, notwithstanding that he had collaborated with Fresnel in making the experiment by

which this point was verified, and Jean-Baptiste Biot (1774–1862), whose experimental researches were numerous and skilful, and who had furnished recent optics with very valuable matter, remained strongly attached to the system of emission by which he endeavoured to explain all the phenomena that Fresnel had discovered and explained by the undulatory system. Moreover, Biot would not acknowledge himself defeated, or regard the system of emission as condemned until Foucault (1819–68) proved that light is propagated much more quickly in air than in water.

XXIX. THEORIES OF HEAT.—The idea of the quantity of heat and the invention of the calorimeter intended for measuring the amount of heat emitted or absorbed by a body under given circumstances are due to Joseph Black (1728–99) and Adair Crawford (1749–95), who, by joining calorimetry with thermometry, veritably created the science of heat, which science remained unborn as long as the only thing done was the comparison of temperatures. Like Descartes, Newton held that heat consisted in a very lively agitation of the smallest parts of which bodies are composed. By showing that a certain quantity of heat is furnished to ice which melts, without however raising the temperature of the ice, that this heat remains in a “latent state” in the water resulting from the melting and that it again becomes manifest when the water returns to ice, the experiments of Black and Crawford led physicists to change their opinion concerning the nature of heat. In it they beheld a certain fluid which combines with other matter when heat passes into the latent state, and separates from it when heat is liberated again, and, in the new nomenclature that perpetuated the revolution brought about by Antoine-Laurent Lavoisier (1743–94), this imponderable fluid was assigned a place among simple bodies and named caloric.

Air becomes heated when it is compressed, and cools again when rarefied under the receiver of the pneumatic machine. Johann Heinrich Lambert (1728–77), Horace de Saussure (1740–79), and John Dalton (1766–1844) recognized the importance of this already old experiment, but it is to Laplace that we are indebted for a complete explanation of this phenomenon. The experiment proved to Laplace that, at a given temperature, a mass of air contains a quantity of caloric proportional to its volume. If we admit the accuracy of the law of compressibility enunciated by Boyle and Mariotte, this quantity of heat combined with a given mass of air, also of given temperature, is proportional to the volume of this air. In 1803 Laplace formulated these propositions in a short note inserted in Berthollet’s “Statique chimique”. In order to verify the consequences which Laplace deduced therefrom concerning the expansion of gases, Louis-Joseph Gay-Lussac (1778–1850) began researches on this subject, and in 1807 on the variations of temperature produced when a gas contained in a receiver enters another receiver previously empty.

Laplace’s views entail an evident corollary; to raise to a certain number of degrees the temperature of a gas of a fixed volume, the communication of less heat is required than if this gas were expanded under an invariable pressure. Hence a gas admits of two distinct kinds of specific heat which depend on whether it is heated at constant volume or under constant pressure; the specific heat being greater in the latter case than in the former. Through these remarks the study of the specific heat of gases was signalized as one of the most important in which experimenters could engage. The Institute made this study the subject of a competition which called forth two notable memoirs, one by Delaroche and Bérard on the measurement of the specific heats of various gases under constant pressure; and the other by Desormes and Clément, published in 1812, on the determination of the increase of heat due to a given com-

pression in a given mass of air. The experiments of Desormes and Clément enabled Laplace to deduce, in the case of air, the ratio of specific heat under constant pressure to specific heat under constant volume, and hence to test the ideas he had formed on the propagation of sound.

In applying to air the law of compressibility discovered by Boyle, Newton had attempted to calculate the velocity of the propagation of sound in this fluid, and the formula which he had established gave values very inferior to those furnished by experimental determination. Lagrange had already shown that, by modifying Boyle’s law of compressibility, this disagreement could be overcome; however, the modification was to be justified not by what Lagrange said but by what Laplace discovered. When sound is propagated in air by alternate condensations and rarefactions, the temperature at each point instead of remaining unchanged, as Boyle’s law supposed, is alternately raised and lowered about a mean value. Hence velocity of sound was no longer expressed by the formula Newton had proposed; this expression had to be multiplied by the square root of the ratio of specific heat under constant pressure to specific heat under constant volume. Laplace had this thought in mind in 1803 (Berthollet, “Statique chimique”); its consequences being developed in 1807 by Poisson, his disciple. In 1816 Laplace published his new formula; fresh experiments by Desormes and Clément, and analogous experiments by Gay-Lussac and Welter gave him tolerably exact values of the relation of the specific heats of gases. Henceforth the great geometrician could compare the result given by his formula with that furnished by the direct determination of the velocity of sound, the latter, in metres per second, being represented by the number 340·889, and the former by the number 337·715. This agreement seemed a very strong confirmation of the hypothesis of caloric and the theory of molecular action, to both of which it was attributable. It would appear that Laplace had a right to say: “The phenomena of the expansion of heat and vibration of gases lead back to the attractive and repellent forces sensible only at imperceptible distances. In my theory on capillary action, I have traced to similar forces the effects of capillarity. All terrestrial phenomena depend upon this species of force, just as celestial phenomena depend upon universal gravitation, and the study of these forces now seems to me the principal object of mathematical philosophy” (written in 1823).

In 1824 a new truth was formulated from which was to be developed a doctrine which was to overturn, to a great extent, natural philosophy as conceived by Newton and Boscovich and carried out by Laplace and his disciples. However, Sadi Carnot (1796–1832), the author of this new truth, still assumed the correctness of the theory of caloric. He proposed to extend to heat-engines the principle of the impossibility of perpetual motion recognized for engines of unchanging temperature, and was led to the following conclusion: In order that a certain quantity of caloric may produce work of the kind that human industry requires, this caloric must pass from a hot to a cold body; when the quantity of caloric is given, as well as the temperatures to which these two bodies are raised, the useful work produced admits of a superior limit independent of the nature of the substances which transmit the caloric and of the device by means of which the transmission is effected. The moment that Carnot formulated this fertile truth, the foundations of the theory of caloric were shaken. However, in the hypothesis of caloric, how could the generation of heat by friction be explained? Two bodies rubbed together were found to be just as rich in caloric as they had been; therefore, whence came the caloric evolved by friction?

As early as 1783 Lavoisier and Laplace were much

troubled by the problem, which also arrested the attention of physicists; as in 1798 when Benjamin Thompson, Count Rumford (1753-1814), made accurate experiments on the heat evolved by friction, and, in 1799, when similar experiments were made by Sir Humphrey Davy (1778-1829). In 1803, beside the notes in which Laplace announced some of the greatest conquests of the doctrine of caloric, Berthollet, in his "Statique chimique", gave an account of Rumford's experiments, trying in vain to reconcile them with the prevailing opinion. Now these experiments, which were incompatible with the hypothesis that heat is a fluid contained in a quantity in each body, recalled to mind the supposition of Descartes and Newton, which claimed heat to be a very lively agitation of the small particles of bodies. It was in favour of this view that Rumford and Davy finally declared themselves.

In the last years of his life Carnot consigned to paper a few notes which remained unpublished until 1878. In these notes he rejected the theory of caloric as inconsistent with Rumford's experiments. "Heat", he added, "is therefore the result of motion. It is quite plain that it can be produced by the consumption of motive power and that it can produce this power." Wherever there is destruction of motive power there is, at the same time, production of heat in a quantity exactly proportional to the quantity of motive power destroyed; and inversely, wherever there is destruction of heat, there is production of motive power".

In 1842 Robert Mayer (1814-78) found the principle of the equivalence between heat and work, and showed that once the difference in two specific heats of a gas is known, it is possible to calculate the mechanical value of heat. This value differed little from that found by Carnot. Mayer's pleasing work exerted scarcely any more influence on the progress of the theory of heat than did Carnot's unpublished notes. However, in 1843 James Prescott Joule (1818-89) was the next to discover the principle of the equivalence between heat and work, and conducted several of the experiments which Carnot in his notes had requested to have made. Joule's work communicated to the new theory a fresh impetus. In 1849 William Thomson, afterwards Lord Kelvin (1824-1907), indicated the necessity of reconciling Carnot's principle with the thenceforth incontestable principle of the mechanical equivalent of heat; and in 1850 Rudolf Clausius (1822-88) accomplished the task; thus the science of thermodynamics was founded. When in 1847 Hermann von Helmholtz published his small work entitled "Ueber die Erhaltung der Kraft", he showed that the principle of the mechanical equivalent of heat not only established a bond between mechanics and the theory of heat, but also linked the studies of chemical reaction, electricity, and magnetism, and in this way physics was confronted with the carrying-out of an entirely new programme, whose results are at present too incomplete to be judged even by scientists.

PIERRE DUHEM.

Physiocrats (φύσις, nature, κρατεῖν, rule), a school of writers on political and economic subjects that flourished in France in the second half of the eighteenth century, and attacked the monopolies, exclusive corporations, vexatious taxes, and various other abuses which had grown up under the mercantile system. Statesmen of the mercantile school in France and elsewhere had adopted a system of tutelage which often gave an artificial growth to industry but which pressed hardly upon agriculture. The physiocrats proposed to advance the interests of agriculture by adopting a system of economic freedom. *Laissez faire et laissez passer* was their watchword. François Quesnay (1694-1774), physician to Mme de Pompadour and Louis XV, founded the school (1758). The term "physiocracy" was probably used by Quesnay to convey the idea that the new system provides for the reign of the natural law. Quesnay and his disciples were called *économistes* by their contemporaries; the term *physiocrates* was not used until the beginning of the nineteenth century.

Political Philosophy.—In metaphysics Quesnay was a follower of Descartes and borrowed from him the mathematical method used in his "Tableau Economique". He accepted a modified form of the natural rights theory which pervades eighteenth-century literature and gave it an optimistic interpretation. He emphasizes the distinction between the natural order (*ordre naturel*) and the positive order (*ordre positif*). The first is founded upon the laws of nature which are the creation of God and which can be discovered by reason. The second is man-made; when its laws coincide with those of the natural order the world will be at its best. He objected to the natural rights philosophers of his day that they concerned themselves only with the positive order to the neglect of the natural. He held that primitive man upon entering society does not give up any of his natural rights, thus taking issue with Rousseau's theory of the social contract. From his optimistic doctrines concerning the laws of the natural order he deduces his doctrine of *laissez faire*. Economic evils arise from the monopolies and restrictions of the positive order; statesmen should aim to harmonize the positive order with the natural by abolishing these excrescences. The state should withdraw its support from the attempts of special interests to bolster up industry artificially. In the language of the physiocrats, "He governs best who governs least". Although ultimately their principles proved favourable to the Revolution, Quesnay and his disciples were in favour of an absolute monarchy subject only to the laws of the "natural order". They considered that it would be easier to persuade a prince than a nation and that the triumph of their

principles would be sooner secured by the sovereign power of a single man.

Economic Doctrine.—Quesnay divides the citizens of a nation into three classes: the productive, which cultivates the soil and pays a rent to the landed proprietors, the proprietors (Turgot's *classe disponible*), who receive the rent or net product (*produit net*) of agriculture, and the barren (*classe stérile*), which comprises those engaged in other occupations than that of agriculture, and produces no surplus. For example, in a country producing five billions of agricultural wealth annually, two billions will go to the proprietors as rent. With this the proprietors will buy one billion's worth of agricultural products and one billion's worth of the manufactured products of the barren class. The productive class also will buy one billion's worth of the products of the barren class. The barren class will spend the two billions which it receives in buying one billion's worth of agricultural products upon which to subsist and one billion's worth of raw material to work up into its finished product. Thus the barren class receive two billions and spend two billions. The value of their product equals the cost of their subsistence plus the cost of the raw material. Thus industry and commerce are barren. Agriculture is productive, since it supports those who are engaged in it and produces in addition a surplus. The national welfare depends upon having this surplus production as large as possible. In other words, a nation will prosper not in proportion as it succeeds in getting foreign money in return for its manufactures, but in proportion to the amount of its net product. The mercantilists, therefore, made a mistake in encouraging manufactures and commerce at the expense of agriculture. The true policy is to encourage agriculture. Statesmen of the mercantile school thought it desirable to have cheap food so that the home industries could compete with the foreign and thus the nation might secure a favourable balance of trade which would bring money into the country. The physiocrats rejected the balance of trade argument and held that dear food was desirable because this meant the prosperity of agriculture and the swelling of the net product. Quesnay even held that under some circumstances it might be desirable to levy a duty on imported agricultural products or to grant an export bounty in order to keep up prices. Holding that the incomes received by the productive and sterile classes were just sufficient for their support, the physiocrats believed that any tax levied upon the members of either of these classes must be shifted until it finally fell upon the net product belonging to the proprietors. In the interest of economy of administration, therefore, they urged that a single tax be levied upon rent. This was their celebrated *impôt unique*. The proposal was somewhat similar to the more recent demands of Henry George for a single tax. The physiocrats sought to protect the landed proprietors, while George wished to expropriate them.

The School.—Most of the ideas of the physiocratic school are found in earlier writings. The expression *laissez faire* is said to have been used by a French merchant, Legendre, in answering a question addressed by Colbert to a gathering of merchants concerning the needs of industry. The idea is developed in the writings of Bois-Guillebert (1712) and the policy was advocated by the Marquis d'Argenson in 1735. Gournay, a contemporary of Quesnay, seems to have originated the extended expression *laissez faire et laissez passer*. This formula called for freedom of internal commerce and manufacture. Some critics hold that Gournay is equally entitled with Quesnay to be called the founder of the physiocratic school on account of the currency which he gave to the doctrine of freedom of trade. Other sources are Hume's criticism of the balance of trade theory, and Cantillon, "Essai sur la Nature du Commerce en Général", in

which the importance of agriculture is recognized and the doctrine of *produit net* developed. The elder Mirabeau was Quesnay's first disciple. His "Philosophie rurale" (1763) gained disciples. Dupont de Nemours, who later exerted considerable influence in the Constituent Assembly in the discussions on taxation, wrote several works in defence of the system. Other important writers were Baudeau, Mercier de la Rivière, and Letrosne. The most eminent of Quesnay's disciples was Turgot, who, as Intendant of Limoges and afterwards as minister of finance under Louis XVI, attempted to apply some of the physiocratic principles practically (*Réflexions sur la formation et la distribution des richesses*, 1766). Outside of France the school had not many disciples. The best known are the Swiss Iselin and the German Schlettwein. The latter was engaged by the Margrave Karl Friedrich of Baden, a friend of Mirabeau, to introduce the single tax in three villages of Baden. The experiment, made under unfavourable conditions, was soon abandoned. In Italy the physiocratic school had few followers. In England, on account of the advanced position of trade and industry, it had none.

Criticism.—The principal service of the physiocrats to modern political economy was not the discovery of any one of their doctrines, but their attempt to formulate a science of society out of materials already at hand. It was from this system as a base that Adam Smith set out to give a new impetus to the study of economic phenomena. Another important contribution consisted in calling attention to the weaknesses of the mercantile system. *Laissez faire* was a good doctrine for the eighteenth century because there was need of a reaction, but it was a mistake to set it up as a universal principle applicable under all conditions. The chief weakness in the physiocratic teaching lay in its theory of value. While agriculture brings forth the raw material of production, commerce and manufactures are equally productive of wealth. In a sense, the physiocrats recognized this, but they held that in producing this wealth the manufacturing and commercial classes use up an equivalent amount of value. This is a gratuitous assumption, but even if true, the same thing could be said of the so-called productive class. Moreover, if wages were governed by the "iron law" both in agriculture and in manufactures and commerce, as the physiocrats assume, the "net product" would be made up of wealth created by the commercial and manufacturing classes as well as by the agricultural class. The theory of the *impôt unique* or single tax rested upon the assumption that all incomes, except those of the proprietors, were at the existence minimum. Since this is not true, it is also not true that all taxes levied upon the other classes will ultimately be paid by the proprietors.

Quesnay; HASBACH, *D. allg. philosophischen Grundlagen d. von F. Quesnay u. A. Smith begründeten politischen Oekonomie* (Leipzig, 1890).

FRANK O'HARA.

Physiologus, an early Christian work of a popular theological type, describing animals real or fabulous and giving each an allegorical interpretation. Thus the story is told of the lion whose cubs are born dead and receive life when the old lion breathes upon them, and of the phoenix which burns itself to death and rises on the third day from the ashes; both are taken as types of Christ. The unicorn also which only permits itself to be captured in the lap of a pure virgin is a type of the Incarnation; the pelican that sheds its own blood in order to sprinkle therewith its dead young, so that they may live again, is a type of the salvation of mankind by the death of Christ on the Cross. Some allegories set forth the deceptive enticements of the Devil and his defeat by Christ; others

present qualities as examples to be imitated or avoided. The book, originally written in Greek at Alexandria, perhaps for purposes of instruction, appeared probably in the second century, though some place its date at the end of the third or in the fourth century. In later centuries it was ascribed to various celebrated Fathers, especially St. Epiphanius, St. Basil, and St. Peter of Alexandria. Origen, however, had cited it under the title "Physiologus", while Clement of Alexandria and perhaps even Justin Martyr seem to have known it. The assertion that the method of the "Physiologus" presupposes the allegorical exegesis developed by Origen is not correct; the so-called "Letter of Barnabas" offers, before Origen, a sufficient model, not only for the general character of the "Physiologus" but also for many of its details. It can hardly be asserted that the later recensions, in which the Greek text has been preserved, present even in the best and oldest manuscripts a perfectly reliable transcription of the original, especially as this was an anonymous and popular treatise. "Physiologus" is not the original title; it was given to the book because the author introduces his stories from natural history with the phrase: "the physiologus says", that is, the naturalist says, the natural philosophers, the authorities for natural history say. About 400 the "Physiologus" was translated into Latin; in the fifth century into Æthiopic [edited by Hommel with a German translation (Leipzig, 1877), revised German translation in "Romanische Forschungen", V, 13-36]; into Armenian [edited by Pitra in "Spicilegium Solesmense", III, 374-90; French translation by Cahier in "Nouveaux Mélanges d'archéologie, d'histoire et de littérature" (Paris, 1874)]; into Syrian [edited by Tychsen, "Physiologus Syrus" (Rostock, 1795), a later Syrian and an Arabic version edited by Land in "Anecdota Syriaca", IV (Leyden, 1875)]. Numerous quotations and references to the "Physiologus" in the Greek and the Latin Fathers show that it was one of the most generally known works of Christian antiquity. Various translations and revisions were current in the Middle Ages. The earliest translation into Latin was followed by various recensions, among them the "Dicta Johannis Chrysostomi de naturis bestiarum", edited by Heider in "Archiv für Kunde österreichischer Geschichtsquellen" (II, 550 sqq., 1850). A metrical Latin "Physiologus" was written in the eleventh century by a certain Theobaldus, and printed by Morris in "An Old English Miscellany" (1872), 201 sqq.; it also appears among the works of Hildebertus Cenomanensis in P. L., CLXXI, 1217-24. To these should be added the literature of the "Bestiaries" (q. v.), in which the material of "Physiologus" was used; the "Tractatus de bestiis et aliis rebus", attributed to Hugo of St. Victor; and the "Speculum naturale" of Vincent of Beauvais.

Translations and adaptations from the Latin introduced the "Physiologus" into almost all the languages of Western Europe. An eleventh-century German translation was printed by Müllenhoff and Scherer in "Denkmäler deutscher Poesie und Prosa" (No. LXXXI); a later translation (twelfth century) has been edited by Lauchert in "Geschichte des Physiologus" (pp. 280-99); and a rhymed version appears in Karajan, "Deutsche Sprachdenkmale des XII. Jahrhunderts" (pp. 73-106), both based on the Latin text known as "Dicta Chrysostomi". Fragments of a ninth-century Anglo-Saxon "Physiologus", metrical in form, still exist; they are printed by Thorpe in "Codex Exoniensis" (pp. 355-67), and by Grein in "Bibliothek der angelsächsischen Poesie" (I, 233-8). About the middle of the thirteenth century there appeared an English metrical "Bestiary", an adaptation of the Latin "Physiologus Theobaldi"; this has been edited by Wright and Halliwell in "Reliquiæ antiquæ" (I, 208-27), also by Morris in "An Old English Miscellany" (1-25). Icelandic literature includes a

"Physiologus" belonging to the early part of the thirteenth century, edited by Dahlerup (Copenhagen, 1889). In the twelfth and thirteenth century there appeared the "Bestiaires" of Philippe de Thaun, a metrical Old-French version, edited by Thomas Wright in "Popular Treatises on Science Written during the Middle Ages" (74-131), and by Walberg (Lund and Paris, 1900); that by Guillaume, clerk of Normandy, called "Bestiaire divin", and edited by Cahier in his "Mélanges d'archéologie" (II-IV), also edited by Hippeau (Caen, 1852), and by Reinsch (Leipzig, 1890); the "Bestiaire" of Gervaise, edited by Paul Meyer in "Romania" (I, 420-42); the "Bestiaire" in prose of Pierre le Picard, edited by Cahier in "Mélanges" (II-IV). A singular adaptation is found in the old Waldensian literature, and has been edited by Alfons Mayer in "Romanische Forschungen" (V, 392 sqq.). As to the Italian bestiaries, a Tosco-Venetian "Bestiarius" has been edited (Goldstaub and Wendriner, "Ein toscovenezianischer Bestiarius", Halle, 1892). Extracts from the "Physiologus" in Provençal have been edited by Bartsch, "Provenzalisches Lesebuch" (162-66). The "Physiologus" survived in the literatures of Eastern Europe in books on animals written in Middle Greek, among the Slavs to whom it came from the Byzantines, and in a Roumanian translation from a Slavic original (edited by Gaster with an Italian translation in "Archivio glottologico italiano", X, 273-304). Medieval poetical literature is full of allusions to the "Physiologus", and it also exerted great influence on the symbolism of medieval ecclesiastical art; symbols like those of the phoenix and the pelican are still well-known and popular.

FRIEDRICH LAUCHERT.

Piacenza, DIOCESE OF (PLACENTINENSIS), in Emilia, central Italy. The city is situated on the right of the Po, near its junction with the Trebbia, in an important strategic position. Agriculture is the chief industry. The cathedral is of the ninth century; it was remodelled by Santa da Sambuceto and others (1122-1223) in beautiful Lombard style. The campanile, over 216 feet high, is surmounted by an angel, in brass; the cupola is a more recent part of the edifice; there are frescoes by Guercino and by Morazzone, Ludovico Caracci, Procaccino, and others. Its Cappella del Crocifisso has an arch with statues of Nero and of Vespasian; the Cappella di S. Corrado has an admirable Madonna by Zitto di Tagliasacchi, and contained once a picture of St. Conrad by Lanfranco, but it was taken to France. Among the churches is S. Antonio (fourth century), many times restored; until 877 it was the cathedral; in 1183 the preliminaries of the Peace of Constance were concluded in this church; here also are paintings by Procaccino, Mulinareto, Novoloni etc.; the sacristy contains a triptych with the *gesta* of S. Antonio. In the pastor's residence of S. Andrea there is an ancient mosaic. S. Bartolommeo, formerly a church of the Jesuits, contains besides its beautiful paintings two crucifixes, one very ancient,

the other dating from 1601. S. Francesco (1278) has beautiful columns, but has been disfigured by incongruous restorations; it contains a Pietà by Bernardo Castelli, a Madonna by Francia, and the tomb of the famous Franciscan, Francesco Mairone (1477). S. Giovanni in Canali (1220), formerly of the Templars, and later of the Dominicans, has also been disfigured by its restorations; it contains statues of Pius V and Benedict XI, the tomb of the Scotti family and of the physician Gulielmo da Saliceto. S. Savino (903) was restored several times and entirely transformed in the eighteenth century; formerly there was a monastery annexed to it; in its recent restorations, paintings of the fourteenth century were discovered, and also pillars and other sculptures of the original construction, as well as mosaics, a crucifix carved in wood, and other objects. Outside the city the monastery of the Cassinesi Benedictines, S. Sisto, founded in 874 by Queen Angilberga, is a veritable sanctuary of art; the famous Sistine Madonna by Raphael, was first here, but was sold by the monks, to obtain funds for repairs. Santa Maria in Campagna contains a very ancient statue in marble of Our Lady, four statues in wood by Hermann Geernaert, and paintings by Procaccino, Pordenone, Guercino, and others.

The Palazzo Ducale, a work of Vignola (1558), has since 1800 served as a barracks. The Palazzo Anguissola da Grazzano contains fine paintings. The Palazzo Brandini has a gallery of paintings by Correggio, Reni, Guercino, Andrea del Sarto, and Murillo. The Palazzo Landi contains paintings by Van Dyck. The Palazzo Palastrelli has a library of works on the history of Piacenza. Cardinal Alberoni established in this town a famous college. Its church has paintings by Paolo Veronese, Guido Reni, and others. The Piazza de Cavalli has equestrian statues of Alessandro and of Ranuccio I, Farnese, by Mocchi da Montevarchi.

Placentia, with Cremona, was founded in 218 B. C., to hold in check the Gauls after their defeat near Clastidium. The Via Emilia terminated there. Scipio, defeated near the Trebbia, retreated to this town. In 206 it was besieged in vain by Hasdrubal and burned by the Gauls in 200. There Emperor Otho defeated Vitellius (69) and then Aurelian was defeated by the Alamanni (271); there also Emperor Orestes was decapitated (467). The Lombards took possession of it, at the beginning of their invasion, and thereafter it remained in their power. From the ninth century the temporal power was in the hands of the bishops, until the twelfth century, when the town became a commune, governed by consuls, and later (1188), by a podestà. In the wars between the Lombard cities and with the emperors, Piacenza was an ally of Milan, on account of its hatred of Cremona and of Pavia; wherefore it was Guelph and a party to both of the Lombard leagues. Twice, Uberto Palavicino made himself lord of the city (1254 and 1261), but the free commune was re-established. From 1290 to 1313, Alberto Scotti was lord of Piacenza; his rule had many interruptions, as in 1308, by Guido della Torre of Milan, in 1312, by Henry VII. The latter's vicar,

Galeazzo Visconti, was expelled by the pontifical legate Bertrando del Poggetto (1322-35). In 1336 Piacenza came again under the rule of the dukes of Milan; between 1404 and 1418 they were compelled to retake the city on various occasions. In 1447 there was a new attempt to re-establish independent government. The fortunes of war gave Piacenza to the Holy See in 1512; in 1545 it was united to the new Duchy of Parma. After the assassination of Pier Luigi Farnese, which occurred at Piacenza (1547), the city was occupied by the troops of the imperial governor of Milan and was not restored to the Duchy of Parma for ten years. In 1746 the Austrians obtained a great victory there over the French and Spaniards, and in 1799 the Russians and Austrians defeated the French. Napoleon made Lebrun Duke of Piacenza.

St. Antonius, who is said to have belonged to the Theban Legion, suffered martyrdom at Piacenza, in the second or third century. The first known bishop is

St. Victor, present at the Council of Sardica (343); St. Savinus, present at Aquileia (381), was probably the Savinus to whom St. Ambrose wrote several letters. Other bishops were St. Maurus, St. Flavianus, St. Majorianus (451). Whether the emperor of this name intended to become Bishop of Piacenza is uncertain; he was not its bishop, having been killed soon after his abdication. Joannes was a contemporary of St. Gregory the Great; Thomas (737) was very influential with King Luitprand; Podo (d. 839)

THE CATHEDRAL, PIACENZA

was honoured with a metrical epitaph; Guido (904), a man of arms rather than of the Church; Boso (940) freed himself from the jurisdiction of the metropolitan See of Ravenna (re-established by Gregory V), and became the antipope John XVI; Pietro (1031) was exiled to Germany by Conrad II; Dionisio was deposed in 1076 by Gregory VII; St. Bonizo (1088), who had been Bishop of Sutri and a great supporter of Gregory VII, was killed in 1089; during the incumbency of Aldo (1096), Emilia was temporarily taken from the jurisdiction of Ravenna; Arduino (1118) founded the new cathedral; Ugo (1155), a nephew of Anacletus II, was driven from his diocese by the schismatics; under Ardiczone (1192) and Grumerio (1199) grave contentions began between the clergy and the consuls, and Grumerio was driven from the diocese; Orlando da Cremona, O.P., was mortally wounded by a Catharist while preaching (1233); P. Alberto Pandoni (1243), an Augustinian; Pietro Filargo (1386) became Pope Alexander V; Pietro Maineri (1388) was formerly the physician of Galeazzo II; Branda Castiglione (1404) was a professor of law at Pavia, and took part in the conciliabulum of Pisa and in the Council of Constance, and became a cardinal; Alessio da Siregno (1412) was a famous preacher; Fabrizio Marliani (1476) was very zealous for the reform of morals in the clergy and in the people; Cardinal Scaramuzza Trivulzio (1519); Catalano Trivulzio (1525); Cardinal Giovanni Bernardino Scotti (1559) was a very learned Theatine; the Bl. Paolo Burali (1570), a Theatine, became a cardinal; Cardinal Filippo Sega (1578); Alessandro Scappi (1627) was obliged to leave the duchy

for having excommunicated the duke, Odoardo; Alessandro Pisani's election (1766) was one of the causes of dissension with the Holy See; Stefano Fallot de Beaumont (1807) was present at the national council of Paris (1810). Bl. Corrado (d. at Noto in 1351) was from Piacenza. The councils of Piacenza were those of 1076 (concerning the schismatics against Gregory VII), 1090 (Urban II against the concubinage of the clergy, and in favour of the crusade), 1132 (Innocent II against Anacletus II). There were ten synods under Bishop Marliani (1476-1508).

In 1582 the diocese was made a suffragan of Bologna; it is now immediately dependent upon the Holy See. It has 350 parishes, with 310,000 inhabitants, 11 religious houses for men, and 29 for women, 5 educational establishments for male students, and 18 for girls, 1 daily paper, and 1 monthly periodical. The diocese has a house of missionaries for emigrants established by the late bishop, Mgr Scalabrini.

U. BENIGNI.

UNIVERSITY OF PIACENZA.—Piacenza was the first Italian city to apply for a Bull erecting its town-schools into a *studium generale*, which Bull was granted by Innocent IV in 1248, and conferred all the usual privileges of other *studia generalia*; by it the power of giving degrees was vested in the Bishop of Piacenza. But no practical work was done here until 1398, when Gian Galeazzo Visconti, Duke of Milan and Pavia, refounded the university in his capacity of Vicar of the Empire. The University of Pavia was suppressed, as he did not wish to have a university in either of his capitals. Gian Galeazzo liberally endowed Piacenza, organizing a university of jurists as well as a university of arts and medicine, each with an independent rector. Between 1398 and 1402 seventy-two salaried professors are recorded as having lectured, including not only the usual professors of theology, law, medicine, philosophy, and grammar, but also the new chairs of astrology, rhetoric, Dante, and Seneca. But this endeavour to establish a large university in a small town which had no natural influx of students was doomed to failure, and little or no work was done after Gian Galeazzo's death in 1402. In 1412 Pavia had its university restored, and the subjects of the duchy were forbidden to study elsewhere. Piacenza then obtained an unenviable notoriety as a market for cheap degrees. This traffic was still flourishing in 1471, though no lectures had been given for sixty years. A college of law and a college of arts and medicine, however, maintained a shadowy existence for many years later. Among the famous teachers at Piacenza may be named the jurist Placentinus, founder of the law-school at Montpellier (d. there, 1192); and Baldus (b. 1327), the most famous jurist of his day (Muratori, "Rer. It. SS.", XX, 939).

C. F. WEMYSS BROWN.

Pianciani, GIAMBATTISTA, scientist, b. at Spoleto, 27 Oct., 1784; d. at Rome, 23 March, 1862. He entered the Society of Jesus on 2 June, 1805; after having received the ordinary Jesuit training he was sent to various cities in the Papal States to teach mathematics and physics and finally was appointed professor in the Roman College, where he lectured and wrote on scientific subjects for twenty-four years. He was an active member of the Accademia d'Arcadia, his academical pseudonym being "Polite Megaride", of the Accademia de' Lincei, and of other scientific societies. His scientific labours were abruptly brought to an end by the Revolution of 1848; he succeeded, how-

ever, in making his escape from Rome and having come to America he taught dogmatic theology during the scholastic year 1849-50 at the Jesuit theologate then connected with Georgetown College, Washington, D. C. When peace was restored in Rome he returned thither and from 1851 till his death was engaged chiefly in administrative duties and in teaching philosophy both in the Roman College and in the Collegio Filosofico of the University of Rome, of which latter college he was president during the last two years of his life. Besides numerous articles on scientific subjects, especially on electricity and magnetism, and on philosophico-religious subjects, he published the following works: "Istituzioni fisico-chimiche" (4 vols., Rome, 1833-4); "Elementi di fisico-chimica" (2 vols., Naples, 1840-41); "In historiam creationis mosaicam commentarius" (Naples, 1851), which he wrote whilst at Georgetown and of which there is a German translation by Schöttl (Ratisbon, 1853); "Saggi filosofici" (Rome, 1855); "Nuovi saggi filosofici" (Rome, 1856); "Cosmogonia naturale comparata col Genesi" (Rome, 1862).

EDWARD C. PHILLIPS.

Pianô Carpine, GIOVANNI DA, b. at Pian di Carpine (now called della Magione), near Perugia, Umbria, 1182; d. probably in 1252. Having entered the Franciscan Order he was a companion of Cæsar of Spire, the leader of the second mission of the Franciscans to Germany in 1221. He took a leading part in founding various new establishments of the order, and was several times provincial in Saxony and once in Spain. In 1245 Innocent IV, in compliance with the resolutions passed at the first council of Lyons, entrusted Carpine with an embassy to the princes and people of Mongolia or Tatar with a view to checking the invasions of these formidable hordes and eventually effecting their conversion. Carpine set out early in 1246; among his companions were Brothers Stephen of Bohemia and Benedict of Poland, who were to act as interpreters. They were hospitably entertained by Duke Vasilico in Russia, where they read the pope's letters to the assembled schismatic bishops, leaving them favourably disposed towards reunion. They reached Kanieff, a town on the Tatar frontier, early in February. The Tatar officials referred them to Corenza, commander of the advance guards, who in his turn directed them to Batu, Khan of Kipchak etc., then encamped on the banks of the Volga. Batu commissioned two soldiers to escort the papal envoys to Karâkorum, the residence of the Great Khan. They reached their destination in the middle of July after a journey of indescribable hardships. The death of the Great Khan Okkodai made it necessary to defer negotiations till the end of August when Kuyuk, his successor, ascended the throne. After much delay Kuyuk finally demanded a written statement of the pope's propositions. His letter in reply is still preserved. Its tone is dignified and not unfriendly, but independent and arrogant. In it he says in substance: "If you desire peace, come before me! We see no reason why we should embrace the Christian religion. We have chastised the Christian nations because they disobeyed the commandments of God and Jenghiz Khan. The power of God is manifestly with us." The superscription reads: "Kuyuk, by the power of God, Khan and Emperor of all men—to the Great Pope!" Carpine procured a translation of the letter in Arabic and Latin. On their homeward journey the envoys halted at the former stations, arriving at Kieff (Russia) in June, 1247. They were enthusiastically received everywhere, especially by the Dukes Visilico and Daniel, his brother. Carpine's proposals for reunion had been accepted in the meantime, and special envoys were to accompany him to the papal Court. From a political and religious aspect the mission to Tatar proved successful only

in a remote sense, but the ambassadors brought with them invaluable information regarding the countries and peoples of the Far East. Carpine's written account, the first of its kind and remarkable for its accuracy, was exhaustively drawn upon by such writers as Cantù and Hue ("Travels in Tataria, Thibet and China", 2 vols., 1852). It has been published by d'Azevaz: "Jean de Plan de Carpin, Relation des Mongols ou Tartares" in "Recueil de voyages", IV (Paris, 1839), and later by Külb: "Geschichte der Missionsreisen nach der Mongolei", I (Ratisbon, 1860), 1-129. Salimbene, who met Carpine in France, found him "a pleasant man, of lively wit, eloquent, well-instructed, and skilful in many things". Innocent IV bestowed upon him every mark of esteem and affection. Having been sent as papal legate to St. Louis, King of France, Carpine was shortly afterwards named Archbishop of Antivari in Dalmatia.

THOMAS PLASSMANN.

Piatto cardinalizio, an allowance granted by the pope to cardinals residing in *curia* or otherwise employed in the service of the Church, to enable them to maintain their dignity with decorum. It was not given to cardinals supported in Rome by their sovereign, nor is it accepted by cardinals of noble family. The entire allowance was not always granted. If the cardinal had other revenues, he received enough to make up the amount of the allowance. This designation *piatto* was first used in the conclave of 1458. Paul II fixed the sum at 100 gold florins a month for cardinals whose revenues were not more than 4000 florins. This sum was called "the poor cardinal's plate". Leo XI intended to provide otherwise for the needy revenues. Paul V raised the *piatto* to 1500 *scudi* a year, for cardinals whose ecclesiastical revenues were less than 6000 *scudi*. Then the custom was introduced of giving 6000 *scudi* annually to cardinals without ecclesiastical revenues. This sum was reduced in 1726 to 4000 *scudi*, as determined in 1464 and 1484, the amount allowed to-day, the cardinals renouncing their ecclesiastical benefices. For some distinguished cardinals the amount was larger. The *piatto cardinalizio* is reckoned to-day at 4000 Roman *scudi* (about \$4000). It is reduced according to the other revenues of the cardinal.

MORONI, *Dizionario*, LII, 274 sqq.

U. BENIGNI.

Piauhý (DE PIAUHÝ), DIOCESE OF (PIAHUNENSIS), suffragan of the Archdiocese of Belem do Para, in the State of Piauhý, north-eastern Brazil. The state is bounded on the north by the Atlantic, west by Maranhão, south by Bahia, east by Pernambuco and Ceará. It takes its name from the river Piauhý. Its area is 116,218 sq. miles, and it has a coast line of ten miles. Piauhý is one of the poorest of the Brazilian states. It has a small trade in cotton and cattle. Frequent periods of drought, followed by famine and typhus, add to the disadvantages of its unhealthy climate. Except in mountainous districts, vegetation is scanty; even the agricultural products—sugarcane, coffee, tobacco—barely support the population.

Therezina is the capital and Parnahyba the chief port. Emigration is making heavy drains on the population, and attempts to colonize by immigration have proved unsuccessful. The Diocese of Piauhý, formerly included in the Diocese of São Luiz do Maranhão, was, on 11 August, 1902, erected by Leo XIII into a separate diocese. Its jurisdiction comprises the Piauhý State, and its population (1911) is 425,000, with 32 parishes. Its first bishop, Mgr de Arango Pereira (b. at Limolira, 4 Nov., 1853), was consecrated on 9 Nov., 1903, and the present bishop Mgr Joachim Antonio de Almeida (b. 7 Aug., 1868) on 14 December, 1905.

J. MORENO-LACALLE.

Piazza Armerina, DIOCESE OF (PLATIENSIS), in the province of Caltanissetta, Sicily. The city of Piazza Armerina is situated on a high hill in a very fertile district. Its origin is obscure. Gulielmo il Malo destroyed it in 1166 on account of a rebellion, and Gulielmo il Buono rebuilt it, together with the church of l'Asunta, now the cathedral, and in which there is an admirable picture of the Assumption by Paladino. The church of the priory of S. Andrea also has fine paintings and frescoes. The diocese, taken from that of Catania was created in 1817, its first prelate was Girolamo Aprile e Benzi; it is a suffragan of Syracuse, has 23 parishes, with 184,500 inhabitants, 7 religious houses of men and 19 of women, 1 school for boys and 7 for girls, and 1 Catholic weekly.

U. BENIGNI.

Piazzi, GIUSEPPE, astronomer, b. at Ponte in Valtellina, 16 July, 1746; d. at Naples, 22 July, 1826. He took the habit of the Theatines at Milan and finished his novitiate at the convent of San Antonio. Studying at colleges of the order at Milan, Turin, Rome, and Genoa, under such preceptors as Tiraboschi, Beccaria, Le Seur, and Jacquier, he acquired a taste for mathematics and astronomy. He taught philosophy for a time at Genoa and mathematics at the new University of Malta while it lasted. In 1779, as professor of dogmatic theology in Rome, his colleague was Chiamonti, later Pius VII. In 1780 he was called to the chair of higher mathematics at the academy of Palermo. There he soon obtained a grant from Prince Caramanico, Viceroy of Sicily, for an observatory. As its director he was charged to get the necessary instruments. He went to Paris in 1787 to study with Lalande, to England in 1788 to work with Maskelyne and the famous instrument-maker Ramsden. A large vertical circle with reading microscopes, a transit, and other apparatus were sent to Palermo in 1789, where they were placed on top of a tower of the royal palace. Observations were started in May, 1791, and the first reports were published as early as 1792. Soon he was able to correct errors in the estimation of the obliquity of the ecliptic, of the aberration of light, of the length of the tropical year, and of the parallax of the fixed stars. He saw the necessity for a revision of the existing catalogues of stars and for the exact determination of their positions. In 1803 he published a list of 6784 stars and in 1814 a second catalogue containing 7646 stars. Both lists were awarded prizes by the Institute of France.

While looking for a small star mentioned in one of the earlier lists he made his great discovery of the first known planetoid, 1 Jan., 1801. Locating a strange heavenly body of the eighth magnitude and repeating the observation several nights in succession, he found that this star had shifted slightly. Believing it to be a comet, he announced its discovery. These few but exact measurements enabled Gauss to calculate the orbit and to find that this was a new planet, between Mars and Jupiter. Kepler and Bode had

called attention to the apparent gap between these two, so that the placing of this new body within that space caused great excitement among astronomers. Piazzi proposed the name of Ceres Ferdinandeia, in honour of his king. Over 600 of these so-called planetoids have since been located within the same space. The king desired to strike a gold medal with Piazzi's

GIUSEPPE PIAZZI

effigy, in commemoration, but the astronomer requested the privilege of using the money for the purpose of a much-needed equatorial telescope. In 1812 he received the commission to reform the weights and measures of Sicily in accordance with the metric system. In 1817 as director-general of the observatories of the Two Sicilies he was charged with the plans of the new observatory which Murat was establishing in Naples. He was a member of the Academies of Naples, Turin, Göttingen, Berlin, and St. Petersburg, foreign associate of the Institute of Milan etc. Besides the numerous memoirs published in the proceedings of the various academies, the following works may be mentioned: "Della specola astronomica di Palermo libri quattro" (Palermo, 1792); "Sull' orologio Italiano e l'Europeo" (Palermo, 1798); "Della scoperta del nuovo pianeta Cerere Ferdinandeia" (Palermo, 1802); "Præcipuarum stellarum inerrantium positiones mediæ incunte seculo XIX ex observationibus habitis in specula Panormitana at 1793 ad 1802" (Palermo, 1803, 1814); "Codice metrico siculo" (Catane, 1812); "Lezioni di astronomia" (Palermo, 1817; tr. Westphal, Berlin, 1822); "Ragguaglio dal reale osservatorio d'Napoli" (Naples, 1821).

WILLIAM FOX.

Pibush, JOHN, VENERABLE, English martyr, b. at Thirsk, Yorkshire; d. at St. Thomas's Waterings, Camberwell, 18 February, 1600-1. According to Gillow he was probably a son of Thomas Pibush, of Great Fencott, and Jane, sister to Peter Danby of Scotton. He came to Reims on 4 August, 1580, received minor orders and subdiaconate in Sept., and diaconate in Dec., 1586, and was ordained on 14 March, 1587. He was sent on the English mission on 3 Jan., 1588-9, arrested at Morton-in-Marsh, Gloucestershire, in 1593, and sent to London, where he arrived before 24 July. The Privy Council committed him to the Gatehouse at Westminster, where he remained a year. He was then tried at the Gloucester Assizes under 27 Eliz., c. 2, for being a priest, but not sentenced, and was returned to Gloucester gaol, whence he escaped on 19 February (1594-5). The next day he was recaptured at Matson and taken back to Gloucester gaol, whence he was sent to the Marshalsea, London, and again tried under the same statute at Westminster on 1 July, 1595. He was sentenced to suffer the penalties of high treason at St. Thomas's Waterings, and in the meantime was to be returned to the Marshalsea. However, by the end of the year he was in the Queen's Bench prison, where he remained for more than five years. The sentence was carried out after one day's notice.

Soc., 1908), 337-40; GILLOW, *Bibl. Dict. Eng. Cath. s. v.*; CHALLONER, *Missionary Priests*, I, n. 123; DASENT, *Acts of the Privy Council* (London, 1890-1907), xxiv, 421.

JOHN B. WAINWRIGHT.

Picard, JEAN, astronomer, b. at La Flèche, 21 July, 1620; d. at Paris, 12 Oct., 1682. He was a priest and prior of Rillé in Anjou. As a pupil of Cassendi he observed with him the solar eclipse of 25 Aug., 1645. In 1655 he succeeded his master as professor of astronomy at the Collège de France. His principal achievement was the accurate measurement of an arc of a meridian of the earth, the distance from Sourdon, near Amiens, to Malvoisine, south of Paris, in 1669-70. His result, 57060 *toises* (a *toise* = about 6.4 ft.) for the degree of arc, has been found to be only 14 *toises* too small. He applied telescopes and micrometers to graduated astronomical and measuring instruments as early as 1667. The quadrant he used had a radius of 38 inches and was so finely graduated that he could read the angles to one quarter of a minute. The sextant employed for determining the meridian was 6 feet in radius. In 1669 he was able to observe stars on the meridian during day-time and to measure their position with the aid of cross-wires at the focus of his telescope. In order to make sure that his standard *toise* should not be lost, like those used by others before him, he conceived the idea of comparing it with the length of the simple pendulum beating seconds at Paris, and thus made it possible to reproduce the standard at any time.

Picard is regarded as the founder of modern astronomy in France. He introduced new methods, improved the old instruments, and added new devices, such as the pendulum clock. As a result of Picard's work, Newton was able to revise his calculations and announce his great law of universal gravitation. The discovery of the aberration of light also became a possibility on account of Picard's study of Tycho Brahe's observations. In 1671 he received from Bartholinus at Copenhagen an exact copy of Tycho's records and then went with Bartholinus to the Island of Hveen in order to determine the exact position of Tycho's observatory at Uraniborg. He was modest and unselfish enough to recommend the rival Italian astronomer Cassini to Colbert and Louis XIV for the direction of the new observatory at Paris. Cassini, on the contrary, proved envious, ignoring Picard's insistent recommendations of a mural circle for accurate meridional observations, until after the latter's death.

Picard was among the first members of the Academy. He also started the publication of the annual "Connaissance des temps" in 1679 (Paris, 1678), and continued the same until 1683. Since then it has been published continuously. His "Mesure de la terre" was brought out in 1671, Paris.

WILLIAM FOX.

Piccolomini, ALESSANDRO, littérateur, philosopher, astronomer, b. 13 June, 1508; d. 12 March, 1578. He passed his youth in the study of literature and wrote several comedies ("Amor costante", "Alessandro", "Ortensio"), translated into Italian verse Ovid's "Metamorphoses", part of the "Æneid", Aristotle's "Poetics" and "Rhetoric", composed a hundred sonnets (Rome, 1549), and other rhyme. He repudiated in later years "Raffaello" or "Dialogo della creanza donne" as too licentious. In 1540 he became professor of philosophy at Padua, where he wrote "Istituzione di tutta la vita dell' uomo nato nobile e in città libera", "Filosofia naturale" in which he followed the theories of ancient and medieval philosophers, while in his "Trattato della grandezza della terra e dell' acqua" (Venice, 1558), he combatted

the Aristotelean and Ptolemaic opinion that water was more extensive than land, thereby provoking, with Antonio Berga, professor at Mondovì, a controversy, in which he was assisted by Giambattista Benedetti. In astronomy ("Sfera del mondo", "Delle stelle fisse", "Speculazioni de' pianeti") he adhered to the Ptolemaic theory. He also wrote on the reform of the calendar (1578), and a commentary on the mechanics of Aristotle. To counteract "Raffaella" he wrote his "Orazione in lode delle donne" (Rome, 1549). His fame extended beyond Italy. Gregory XIII, in 1574, appointed him titular Bishop of Patra and coadjutor to Francesco Bandini, Archbishop of Siena, who survived him.

FABIANI, *Vita di Alessandro Piccolomini* (Siena, 1749 and 1759); TIRABOSCHI, *Storia della letteratura italiana*, VII, pt. i.

U. BENIGNI.

Piccolomini, ENEA SILVIO. See PIUS II, POPE.

Piccolomini-Ammannati, JACOPO, cardinal, b. in the Villa Basilica near Lucca, 1422; d. at San Lorenzo near Bolsena, 10 Sept., 1479. He was related to the Piccolomini of Siena. His literary and theological education he acquired in Florence. Under Nicholas V he went to Rome, where, for a while, he lived in extreme penury. In 1450 he became private secretary to Cardinal Domenico Capranica; later Calistus III appointed him secretary of Briefs. He was retained in this office by Pius II, who also made him a member of the pontifical household, on which occasion he assumed the family name of Piccolomini. In 1460 he was made Bishop of Pavia by Pius II, and throughout the pontificate of the latter was his most trusted confidant and adviser. He exhibited paternal solicitude in the government of his diocese, and during his prolonged absences entrusted its affairs to able vicars, with whom he remained in constant touch. On 18 December, 1461, he was made cardinal, and was commonly known as the Cardinal of Pavia. He accompanied Pius II to Ancona, and attended him in his last illness. In the subsequent conclave he favoured the election of Paul II, whose displeasure he afterward incurred by insisting on the full observance of the ante-election capitulations that the pope had signed. The imprisonment of his private secretary by Paul II on a charge of complicity in the conspiracy of the "Accademici" offended Piccolomini still more, and his open defence of the secretary aggravated the pope's ill-will. The disfavour in which he was held by Paul II did not exempt his episcopal revenues from sequestration by the Duke of Milan, Galeazzo Maria. It was due to his insistence that Paul II took energetic measures against George Podiebrad, King of Bohemia. Sixtus IV was scarcely more favourable towards Piccolomini than Paul II.

He was the friend of students and scholars, and protected Jacopo de Volterra. In 1470 he was transferred to the See of Lucca and was named papal envoy to Umbria. He wrote a continuation in seven books of the "Commentarii" of Pius II. His style is elegant, but he is not always impartial, especially apropos of Paul II or Sixtus IV. His Commentaries, nevertheless, remain an important source for contemporary history, and his valuable letters have been collected and published. Ammannati is one of the most sympathetic personalities of the Italian Renaissance. He enjoyed the friendship of noted prelates and humanists, among others, Cardinals Bessarion, Carvajal, Roverella etc. Bessarion (Pastor, "Geschichte der Päpste", II, 731), praises his executive ability and readiness, his charity and zeal.

Epistolæ et commentarii Jacobi Piccolomini cardinalis Papiensis (Milan, 1506), added also to the Frankfurt ed. of the *Commentarii* of Pius II (Frankfort, 1614); PAULI, *Disquisizione istorica della patria e compendio della vita del Card. Jacopo Ammannati* (Lucca, 1712); CARDELLA, *Vite del Cardinali*, III, 153.

U. BENIGNI

Pichler, a renowned Austrian family of gem-cutters who lived and died in Italy.

ANTONIO (JOHANN ANTON) b. at Brixen, Tyrol, 12 April, 1697; d. in Rome, 14 Sept., 1779. He was the son of a physician and had been a merchant until, travelling in Italy, he resolved to devote himself to art. He went to work in Naples with a goldsmith and engraver of precious stones. In 1743, proficient in his new calling, he moved to Rome and copied many antiques. He attained excellence and fame, but was somewhat limited in his field for want of early training and grounding in design.

GIOVANNI (JOHANN ANTON), the son of the foregoing, was b. at Naples, 1 Jan., 1734; d. in Rome, 25 Jan., 1791. He was a painter, gem-cutter, and experimenter in encaustic and mosaic, a pupil of his father, and of the painter Corvi. His scholarship and knowledge of the fine arts gave him unusual advantages. Early in life he executed a series of historical paintings for the Franciscans at Orioli, and the Augustinians at Braccian; also a St. Michael for the Pauline nuns in Rome. Later he devoted himself wholly to intaglio; he wrought gems of great beauty and finish, which resembled the classic so closely in style and execution that Winckelmann is said to have thought them antiques. He was held in high regard and received innumerable honours and lucrative commissions. Works: Hercules strangling the Lion; Leander crossing the Hellespont; Nemesis, Leda, Galatea, Venus, Dancers, the Vestal Tuccia, Arethusa; Ariadne, Antinous, Sappho; portraits of Pius VI and the Emperor Joseph II; and many other subjects. His son GIACOMO was trained to be a gem-cutter and executed many works in Milan, whither he had gone to be near his sister Theresa, married to the poet Vincenzo Monti. He died in early manhood.

GIUSEPPE (JOHANN JOSEPH), b. in Rome, 1760; d. there, 1820. He was a son of Antonio by a second marriage and half brother to Giovanni, who taught him the family art. Among his works are the portrait of Alexander I of Russia; the Three Graces after Canova; Achilles, Bacchus, Ceres, Io, Medusa, Perseus etc. He signs in Greek, like the older Pichlers ΠΙΧΛΕΡ, using the initial Φ.

LUIGI, the most distinguished of the Pichler family, was b. in Rome 31 Jan., 1773, of the second marriage of Antonio; d. 13 March, 1854. Losing his father while very young, he was indebted to his half-brother, Giovanni, for his careful education under a private tutor and for four years of art training with the painter De Angelis. Almost in childhood the boy had taken to himself the tools of the gem-cutter and, as he grew older, showed a special liking for cameo. Giovanni taught him their common art, and connoisseurs esteem that Luigi's incisions have even more finish, clearness, and light-gathering quality than those of his brother. He received many commissions from the Vatican and the Courts of France and Austria, and kept a splendid house where music and masques were frequently given. He made several trips to Vienna and was asked to found a school there. In 1818 he copied in enamel five hundred gems of the Vienna Cabinet which the emperor wished to present to the pope. For the same city he made a complete collection of copies of the intaglios of his father and brother, adding a set of his own, thus bringing the historical collection of 1400 antiques up to modern times. Venus, Cupid and Psyche, Apollo, Head of Julius Cæsar, Mars, Iris, the Day and Night of Thorwaldsen; and two exquisite heads of Christ are some of his subjects; besides many originals and portraits, including Giovanni Pichler's, Winckelmann's, Joseph II, Pius VII, and Gregory XVI. Luigi received innumerable honours from the popes and sovereigns of his day. His last gem, a head of Ajax, which he wished to present to Pius IX, was placed by the pope in a gold case in the Vatican collec-

tion with the signature H. A or HIXAEP. A. The tomb of the Pichlers is in S. Lorenzo in Lucina, Rome.

M. L. HANDLEY.

Pichler, VITUS, distinguished canonist and controversial writer, b. at Grossberghofen, 24 May, 1670; d. at Munich, 15 Feb., 1736. He studied for the secular priesthood, but after ordination entered the Society of Jesus, 28 Sept., 1696. For four years he was professor of philosophy at Brigue and Dillingen. He was then advanced to the chair of theology, controversial and scholastic, at Augsburg. He acquired fame in the field of canon law, which he taught for nineteen years at Dillingen, and at Ingolstadt, where he was the successor of the illustrious canonist, Fr. Schmalzgrueber. His latest employment was as prefect of higher studies at Munich. His first important literary work was "Examen polemicum super Augustana Confessione" (1708), an examination of the Lutheran Augsburg Confession. Other controversial works followed, generally directed against Lutheranism, such as "Lutheranismus constanter errans" (1709); "Una et vera fides" (1710); "Theologia polemica particularis" (1711). In his "Cursus theologiae polemicæ universæ" (1713), Pichler devotes the first part to the fundamentals of polemical theology and the second part to the particular errors of the reformers. It is said that he was the first writer to lay down, clearly and separately, the distinction between fundamental theology and other divisions of the science. He also wrote an important work on papal infallibility, "Papaus nunquam errans in proponendis fidei articulis" (1709). Although widely renowned as a polemical theologian, Pichler is better known as a canonist. He published his "Candidatus juris prudentiæ sacræ" in 1722; this was followed by "Summa jurisprudentiæ sacræ universæ" in 1723 sqq. He also issued "Manipulus casuum jiridicorum" and several epitomes of his larger canonical treatises. Pichler's controversial works were in great vogue during the eighteenth century, while his books on canon law were used as textbooks in many universities. His solutions of difficult cases in jurisprudence gave a decided impetus to the study of the canons and afforded a key to the intricate portions of the "Corpus juris canonici". Fourteen of Pichler's works, excluding the many editions and alterations, are enumerated.

WILLIAM H. W. FANNING.

Pickering, THOMAS, VENERABLE, lay brother and martyr, a member of an old Westmoreland family, b. c. 1621; executed at Tyburn, 9 May, 1679. He was sent to the Benedictine monastery of St. Gregory at Douai, where he took vows as a lay brother in 1660. In 1665 he was sent to London, where, as steward or procurator to the little community of Benedictines who served the queen's chapel royal, he became known personally to the queen and Charles II; and when in 1675, urged by the parliament, Charles issued a proclamation ordering the Benedictines to leave England within a fixed time, Pickering was allowed to remain, probably on the ground that he was not a priest. In 1678 came the pretended revelations of Titus Oates, and Pickering was accused of conspiring to murder the king. No evidence except Oates's word was produced and Pickering's innocence was so obvious that the queen publicly announced her belief in him, but the jury found him guilty, and with two others he was condemned to be hanged, drawn, and quartered. The king was divided between the wish to save the innocent men and fear of the popular

clamour, which loudly demanded the death of Oates's victims, and twice within a month the three prisoners were ordered for execution and then reprieved. At length Charles permitted the execution of the other two, hoping that this would satisfy the people and save Pickering from his fate. The contrary took place, however, and, 26 April, 1679, the House of Commons petitioned for Pickering's execution. Charles yielded and the long-deferred sentence was carried out on the ninth of May. A small piece of cloth stained with his blood is preserved among the relics at Downside Abbey.

The Tryals of William Ireland, Thomas Pickering and John Grove for conspiring to murder the king . . . G. ROGER HUDLESTON.

Piconio, BERNARDINE A (HENRI BERNARDINE DE PRUIGNY), b. at Picquigny, Picardy, 1633; d. in Paris, 8 December, 1709; was educated at Picquigny, and joined the Capuchins in 1649. As professor of theology he shed great lustre upon his order; his best-known work is his "Triplex expositio epistolarum sancti Pauli" (Paris, 1703 [French], 1706 [English, tr. Prichard], London, 1888), which has ever been popular among Scriptural scholars. Piconio also wrote "Triplex expositio in sacrosancta D. N. Jesu Christi Evangelia" (Paris, 1726), and a book of moral instructions. A complete edition of his works, "Opera omnia Bernardini a Piconio", was published at Paris (1870-2).

Picpus, CONGREGATION OF THE. See SACRED HEARTS OF JESUS AND MARY, CONGREGATION OF THE.

Picquet, FRANÇOIS, a celebrated Sulpician missionary in Canada, b. at Bourg, Bresse, France, 4 Dec., 1708; d. at Verjon, Ain, France, in 1781. He entered the Seminary of Lyons (1727), where he was ordained deacon in 1731. At the Seminary of St. Sulpice in Paris, after winning his doctorate at the Sorbonne, he was raised to the priesthood, and became a Sulpician. The same year he begged to be sent to Canada, and in the month of July arrived at Montreal, where for five years (1734-9) he was engaged in the ministry. On the Indian mission of the Lac-des-Deux-Montagnes (now Oka), he acquired the Algonquin and Iroquois tongues so perfectly that he surpassed the ablest orators of these tribes. His influence enabled him to win a large number of these savages to the true Faith. The Lake mission became very populous: Nipissings, Outaouois, Mohawks, and Hurons crowded alongside the Algonquins and Iroquois. Picquet fortified this Catholic centre against the pagan tribes, and erected the Calvary which still exists, with its well-built stations stretching along the mountain side facing the lake. In the intercolonial war between France and England (1743-8), the Indian allies of these two powers came to arms. Due to the influence of their missionary the Five Nations, hitherto allies of the English, remained neutral, while the other savages carried on a guerilla war in New England or served as scouts for the French troops. When peace was restored, Picquet volunteered to establish an Indian post on the Presentation River, whence he spread the Gospel among the Iroquois nations, as far as the Indians of the West. Founded on 1 June, 1749, this post became the Fort of the Presentation in the following year; from it arose the town of Ogdensburg, New York.

In 1751 Picquet travelled round Lake Ontario to gather into his mission as many Iroquois as possible, and succeeded in establishing 392 families at the Presentation. In 1752 Mgr de Pontbriand, the last French Bishop of Quebec, baptized 132 of them. A banner, preserved in the church of Oka, perpetuates the souvenir of this event, and the memory of the fidelity of the Five Nations to the cause of France, for, in the course of the Seven Years' War, it floated side by side with the Fleur-de-lis on many a battlefield. In 1753 Picquet went to France and presented to the minister of the Navy a well-documented memorandum concerning Canada, in which he pointed out the best means for preserving that colony for the French Crown. Hardly had he returned to Canada (1754) when hostilities were resumed. He directed his savages against the English, whom he considered as much the enemies of Catholicism as of France, and for six years accompanied them on their expeditions and into the field of battle. "Abbé Picquet was worth several regiments", said Governor Duquesne of him. The English set a price on his head. When all hope of the cause was lost, by the order of his superiors who feared he might fall into the hands of the English, Picquet returned to France, passing thither through Louisiana (1760). He was engaged in the ministry in Paris till 1772. He then returned to his homeland, Bresse, and was named canon of the cathedral of Bourg, where he died.

Lettres édifiantes et curieuses (Mémoires des Indes), XXVI (Paris, 1783), 1-63; GOSSELIN, *Le fondateur de la Présentation, l'abbé Picquet in Mémoires et Comptes-rendus de la Société royale du Canada*, XII, sect. 1 (1894); BERTRAND, *Bibliothèque sulpicienne ou Histoire littéraire de la Compagnie de Saint-Sulpice*, I (Paris, 1900), 394-401; CHAGNY, *Un défenseur de la Nouvelle-France, François Picquet "le Canadien"* (Lyons, 1911).

A. FOURNET.

Picts. See SCOTLAND.

Pie, LOUIS-ÉDOUARD-DÉSIRÉ, cardinal, b. at Pontgouin, Diocese of Chartres, 1815; d. at Angoulême, 1880. He studied at the Seminary of Chartres and at St. Sulpice, was ordained 1839, became Vicar-General of Chartres, 1844, and Bishop of Poitiers, 1849. He created many parishes, established in his seminary a canonical faculty of theology, founded for the missions of the diocese the Oblates of St. Hilary, and brought the Jesuits to Poitiers and the Benedictines to Solesmes and Ligugé. To his initiative were largely due the resumption of the provincial synods in France, the promotion of St. Hilary's cultus, and the erection of the national shrine of the Sacred Heart at Montmartre. He is, however, best known for his opposition to modern errors, and his championship of the rights of the Church. Regarding as futile the compromises accepted by other Catholic leaders, he fought alike all philosophical theories and political arrangements that did not come up to the full traditional Christian standard. His stand in matters philosophical was indicated as early as 1854-55 in two synodal instructions against "the errors of the present day and of philosophy".

In politics a staunch follower of the Comte de Chambord, he trusted but little the other regimes under which he lived. To Napoleon III, who had declared untimely certain measures suggested by the bishop, Pie said one day: "Sire, since the time has not come for Christ to reign, then the time has not come for government to last". Such was the vigour with which he stigmatized the imperial insincerity regarding the independence of the Papal States that he was denounced to both the Council of State and the Holy See. The former pronounced him guilty of abuse of power, but Cardinal Antonelli valiantly stood by him. At the Vatican Council he did not sign the *postulation* petitioning for the definition of papal infallibility, but once it was placed on the programme of the council, he proved one of the best exponents and defenders of it. As a reward for his loyal services,

Leo XIII made him cardinal, 1879. Sincerely attached to his diocese, Mgr Pie had refused all offers of preferment: a seat in the National Assembly, the Archbishopric of Tours, and even the primatial See of Lyons. His works, full of doctrine and unction, were published serially during his lifetime at Poitiers, but were later collected into "*Œuvres épiscopales*", 10 vols., Paris, s. d., and "*Œuvres sacerdotales*", 2 vols., Paris, s. d.

J. F. SOLLIER.

Piedmont (Ital. *Piemonte*), a part (*compartimento*) of northern Italy, bounded on the north by Switzerland, on the west by France, on the south by Liguria, and on the east by Lombardy. It includes the plain of the Upper Po, and the Alpine valleys that descend towards the plain from the south side of the Pennine Alps, from the east side of the Graian and Cottian, and from the north side of the Maritime Alps. Its name, *pedes montium*, from which arose *Pedimontium*, came from its geographical position, enclosed on three sides by high mountains. At the present time it includes the four Italian provinces of Turin, Novara, Alessandria, and Cuneo. In the Middle Ages and in antiquity the country was important chiefly because it contained the passes over the Alps which led from Italy to Gaul. Until the beginning of the fourth century Christianity had made little progress. However, in the course of the fourth and fifth centuries Christianity spread rapidly among the people, now completely Romanized. The earliest episcopal sees were established in this era, namely Turin, Asti, and Aosta.

In the early Middle Ages various petty feudal states were formed in the Piedmontese country, the most important of which were the Marquessates of Ivrea, Suso, Saluzzo, Montferrat, and the Countship of Turin. The counts of Savoy early made successful attempts to establish their authority in this region. At the beginning of the eleventh century Aosta and the territory under its control belonged to Count Humbert I of Savoy. His son Oddo (Otto, d. 1060) married the Marchioness Adelaide of Turin, and in this way became possessed of the Marquessate of Susa, with the towns of Turin and Pinerolo, the foundation of the later Piedmont. After the death (1232) of Thomas I, Count of Savoy, this marquessate went to a younger branch, the descendants of Thomas II (d. 1259), son of Thomas I; Amadeus V, son of Thomas II, is the ancestor of the present Italian royal family. These rulers called themselves Counts of Piedmont. On account of the position of their territories the Dukes of Savoy had a large share in the wars for supremacy in northern Italy. Besides extending their authority into Switzerland in the fifteenth and sixteenth centuries, they also gained new domains in Italy: the lordships of Vercelli, Asti, and Cava, and the feudal suzerainty over Montferrat. In the wars between the Emperor Charles V and Francis I of France, Duke Charles III (d. 1553) of Piedmont lost the greater part of his duchy. In the Peace of Câteau-Cambresis (1559), however, his son Emmanuel Philibert (d. 1580) retained nearly all of his father's possessions, and obtained, in exchange for other territories, the Marquessate of Tenda and the Principality of Oneglia.

Emmanuel Philibert's successor, Charles Emmanuel I (1580-1630), acquired the Marquessate of Saluzzo and a large part of Montferrat, which his son Victor Amadeus I (1630-37) was able to retain by conceding two other lordships to France. During the regency of the widow of Victor Amadeus I, the French Princess Christine, the influence of France in the Duchy of Savoy was greatly increased. Her son Charles Emman-

uel II (d. 1675) sought in vain to escape this dominating control. Victor Amadeus II (1675-1730) joined the great alliance against France in the War of the Spanish Succession. By the victory of Turin in 1706 Prince Eugene drove out the French troops that had made a sudden descent upon Piedmont, thus ridding the duke of his enemies. As a reward for joining the alliance the duke received by the Peace of Utrecht of 1713 the Marquessate of Montferrat, the City of Alessandria, and the Districts of Val Sesia and Lomellina, so that the part of his territories situated in Italy had essentially the same extent as the present Department of Piedmont. Outside of these new territories he was granted the Island of Sicily, which, however, he lost again when Spanish troops attacked the island in 1718. In 1720 as compensation for this loss he received the Island of Sardinia. He now assumed the title of King of Sardinia; besides the island, the kingdom included Savoy and Piedmont on the mainland. In the Polish and Austrian wars of succession the next king, Charles Emmanuel III (as king, Charles Emmanuel I, 1730-73), acquired the additional Italian districts of Tortona and Novara, also Anghiera, Bobbio, and a part of the principality of Pavia. His son Victor Amadeus III (1773-96) was a weak man of little importance. During his reign the storms caused by the French Revolution swept over his kingdom. Napoleon's victories obliged him in 1796 to cede Savoy and Nice to France, and his son and successor Charles Emmanuel II (1796-1802) lost all his territories on the mainland, which, together with Liguria and Parma, were united to France. The king abdicated, entered the Society of Jesus, and in 1802 resigned the crown to his brother Victor Emmanuel I. At first the latter resided in Sardinia.

Until the seventeenth century the position of the Church in Piedmont was a satisfactory one; no restriction was placed upon its activities. The country contained numerous dioceses; of these Aosta was a suffragan of Tarentaise, Nice of Embrun, and the other dioceses on Italian soil were suffragans of Milan. In 1515 Turin, where the Dukes of Savoy lived, was made an archdiocese with the two suffragan sees of Ivrea and Mondovi. As lord chancellor and first secretary of state the Archbishop of Turin was by law a member of the council of state. The ducal family was very religious, and until the end of the seventeenth century maintained close relations with the Papal See, which had established a permanent nunciature at Turin in the sixteenth century, while an agent of the Government of Piedmont resided at Rome. For some of their domains the dukes were vassals of the Holy See, but this relation caused no difficulties. There was a large body of clergy, and monasteries were numerous. There were also two religious orders of knights, that of St. Lazarus, an order or hospitaliers for the care of the sick, especially lepers, and that of St. Mauritius, which had been founded by Amadeus VIII in 1434 and confirmed in 1572 by Gregory XII. The same pope confirmed the union of the two orders, of which the duke was the perpetual grand master. The original purpose of these knightly orders was, however, very soon lost sight of; in recent times they have been changed into a secular decoration. Duke Charles Emmanuel I was very zealous in the struggle against Protestantism, and both he and his two successors took energetic measures against the growth of the Waldensians. However, Emmanuel Philibert made the execution of the judgments of the ecclesiastical Inquisition dependent on the consent of the senate and judicial investigation by the Government.

Towards the end of the seventeenth century the dukes, who had become absolute rulers, and their administrative officials began to suppress the liberties of the Church in imitation of France. They even interfered in the purely ecclesiastical government of the Church. Thus during the administration of Vic-

tor Amadeus, who was the actual ruler from 1684, violent dissensions with the Holy See arose and seriously injured religious life, especially because large numbers of dioceses and higher ecclesiastical benefices remained vacant for a long period. Lengthy negotiations were carried on with Rome. An edict issued by Victor Amadeus in 1694 for the benefit of the Waldensians was rejected at Rome, because it annulled the old law for the protection of the Catholic Church. The duke took the most severe measures against this Roman decree. The senate forbade its publication under heavy penalties, so that it could not be executed, and the tribunal of the Inquisition of Piedmont lost nearly all its importance. The Dioceses of Casale, Acqui, and Ventimiglia included parts of the territory of Piedmont, although the bishops did not reside in the duchy; this was regarded as a great grievance. The duke wished to force these bishops to appoint episcopal vicars for the supervision of those of his subjects belonging to their dioceses; this the bishops refused to do. Whereupon the landed property in Piedmont belonging to the Diocese of Nice was sequestrated; this led the bishop, after three years of unsuccessful negotiations, to excommunicate the secular officials who had carried out the ducal decree. The senate forbade the recognition of the sentence of excommunication under the severest penalties, for the laity the penalty of death, and commanded the priests to grant the sacraments to the excommunicated. This last command, however, was recalled by the duke as too extreme a measure against ecclesiastical authority.

Victor Amadeus now claimed the entire right of presentation to all the sees and to all the abbeys in his territories granted by the pope in consistory, on ground of a privilege conferred by Pope Nicholas V in 1451 upon Duke Louis of Savoy, whereby the pope, before filling sees and abbacies, would ask for the opinion and consent of the duke in regard to the persons nominated. This privilege had been confirmed on various occasions during the sixteenth century. Rome was not willing to acknowledge the privilege in this enlarged form. The duke had also issued an edict by which a secular judge was not to grant permission to those desiring to enter the clergy until he had fully informed himself concerning the ability of the candidate, the number of parishes in the locality, and of the priests and monks there, and the nature of the property to be assigned to the candidate for his support. In 1700 a bitter dispute arose between the Archbishop of Turin and the ducal delegation, when the archbishop by a decree declared invalid the ecclesiastical arrangements proposed by the laity against the decrees of the Apostolic See. However, the bishops, supported by the nuncio, followed the instructions of the pope in all ecclesiastical questions. Further disputes also arose concerning the testamentary competency of regulars, a right which was denied the regular clergy by the Government, and as to the rights of the pope in the fiefs of the Roman Church that were possessed by the dukes. These questions were exhaustively examined at Rome, and the advocate of the consistory, Sardini, was sent to Turin to negotiate the matters; but the agreement adjusting the difficulty that was obtained by him was not accepted at Rome. New troubles constantly arose when the duke confiscated the revenues of benefices accruing during their vacancy and abrogated the *spolia* (property of ecclesiastics deceased intestate) of ecclesiastical benefices. The Government appointed an administrator of its own for the care and administration of the estates of vacant benefices, but he was not recognized by the bishops. Secular approval of ecclesiastical acts and ordinances was made necessary in a continually increasing number of cases. New negotiations, undertaken in 1710 at Rome by Count de Gubernatis, produced no results. The only agreement

reached was in regard to the administrator of vacant benefices, who was also appointed the Apostolic administrator for this purpose. In this form the office of the Apostolic-royal steward continued to exist.

When the Island of Sardinia was granted to Piedmont in 1720 a new conflict arose, as the pope claimed to be the sovereign of the island. The basis of this was that Boniface VIII had invested the King of Aragon with the island under the condition that it should never be separated from the Crown of Aragon. Consequently the demand was made upon the new King of Sardinia that he should seek papal investiture. As Victor Amadeus refused to do this, the pope rejected the arrangements for filling the episcopal sees and ecclesiastical benefices made by the king, who also claimed all the rights of patronage exercised by the Spanish sovereign. As a consequence most of the sees on the islands were without incumbents, which increased the difficulties. Benedict XIII (1724-30) sought to bring about a reconciliation in order to put an end to the injury inflicted on religious life. In Turin the necessity of an accommodation was also realized, and the king sent the adroit and skilful Marquess d'Ormea to Rome to prepare the way for the negotiations. The peace-loving pope made large concessions, although the king made still further encroachments upon the rights of the Church. The negotiations were carried on by a congregation composed of four cardinals and the prelate Merlini. Several points were adjusted, especially the king's right of presentation to the bishoprics and abbeys, while others were discussed, particularly the immunity of the Church, the right of the pope to claim the *spolia*, also the right to charge ecclesiastical revenues with pensions. Most of the difficulties were finally adjusted, and an agreement was signed in 1727, so that the vacant sees could now be filled and ecclesiastical administration resumed. King Charles Emmanuel III (1730-73) made new conventions with Benedict XIV (1740-59), who had formerly supported the Marquess d'Ormea in his negotiations, and had always maintained friendly relations with him. By two conventions made in 1741 the King of Sardinia was granted the Apostolic vicariate for the papal fiefs on condition of paying a quit-rent, and the questions of the ecclesiastical benefices, the revenues of benefices during vacancy, and the administration of these vacant benefices were adjusted. Notwithstanding his friendliness, the papal commissioner had a very difficult position to maintain in his relations with the president of the senate, Caissotti. Finally on 6 Jan., 1742, the pope issued instructions to the bishops, in which both sides had concurred; in these it was made the duty of foreign bishops to appoint vicars for the parts of their dioceses in the territory of Piedmont, ecclesiastical jurisdiction was curtailed, and the landed property of the Church that had been obtained after 1620 was made subject to the ordinary civil taxes. In 1750 the pope resigned various revenues that the Apostolic See derived from Piedmont in return for a very small indemnity. Charles Emmanuel III now remained on the best of terms with Rome, notwithstanding isolated difficulties and disputes which still arose. Merlini was once more received at Turin as nuncio, and the piously-inclined king sought to promote the interests of religion, to protect Christian discipline, and to support the rights of the Church in other countries.

The last period of the history of the Kingdom of Sardinia began after the Napoleonic era. In 1814-15 Victor Emmanuel I regained Piedmont with the territories of Genoa (Liguria) and Grenoble. The Government again sought to base the administration on the old political principles of the period before the French Revolution, while a large part of the citizens of the country were filled with ideas of political independence and Liberalism, and the revolutionary secret society, the Carbonari, was at work. When in 1821 a military

insurrection broke out, the king abdicated in favour of his brother Charles Felix (1821-31). Before Charles Felix arrived the country was administered by Charles Albert, the heir-presumptive to the throne, who was a member of the Savoy-Carignan branch of the family. Charles at once established the Spanish constitution of 1812 and summoned a Liberal ministry. However, Charles Felix crushed the Liberal opposition with the aid of Austrian troops and re-established former administrative conditions. At his death the direct line of the dynasty of Savoy was extinct, and he was succeeded by Charles Albert of Savoy-Carignan (1831-49). This king gave the country a constitution in 1848, summoned a Liberal ministry, and assumed the leadership of the movement for the national unity of Italy. This led to a war with Austria in which he was defeated at Novara, and consequently was obliged to abdicate on 4 Nov., 1849, in favour of his son Victor Emmanuel II (1849-78). Count Camillo de Cavour (d. 6 June, 1861) was soon made the head of the administration. Journeys in France and England had imbued Cavour with ideas of political and parliamentary freedom; from 1848 he had sought to spread his opinions by publishing with the aid of Balbo, Santa Rosa, and others the journal "Il Risorgimento". On 4 Nov., 1852, he was made president of the ministry; he now sought by the economic development of the country and by diplomatic relations, especially on the occasion of the Crimean War, and at the Congress of Paris in 1856, where the "Italian" question was raised, to prepare for war with Austria.

In a secret agreement with Napoleon III made at Plombières on 20 July, 1858, he gained the support of the French emperor by promising to cede Savoy and Nice to France. In this way Victor Emmanuel II was able in 1859 to begin war against Austria with the aid of Napoleon, and the two allies defeated the Austrian army at Magenta (4 June) and at Solferino (24 June). At the same time a revolution broke out in central Italy that had been planned by the followers of Mazzini, and the national union founded by him in Piedmont. Tuscany, the duchies, and the districts ruled by delegation received Piedmontese administrators. In his choice of means the only principle followed by Cavour was to use whatever might prove advantageous to him. His connexion with men like Mazzini, Garibaldi, and others shows the lack of principle in his conduct. Piedmont adopted the cause of the revolution. In the Peace of Zurich, 10 Nov., 1859, it was stipulated that Lombardy would be given to Piedmont. In 1860 the people of Savoy and Nice voted for union with France, so that these territories now became a part of France, and the royal dynasty of Piedmont resigned its native land of Savoy. As compensation for this loss Piedmont received Tuscany and Emilia. On 2 April, 1860, the "National Parliament" was opened at Turin; the parliament, asserting the principle of nationality, demanded "Italy for the Italians". Soon other Italian domains were absorbed, and on 17 March, 1861, Victor Emmanuel II assumed the title of King of Italy (see ITALY), whereby Piedmont and the Kingdom of Italy were merged into the united Kingdom of Italy. On 29 March, 1861, Cavour announced that Rome was the future capital of united Italy.

After the readjustment of ecclesiastical conditions in 1817 there were seven Church provinces in the Kingdom of Sardinia that had been formed and enlarged in the period following the Napoleonic era. These archdioceses were: in Piedmont, Turin with 10 suffragans, to which in 1860 an eleventh, Aosta (which had belonged to Chambéry), was added; Vercelli with 5 suffragans; in Liguria, Genoa with 6 suffragans; in Savoy, Chambéry with 4 suffragans (after the withdrawal of Aosta only 3); on the Island of Sardinia the three Archdioceses of Cagliari, Oristano, and Sassari,

with ■ suffragans. Both the Liberal movement and the intrigues of the revolutionary party in Piedmont were in every way inimical to the Church. In March, 1848, the expulsion of the Jesuits was begun in the harshest manner. In October a law regarding instruction was issued that was adverse to the Church. In the next year began the hostilities directed against Archbishop Luigi Franconi of Turin and other bishops. The Archbishops of Turin and Sassari were even imprisoned. In 1850 the ecclesiastical immunities were suppressed and ecclesiastical jurisdiction was limited. In 1851 the Government regulated theological instruction without the concurrence of the Church; in 1852 civil marriage was introduced; in 1853 the office of the Apostolic royal steward was completely secularized; in 1854 laws were issued directed against the monasteries; in 1855 the ecclesiastical academy of Superga was suppressed; in 1856 and the following years oppressive measures were issued against parish priests and parish administration, such as confiscation of the greater part of the lands of the Church. Using the party cry of a "free Church in a free state", Cavour and his confederates robbed the Church in many directions of its essential rights and freedom, as well as of its rightful possessions. The same spirit of hostility to the Church was shown towards the papacy; the nunciature at Turin was suppressed. Thus the union of Italy was carried on, even by Piedmont, that had allied itself to revolutionary elements hostile to the Church, in a manner inimical throughout to the Church and religion. This hostility continued to control the official measures as well as the entire course of the Italian Government.

J. P. KIRSCH.

Piel, PETER, a pioneer in the movement for reform of church music, b. at Kesewick, near Bonn, 12 Aug., 1835; d. at Boppard, on the Rhine, 21 Aug., 1904. Educated in the seminary for teachers at Kempen, he was instructed in music by Albert Michael Jopen (1828-78), and became professor of music at the Seminary of Boppard in 1868, a position which he held until his death. During all the years of his incumbency Piel displayed extraordinary activity as composer, teacher, and critic. He wrote a number of masses, both for equal and mixed voices, numerous motets, antiphons in honour of the Blessed Virgin Mary for four and eight voices, Magnificats in the eight Gregorian modes, and a Te Deum, all of which have enjoyed great vogue. Piel's compositions reveal the resourceful contrapuntist, and are of classic purity of style. His trios, preludes, and postludes for the organ are models of finish and smoothness. It is as a teacher, however, and through the large number of distinguished musicians whom he formed that Piel exerted the greatest influence. His "Harmonielehre" has passed through a number of editions and is a standard book of instruction in liturgical music. In 1887 he received from the German Government the title of Royal Director of Music.

Pie Pelicane, Jesu, Domine, the sixth quatrain of Adoro Te Devote (q. v.), sometimes used as a separate hymn at Benediction of the Most Blessed Sacrament.

Pierius, priest and probably head master of the catechetical school at Alexandria conjointly with Achillas, flourished while Theonas was bishop of that city; d. at Rome after 309. His skill as an exegetical writer and as a preacher gained for him the appellation, "Origen the Younger". Philip of Side, Photius, and others assert that he was a martyr. However, since St. Jerome assures us that he survived the Diocletian persecution and spent the rest of his life at Rome, the term "martyr" can only mean that he underwent sufferings, not death, for his Faith. The Roman Martyrology commemorates him on 4 November. He wrote a work (*βιβλίον*) comprising twelve treatises or sermons (*λόγοι*), in some of which he repeats the dogmatic errors attributed by some authors to Origen (q. v.), such as the subordination of the Holy Ghost to the Father and the Son, and the pre-existence of human souls. His known sermons are: one on the Gospel of St. Luke (*εἰς τὸ κατὰ Λουκᾶν*); an Easter sermon on Osee (*εἰς τὸ πάσχα καὶ τὸν Ὠσηέ*); a sermon on the Mother of God (*περὶ τῆς θεοτόκου*); a few other Easter sermons; and a eulogy on St. Pamphilus, who had been one of his disciples (*εἰς τὸν βίον τοῦ ἁγίου Παμφίλου*). Only some fragments of his writings are extant. They were edited by Routh in "Reliquiæ Sacræ", III, 423-35, in P. G., X, 241-6, and, with newly discovered fragments, by Boor in "Texte und Untersuchungen zur Geschichte der althristlichen Literatur", V, ii (-Leipzig, 1888), 165-184. For an English translation see Salmond in "Ante-Nicene Fathers" (New York, 1896), 157.

Pierre de Castelnau, BLESSED, b. in the Diocese of Montpellier, Languedoc, now Department of Hérault, France; d., 15 Jan., 1208. He embraced the ecclesiastical state, and was appointed Archdeacon of Maguelonne (now Montpellier). Pope Innocent III sent him (1199) with two Cistercians as his legate into the middle of France, for the conversion of the Albigenses. Some time later, about 1202, he received the Cistercian habit at Fontfroide, near Narbonne. He was again confirmed as Apostolic legate and first inquisitor. He gave himself untiringly to his work, strengthening those not yet infected with error, reclaiming with tenderness those who had fallen but manifested good will, and pronouncing ecclesiastical censures against the obdurate. Whilst endeavouring to reconcile Raymond, Count of Toulouse, he was, by order of the latter, transpierced with a lance, crying as he fell, "May God forgive you as I do." His feast is celebrated in the Cistercian order, by one part on 5 March, and by the other on 14 March. He is also honoured as a martyr in the Dioceses of Carcassonne and Treves. His relics are interred in the church of the ancient Abbey of St-Gilles.

EDMOND M. OBRECHT.

Pierre de Maricourt, surnamed PETER THE PILGRIM (*Petrus Peregrinus*), physician of the Middle Ages. Under the name of "Magister Petrus de Maharne-curia, Picardus", he is quoted by Roger

Bacon in his "Opus Majus" as the only author of his time who possessed an exact knowledge of perspective. According to Bacon he came from Picardy, and the village of Maricourt is situated in the Department of the Somme, near Péronne. He has left a remarkable treatise on the magnet, "Epistola Petri Peregrini de Maricourt ad Sygerum de Foucaucourt, militem, de magnete"; Syger de Foucaucourt was a friend and neighbour of the author, his domain bordering on that of Maricourt. It is dated 8 August, 1269, and bears the legend: *Actum in castris, in obsidione Luceria* (done in camp during the siege of Luceria), whence we know that the author was in the army of Charles of Anjou, who, in 1269, laid siege to the city of Lucera or Nocera, the only detail of his life known. The sobriquet "Pilgrim" would lead us to suppose, in addition, that he was a crusader. The "Epistola de magnete" is divided into two parts. The first, a model of inductive reasoning based on definite experiences correctly interpreted, sets forth the fundamental laws of magnetism. His part seems to have been, not the discovery of these laws, but their presentation in logical order. In the second division, less admirable, an attempt is made to prove that with the help of magnets it is possible to realize perpetual motion. From medieval times the work was exceedingly popular; in 1326 Thomas Bradwardine quotes it in his "Tractatus de proportionibus", and after his time the masters of Oxford University make frequent use of it. The manuscripts containing it are very numerous, and it has been printed a number of times. The first edition was issued at Augsburg, 1558, by Achilles Gasser. In 1572 Jean Taisner or Taisnier published from the press of Johann Birkmann of Cologne a work entitled "Opusculum perpetua memoria dignissimum, de natura magnetis et ejus effectibus, Item de motu continuo". In this celebrated piece of plagiarism Taisnier presents, as though from his own pen, the "Epistola de magnete" of Pierre de Maricourt and a treatise on the fall of bodies by Gianbattista Benedetti. The "Epistola de magnete" was later issued by Libri (*Histoire des sciences mathématiques en Italie*, II, Paris, 1838; note v, pp. 487-505), but this edition was full of defects; correct editions were published by P. D. Timoteo Bertelli (in "Bulletino di bibliografia e di storia delle scienze matematiche e fisiche pubblicata da B. Boncompagni", I, 1868; pp. 70-80) and G. Hellmann ("Neudrucke von Schriften und Karten über Meteorologie und Erdmagnetismus, No. 10, Rara magnetica", Berlin, 1898). A translation into English has been made by Silvanus P. Thompson ("Peter Peregrinus of Maricourt, Epistle to Sygerus of Foucaucourt, Soldier, concerning the Magnet", Chiswick Press, s. d.), also by Brother Arnold ("The Letter of Petrus Peregrinus on the Magnet, A. D. 1269", with introductory note by Brother Potamian, New York, 1904).

PIERRE DUHEM.

Pierre Mathieu. See LIBER SEPTIMUS.

Pierron, JEAN, missionary, b. at Dun-sur-Meuse, France, 28 Sept., 1631; date and place of death unknown. He entered the Jesuit novitiate at Nancy, 21 Nov., 1650, and after studying at Pont-à-Mousson he became an instructor at Reims and Verdun; he completed the curriculum in 1665 and spent two years more as an instructor at Metz. On his arrival in Canada in June, 1667, he was sent to the Iroquois mission of Sainte-Marie. In a letter written the same year he described his impressions of the country, the

characteristics and customs of the savages, and expressed an admiration for the Iroquois language, which reminded him of Greek. He arrived at Tionontoguen, the principal village of the Mohawks, on 7 Oct., 1668, where he replaced Father Fremin. These people were one of the most flourishing of the Iroquois nations, valiant and proud warriors, and difficult to convert. Father Pierron made use of pictures which he painted himself in order to make his teachings more impressive, and invented a game by means of which the Indians learned the doctrines and devotions of the Church; he taught the children to read and write. He spent one winter in Acadia to ascertain if it were possible to re-establish the missions which had been expelled in 1655, and travelled through New England, Maryland (which at that time had a Catholic governor, Charles Calvert), and Virginia; returning to the Iroquois, he worked among them until 1677 and went to France in the following year. He was a man of rare virtue, and during all his missionary career fought against a natural repugnance to the Iroquois.

J. ZEVELY.

Pierson, PHILIPPE, b. at Ath, Hainaut (Belgium), 4 January, 1642; d. at Lorette, Quebec, 1688. At the age of eighteen he entered the Jesuit novitiate at Tournai, and pursued his studies at Louvain, Lille, and Douay. He was an instructor at Armentières and Bethune before he went to Canada in 1666, where he taught grammar in the college at Quebec, and presented a successful Latin play on the Passion of Our Lord. After studying theology for two years he was ordained in 1669, then worked among the Indians at Prairie de la Madeleine and Sillery. From 1673 to 1683 he did excellent work by spreading Christianity among the Hurons of the Makinac mission. In a letter from St. Ignace he described how his church increased in numbers and grew strong in faith. Later, from 1683 he was a missionary among the Sioux west of Lake Superior, and remained as such until his death.

Ed. THWAITES, *Jesuit Relations* (Cleveland, 1896-1901).

J. ZEVELY.

Pietism, a movement within the ranks of Protestantism, originating in the reaction against the fruitless Protestant orthodoxy of the seventeenth century, and aiming at the revival of devotion and practical Christianity. Its appearance in the German Lutheran Church, about 1670, is connected with the name of Spener. Similar movements had preceded it in the Reformed Church of the Netherlands (Gisbert Voetius, Jodocus von Lodensteyn) and on the German Lower Rhine (Gerhard Tersteegen). Among German Lutherans the mystics Valentin Weigel and Johannes Arndt and the theologians Johann Gerhard, Johann Matthias Meyfart, and Theophilus Grossgebauer may be regarded as precursors of Spener.

Philipp Jakob Spener, born in 1635 at Rappoltswiler in Alsace, had been from his earliest years, under the influence of the pious Countess Agathe von Rappoltstein, familiar with such ascetical works as Arndt's "Sechs Bücher vom wahren Christenthum". At Geneva, whither he went as student in 1660, he was profoundly impressed by Jean de Labadie, then active as a Reformed preacher, but later a separatist fanatic. Spener found his first sphere of practical work at Frankfort on the Main, where he was appointed pastor and senior in 1666. His sermons, in which he emphasized the necessity of a lively faith and the sanctification of daily life, brought him many adherents among the more serious of his hearers; but recognizing the impossibility of leading the people at large to the desired degree of perfection, he conceived the idea of an *ecclesiola in ecclesia*, established in 1670 the so-called "Collegia pietatis" (whence the name Pietists),

i. e. private assemblies in his own house for pious reading and mutual edification, and wrote "*Pia desideria oder herzliches Verlangen nach gottgefälliger Besserung der wahren evangelischen Kirche*" (1675). After criticizing the prevalent abuses, he makes six suggestions for the improvement of ecclesiastical conditions: In view of the inadequacy of sermons for the purpose, private gatherings should be held to secure among the people a more thorough acquaintance with the Word of God; the idea of a universal priesthood, which had not attained its rightful significance in the previous development of the Lutheran Church, was to be more fully realized; with the knowledge of Christianity was to be closely joined the exercise of charity and the spirit of forgiveness; the attitude towards unbelievers should be determined upon not by a controversial spirit, but by the charitable desire of winning these souls; the theological course should be reformed in order to spur the students not only to diligence, but also to a devout life, in which the professors should set the example; in preaching, rhetoric should be abandoned and stress laid upon inculcating faith and a living, practical Christianity. Spener further defended his ideas of a universal priesthood in "*Das geistliche Priesterthum, aus göttlichem Wort kürzlich beschrieben*" (1677). His "*Pia Desideria*" won him many adherents, but also aroused violent opposition among Lutheran theologians.

A wider sphere of activity opened to Spener in 1686 when he was appointed court preacher at Dresden. During the same year, August Hermann Francke, Paul Anton, and Johann Kaspar Schade established at Leipzig, along the line of Spener's ideas, the "*Collegia philobiblica*", for the practical and devotional explanation of Holy Scripture, which attracted large numbers of masters and students. The Pietist movement at Leipzig, however, came to an end a few years later owing to the opposition of the theological faculty, headed by Professor Johann Benedict Carpzov. The Pietists were accused of false doctrines, contempt for public worship and the science of theology, and separatistic tendencies. The "*Collegia philobiblica*" was dissolved in 1690 and the leaders of the movement, forbidden to lecture on theology, left Leipzig. Spener, who had fallen into disfavour with the Elector of Saxony, removed in 1691 to Berlin, where he was appointed provost to the church of St. Nicholas and counsellor to the consistory. Pietism was also attacked in Carpzov's Easter programme of 1691 and the anonymous treatise "*Imago Pietismi*" (1691), probably the work of Pastor Roth of Halle. A lively exchange of controversial pamphlets ensued. Spener's call to Berlin was of great significance for Pietism, as he here enjoyed the full confidence of Prince Frederick III (later King Frederick I of Prussia) and wielded a decisive influence in the selection of professors for the theological faculty of the recently founded University of Halle. Francke, who had been working at Erfurt since his departure from Leipzig, went to Halle as professor and pastor in January, 1692; his friend, Joachim Justus Breithaupt, had preceded him in October, 1691, as first professor of theology and director of the theological seminary. Somewhat later Paul Anton, formerly a colleague of Francke's at Leipzig, also received a chair at Halle. Professors in other faculties, like the celebrated jurist Christian Thomasius, organizer of the new university, were at least on friendly terms with the Pietist theologians, even if they did not share their religious beliefs. Thus Halle became the centre of the Pietistic movement in Lutheran Germany.

Francke ranks high also in the history of education, owing to the establishment (1695) of his orphan asylum, around which he grouped various institutions suited to the needs of teachers and pupils. He also turned his attention to foreign missions; the Pietists

promoted the dissemination of the Bible through the establishment (1710), by Freiherr von Canstein, of a bible house at the Halle orphan asylum. The Pietists on the whole preserved the doctrinal content of Lutheran dogma, but treated systematic theology and philosophy as quite secondary. In preaching against the prevalent laxity of morals they relegated to the background the Lutheran dogma of justification by faith alone and insisted on a life of active devotion, and the doctrine of repentance, conversion, and regeneration. The Pietist conventicles sought to further the "penitential conflict" leading to regeneration by prayer, devout reading, and exhortations. The so-called "adiaphora", theatres, dancing, etc., were regarded as sinful. After the foundation of the University of Halle the campaign against Pietism was pursued with increased vigour by the orthodox Lutherans, notably Samuel Schelwig at Danzig, Valentin Alberti at Leipzig, and the theological faculty of Wittenberg, with Johann Deutschmann at its head. Later came Valentin Ernst Löschner (d. 1747), against whom Pietism was defended by Joachim Lange, professor at Halle. During these struggles the founders of Pietism had passed away, Spener in 1705, Francke in 1727, Breithaupt in 1732, and then followed the period of decline.

Meanwhile, despite opposition, the influence of Pietism had spread, and its prestige, with the support of King Frederick I and Frederick William I, survived Francke's death. Frederick William I decreed (1729) that all theologians desiring appointments in Prussia should study at Halle for two years; but the favour shown the Pietists ceased with the accession of Frederick II. Besides Halle, the Universities of Königsberg and Giessen aided in the spread of Pietism. It had also a powerful patron in Frederick IV, King of Denmark, who encouraged the movement in his country, sent Danish students of theology to Halle, and requested Francke to recommend missionaries for the Danish East Indian possessions. At Würtemberg Pietism took on a special character; while holding in essentials to the ideas of Spener and Francke, it was more moderate, adhered more closely to the organization and theology of the Lutheran Church, kept clear of eccentricities, had more scholarly interests, and flourished longer than the Pietism of Northern Germany. Francke, who had travelled through Würtemberg in 1717, was held in great veneration, while there was no intercourse at all with the later representatives of Pietism in Northern Germany. The leader of the movement at Würtemberg was Johann Albrecht Bengel (d. 1752), who, like many other Würtemberg theologians, had studied at Halle; with him were associated Eberhard Weismann and Friedrich Christoph Oetinger. A separatistic community which grew out of Pietism was the "*Herrnhüter*", whose founder, Count von Zinzendorf, had been educated in Francke's institutions at Halle. In Switzerland, Pietism was widespread, especially in the cantons of Bern, Zurich, Basle, and Waadt.

So far as it followed the paths traced by Spener and Francke, Pietism produced some beneficial results. In the subjective bias of the whole movement, however, there lay from the beginning the danger of many abuses. It often degenerated into fanaticism, with alleged prophecies, visions, and mystical states (e. g., bloody sweats). This decadent Pietism led to the formation of various independent communities, some fanatic (Nillenaries, etc.), others criminal, indulging in lewd orgies (e. g. the Wittgenstein scandals and the Buttler gang). Among the theologians who, starting as Pietists, advanced to an independent position, quite at variance with organized Protestantism, the most conspicuous were Gottfried Arnold (d. 1714), representative of a fanatical mysticism, and his disciple, Johann Konrad Dippel, who attacked all forms

of orthodox Christianity. Though the founders of Pietism had no idea of forsaking the basis of Lutheran dogma, the Pietistic movement, with its treatment of dogma as a secondary matter and its indifference to variations in doctrine, prepared the ground for the theological rationalism of the period of enlightenment. Johann Salomo Semler, the father of rationalism, came from the Halle school of Pietism, and his appointment as professor of theology at the University of Halle in 1752 opened the way to the ascendancy of rationalism, against which the devout Pietists were as powerless as the representatives of Protestant orthodoxy. Pietism revived in Protestant Germany and Protestant Switzerland, early in the nineteenth century, as a reaction against the rationalistic enlightenment and a response to more deeply felt religious needs. A far-reaching activity along these lines was exerted in many parts of Germany and Switzerland by Freifrau von Krüdener by means of her sermons on penance. Tract societies and associations for propagating home missions did much to promote the spirit of Pietism. On the other hand, along with good results, this movement again degenerated into mystical fanaticism and sectarianism (e. g., the "sanctimonious hypocrites" at Königsberg, about 1835; the adherents of Schönherr, Ebel, and Diestel). There are also connecting links between the subjectivism of the Pietists and the theological liberalism of Albrecht Ritschl and his school, whose insistence on interior religious experience in the form of feeling is a basic idea of Pietism, although the Ritschlian school is opposed by devout Pietists as well as by Orthodox Lutherans.

FRIEDRICH LAUCHERT.

Pietro di Murrone. See CELESTINE V, SAINT, POPE.

Pighius (PIGGHE), ALBERT, theologian, mathematician, and astronomer, b. at Kampen, Overysse, Holland, about 1490; d. at Utrecht, 26 Dec., 1542. He studied philosophy and began the study of theology at Louvain, where Adrian of Utrecht, later Pope Adrian VI, was one of his teachers. Pighius completed his studies at Cologne and received in 1517 the degree of Doctor of Theology. He then followed his teacher Adrian to Spain, and, when the latter became pope, to Rome, where he also remained during the reigns of Clement VII and Paul III, and was repeatedly employed in ecclesiastico-political embassies. He had taught mathematics to Cardinal Alessandro Farnese, afterwards Paul III; in 1535 Paul III appointed him provost of St. John's at Utrecht, where he had held a canonry since 1524. At the religious disputation of Ratisbon in 1541 he was on the Catholic side.

Among his writings the following belong to the sphere of his mathematico-astronomical studies: "Astrologia defensio adversus prognosticatorum vulgus, qui annuas prædictiones edunt et se astrologos mentiuntur" (Paris, 1518); also the treatise addressed to Leo X upon the reform of the calendar, "De æquinotiarum solstitiorumque inventionem et de ratione paschalis celebrationis deque restitutione ecclesiastici Calendarii" (Paris, 1520); also "Apologia adversus no-

vam Marci Beneventani astronomiam" (Paris, 1522); and "Defensio Apologiae adversus Marci Beneventani astronomiam" (Paris, 1522). As a theologian he zealously defended the authority of the Church against the Reformers. His most important theological work is a rejoinder to Henry VIII of England and is entitled: "Hierarchia ecclesiastica assertio" (Cologne, 1538, dedicated to Paul III; later editions, 1544, 1558, 1572). In reply John Leland wrote his "Antiphilarchia"; cf. "Dict. Nat. Biog." (new ed., London, 1909), XI, 893. Pighius also wrote: "Apologia indicti a Paulo III. Concilii, adversus Lutheranas confederationes" (Cologne, 1537; Paris, 1538); "De libero hominis arbitrio et divina gratia libri X" (Cologne, 1542), against Luther and Calvin; "Controversiarum præcipuarum in Comitibus Ratisponensibus tractatarum . . . explicatio" (Cologne, 1542). To this were added the two treatises: "Quæstio de divortiatorum novis coniugiis et uxorum pluralitate sub lege evangelica" and "Diatriba de actis VI. et VII. Synodi". Other theological works were: "Ratio componendorum dissidiorum et sanciendæ in religione concordia" (Cologne, 1542), and his last work, "Apologia adversus Martini Bucerii calumnias" (Mainz, 1543). A treatise "Adversus Græcorum errores", dedicated to Clement VII, is preserved in manuscript in the Vatican Library.

Pighius was in his convictions a faithful adherent of the Church and a man of the best intentions, but on some points he advanced teachings which are not in harmony with the Catholic position. One was his opinion that original sin was nothing more than the sin of Adam imputed to every child at birth, without any inherent taint of sinfulness being in the child itself. In the doctrine of justification also he made too many concessions to Protestants. He originated the doctrine of the double righteousness by which man is justified, that has justly been characterized as "semi-Lutheranism". According to this theory, the imputed righteousness of Christ is the formal cause of the justification of man before God, while the individual righteousness inherent in man is always imperfect and therefore insufficient. These opinions of Pighius were adopted by Johannes Gropper and Cardinal Contarini; during the discussion at the Council of Trent of the "Decretum de Justificatione" they were maintained by Seripando, but the Council, with due regard for the ideas that were justifiable in themselves, rejected the untenable compromise theory itself.

FRIEDRICH LAUCHERT.

Pignatelli, VENERABLE GIUSEPPE MARIA, b. 27 December, 1737, in Saragossa, Spain; d. 11 November, 1811. His family was of Neapolitan descent and noble lineage. After finishing his early studies in the Jesuit College of Saragossa, he entered the Society of Jesus (8 May, 1753) notwithstanding his family's opposition. On concluding his ecclesiastical studies he was ordained, and taught at Saragossa. In 1766 the Governor of Saragossa was held responsible for the threatened famine, and so enraged was the populace against him that they were about to destroy his palace by fire. Pignatelli's persuasive power over the people averted the calamity. Despite the letter of thanks sent by Charles III the Jesuits were accused of instigating the above-mentioned riot. Pignatelli's refutation of the calumny was followed by the decree of expulsion of the Fathers of Saragossa (4 April, 1767). Minister Aranda offered to reinstate Nicola

and Giuseppe Pignatelli, providing they abandon their order, but in spite of Giuseppe's ill-health they stood firm. Not permitted by Clement III to land at Cività Vecchia, with the other Jesuits of Aragon, he repaired to St. Boniface in Corsica where he displayed singular ability for organization in providing for five hundred fathers and students. His sister, the Duchess of Acerra, aided him with money and provisions. He organized studies and maintained regular observance. When France assumed control of Corsica, he was obliged to return to Genoa. He was again detailed to secure a location in the legation of Ferrara, not only for the fathers of his own province of Aragon, but also for those of Peru and Mexico, but the community was dissolved in August, 1773. The two Pignatelli brothers were then obliged to betake themselves to Bologna, where they lived in retirement (being forbidden to exercise the sacred ministry). They devoted themselves to study and Pignatelli himself collected books and manuscripts bearing on the history of the Society. On ascertaining from Pius IV that the Society of Jesus still survived in White Russia, he desired to be received there. For various reasons he was obliged to defer his departure. During this delay he was invited, on the instance of Ferdinand, Duke of Parma, to re-establish the Society in his States; and in 1793, having obtained through Catharine II a few fathers from Russia, with other Jesuits, an establishment was made. On 6 July, 1797, Pignatelli there renewed his vows. In 1799 he was appointed master of novices in Colerno. On the decease of the Duke of Parma, the States of Parma were placed under allegiance to France. Notwithstanding this fact, the Jesuits remained undisturbed for eighteen months, during which period Pignatelli was appointed Provincial of Italy. After considerable discussion he obtained the restoration of the Jesuits in Naples. The papal Brief (30 July, 1804) was much more favourable than that granted for Parma. The older Jesuits soon asked to be received back; many, however, engaged in various ecclesiastical callings, remained at their posts. Schools and a college were opened in Sicily, but when this part of the kingdom fell into Napoleon's power, the dispersion of the Jesuits was ordered; but the decree was not rigorously executed. Pignatelli founded colleges in Rome, Tivoli, and Orvieto, and the fathers were invited to other cities. During the exile of Pius VII and the French occupation the Society continued unmolested, owing largely to the prudence and the merits of Pignatelli; he even managed to avoid the oaths of allegiance to Napoleon. He also secured the restoration of the Society in Sardinia (1807). Under Gregory XVI the cause of his beatification was introduced.

U. BENIGNI.

Pike, WILLIAM, VENERABLE, martyr, born in Dorsetshire; died at Dorchester, Dec., 1591. He was a joiner, and lived at West Moors, West Parley. On his way from Dorchester to his home, he fell in with the venerable martyr Thomas Pilchard, who converted him, probably in 1586. At his trial for being reconciled with the See of Rome "the bloody question about the Pope's supremacy was put to him, and he frankly confessed that he maintained the authority of the Roman See, for which he was condemned to die a traitor's death". When they asked him to recant in order to save his life and his family, "he boldly replied that it did not become a son of Mr. Pilchard to do so". "Until he died, Mr. Pilchard's name was constantly on his lips." Being asked at death what had moved him to that resolution etc., he said "Nothing but the smell of a pilchard". The date of his death is not recorded, but in the Menology his name is under 22 Dec.

JOHN B. WAINEWRIGHT.

Pilar, NUESTRA SEÑORA DEL (Our Lady of the Pillar), a celebrated church and shrine, at Saragossa, Spain, containing a miraculous image of the Blessed Virgin, which is the object of very special devotion throughout the kingdom. The image, which is placed on a marble pillar, whence the name of the church, was crowned in 1905 with a crown designed by the Marquis of Griñi, and valued at 450,000 pesetas (£18,750). The present spacious church in Baroque style was begun in 1681. According to an ancient Spanish tradition, given in the Roman Breviary (for 12 October, Ad. mat., lect. vi), the original shrine was built by St. James the Apostle at the wish of the Blessed Virgin, who appeared to him as he was praying by the banks of the Ebro at Saragossa. There has been much discussion as to the truth of the tradition. Mgr L. Duchesne denies, as did Baronius, the coming of St. James to Spain, and reproduces arguments founded on writings of the Twelfth (Ecumenical Council, discovered by Loaisa, but rejected as spurious by the Jesuit academician Fita and many others. Those who defend the tradition adduce the testimony of St. Jerome (P. L., XXIV, 373) and that of the Mozarabic Office. The oldest written testimony of devotion to the Blessed Virgin in Saragossa usually quoted is that of Pedro Librana (1155). Fita has published data of two Christian tombs at Saragossa, dating from Roman days, on which the Assumption of the Blessed Virgin is represented.

Pilate, ACTS OF. See APOCRYPHA, sub-title III.

Pilate, PONTIUS.—After the deposition of the eldest son of Herod, Archelaus (who had succeeded his father as ethnarch), Judea was placed under the rule of a Roman procurator. Pilate, who was the fifth, succeeding Valerius Gratus in A. D. 26, had greater authority than most procurators under the empire, for in addition to the ordinary duty of financial administration, he had supreme power judicially. His unusually long period of office (A. D. 26-36) covers the whole of the active ministry both of St. John the Baptist and of Jesus Christ. As procurator Pilate was necessarily of equestrian rank, but beyond that we know little of his family or origin. Some have thought that he was only a freedman, deriving his name from *pileus* (the cap of freed slaves) but for this there seems to be no adequate evidence, and it is unlikely that a freedman would attain to a post of such importance. The Pontii were a Samnite gens. Pilate owed his appointment to the influence of Sejanus. The official residence of the procurators was the palace of Herod at Cæsarea; where there was a military force of about 3,000 soldiers. These soldiers came up to Jerusalem at the time of the feasts, when the city was full of strangers, and there was greater danger of disturbances, hence it was that Pilate had come to Jerusalem at the time of the Crucifixion. His name will be forever covered with infamy because of the part which he took in this matter, though at the time it appeared to him of small importance.

Pilate is a type of the worldly man, knowing the right and anxious to do it so far as it can be done without personal sacrifice of any kind, but yielding easily to

pressure from those whose interest it is that he should act otherwise. He would gladly have acquitted Christ, and even made serious efforts in that direction, but gave way at once when his own position was threatened. The other events of his rule are not of very great importance. Philo (Ad Gaium, 38) speaks of him as inflexible, merciless, and obstinate. The Jews hated him and his administration, for he was not only very severe, but showed little consideration for their susceptibilities. Some standards bearing the image of Tiberius, which had been set up by him in Jerusalem, caused an outbreak which would have ended in a massacre had not Pilate given way. At a later date Tiberius ordered him to remove certain gilt shields, which he had set up in Jerusalem in spite of the remonstrances of the people. The incident mentioned in St. Luke, xiii, 1, of the Galileans whose blood Pilate mingled with the sacrifices, is not elsewhere referred to, but is quite in keeping with other authentic events of his rule. He was, therefore, anxious that no further hostile reports should be sent to the emperor concerning him. The tendency, already discernible in the canonical Gospels, to lay stress on the efforts of Pilate to acquit Christ, and thus pass as lenient a judgment as possible upon his crime, goes further in the apocryphal Gospels and led in later years to the claim that he actually became a Christian. The Abyssinian Church reckons him as a saint, and assigns 25 June to him and to Claudia Procula, his wife. The belief that she became a Christian goes back to the second century, and may be found in Origen (Hom., in Mat., xxxv). The Greek Church assigns her a feast on 27 October. Tertullian and Justin Martyr both speak of a report on the Crucifixion (not extant) sent in by Pilate to Tiberius, from which idea a large amount of apocryphal literature originated. Some of these were Christian in origin (Gospel of Nicodemus), others came from the heathen, but these have all perished.

His rule was brought to an end through trouble which arose in Samaria. An impostor had given out that it was in his power to discover the sacred vessels which, as he alleged, had been hidden by Moses on Mount Gerizim, whither armed Samaritans came in large numbers. Pilate seems to have thought the whole affair was a blind, covering some other more important design, for he hurried forces to attack them, and many were slain. They appealed to Vitellius, who was at that time legate in Syria, saying that nothing political had been intended, and complaining of Pilate's whole administration. He was summoned to Rome to answer their charges, but before he could reach the city the Emperor Tiberius had died. That is the last that we know of Pilate from authentic sources, but legend has been busy with his name. He is said by Eusebius (H. E., ii, 7), on the authority of earlier writers, whom he does not name, to have fallen into great misfortunes under Caligula, and eventually to have committed suicide. Other details come from less respectable sources. His body, says the "Mors Pilati", was thrown into the Tiber, but the waters were so disturbed by evil spirits that the body was taken to Vienne and sunk in the Rhone, where a monument, called Pilate's tomb, is still to be seen. As the same thing occurred there, it was again removed and sunk in the lake at Lausanne. Its final disposition was in a deep and lonely mountain tarn, which, according to later tradition, was on a mountain, still called Pilatus, close to Lucerne. The real origin of this name is, however, to be sought in the cap of cloud which often covers the mountain, and serves as a barometer to the inhabitants of Lucerne. There are many other legends about Pilate in the folklore of Germany, but none of them have the slightest authority.

MÜLLER, *Pontius Pilatus der fünfte Prokurator von Judda* (Stuttgart, 1888), gives a list of earlier writings on Pilate; ROSTÈRES, *Ponce Pilate* (Paris, 1883); WALTHER, *Pontius Pilatus, eine studie* (Amsterdam, 1888); OLLIVIER, *Ponce Pilate et les*

Pontii in Revue Biblique, V (1896), 247-54, 594-600; INNES, *Trial of Jesus Christ* (London, 1899), a legal monograph; for apocryphal literature see LIPSIVS, *Die Pilatus Acten* (Leipzig, 1871).

ARTHUR S. BARNES.

Pilchard (PILCHER), THOMAS VENERABLE, martyr, b. at Battle, Sussex, 1557; d. at Dorchester, 21 March, 1586-7. He became a Fellow of Balliol College, Oxford, in 1576, and took the degree of M.A., in 1579, resigning his fellowship the following year. He arrived at Reims 20 Nov., 1581, and was ordained priest at Laon, March, 1583, and was sent on the mission. He was arrested soon after, and banished; but returned almost immediately. He was again arrested early in March, 1586-7, and imprisoned in Dorchester Gaol, and in the fortnight between committal to prison and condemnation converted thirty persons. He was so cruelly drawn upon the hurdle that he was fainting when he came to the place of execution. When the rope was cut, being still alive he stood erect under the scaffold. The executioner, a cook, carried out the sentence so clumsily that the victim, turning to the sheriff, exclaimed "Is this then your justice, Mr. Sheriff?" According to another account "the priest raised himself and putting out his hands cast forward his own bowels, crying 'Miserere mei'". Father Warford says: "There was not a priest in the whole West of England, who, to my knowledge, was his equal in virtue."

JOHN B. WAINWRIGHT.

Pilgrimage of Grace, the name given to the religious rising in the north of England, 1536. The cause of this great popular movement, which extended over five counties and found sympathizers all over England, was attributed by Robert Aske, the leader of the insurgents, to "spreading of heretics, suppression of houses of religion and other matters touching the commonwealth". And in his "Narrative to the King", he declared: "In all parts of the realm men's hearts much grudged with the suppression of abbeyes, and the first fruits, by reason the same would be the destruction of the whole religion in England. And their especial great grudge is against the lord Cromwell." The movement broke out on 13 Oct., 1536, immediately following the failure of the Lincolnshire Rising; and Robert Aske, a London barrister of good Yorkshire family, who had been to some extent concerned in the Lincolnshire rising, putting himself at the head of nine thousand insurgents, marched on York, which he entered. There he arranged for the expelled monks and nuns to return to their houses; the king's tenants were driven out and religious observance resumed. The subsequent success of the rising was so great that the royal leaders, the Duke of Norfolk and Earl of Shrewsbury, opened negotiations with the insurgents at Doncaster, where Aske had assembled between thirty and forty thousand men. As a result of this, Henry authorized Norfolk to promise a general pardon and a Parliament to be held at York within a year. Aske then dismissed his followers, trusting in the king's promises. But these promises were not kept, and a new rising took place in Cumberland and Westmoreland, and was spreading to Yorkshire. Upon this, the king arrested Aske and several of the other leaders, who were all convicted of treason and executed. The loss of the leaders enabled Norfolk to crush the rising. The king avenged himself on Cumberland and Westmoreland by a series of massacres under the form of martial law. Though Aske had tried to prevent the rising he was put to death. Lord Darcy, Sir Henry Percy, and several other gentlemen, together with the four Abbots of Fountains, Jervaulx, Barlings, and Sawley, who were executed at Tyburn, have been reckoned by Catholic

writers as martyrs for the Faith, and their names inserted in martyrologies, but they have not been included in the cause of beatification of English martyrs.

GASQUET, *Henry VIII. and the English Monasteries*, II (London, 1888), ii-iv, and state papers (*Henry VIII.*) therein referred to; TIERNEY-DODD, *Church History*, I (London, 1839); LINGARD, *History of England*, V (London, 1883); for non-Catholic accounts, the standard authorities on the reign of Henry VIII (q. v.), such as GAIRDNER, DIXON, and the *Cambridge Modern History*.

EDWIN BURTON.

Pilgrimages (Mid. Eng. *pilgrime*, Old Fr. *pelegrin*, derived from Lat. *peregrinum*, supposed origin, *per* and *ager*—with idea of wandering over a distance) may be defined as journeys made to some place with the purpose of venerating it, or in order to ask there for supernatural aid, or to discharge some religious obligation.

ORIGIN.—The idea of a pilgrimage has been traced back by some (Littledale in "Encyc. Brit.", 1885, XIX, 90; "New Internat. Encyc.", New York, 1910, XVI, 20, etc.) to the primitive notion of local deities, that is, that the divine beings who controlled the movements of men and nature could exercise that control only over certain definite forces or within set boundaries. Thus the river gods had no power over those who kept away from the river, nor could the wood deities exercise any influence over those who lived in deserts or clearings or on the bare mountain-side. Similarly there were gods of the hills and gods of the plains who could only work out their designs, could only favour or destroy men within their own locality (III Kings, xx, 23). Hence, when some man belonging to a mountain tribe found himself in the plain and was in need of divine help, he made a pilgrimage back again to the hills to petition it from his gods. It is therefore the broken tribesmen who originate pilgrimages.

Without denying the force of this argument as suggesting or extending the custom, for it has been admitted as plausible by distinguished Catholics (cf. Lagrange, "Etudes sur les relig. sémit.", VIII, Paris, 1905, 295, 301), we may adhere to a less arbitrary solution by seeking its cause in the instinctive motion of the human heart. For pilgrimages properly so called are made to the places where the gods or heroes were born or wrought some great action or died, or to the shrines where the deity had already signified it to be his pleasure to work wonders. Once theophanies are localized, pilgrimages necessarily follow. The Incarnation was bound inevitably to draw men across Europe to visit the Holy Places, for the custom itself arises spontaneously from the heart. It is found in all religions. The Egyptians journeyed to Sekket's shrine at Bubastis or to Ammon's oracle at Thebes; the Greeks sought for counsel from Apollo at Delphi and for cures from Asclepius at Epidaurus; the Mexicans gathered at the huge temple of Quetzal; the Peruvians massed in sun-worship at Cuzco and the Bolivians in Titicaca. But it is evident that the religions which centred round a single character, be he god or prophet, would be the most famous for their pilgrimages, not for any reason of tribal returns to a central district where alone the deity has power, but rather owing to the perfectly natural wish to visit spots made holy by the birth, life, or death of the god or prophet. Hence Buddhism and Mohammedanism are especially famous in inculcating this method of devotion. Huge gatherings of people intermittently all the year round venerate Kapilavastu where Gaukama Buddha began his life, Benares where he opened his sacred mission, Kasinagara where he died; and Mecca and Medina have become almost bywords in English as the goals of long aspirations, so famous are they for their connexion with the prophet of Islam.

Granting then this instinctive movement of human nature, we should expect to find that in Christianity God would Himself satisfy the craving He had first Himself created. The story of His appearance on

earth in bodily form when He "dwelt amongst us" could not but be treasured up by His followers, and each city and site mentioned become a matter of grateful memory to them. Then again the more famous of His disciples, whom we designate as saints, themselves began to appeal to the devotion of their fellows, and round the acts of their lives soon clustered a whole cycle of venerated shrines. Especially would this be felt in the case of the martyrs; for their passion and death stamped more dramatically still the exact locality of their triumph. Moreover, it seems reasonable to suppose that yet another influence worked to the same end. There sprang up in the early Church a curious privilege, accorded to dying martyrs, of granting the remission of canonical penances. No doubt it began through a generous acceptance of the relation of St. Stephen to St. Paul. But certain it is that at an early date this custom had become so highly organized that there was a *libellus*, or warrant of reconciliation, a set form for the readmittance of sinners to Christian fellowship (Batiffol, "Etudes d'hist. et de théol. posit.", I, Paris, 1906, 112-20). Surely then it is not fanciful to see how from this came a further development. Not only had the martyrs in their last moments this power of absolving from ecclesiastical penalties, but even after their deaths, their tombs and the scenes of their martyrdom were considered to be capable also—if devoutly venerated—of removing the taints and penalties of sin. Accordingly it came to be looked upon as a purifying act to visit the bodies of the saints and above all the places where Christ Himself had set the supreme example of a teaching sealed with blood.

Again it may be noted how, when the penitential system of the Church, which grouped itself round the sacrament of the confessional, had been authoritatively and legally organized, pilgrimages were set down as adequate punishments inflicted for certain crimes. The hardships of the journey, the penitential garb worn, the mendicity it entailed made a pilgrimage a real and efficient penance (Beazley, "Dawn of Modern Geography", II, 139; Furnivall, "The Stations of Rome and the Pilgrim's Sea Voyage", London, 1867, 47). To quote a late text, the following is one of the canons enacted under King Edgar (959-75): "It is a deep penitence that a layman lay aside his weapons and travel far barefoot and nowhere pass a second night and fast and watch much and pray fervently, by day and by night and willingly undergo fatigue and be so squalid that iron come not on hair or on nail" (Thorpe, "Ancient Laws", London, 1840, 411-2; cf. 44, 410, etc.). Another witness to the real difficulties of the wayfaring palmer may be cited from "Syr Isenbras", an early English ballad:—

"They bare with them no maner of thyng
That was worth a farthyng
Cattell, golde, ne fe;
But mekely they asked theyre meate
Where that they myght it gette.
For Saynet Charytie."

(Utterson, "Early Popular Poetry", I, London, 1817, 83). And the Earl of Arundel of a later date obtained absolution for poaching on the bishop's preserves at Houghton Chace only on condition of a pilgrimage to the shrine of St. Richard of Chichester ("Archæologia", XLV, 176; cf. Chaucer, "Works", ed. Morris, III, 266). And these are but late descriptions of a practice of penance which stretches back beyond the legislation of Edgar, and the organization of St. Theodore to the sub-Apostolic age. Finally a last influence that made the pilgrimage so popular a form of devotion was the fact that it contributed very largely to ease the soul of some of its vague restlessness in an age when conditions of life tended to cramp men down to certain localities. It began to be looked upon as a real help to the establishment of a perfectly controlled character. It took its place in the mediæval manuals

of psychology. So John de Burg in 1385 (*Pupilla oculi*, fol. LXIII), "contra acediam, opera laboriosa bona ut sunt peregrinationes ad loca sancta."

HISTORY IN GENERAL.—In a letter written towards the end of the fourth century by Sts. Paula and Eustochium to the Roman matron Marcella urging her to follow them out to the Holy Places, they insist on the universality of the custom of these pilgrimages to Palestine:—"Whosoever is noblest in Gaul comes hither. And Britain though divided from us yet hastens from her land of sunset to these shrines known to her only through the Scriptures." They go on to enumerate the various nationalities that crowded round these holy places, Armenians, Persians, Indians, Ethiopians, and many others (P. L., XXII; Ep. xlv, 489-90). But it is of greater interest to note how they claim for this custom a continuity from Apostolic days. From the Ascension to their time, bishops, martyrs, doctors, and troops of people, say they, had flocked to see the sacred stones of Bethlehem and of wherever else the Lord had trod (489). It has been suggested that this is an exaggeration, and certainly we can offer no proof of any such uninterrupted practice. Yet when the first examples begin to appear they are represented to us without a word of astonishment or a note of novelty, as though people were already fully accustomed to like adventures. Thus in Eusebius, "History" (tr. Crusé, London, 1868, VI, xi, 215), it is remarked of Bishop Alexander that "he performed a journey from Cappadocia to Jerusalem in consequence of a vow and the celebrity of the place." And the date given is also worthy of notice, A. D. 217. Then again there is the story of the two travellers of Placentia, John and Antoninus the Elder (*Acta SS.*, July, II, 18), which took place about 303-4. Of course with the conversion of Constantine and the visit to Jerusalem of the Empress St. Helena the pilgrimages to the Holy Land became very much more frequent. The story of the finding of the Cross is too well known to be here repeated (cf. P. L., XXVII, 1125), but its influence was unmistakable. The first church of the Resurrection was built by Eustathius the Priest (*loc. cit.*, 1164). But the flow of pilgrimages began in vigour four years after St. Helena's visit (*Acta SS.*, June, III, 176; Sept., III, 56). Then the organization of the Church that partly caused and partly resulted from the Council of Nicaea continued the same custom.

In 333 was the famous Bordeaux Pilgrimage ("Palestine Pilgrim Text Society", London, 1887, preface and notes by Stewart). It was the first of a whole series of pilgrimages that have left interesting and detailed accounts of the route, the peoples through which they passed, the sites identified with those mentioned in the Gospels. Another was the still better-known "Peregrinatio Silvæ" (ed. Barnard, London, 1891, Pal. Pilg. Text Soc.; cf. "Rev. des quest. hist.", 1903, 367, etc.). Moreover, the whole movement was enormously increased by the language and action of St. Jerome, whose personality at the close of the fourth century dominated East and West. Slightly earlier St. John Chrysostom emphasized the efficacy in arousing devotion of visiting even the "lifeless spots" where the saints had lived (In Phil., 702-3, in P. G., LXII). And his personal love of St. Paul would have unfailingly driven him to Rome to see the tomb of the Apostles, but for the burden of his episcopal office. He says (In Ephes. hom. 8, ii, 57, in P. G., LXII), "If I were freed from my labours and my body were in sound health I would eagerly make a pilgrimage merely to see the chains that had held him captive and the prison where he lay." While in another passage of extraordinary eloquence he expresses his longing to gaze on the dust of the great Apostle, the dust of the lips that had thundered, of the hands that had been fettered, of the eyes that had seen the Master; even as he speaks he is dazzled by the splendour of the metropolis of the world lit up by the glorious tombs of

the twin prince Apostles (In Rom. hom. 32, iii, 678, etc., in P. G., LX). Nor in this is he advocating a new practice, for he mentions without comment how many people hurried across the seas to Arabia to see and venerate the dunghill of Job (Ad pop. Antioch. hom. 5, 69, in P. G., XLIX). St. Jerome was cramped by no such official duties as had kept St. Chrysostom to his diocese. His conversion, following on the famous vision of his judgment, turned him from his studies of pagan classics to the pages of Holy Writ, and, uniting with his untiring energy and thoroughness, pushed him on to Palestine to devote himself to the Scriptures in the land where they had been written. Once there the actual Gospel scenes appealed with supreme freshness to him, and on his second return from Rome his enthusiasm fired several Roman matrons to accompany him and share his labours and his devotions. Monasteries and convents were built and a Latin colony was established which in later times was to revolutionize Europe by inaugurating the Crusades.

From the Holy Land the circle widens to Rome, as a centre of pilgrimages. St. Chrysostom, as has been shown, expressed his vehement desire to visit it. And in the early church histories of Eusebius, Zosimus, Socrates, and others, notices are frequent of the journeyings of celebrated princes and bishops of the City of the Seven Hills. Of course the Saxon kings and royal families have made this a familiar thing to us. The "Ecclesiastical History" of St. Bede is crowded with references to princes and princesses who laid aside their royal diadems in order to visit the shrine of the Apostles; and the "Anglo-Saxon Chronicle" after his death takes up the same refrain. Then from Rome again the shrines of local saints begin to attract their votaries. In the letter already cited in which Paula and Eustochium invite Marcella to Palestine they argue from the already established custom of visiting the shrines of the martyrs: "Martyrum ubique sepulchra veneramus" (Ep. xlv, 488, in P. L., XXII). St. Augustine endeavours to settle a dispute by sending both litigants on a pilgrimage to the tomb of St. Felix of Nola, in order that the saint may somehow or other make some sign as to which party was telling the truth. He candidly admits that he knows of no such miracle having been performed in Africa; but argues to it from the analogy of Milan where God had made known His pleasure through the relics of Sts. Gervasius and Protasius (Ep. lxxvii, 269, in P. L., XXXIII). Indeed, the very idea of relics, which existed as early as the earliest of the catacombs, teaches the essential worth of pilgrimages, i. e., of the journeying to visit places hallowed by events in the lives of heroes or of gods who walked in the guise of men (St. Aug., "De civ. Dei", XXII, 769, in P. L., XXXVIII).

At first a mere question of individual travelling, a short period was sufficient to develop into pilgrimages properly organized companies. Even the "Peregrinatio Silvæ" shows how they were being systematized. The initiators were clerics who prepared the whole route beforehand and mapped out the cities of call. The bodies of troops were got together to protect the pilgrims. Moreover, Christian almsgiving invented a method of participation in the merits of a pilgrimage for those unable actually to take part in them; it established hospices along the line (Ordericus Vitalis, "Hist. eccles.", ed. Le Prévost, Soc. hist. France, II, 64, 53; Toulmin Smith, "English Guilds", *passim*). The conversion of the Hungarians amplified this system of halts along the road; of St. Stephen, for example, we read that "he made the way very safe for all and thus allowed by his benevolence a countless multitude both of noble and common people to start for Jerusalem" (Glaber, "Chron.", III, C. I. Mon. Germ. Hist., VII, 62). Thus these pious journeys gradually harden down and become fixed and definite. They are allowed for by laws, civil and ecclesiastical. Wars are fought to insure their safety, crusades are

begun in their defence, pilgrims are everywhere granted free access in times alike of peace and war. By the "Consuetudines" of the canons of Hereford cathedral we see that legislation was found to be necessary. No canon was to make more than one pilgrimage beyond the seas in his own lifetime. But each year three weeks were allowed to enable any that would to visit shrines within the kingdom. To go abroad to the tomb of St. Denis, seven weeks of absence was considered legal, eight weeks to the body of St. Edmund at Pontigny, sixteen weeks to Rome, or to St. James at Compostella, and a year to Jerusalem (Archæol., XXXI, 251-2 notes).

Again in another way pilgrimages were being regarded as part of normal life. In the registers of the Inquisition at Carcassonne (Waterton, "Pietas Mariana Britannica", 112) we find the four following places noted as being the centres of the greater pilgrimages to be imposed as penances for the graver crimes, the tomb of the Apostles at Rome, the shrine of St. James at Compostella, St. Thomas's body at Canterbury, and the relics of the Three Kings at Cologne. Naturally with all this there was a great deal of corruption.

Even from the earliest times the Fathers perceived how liable such devotions were to degenerate into an abuse. St. John Chrysostom, so ardent in his praise of pilgrimages, found it necessary to explain that there was "need for none to cross the seas or fare upon a long journey; let each of us at home invoke God earnestly and He will hear our prayer" (Ad pop. Antioch. hom. iii, 2, 49, in P. G., XLIX; cf. hom. iv, 6, 68). St. Gregory Nazianzen is even stronger in his condemnation.

He has a short letter in which he speaks of those who regard it as an essential part of piety to visit Jerusalem and see the traces of the Passion of Christ. This, he says, the Master has never commanded, though the custom is not therefore without merit. But still he knows that in many cases the journey has proved a scandal and caused serious harm. He witnesses, therefore, both to the custom and the abuse, evidently thinking that the latter outweighed the former (Ep. ii, 1009, in P. G., XLVI). So again St. Jerome writes to Paulinus (Ep. lxxviii in P. L., XXII) to explain, in an echo of Cicero's phrase, that it is not the fact of living in Jerusalem, but of living there well, that is worthy of praise (579); he instances countless saints who never set foot in the Holy Land; and dares not tie down to one small portion of the Earth Him whom Heaven itself is unable to contain. He ends with a sentence that is by now famous, "et de Hierusolymis et de Britannia æqualiter patet aula cœlestis" (581).

Another well-quoted passage comes from a letter of St. Augustine in which he expounds in happy paradox that not by journeying but by loving we draw nigh unto God. To Him who is everywhere present and everywhere entire we approach not by our feet but by our hearts (Ep. clv, 672, in P. L., XXXII). For certainly pilgrimages were not always undertaken for the best of motives. Glaber (ed. Prou, Paris, 1886, 107) thinks it necessary to note of Lethbald that he was far from being one of those who were led to Jerusalem simply from vanity, that they might have won-

derful stories to tell, when they came back. Thus, as the centuries pass, we find human nature the same in its complexity of motives. Its noblest actions are found to be often caused by petty spites or vanity or overvaulting ambition; and even when begun in good faith as a source of devotion, the practices of piety at times are degraded into causes of vice. So the author of the "Imitation of Christ" raises his voice against overmuch pilgrimage-making: "Who wander much are but little hallowed." Note too the words of the fifteenth-century English Dominican, John Bromyard ("Summa Prædicantium", Tit. Feria n. 6, fol. 191, Lyons, 1522):—"There are some who keep their pilgrimages and festivals not for God but for the devil. They who sin more freely when away from home or who go on pilgrimage to succeed in inordinate and foolish love—those who spend their time on the road in evil and uncharitable conversation may indeed say *peregrinamur a Domino*—they make their pilgrimage away from God and to the devil."

But the most splenetic scorn is to be found in the pages of that master of satire, Erasmus. His "Religious Pilgrimage" ("Colloquies" ed. Johnson, London, 1878, II, 1-37)

is a terrible indictment of the abuses of his day. Exaggerated no doubt in its expressions, yet revealing a sufficient modicum of real evil, it is a graphic picture from the hand of an intelligent observer. There is evident sign that pilgrimages were losing in popularity, not merely because the charity of many was growing cold, but because of the excessive credulity of the guardians of the shrines, their overwrought insistence on the necessity

PILGRIMS ENTERING BETHLEHEM AT CHRISTMAS

of pilgrimage-making, and the fact that many who journeyed from shrine to shrine neglected their domestic duties. These three evils are quaintly expressed in the above mentioned dialogue, with a liberty of speech that makes one astonished at Rome's toleration in the sixteenth century. With all these abuses Erasmus saw how the spoiler would have ready to hand excuses for suppressing the whole system and plundering the most attractive treasures. The wealth might well be put, he suggested, to other uses; but the idea of a pilgrimage contained in it nothing opposed to the enlightened opinions of this prophet of "sweet reasonableness". "If any shall do it of their own free choice from a great affection to piety, I think they deserve to be left to their own freedom" (op. cit., 35). This was evidently the opinion also of Henry VIII, for, though in the Injunctions of 1536 and 1538 pilgrimages were to be discouraged, yet both in the bishop's book (The Institution of the Christian Man, 1537) and the king's book (The Necessary Doctrine and Erudition of the Christian Man, 1543), it is laid down that the abuse and not the custom is reprehensible. What they really attack is the fashion of "putting differences between image and image, trusting more in one than in another" (cf. Gairdner, "Lollardy and the Reformation", II, London, 1908, IV, ii, 330, etc.). All this shows how alive Christendom has been to evils which Reformers are forever denouncing as inseparable from Catholicism. It admits the danger but does not allow it to prejudice the good use ("Diayloge of Syr Thomas More", London,

1529). Before dealing with each pilgrimage in particular one further remark should be made. Though not properly included under a list of abuses, a custom must be noted of going in search of shrines utterly at haphazard and without any definite notion of where the journey was to end (Waterton, "Piet. Mar. Britt.", London, 1879, III, 107; "Anglo-Sax. Chron.", tr. Thorpe in R. S., London, 1861, II, 69; Beazley, "Dawn of Mod. Geog.", London, 1897-1906, I, 174-5; Tobl. Bibl. Geog. Pal. 26, ed. of 1876).

HISTORY IN PARTICULAR.—It will be necessary to mention and note briefly the chief places of Catholic pilgrimage, in early days, in the Middle Ages, and in modern times.

Aachen, Rhenish Prussia.—This celebrated city owes its fame as a centre of pilgrimage to the extraordinary list of precious relics which it contains. Of

EINSIEDELN—THE SHRINE SEEN FROM THE GALLERY OF THE CHURCH

their authenticity there is no need here to speak, but they include among a host of others, the swaddling clothes of the child Jesus, the loin-cloth which Our Lord wore on the Cross, the cloth on which the Baptist's head lay after his execution, and the Blessed Virgin's cloak. These relics are exposed to public veneration every seven years. The number of pilgrims in 1881 was 158,968 (Champagnac, "Dict. des pèlerinages", Paris, 1859, I, 78).

Alet, Limoux, France, contains a shrine of the Blessed Virgin dating traditionally from the twelfth century. The principal feast is celebrated on 8 September, when there is still a great concourse of pilgrims from the neighbourhood of Toulouse. It is the centre of a confraternity of the Immaculate Heart of Mary founded for the conversion of sinners, the members of which exceed several thousands (Champagnac, II, 89).

Ambronay, Burgundy, France, an ancient shrine of the Blessed Virgin, dating back to the seventh century. It is still a centre of pilgrimage.

Amorgos, or Mergo, in the Greek Archipelago, has a quaint picture of the Blessed Virgin painted on wood, which is reputed to have been profaned and broken at Cyprus and then miraculously rejoined in its present shrine. Near by is enacted the pretended miracle of the Urn, so celebrated in the Archipelago (Champagnac, I, 129).

Ancona, Italy.—The Cathedral of St. Cyriacus contains a shrine of the Blessed Virgin which became famous only in 1796. On 25 June of that year, the eyes of the Madonna were seen filled with tears, which was later interpreted to have prefigured the calamities that fell on Pius VI and the Church in Italy owing to Napoleon. The picture was solemnly crowned by Pius VII on 13 May, 1814, under the title "Regina Sanctorum Omnium" (Champagnac, I, 133; Anon., "Pèlerinages aux sanct. de la mère de Dieu", Paris, 1840).

Anges, Seine-et-Oise, France.—The present chapel only dates from 1808; but the pilgrimage is really ancient. In connexion with the shrine is a spring of miraculous water (Champagnac, I, 146).

Arcachon, Gironde, France.—It is curious among the shrines of the Blessed Virgin as containing an alabaster statue of the thirteenth century. Pius IX granted to this statue the honour of coronation in 1870, since which time pilgrimages to it have greatly increased in number and in frequency.

Ardilliers, Saumur, France.—A chapel of the Blessed Virgin founded on the site of an ancient monastery. It has been visited by famous French pilgrims such as Anne of Austria, Louis XIII, Henrietta Maria, etc. The sacristy was built by Cesare, Duke of Vendôme, and in 1634 Cardinal Richelieu added a chapel (Champagnac, I, 169).

Argenteuil, Seine-et-Oise, France, is one of the places which boasts of possessing the Holy Coat of Jesus Christ. Its abbey was also well known as having had as abbess the famous Héloïse. Whatever may be thought of the authenticity of the relic, the antiquity of pilgrimages drawn to its veneration dates from its presentation to St. Louis in 1247. From the pilgrimage of Queen Blanche in 1255 till our own day there has been an almost uninterrupted flow of visitors. The present *châsse* was the gift of the Duchess of Guise in 1680 (Champagnac, I, 171-223).

Aubervilles, Seine, France, an ancient place of pilgrimage from Paris. It is mentioned in the *Calendars* of that diocese under the title of Notre-Dame-des-Vertus, and its feast was celebrated annually on the second Tuesday in May. An early list of miraculous cures performed under the invocation of this Madonna was printed at Paris in 1617 (Champagnac, I, 246).

Auriesville, Montgomery Co., New York, U. S. A., is the centre of one of the great pilgrimages of the New World. It is the scene of martyrdom of three Jesuit missionaries by Mohawk Indians; but the chapel erected on the spot has been dedicated to Our Lady of Martyrs, presumably because the cause of the beatification of the three fathers is as yet uncompleted. 15 August is the chief day of pilgrimage; but the practice of visiting Auriesville increases yearly in frequency, and lasts intermittently throughout the whole summer (Wynne, "A Shrine in the Mohawk Valley", New York, 1905; Gerard in "The Month", March, 1874, 306).

Bailleul-le-Soc, Oise, France, possesses a chapel dedicated to the Blessed Virgin, dating from the reign of Louis XIV. It has received no episcopal authorization, and in fact was condemned by the Bishop of Beauvais, Mgr de Saint-Aignan, 24 February, 1716. This was in consequence of the pilgrimage which sprang up, of visiting a well of medicinal waters. Owing to its health-giving properties, it was called *Sainte-Fontaine*, but, by the superstition of the people, who at once invented a legend to account for it, this was quickly changed to *Sainte-Fontaine*. It is still a place of veneration; and pilgrims go to drink the waters of the so-called holy well (Champagnac, I, 264).

Bétharram, Basses-Pyrénées, France, one of the oldest shrines in all France, the very name of which dates from the Saracenic occupation of the country. A legend puts back the foundation into the fourth century, but this is certainly several hundred years

too early. In much more recent times a calvary, with various stations, has been erected and has brought back the flow of pilgrims. The Basque population round about knows it as one of its most sacred centres (Champagnac, I, 302-11).

Boher, near Leith Abbey, King's Co., Ireland, contains the relics of St. Manchan, probably the abbot who died in 664. The present shrine is of twelfth-century work and is very well preserved considering its great age and the various calamities through which it has passed. Pilgrimages to it are organized from time to time, but on no very considerable scale (Wall, "Shrines of British Saints", 83-7).

Bonaria, Sardinia, is celebrated for its statue of Our Lady of Mercy. It is of Italian workmanship, probably about 1370, and came miraculously to Bonaria, floating on the waters. Every Saturday local pilgrimages were organized; but to-day it is rather as an object of devotion to the fisherfolk that the shrine is popular (Champagnac, I, 1130-1).

Boulogne, France, has the remains of a famous statue that has been a centre of pilgrimage for many centuries. The early history of the shrine is lost in the legends of the seventh century. But whatever was the origin of its foundation there has always been a close connexion between this particular shrine and the seafaring population on both sides of the Channel. In medieval France the pilgrimage to it was looked upon as so recognized a form of devotion that not a few judicial sentences are recorded as having been commuted into visits to Notre-Dame-de-Boulogne-sur-mer. Besides several French monarchs, Henry III visited the shrine in 1255, the Black Prince and John of Gaunt in 1360, and later Charles the Bold of Burgundy. So, too, in 1814 Louis XVIII gave thanks for his restoration before this same statue. The devotion of Our Lady of Boulogne has been in France and England increased by the official recognition of the Archconfraternity of Our Lady of Compassion, established at this shrine, the object of which is to pray for the return of the English people to the Faith (Champagnac, I, 342-62; Hales in "Academy", 22 April, 1882, 287).

Bruges, Belgium, has its famous relic of the Holy Blood which is the centre of much pilgrimage. This was brought from Palestine by Thierry of Alsace on his return from the Second Crusade. From 7 April, 1150, this relic has been venerated with much devotion. The annual pilgrimage, attended by the Flemish nobility in their quaint robes and thousands of pilgrims from other parts of Christendom, takes place on the Monday following the first Sunday in May, when the relic is carried in procession. But every Friday the relic is less solemnly exposed for the veneration of the faithful (Smith, "Bruges", London, 1901, *passim*; cf. "Tablet", LXXXIII, 817).

Buglose, Landes, France, was for long popular as a place of pilgrimage to a statue of the Blessed Virgin; but it is perhaps as much visited now as the birthplace of St. Vincent de Paul. The house where he was born and where he spent his boyhood is still shown (Champagnac, I, 374-90).

Canterbury, Kent, England, was in medieval times the most famous of English shrines. First as the birthplace of Saxon Christianity and as holding the tomb of St. Augustine; secondly as the scene of the martyrdom of St. Thomas Becket, it fitly represented the ecclesiastical centre of England. But even from beyond the island, men and women trooped to the shrine of the "blissful martyr", especially at the great pardons or jubilees of the feast every fifty years from 1220 to 1520; his death caused his own city to become, what Winchester had been till then, the spiritual centre of England (Belloc, "The Old Road", London, 1904, 43). The spell of his name in his defence of the spirituality lay so strongly on the country that Henry VIII had to make a personal attack on the dead saint

before he could hope to arrogate himself full ecclesiastical authority. The poetry of Chaucer, the wealth of England, the crown jewels of France, and marble from ruins of ancient Carthage (a papal gift) had glorified the shrine of St. Thomas beyond compare; and the pilgrim signs (see below) which are continually being discovered all over England and even across the Channel ("Guide to Medieval Room, British Museum", London, 1907, 69-71) emphasize the popularity of this pilgrimage. The precise time of the year for visiting Canterbury seems difficult to determine (Belloc, *ibid.*, 54), for Chaucer says spring, the Continental traditions imply winter, and the chief gatherings of which we have any record point to the summer. It was probably determined by the feasts of the saint and the seasons of the year. The place of the martyrdom has once more become a centre of devo-

FAÇADE, BASILICA OF NOTRE-DAME, LE PUY
(See article Le Puy, Vol. IX)

tion, mainly through the action of the Guild of Ransom (Wall, "Shrines", 152-171; Belloc, *op. cit.*; Danks, "Canterbury", London, 1910).

Carmel, Palestine, has been for centuries a sacred mountain, both for the Hebrew people and for Christians. The Mohammedans also regard it with devotion, and from the eighteenth century onwards have joined with Christians and Jews in celebrating the feast of Elias in the mountain that bears his name.

Ceylon may be mentioned as possessing a curious place of pilgrimage, Adam Peak. On the summit of this mountain is a certain impression which the Mohammedans assert to be the footprint of Adam, the Brahmans that of Rama, the Buddhists that of Buddha, the Chinese that of Fo, and the Christians of India that of St. Thomas the Apostle (Champagnac, I, 446).

Chartres is in many respects the most wonderful sanctuary in Europe dedicated to the Blessed Virgin, as it boasts of an uninterrupted tradition from the times of the druids who dedicated there a statue *virgini pariturae*. This wooden statue is said to have been still existing in 1793, but to have been destroyed during the Revolution. Moreover, to enhance the sacredness of the place a relic was preserved, presented by Charlemagne, viz., the *chemise* or veil of the Blessed Virgin. Whatever may be the history or

authenticity of the relic itself, it certainly is of great antiquity and resembles the veils now worn by women in the East. A third source of devotion is the present stone image of the Blessed Virgin inaugurated with great pomp in 1857. The pilgrimages to this shrine at Chartres have naturally been frequent and of long continuance. Amongst others who have taken part in these visits of devotion were popes, kings of France and England, saints like Bernard of Clairvaux, Anselm of Canterbury, Thomas Becket, Vincent de Paul, and Francis de Sales, and the hapless Mary Queen of Scots. There is, moreover, an annual procession to the shrine on 15 March (Champagnac, I, 452-60; Northcote, "Sanct. of the Madonna", London, 1868, IV, 169-77; Chabarmes, "Hist. de N.-D. de Chartres", Chartres, 1873).

Chichester, Sussex, England, had in its cathedral the tomb of St. Richard, its renowned bishop. The throng of pilgrims to this shrine, made famous by the devotion of Edward I, was so great that the body was dismembered so as to make three separate stations. Even then, in 1478, Bishop Storey had to draw up stringent rules so that the crowd should approach in a more seemly manner. Each parish was to enter at the west door in the prescribed order, of which notice had to be given by the parish priests in their churches on the Sunday preceding the feast. Besides 3 April, another pilgrimage was made on Whit-Sunday (Wall, 126-31).

Cologne, Rhenish Germany, as a city of pilgrimage centres round the shrine of the Three Kings. The relics are reputed to have been brought by St. Helena to Constantinople, to have been transferred thence to Milan, and evidently in the twelfth century to have been carried in triumph by Frederick Barbarossa to Cologne. The present *châsse* is considered the most remarkable example extant of the medieval goldsmith's art. Though of old reckoned as one of the four greater pilgrimages, it seems to have lost the power of attracting huge crowds out of devotion; though many, no doubt, are drawn to it by its splendour (Champagnac, I, 482).

Compostella, Spain, has long been famous as containing the shrine of St. James the Greater (q. v., where the authenticity of the relics etc. is discussed at some length). In some senses this was the most renowned medieval pilgrimage; and the custom of those who bore back with them from Galicia scallop shells as proofs of their journey gradually extended to every form of pilgrimage. The old feast-day of St. James (5 August) is still celebrated by the boys of London with their grottos of oyster shells. The earliest records of visits paid to this shrine date from the eighth century; and even in recent years the custom has been enthusiastically observed (cf. Rymer, "Foedera", London, 1710, XI, 371, 376, etc.).

Concepción, Chile, has a pilgrimage to a shrine of the Blessed Virgin that is perhaps unique, a rock-drawn figure of the Mother of God. It was discovered by a child in the eighteenth century and was for long popular among the Chilians.

Cordova, Spain, possesses a curious Madonna which

was originally venerated at Villa Viciosa in Portugal. Because of the neglect into which it had fallen, a pious shepherd carried it off to Cordova, whence the Portuguese endeavoured several times to recover it, being frustrated each time by a miraculous intervention (Champagnac, I, 525).

Cracow, Poland, is said to possess a miraculous statue of the Blessed Virgin brought to it by St. Hyacinth, to which in times past pilgrimages were often made (Acta SS., Aug., III, 317-41).

Croyland, Lincolnshire, England, was the centre of much pilgrimage at the shrine of St. Guthlac, due principally to the devotion of King Wiglaf of Mercia (Wall, 116-8).

Czenstochowa, Poland, is the most famous of Polish shrines dedicated to the Mother of God, where a picture painted on cypress-wood and attributed to St. Luke is publicly venerated. This is reputed to be the richest sanctuary in the world. A copy of the picture has been set up in a chapel of St. Roch's church by the Poles in Paris (Champagnac, I, 540).

LORETO—INTERIOR OF THE HOLY HOUSE

Downpatrick, County Down, Ireland, is the most sacred city of Ireland in that the bodies of Ireland's highest saints were there interred.

"In the town of Down, buried in one grave

Bridget, Patrick, and the pious Columba."

Nothing need be said here about the relics of these saints; it is sufficient merely to hint at the pilgrimages that made this a centre of devotion (Wall, 31-2).

Drumlane, Ireland, was at one time celebrated as

containing the relics of S. Moedoc in the famous Breac Moedoc. This shrine was in the custody of the local priest till 1846, when it was borrowed and sold to a Dublin jeweller, from whom in turn it was bought by Dr. Petrie. It is now in the museum of the Royal Irish Academy (Wall, 80-3).

Dunfermline, Fife, Scotland, was the resort of countless pilgrims, for in the abbey was the shrine of St. Margaret. She was long regarded as the most popular of Scottish saints and her tomb was the most revered in all that kingdom. Out of devotion to her, Dunfermline succeeded Iona as being the burial place of the kings (Wall, 48-50).

Durham, England, possessed many relics which drew to it the devotion of many visitors. But its two chief shrines were those of St. Cuthbert and St. Bede. The former was enclosed in a gorgeous reliquary, which was put in its finished state by John, Lord Nevill of Raby, in 1372. Some idea may be had of the number of pilgrims from the amount put by the poorer ones into the money-box that stood close by. The year 1385-6 yielded £63 17s. 8d. which would be equivalent in our money to £1277 13s. 4d. A dispute rages round the present relics of St. Cuthbert, and there is also some uncertainty about the body of St. Bede (Wall, 176-207, 110-6).

Edmundsbury, Suffolk, England, sheltered in its abbey church the shrine of St. Edmund, king and martyr. Many royal pilgrims from King Canute to Henry VI knelt and made offerings at the tomb of the saint; and the common people crowded there in great

COMPOSTELA—FAÇADE OF THE CHURCH OF SANTIAGO (ST. JAMES)

numbers because of the extraordinary miracles worked by the holy martyr (Wall, 216-23; Mackinlay, "St. Edmund King and Martyr", London, 1893; Sneed-Cox, "Life of Cardinal Vaughan", London, 1910, II, 287-94).

Einsiedeln, Schwyz, Switzerland, has been a place of pilgrimage since Leo VIII in 954. The reason of this devotion is a miraculous statue of the Blessed Virgin brought by St. Meinrad from Zurich. The saint was murdered in 861 by robbers who coveted the rich offerings which already at that early date were left by the pilgrims. The principal days for visiting the shrine are 14 Sept. and 13 Oct.; it is calculated that the yearly number of pilgrims exceeds 150,000. Even Protestants from the surrounding cantons are known to have joined the throng of worshippers (Northcote, "Sanctuaries", 122-32).

Ely, Cambridgeshire, England, was the centre of a pilgrimage to the shrine of St. Etheldreda. One of her hands is still preserved in a shrine in the (pre-Reformation) Catholic church dedicated to her in London (Wall, 55-6).

Ephesus, Asia Minor, is the centre of two devotions, one to the mythical Seven Sleepers, the other to the Mother of God, who lived here some years under the care of St. John. Here also it was that the Divine maternity of Our Lady was proclaimed, by the Third Œcumenical Council, A. D. 491 ("Pèlerinages aux sanct. de la mère de Dieu", Paris, 1840, 119-32; Champagnac, I, 608-19).

Evreux, Eure, France, has a splendid cathedral dedicated to the Blessed Virgin, but the pilgrimage to it dates only from modern times (Champagnac, I, 641).

Favers, Seine-et-Oise, France, is the centre of a pilgrimage to the church of St. Sulpice, where there are relics of the saint. St. Louis IX paid his homage at the shrine; and even now, from each parish of St. Sulpice (a common dedication among French churches) deputies come here annually on pilgrimage for the three Sundays following the feast which occurs on 27 August (Champagnac, I, 646-7).

Garaizon, Tarbes, France, was the scene of an apparition of Our Lady to a shepherdess of twelve years old, Aglèse de Sagasan, early in the sixteenth century. The sanctuary was dedicated afresh after the Revolution and is once more thronged with pilgrims. The chief festival is celebrated on 8 September (Champagnac, I, 95-9).

Genazzano, Italy, contains the miraculous picture of Our Lady of Good Counsel which is said to have been translated from Albania. It has, since its arrival 25 April, 1467, been visited by popes, cardinals, kings, and by countless throngs of pilgrims; and devotion to the shrine steadily increases (Northcote, "Sanctuaries", 15-24).

Glastonbury, Somerset, England, has been a holy place for many centuries and round it cluster legends and memories, such as no other shrine in England can boast. The Apostles, St. Joseph of Arimathea, Sts. Patrick and David, and King Arthur begin the astonishing cycle which is continued by names like St. Dunstan, etc. The curious thorn which blossomed twice yearly, in May and at Christmastide, also proved an attraction for pilgrims, though the story of its miraculous origin does not seem to go back much before the sixteenth century. A proof of the devotion which the abbey inspired is seen in the "Pilgrim's Inn," a building of late fifteenth century work in the Perpendicular style yet standing in the town (Marson, "Glastonbury. The English Jerusalem", Bath, 1909).

Grace, Lot-et-Garonne, France, used to be the seat of an ancient statue of the Blessed Virgin which entered the town in a miraculous fashion. It was enshrined in a little chapel perched on the bridge that spans the river Lot. Hence its old name, Nostro Damo del cap del Pount. Even now some pilgrimages are made to the restored shrine (Champagnac, I, 702-5).

Grottaferrata, Campagna, Italy, a famous monastery of the Greek Rite, takes its name (traditionally) from a picture of the Madonna found, protected by a grille, in a grotto. It is still venerated in the abbey church and is the centre of a local pilgrimage (Champagnac, I, 714-15).

Guadalupe, Estradamura, Spain, is celebrated for its wonder-working statue of the Blessed Virgin. But it has been outshone by another shrine of the same name in Mexico, which has considerably gained in importance as the centre of pilgrimage. As a sanctuary the latter takes the place of one dedicated to an old pagan goddess who was there worshipped. The

GOA—SHRINE OF ST. FRANCIS XAVIER
Church of the Bom Jesus

story of the origin of this shrine (see GUADALUPE, SHRINE OF) is astonishing.

Hal, Belgium, contains a wooden statue of the Blessed Virgin which is decorated with a golden crown. It has been described by Justus Lipsius in his "Diva Virgo Hallensis" ("Omnia Opera", Antwerp, 1637, III, 687-719); as a place of pilgrimage, it has been famous in all Europe and has received gifts from many noble pilgrims. The monstrance given by Henry VIII was lent for use during the Eucharistic Congress in London in 1909. The miracles recorded are certainly wonderful.

Holywell, North Wales, still draws large bodies of pilgrims by its wonderful cures. It has done so continuously for over a thousand years, remaining the one active example of what were once very common (Holy Wells. Chalmers, "Book of Days", II, 6-8). The well is dedicated to St. Winefride and is said to mark the spot of her martyrdom in 634 (Maher, "Holywell in 1894" in "The Month", February, 1895, 153).

Iona, Scotland, though not properly, until recently, a place of pilgrimage, can hardly be omitted with propriety from this list. The mention of it is sufficient to recall memories of its crowded tombs of kings, chieftains, prelates, which witness to the honour in which it was held as the Holy Island (Trenholme, "Story of Iona", Edinburgh, 1909).

Jerusalem, Palestine, was in many ways the origin

of all pilgrimages. It is the first spot to which the Christian turned with longing eyes. The earliest recorded pilgrimages go back to the third century with the mention of Bishop Alexander; then in the fourth century came the great impulse given by the Empress Helena who was followed by the Bordeaux Pilgrims and the "Peregrinatio Silvæ" and others (cf. *Acta SS.*, June, III, 176; Sept., III, 56). The action of St. Jerome and his aristocratic lady friends made the custom fashionable and the Latin colony was established by them which made it continuous (Gregory of Tours, "*Hist. Franc.*", Paris, 1886, ed. by Omont, II, 68; V, 181; etc.). So too comes the visit of Arculf, cited by St. Bede ("*Ecel. Hist.*", V, xv, 263, ed. Giles, London, 1847) from the writings of Adamnan; of Cadoc the Welsh bishop mentioned below (cf. *St. Andrews*); of Probus sent by Gregory I to establish a hospice in Jerusalem (*Acta SS.*, March, II, § 23, 150, 158a, etc.). There are also the legendary accounts of King Arthur's pilgrimage, and that of Charlemagne (Paris, "*Romania*", 1880, 1-50; 1902, 404, 616, 618). A few notices occur of the same custom in the tenth century (Beazley, II, 123), but there is a lull in these visits to Jerusalem till the eleventh century. Then, at once, a new stream begins to pour over to the East at times in small numbers, as Foulque of Nerra in 1011. Meingoz took with him only Simon the Hermit, and Ulric, later prior of Zell, was accompanied by one who could chant the psalms with him;

at times also in huge forces as in 1026 under Richard II of Normandy, in 1033 a record number (Glaber, Paris, 1886, IV, 6, 106, ed. Prou), in 1035 another under Robert the Devil (*ibid.*, 128), and most famous of all in 1065 that under Gunther, Bishop of Bamberg, with twelve thousand pilgrims (Lambert of Gersfield, "*Mon. Germ. Hist.*", Hanover, 1844, V, 169). This could only lead to the Crusades which stamped the Holy Land on the memory and heart of Christendom. The number who took the Cross seems fabulous (cf. Giraldus Cambrensis, "*Itin. Cambriæ*", II, xiii, 147, in R. S., ed. Dimock, 1868); and many who could not go themselves left instructions for their hearts to be buried there (cf. Hovenden, "*Annals*", ed. Stubbs, 1869, in R. S., II, 279; "*Chron. de Froissart*", Bouchon, 1853, Paris, 1853, I, 47; cf. 35-7). So eager were men to take the Cross, that some even branded or cut its mark upon them ("*Miracula s. Thomæ*", by Abbot Benedict, ed. Giles, 186) or "with a sharpe knyfe he share, A crosse upon his shoulder bare" ("*Syr Isenbras*" in Utterson, "*Early Pop. Poetry*", London, 1817, I, 83). From the twelfth century onwards the flow is uninterrupted, Russians (Beazley, II, 156), Northerners (II, 174), Jews (218-74), etc. And the end is not yet ("*Itinera hierosolymitana sæculi IV-VIII*", ed. Geyer in the "*Corp. script. eccl. lat.*", 39, Vienna, 1898; Palestine Pilg. Text Soc., London, 1884 sqq.; "*Deutsche Pilgerreisen nach dem heiligen Lande*", II, Innsbruck, 1900, etc.; Bréhier, "*L'église et l'Orient au moyen-âge*", Paris, 1907, 10-15, 42-50).

Kavelaer, Guelders, is a daughter-shrine to the Madonna of Luxemburg, a copy of which was here enshrined in 1642 and continues to attract pilgrims (*Champagnac*, I, 875).

La Quercia, Viterbo, Italy, is celebrated for its quaint shrine. Within the walls of a church built by Bramante is a tabernacle of marble that enfolds the wonder-working image, painted of old by Batiste Juzzante and hung up for protection in an oak. A part of the oak still survives within the shrine, which boasts, as of old, its pilgrims (Mortier, "*Notre Dame de la Quercia*", Florence, 1904).

La Salette, Dauphiny, France, is one of the places where the Blessed Virgin is said to have appeared in the middle of the nineteenth century. This is no place to discuss the authenticity of the apparition. As a place of pilgrimage it dates from 19 Sept., 1846, immediately after which crowds began to flock to the shrine. The annual number of visitors is computed to be about 30,000 (Northcote, "*Sanctuaries*", 178-229).

La Sarte, Huy, Belgium, boasts a shrine of the Blessed Virgin that dominates the surrounding country. Perched on the top of a hill, past a long avenue of wayside chapels, is the statue found by chance in 1621.

Year by year during May countless pilgrims organized in parishes climb the steep ascent in increasing numbers (Halflants, "*Hist. de N.-D. de la Sarte*", Huy, 1871).

Laus, Hautes-Alpes, France, is one of the many seventeenth-century shrines of the Blessed Virgin. There is the familiar story of an apparition to a shepherdess with a command to found a church. So popular has this shrine become that the annual number of

MARIAZELL—CORPUS CHRISTI PROCESSION, 1897

pilgrims is said to be close on 80,000. The chief pilgrimage times are Pentecost and throughout October (Northcote, "*Sanctuaries*", 146-59).

Le Puy, Haute-Loire, France, boasts the earliest scene of any of the Blessed Virgin's apparitions. Its legend begins about the year 50. After the Crusades had commenced, Puy-Notre-Dame became famous as a sanctuary of the Blessed Virgin throughout all Christendom. Its great bishop, Adhemar of Montheil, was the first to take the Cross, and he journeyed to Jerusalem with Godfrey de Bouillon as legate of the Holy See. The "*Salve Regina*" is by some attributed to him, and was certainly often known as the "*Anthem of Puy*". Numberless French kings, princes, and nobles have venerated this sanctuary; St. Louis IX presented it with a thorn from the Sacred Crown. The pilgrimages that we read of in connexion with this shrine must have been veritable pageants, for the crowds, even as late as 1853, exceeded 300,000 in number (Northcote, "*Sanctuaries*", 160-9).

Lichfield, Staffordshire, England, is one of the places of pilgrimage which has ceased to be a centre of devotion; for the relics of St. Chad, cast out of their tomb by Protestant fanaticism, have now found a home in a Catholic church (the Birmingham cathedral), and it is to the new shrine that the pilgrims turn (Wall, 97-102).

Lièsses, Picardy, France, was before the rise of Lourdes the most famous centre in France of pilgrimage to the Blessed Virgin. The date of its foundation is pushed back to the twelfth century and the quaint story of its origin connects it with Christian captives during the Crusades. Its catalogue of pilgrims reads like an "*Almanach de Gotha*"; but the numberless

unnamed pilgrims testify even more to its popularity. It is still held in honour (Champagnac, I, 918-22).

Lincoln, Lincolnshire, England, in its splendid cathedral guarded the relics of its bishop, St. Hugh. At the entombment in 1200, two kings and sixteen bishops, at the translation in 1280, one king, two queens, and many prelates took part. The inflow of pilgrims was enormous every year till the great spoliation under Henry VIII (Wall, 130-40).

Loges, Seine-et-Oise, France, was a place much frequented by pilgrims because of the shrine of St. Fiacre, an Irish solitary. In 1615 it became, after a lapse of some three centuries, once more popular, for Louis XIII paid several visits there. Among other famous worshippers were James II and his queen from their place of exile at St.-Germain. The chief day of pilgrimage was the feast of St. Stephen, protomartyr (26 December). It was suppressed in 1744 (Champagnac, I, 934-5).

Loreto, Ancona, Italy, owing to the ridicule of one half of the world and the devotion of the other half, is too well-known to need more than a few words. Nor is the authenticity of the shrine to be here at all discussed. As a place of pilgrimage it will be sufficient to note that Dr. Stanley, an eyewitness, pronounced it to be "undoubtedly the most frequented shrine in Christendom" (Northcote, "Sanctuaries", 65-106; Dolan in "The Month", August, 1894, 545; cf. *ibid.*, February, 1867, 178-83).

Lourdes, Pyrénées, France, as a centre of pilgrimage is without a rival in popularity throughout the world. A few statistics are all that shall be recorded here. From 1867 to 1903 inclusively 4271 pilgrimages passed to Lourdes numbering some 387,000 pilgrims; the last seven years of this period average 150 pilgrimages annually. Again within thirty-six years (1868 to 1904) 1643 bishops (including 63 cardinals) have visited the grotto; and the Southern Railway Company reckon that Lourdes station receives over a million travellers every year (Bertrin, "Lourdes", tr. Gibbs, London, 1908; "The Month", October, 1905, 359; February, 1907, 124).

Luxemburg possesses a shrine of the Blessed Virgin under the title of "Consoler of the Afflicted". It was erected by the Jesuit Fathers and has become much frequented by pious pilgrims from all the country round. The patronal feast is the first Sunday of July, and on that day and the succeeding octave the chapel is crowded. Whole villages move up, headed by their parish priests; and the number of the faithful who frequent the sacraments here is sufficient justification for the numerous indulgences with which this sanctuary is enriched (Champagnac, I, 985-95).

Lyons, Rhône, France, boasts a well-known pilgrimage to Notre-Dame-de-Fourvières. This shrine is supposed to have taken the place of a statue of Mercury in the forum of Old Lugdunum. But the earliest chapel was utterly destroyed by the Calvinists in the sixteenth century and again during the Revolution. The present structure dates from the reinauguration by Pius VII in person, 19 April, 1805. It is well to remember that Lyons was ruled by St. Irenæus who was famed for his devotion to the Mother of God (Champagnac, I, 997-1014).

Malacca, Malay Peninsula, was once possessed of a shrine set up by St. Francis Xavier, dedicated under the title Our Lady of the Mount. It was for some years after his death (and he was buried in this chapel, before the translation of his relics to Goa, cf. "The Tablet", 31 Dec., 1910, p. 1055), a centre of pilgrimage. When Malacca passed from Portuguese to Dutch rule, the exercise of the Catholic religion was forbidden, and the sanctuary became a ruin (Champagnac, I, 1023-5).

Maniua, Lombardy, Italy, has outside the city walls a beautiful church, S. Maria delle Grazie, dedicated by the noble house of Gonzaga to the Mother of

God. It enshrines a picture of the Madonna painted on wood and attributed to St. Luke. Pius II, Charles V, the Constable of Bourbon are among the many pilgrims who have visited this sanctuary. The chief season of pilgrimage is about the feast of the Assumption (15 August), when it is computed that over one hundred thousand faithful have some years attended the devotions (Champagnac, I, 1042).

Maria-Stein, near Basle, Switzerland, is the centre of a pilgrimage. An old statue of the Blessed Virgin, no doubt the treasure of some unknown hermit, is famed for its miracles. To it is attached a Benedictine monastery—a daughter-house to Einsiedeln (Champagnac, I, 1044).

Mariazell, Styria, a quaint village, superbly situated but badly built, possesses a tenth-century statue of the Madonna. To it have come almost all the Habsburgs on pilgrimage, and Maria Theresa left there, after her visit, medallions of her husband and her children. From all the country round, from Carinthia, Bohemia, and the Tyrol, the faithful flock to the shrine during June and July. The Government used to decree the day on which the pilgrims from Vienna were to meet in the capital at the old Cathedral of St. Stephen and set out in ordered bands for their four days' pilgrimage (Champagnac, I, 1045-7).

Marseilles, France, as a centre of pilgrimage has a noble shrine, Notre-Dame-de-la-Garde. Its chapel, on a hill beyond the city, dominates the neighbourhood, where is the statue, made by Chancel in 1836 to take the place of an older one destroyed during the Revolution (Champagnac, I, 1055).

Mauriac, Cantal, France, is visited because of the thirteenth-century shrine dedicated to Notre-Dame-des-Miracles. The statue is of wood, quite black. The pilgrimage day is annually celebrated on 9 May (Champagnac, I, 1062).

Messina, Sicily, the luckless city of earthquake, has a celebrated shrine of the Blessed Virgin. It was peculiar among all shrines in that it was supposed to contain a letter written or rather dictated by the Mother of God, congratulating the people of Messina on their conversion to Christianity. During the destruction of the city in 1908, the picture was crushed in the fallen cathedral (Thurston in "The Tablet", 23 Jan., 1909, 123-5).

Montaigu, Belgium, is perhaps the most celebrated of Belgian shrines raised to the honour of the Blessed Virgin. All the year round pilgrimages are made to the statue; and the number of offerings day by day is extraordinary.

Montmartre, Seine, France, has been for centuries a place of pilgrimage as a shrine of the Mother of God. St. Ignatius came here with his first nine companions to receive their vows on 15 Aug., 1534. But it is famous now rather as the centre of devotion to the Sacred Heart, since the erection of the National Basilica there after the war of 1870 (Champagnac, I, 1125-46).

Montpellier, Herault, France, used to possess a famous statue of black wood—Notre-Dame-des-Tables. Hidden for long within a silver statue of the Blessed Virgin, life-size, it was screened from public view, till it was stolen by the Calvinists and has since disappeared from history. From 1189 the feast of the Miracles of Mary was celebrated with special Office at Montpellier on 1 Sept., and throughout an octave (Champagnac, I, 1147).

Mont St-Michel, Normandy, is the quaintest, most beautiful, and interesting of shrines. For long it was the centre of a famous pilgrimage to the great archangel, whose power in times of war and distress was earnestly implored. Even to-day a few bands of peasants, and here and there a devout pilgrim, come amid the crowds of visitors to honour St. Michael as of old (Champagnac, I, 1151).

Montserrat, Spain, lifts itself above the surrounding

country in the same way as it towers above other Spanish centres of pilgrimage to the Blessed Virgin. Its existence can be traced to the tenth century, but it was not a centre of much devotion till the thirteenth. The present church was only consecrated on 2 Feb., 1562. It is still much sought after in pilgrimage (Champagnac, I, 1152-73).

Naples, Italy, is a city which has been for many centuries and for many reasons a centre of pilgrimage. Two famous shrines there are the Madonna del Carmine and Santa Maria della Grotta (Northcote, "Sanctuaries", 107-21; see also JANUARIUS, SAINT).

Oostacker, Ghent, Belgium, is one of the famous daughter-shrines of Lourdes. Built in imitation of that sanctuary and having some of the Lourdes water in the pool of the grotto, it has almost rivalled its parent in the frequency of its cures. Its inauguration began with a body of 2000 pilgrims, 29 July, 1875, since which time there has been a continuous stream of devout visitors. One has only to walk out there from Ghent on an ordinary afternoon to see many worshippers, men, women, whole parishes with their curés, etc. kneeling before the shrine or chanting before the Blessed Sacrament in the church (Scheerlinck, "Lourdes en Flandre", Ghent, 1876).

Oxford, England, contained one of the premier shrines of Britain, that of St. Frideswide. Certainly her relics were worthy of grateful veneration, especially to Oxford dwellers, for it is to her that the city and university alike appear to owe their existence. Her tomb (since restored at great pains, 1890) was the resort of many pilgrims. Few English kings cared to enter Oxford at all; but the whole university, twice a year, i. e. mid-Lent and Ascension Day, headed by the chancellor, came in solemn procession to offer their gifts. The Catholics of the city have of late years reorganized the pilgrimage on the saint's feast-day, 19 Oct. (Wall, 63-71).

Padua, Italy, is the centre of a pilgrimage to the relics of St. Anthony. In a vast choir behind the sanctuary of the church that bears his name is the treasury of St. Anthony; but his body reposes under the high altar. Devotion to this saint has increased so enormously of late years that no special days seem set apart for pilgrimages. They proceed continuously all the year round (Chérancé, "St. Anthony of Padua", tr. London, 1900).

Pennant Melangell, Montgomery, Wales, to judge from the sculptured fragments of stone built into the walls of the church and lych gate, was evidently a place of note, where a shrine was built to St. Melangell, a noble Irish maiden. The whole structure as restored stands over eight feet high and originally stood in the Cell-y-Bedd, or Cell of the Grave, and was clearly a centre of pilgrimage (Wall, 48).

Pontigny, Yvonne, France, was for many centuries a place of pilgrimage as containing the shrine of St. Edmund of Canterbury. Special facilities were allowed by the French king for English pilgrims. The Huguenots despoiled the shrine, but the relics were saved to be set up again in a massive *châsse* of eighteenth-century workmanship. In spite of the troubles in France the body remains in its old position, and is even carefully protected by the Government (Wall, 171-5).

Puche, Valencia, Spain, is the great Spanish sanctuary dedicated to Our Lady of Mercy, in honour of whom the famous Order of Mercy came into being through Spanish saints. The day of pilgrimage was the feast of Our Lady of Mercy, 24 Sept. (Champagnac, II, 488-92).

Rocamadour, Lot, France, was the centre of much devotion as a shrine of the Blessed Virgin. Amongst its pilgrims may be named St. Dominic; and the heavy mass of iron hanging outside the chapel witnesses to the legendary pilgrimage of Roland, whose good sword Durendal was deposited there till it was

stolen with the other treasures by Henry II's turbulent eldest son, Henry Court Mantel (Drane, "Hist. of St. Dominic", London, 1891, 302-10; Laporte, "Guide du pèlerin à Rocamadour", Rocamadour, 1862).

Rocheville, Toulouse, France.—The legend of its origin fixes the date of its apparition of the Blessed Virgin as 1315. Long famous, then long neglected, it has once more been restored. During the octave of the Nativity of Our Lady (8-15 Sept.) it is visited by quite a large body of devout pilgrims (Champagnac, II, 101).

Rio de Janeiro, Brazil, contains a sanctuary dedicated to Our Lady of Travel. This statue is in a convent of nuns situated just outside the city, on the east of the bay. It is devoutly venerated by the pious people of Brazil, who invoke the protection of the Blessed Virgin on their journeys (Champagnac, II, 517-8).

Rome, Italy, has had almost as much influence on the rise of Christian pilgrimages as the Holy Land. The sacred city of the Christian world, where lay the bodies of the twin prince Apostles, attracted the love of every pious Christian. We have quoted the words of St. Chrysostom who yearned to see the relics of St. Paul; and his desire has been expressed in action in every age of Christian time. The early records of every nation (of the histories of Eusebius, Zosimus, Socrates, Bede, etc. *passim*) give name after name of bishop, king, noble, priest, layman who have journeyed to visit as pilgrims the *limina Apostolorum*. Full to repletion as the city is with relics of Christian holiness, the "rock on which the Church is built" has been the chief attraction; and Bramante has well made it the centre of his immortal temple. Thus St. Marcius came with his wife Martha and his two sons all the way from Persia in 269; St. Paternus from Alexandria in 253; St. Maurus from Africa in 284. Again Sts. Constantine and Victorian on their arrival at Rome went straight to the tomb of St. Peter, where soldiers caught them and put them to death. So also St. Zoe was found praying at the tomb of St. Peter and martyred. Even then in these early days the practice of pilgrimages was in full force, so that the danger of death did not deter men from it (Barnes, "St. Peter in Rome", London, 1900, 146). Then to overleap the centuries we find records of the Saxon and Danish kings of England trooping Romewards, so that the very name of Rome has become a verb to express the idea of wandering (Low Lat., *romerus*; Old Fr., *romieu*; Sp., *romero*; Port., *romeiro*; A. S., *romaign*; M. E., *romen*; Modern, *roam*). And of the Irish, the same uninterrupted custom has held good till our own day (Ulster Archaeolog. Jour., VII, 238-42). Of the other nations there is no need to speak.

It is curious, however, to note that though the chief shrine of Rome was undoubtedly the tomb of the Apostles—to judge from all the extant records—yet the pilgrim sign (see below) which most commonly betokened a palmer from Rome was the "vernicle" or reproduction of St. Veronica's veil. Thus Chaucer (Bell's edition, London, 1861, 105) describes the pardoner:—

"That strait was comen from the Court of Rome
A vernicle had he served upon his cappe".

However, there was besides a medal with a reproduction of the heads of Sts. Peter and Paul and another with the crossed keys. These pilgrimages to Rome, of which only a few early instances have been given, have increased of late years, for the prisoner of the Vatican, who cannot go out to his children, has become, since 1870, identified with the City of the Seven Hills in a way that before was never for long experienced. Hence the pope is looked upon as embodying in his person the whole essence of Rome, so that to-day it is the pope who is the living tomb of St. Peter. All this has helped to increase the devotion and love of the Catholic world for its central city and has enormously

multiplied the annual number of pilgrims. Within the city itself, mention must just be made of the celebrated pilgrimage to the seven churches, a devotion so dear to the heart of St. Philip (Capecelatro, "Life of St. Philip", tr. Pope, London, 1894, I, 106, 238, etc.). His name recalls the great work he did for the pilgrims who came to Rome. He established his Congregation of the Trinità dei Pellegrini (*ibid.*, I, 138-54), the whole work of which was to care for and look after the thronging crowds who came every year, more especially in the years of jubilee. Of course, many such hospices already existed. The English College had originally been a home for Saxon pilgrims; and there were and are many others. But St. Philip gave the movement a new impetus.

St. Albans, Hertford, England, was famous over Europe in the Middle Ages. This is the more curious as the sainted martyr was no priest or monk, but a simple layman. The number of royal pilgrims practically includes the whole list of English kings and queens, but especially devoted to the shrine were Henry III, Edward I, Edward II, Richard II. During the last century the broken pieces of the demolished shrine (to the number of two thousand fragments) were patiently fitted together, and now enable the present generation to picture the beauty it presented to the pilgrims who thronged around it (Wall, II, 35-43).

St. Andrews, Fife, Scotland.—Though more celebrated as a royal burgh and as the seat of Scotland's most ancient university, its earlier renown came to it as a centre of pilgrimage. Even as far back as the year 500 we find a notice of the pilgrimages made by the Welsh bishop, Cadoc. He went seven times to Rome, thrice to Jerusalem, and once to St. Andrews (*Acta SS.*, Jan., III, 219).

St. David's, Pembrokeshire, Wales, was so celebrated a place of pilgrimage that William I went there immediately after the conquest of England. The importance of this shrine and the reverence in which the relics of St. David were held may be gathered from the papal Decree that two pilgrimages here were equal to one to Rome (Wall, 91-5).

Ste Anne d'Auray, Vannes, Brittany, a centre of pilgrimage in one of the holiest cities of the Bretons, celebrated for its *pardons* in honour of St. Anne. The principal pilgrimages take place at Pentecost and on 26 July.

Ste Anne de Beaupré, Quebec, Canada, has become the most popular centre of pilgrimage in all Canada within quite recent years. A review, or pious magazine, "*Les Annales de la Bonne S. Anne*", has been founded to increase the devotion of the people; and the zeal of the Canadian clergy has been displayed in organizing parochial pilgrimages to the shrine. The Eucharistic Congress, held at Montreal in 1910, also did a great deal to spread abroad the fame of this sanctuary.

Sainte-Baume.—S. Maximin, Toulouse, France, is the centre of a famous pilgrimage to the supposed relics of St. Mary Magdalene. The historical evidence against the authentication of the tombs is extraordinarily strong and has not been really seriously answered. The pilgrimages, however, continue; and devout worshippers visit the shrine, if not of, at least, dedicated to, St. Mary Magdalene. The arguments against the tradition have been marshalled and fully set out by Mgr Duchesne ("*Fastes épiscopaux de l'ancienne Gaul*", Paris, 1894-1900) and appeared in English form in "*The Tablet*", XCVI (1900), 88, 282, 323, 365, 403, 444.

St. Patrick's Purgatory, Donegal, Ireland, has been the centre of a pilgrimage from far remote days. The legends that describe its foundation are full of Dantesque episodes which have won for the shrine a place in European literature. It is noticed by the medieval chroniclers, found its way into Italian prose, was

dramatized by Calderón, is referred to by Erasmus, and its existence seems implied in the remark of Hamlet concerning the ghost from purgatory: "Yes by St. Patrick but there is, Horatio" (Act I, sc. V). Though suppressed even before the Reformation, and of course during the Penal Times, it is still extraordinarily popular with the Irish people, for whom it is a real penitential exercise. It seems the only pilgrimage of modern times conducted like those of the Middle Ages (Chambers, "*Book of Days*", London, I, 725-8; Leslie in "*The Tablet*", 1910).

Saragossa, Aragon, Spain, is celebrated for its famous shrine dedicated to the Blessed Virgin under the title *Nuestra Señora del Pilar*. Tradition asserts that the origin of this statue goes back to the time of

PADUA—BASILICA OF ST. ANTHONY

St. James, when, in the lifetime of the Mother of God, it was set up by order of the Apostle. This was approved by Callistus III in 1456. It is glorious on account of the many miracles performed there, and is the most popular of all the shrines of the Blessed Virgin in the Peninsula and the most thronged with pilgrims (*Acta SS.*, July, VII, 880-900).

Savona, Genoa, Italy, claims to possess the oldest sanctuary dedicated to the Blessed Virgin in all Italy, for to it Constantine is said to have gone on pilgrimage. The statue was solemnly crowned by Pius VII, not while spending his five years of captivity in the city, but later, i. e., on 10 May, 1815, assisted by King Victor Emmanuel and the royal family of Savoy (Champagnac, II, 852-7).

Teneriffe, Canary Islands, has a statue of the Blessed Virgin which tradition asserts was found by the pagan inhabitants and worshipped as some strange deity for a hundred years or so. For some time after the conversion of the islanders it was a centre of pilgrimage (Champagnac, II, 926-7).

Toledo, New Castile, Spain, in its gorgeous cathedral enshrines a statue of the Blessed Virgin in a chapel of jasper, ornamented with magnificent and unique treasures. This centre of devotion to the Blessed Virgin which draws to it annually a great number of pilgrims, is due to the tradition of the apparition to St. Ildephonsus (Champagnac, II, 944-6).

Tortosa, Syria, was in the Middle Ages famous for ■

wandering ways that led from port to sanctuary and from shrine to shrine (Digby, "Compitum", London, 1851, I, 408). Thus they hoped to get their share also in the merits of the pilgrim. The whole subject has been illuminated in a particular instance by a monograph of Hilaire Belloc in the "Old Road" (London, 1904).

Geography too sprang from the same source. Each pilgrim who wrote an account of his travels for the instruction and edification of his fellows was unconsciously laying the foundations of a new science; and it is astonishing how very early these written accounts begin. The fourth century saw them rise, witnessed the publication of many "Peregrinationes" (cf. Palestine Pilg. Text Soc., *passim*), and started the fashion of writing these day-to-day descriptions of the countries through which they journeyed. It is only fair to mention with especial praise the names of the Dominicans Ricoldo da Monte Cruce (1320) and Burchard of Mount Sion (Beazley, II, 190, 383), the latter of whom

has given measurements of several Biblical sites, the accuracy of which is testified to by modern travellers. Again we know that Roger of Sicily caused the famous work "The Book of Roger, or the Delight of whose loves to make the Circuit of the World" (1154) to be compiled, from information gathered from pilgrims and merchants,

PILGRIM'S SIGN: ST. THOMAS OF CANTERBURY

who were made to appear before a select committee of Arabs (Symonds, "Sketches in Italy", Leipzig, 1883, I, 249); and we even hear of a medieval Continental guide-book to the great shrines, prefaced by a list of the most richly indulgenced sanctuaries and containing details of where money could be changed, where inns and hospitals were to be found, what roads were safest and best, etc. ("The Month", March, 1909, 295; "Itineraries of William Wey", ed. for Roxburgh Club, London, 1857; Thomas, "De passagiis in Terram Sanctam", Venice, 1879; Bounardot and Longnon, "Le saint voyage de Jérusalem du Seigneur d'Au-gle", Paris, 1878).

Crusades also naturally arose out of the idea of pilgrimages. It was these various *peregrinationes* made to the Sepulchre of Jesus Christ that at all familiarized people with the East. Then came the huge columns of devout worshippers, growing larger and larger, becoming more fully organized, and well protected by armed bands of disciplined troops. The most famous pilgrimage of all, that of 1065, which numbered about 12,000, under Gunther, Bishop of Bamberg, assisted by the Archbishop of Mainz, and the Bishops of Ratisbon and Utrecht, was attacked by Bedouins after it had left Caesarea. The details of that Homeric struggle were brought home to Europe (Lambert of Gersfield, "Mon. Germ. Hist.", 1844, V, 169) and at once gave rise the Crusades.

Miracle Plays are held to be derived from returning pilgrims. This theory is somewhat obscurely worked out by Père Menestrier (*Représentations en musique anc. et modernes*; cf. Champagnac, I, 9). But he bases his conclusions on the idea that the miracle plays begin by the story of the Birth or Death of Christ and holds that the return to the West of those who had visited the scenes of the life of Christ naturally

led them to reproduce these as best they could for their less fortunate brethren (St. Aug., "De civ. Dei" in P. L., XXXVIII, 764). Hence the miracle plays that deal with the story of Christ's Passion were imported for the benefit of those who were unable to visit the very shrines. But the connexion between the pilgrimages and these plays comes out much more clearly when we realize that the scene of the martyrdom of the saint or some legend concerning one of his miracles was not uncommonly acted before his shrine or during the pilgrimage that was being made to it. It was performed in order to stimulate devotion, and to teach the lessons of his life to those who probably knew little about him. It was one way and the most effective way of seeing that the reason for visiting the shrine was not one of mere idle superstition, but that it had a purpose to achieve in the moral improvement of the pilgrim.

International Communications owed an enormous debt to the continual interchange of pilgrims. Pilgrimages and wars were practically the only reasons that led the people of one country to visit that of another. It may safely be hazarded that an exceedingly large proportion of the foreigners who came to England, came on purpose to venerate the tomb of the "Holy blissful Martyr", St. Thomas Becket. Special enactments allowed pilgrims to pass unmolested through districts that were in the throes of war. Again facilities were granted, as at Pontigny, for strangers to visit the shrines of their own saints in other lands. The result of this was naturally to increase communications between foreign countries. The matter of road-making has been already alluded to and the establishment of hospices along the lines of march, as the ninth-century monastery at Mont Cenis, or in the cities most frequented by pilgrims, fulfilled the same purpose (Acta SS., March, II, 150, 157; Glaber, "Chron." in Mon. Germ. Hist.: Script, VII, 62). Then lastly it may be noted that we have distinct notices, scattered, indirect, and yet all the more convincing, that pilgrims not unfrequently acted as postmen, carrying letters from place to place as they went; and that people even waited with their notes written till a stray pilgrim should pass along the route (Paston Letters, II, 62).

Religious Orders began to be founded to succour the pilgrims, and these even the most famous orders of the medieval Church. The Knights Hospitallers, or Knights of St. John, as their name implies, had as their office to guard the straggling bands of Latin Christians; the Knights of Rhodes had the same work to carry out; as also had the Knights Templars. In fact the seal of these last represented simply a knight rescuing a helpless pilgrim (compare also the Trinità dei Peregrini of St. Philip).

Scandals effected by this form of devotion are too obvious and were too often denounced by the saints and other writers from St. Jerome to Thomas a Kempis to need any setting out here. The "Canterbury Tales" of Chaucer are sufficient evidence. But the "Colloquy" of Erasmus briefly mentions the more characteristic ones: (i) excessive credulity of the guardian of the shrine; (ii) insistence upon the obligation of pilgrimages as though they were necessary for salvation; (iii) the neglect on the part of too many of the pilgrims of their own duties at home in order to spend more time in passing from one sanctuary to another; (iv) the wantonness and evil-living and evil-speaking indulged in by the pilgrims themselves in many cases. Not as though these abuses invalidated the use of pilgrimages. Erasmus himself declares that they did not; but they certainly should have been more stringently and rigorously repressed by the church rulers. The dangers of these scandals are evidently reduced to a minimum by the speed of modern travel; yet from time to time warnings need to be repeated lest the old evils should return.

BLESSING.—To complete this article, it will be well to give the following blessings taken from the Sarum Missal (London, 1868, 595-6). These should be compared with Mohammedan formularies (Champagnac, II, 1077-80, etc.):—

Blessing of Scrip and Staff.

℟. The Lord be with you.

℞. And with thy spirit.

Let us pray. O Lord Jesus Christ who of Thy unspeakable mercy at the bidding of the Father and by the Co-operation of the Holy Ghost wast willing to come down from Heaven and to seek the sheep that was lost by the deceit of the devil, and to carry him back on Thy shoulders to the flock of the Heavenly Country; and didst commend the sons of Holy Mother Church by prayer to ask, by holy living to seek, by persevering to knock that so they may the more speedily find the reward of saving life; we humbly call upon Thee that Thou wouldst be pleased to bless these scrips (or this scrip) and these staves (or this staff) that whosoever for the love of Thy name shall desire to wear the same at his side or hang it at his neck or to bear it in his hands and so on his pilgrimage to seek the aid of the Saints with the accompaniment of humble prayer, being protected by the guardianship of Thy Right Hand may be found meet to attain unto the joys of the everlasting vision through Thee, O Saviour of the World, Who livest and reignest in the unity of the Holy Spirit, God for ever and ever. Amen.

Here let the scrip be sprinkled with Holy Water and let the Priest put it round each pilgrim's neck, saying: In the Name of our Lord Jesus Christ receive this scrip, the habit of thy pilgrimage, that after due chastisement thou mayest be found worthy to reach in safety the Shrine of the Saints to which thou desirest to go; and after the accomplishment of thy journey thou mayest return to us in health. Through, etc.

Here let him give the Staff to the Pilgrim, saying: Receive this staff for thy support in the travail and toil of thy pilgrimage, that thou mayest be able to overcome all the hosts of the enemy and reach in safety the Shrine of the Saints whither thou desirest to go; and having obediently fulfilled thy course mayest return again to us with joy. Through, etc.

The Blessing of the Cross for one on a pilgrimage to Jerusalem.

℟. The Lord be with you.

℞. And with thy spirit.

Let us pray. O God, whose power is invincible and pity cannot be measured, the aid and sole comfort of pilgrims; who givest unto Thy servants armour which cannot be overcome; we beseech Thee to be pleased to bless this dress which is humbly devoted to Thee, that the banner of the venerated Cross, the figure whereof is upon it, may be a most mighty strength to Thy servants against the wicked temptations of the old enemy; a defence by the way, a protection in Thy house, and a security to us on every side. Through, etc.

Here let the garment marked with the Cross be sprinkled with Holy Water and given to the pilgrim, the priest saying:

Receive this dress whereupon the sign of the Cross of the Lord Our Saviour is traced, that through it safety, benediction and strength to journey in prosperity, may accompany thee to the Sepulchre of Him, who with God the Father and the Holy Ghost, liveth and reigneth one God, world without end. Amen.

BEDE JARRETT.

Pilgrim, Bishop of Passau, date of birth unknown; d. 20 May, 991. He was educated at the Benedictine monastery of Niederaltaich, and was made bishop in 971. To him are attributed some, if not all, of the "Forgeries of Lorch", a series of documents, especially Bulls of Popes Symmachus, Eugene II, Leo VII, and Agapetus II, fabricated to prove that Passau was a continuation of a former archdiocese named Lorch. By these he attempted to obtain from Benedict VI the elevation of Passau to an archdiocese, the re-erection of those dioceses in Pannonia and Mœsia which had been suffragans of Lorch, and the pallium for himself. While Pilgrim was ambitious, he also had at heart the welfare of the captive Christians in Hungary and the Christianization of that country. There is extant an alleged Bull of Benedict VI granting Pilgrim's demands; but this is also the work of Pilgrim, possibly a document drawn up for the papal signature, which it never received. Apart from these forgeries, common enough at the time, Pilgrim was a good and zealous bishop, and converted numerous heathens in Hungary, built many schools and churches, restored the Rule of St. Benedict in Niederaltaich, transferred the relics of St. Maximilian from Oetting to Passau, and held synods (983-91) at Ennsburg (Lorch), Mautern, and Mistelbach. In the "Niebelungenlied" he is lauded as a contemporary of the heroes of that epic.

MICHAEL OTT.

Pillar of Cloud (PILLAR OF FIRE), a cloud which accompanied the Israelites during their wandering. It was the same as the pillar of fire, as it was luminous at night (cf. Ex., xiv, 19, 20, 24; Num., ix, 21, 22). The name "pillar" is due to the columnar form which it commonly assumed. It first appeared while the Israelites were marching from Socoth to Etham, and vanished when they reached the borders of Chanaan (Ex., xiii, 20-22; xl, 36). It was a manifestation of God's presence among His people (Ex., xiv, 24 sqq.; xxxiii, 9; Num., xi, 25; xii, 5; Deut., xxxi, 15; Ps. xlviii, 7). During encampment it rested over the tabernacle of the covenant, after it was built, and before that time probably over the centre of the camp. It rose as a signal that camp was to be broken, and during the march it preceded the people, stopping when they were to pitch their tents (Ex., xl, 34, 35; Num., ix, 17 sqq.; Deut., i, 33). At the crossing of the Red Sea it rested between the Israelites and the Egyptians, being bright on the side of the former and dark on the other (Ex., xiv, 19, 20). During the marches it lit the way at night, and by day protected the people from the heat of the sun (Num., x, 34; Deut., i, 33; II Esd., ix, 12; Wis., x, 17; xviii, 3; Ps. civ, 39). It may be doubted whether it covered the camp by day, as many commentators maintain. Num., x, 34, speaks only of the march, and Wis., xix, 7, does not necessarily refer to the whole camp. St. Paul (I Cor., x, 1, 2, 6) considers it as a type of baptism, and the Fathers regard it as the figure of the Holy Ghost leading the faithful to the true Promised Land. The rationalistic explanation which sees in the pillar only a torch carried on a pole, such as is used even now by

caravans in Arabia, fails to take the data of the Bible into consideration.

F. BECHTEL.

Pima Indians, an important tribe of southern Arizona, centring along the Middle Gila and its affluent, the Salt River. Linguistically they belong to the Piman branch of the widely-extended Shoshonean stock, and their language, with dialectic variation, is the same as that spoken also by the Pápago and extinct Sobaipuri of southern Arizona, and by the Nevome of Sonora, Mexico. In Spanish times the tribes of the Arizona group were known collectively as *Pimas Altos* (Upper Pima), while those of Sonora were distinguished as *Pimas Bajos* (Lower Pima), the whole territory being known as the Pimería. The tribal name Pima is a corruption of their own word for "no", mistaken by the early missionaries for a proper name. They call themselves, simply 'Aátam, "people", or sometimes for distinction 'Aatam-akimúlt, "river-people". Notwithstanding their importance as a tribe, the Pima have not been prominent in history, owing to their remoteness from military and missionary activity during the Spanish period, and to their almost unbroken peaceable attitude towards the whites. It was at one time claimed that they were the authors of the ruined *pueblos* in their country, notably the celebrated Casa Grande, but later investigation confirms the statement recorded by Father Garcés as early as 1780 that they were built by a previous people connected with the Hopi.

The real history of the Pima may be said to begin with the German Jesuit missionary explorer, Father Eusebio Kino (Kühn), who in 1687 established a mission headquarters at Dolores, near the present Cucurpe, northern Sonora, Mexico, from which point until his death in 1711 he covered the whole Pimería in his missionary labours. In 1694, led by Indian reports of massive ruins in the far north, he penetrated alone to the Gila, and said Mass in the Casa Grande. In 1697 he accompanied a military exploration of the Pima country, under Lieutenant Bernal and Captain Mange, baptizing nearly a hundred Indians. In 1701 he made the earliest map of the Gila region. He found the Pima and their cousins the Pápago most anxious for teachers. "They were, above all, desirous of being formed into regular mission communities, with resident padres of their own; and at many rancherías they built rude but neatly cared-for churches, planted fields, and tended herds of live stock in patient waiting for missionaries, who, in most cases, never came" (Bancroft). From 1736 to 1750 Fathers Keller and Sedelmair several times visited the Pima, but no missions were established in their country, although a number of the tribe attached themselves to the Pápago missions. The revolt of the southern tribes in 1750 caused a suspension of the work, but the missions were resumed some years later and continued under increasing difficulties until the expulsion of the Jesuits in 1767, at which time the whole number of neophytes in Arizona, chiefly Pápago, was about 1200. In the next year the Arizona missions were turned over to Franciscans of the College of Queretaro, who continued the work with some success in spite of constant inroads of the Apache. Although details are wanting, it is probable that the number of neophytes increased. The most noted of these later workers was Father Francisco Garcés, in charge of the Pápago at San Xavier del Bac (1768-76). In 1828, by decree of the revolutionary government of Mexico, all the missions were confiscated, the Spanish priests expelled, and all Christianizing effort came to an end.

About 1840 the Pima were strengthened by the Maricopa from the lower Gila, who moved up to

escape the attacks of the Yuma, the common enemy of both. Both tribes continue to live in close alliance, although of entirely different language and origin. Their relations with the United States Government began in 1846, when General Kearney's expedition entered their territory, and met with a friendly reception. Other expeditions stopped at their villages within the next few years, all meeting with kind treatment. With the influx of the California gold hunters about 1850 there set in a long period of demoralization, with frequent outrages by the whites which several times almost provoked an outbreak. In 1850 and 1857 the hostile Yuma were defeated. The Apache raids were constant and destructive until the final subjugation of that tribe by the Government. In all the Apache campaigns since 1864 the Pima have served as willing and efficient scouts. In 1857 a non-resident agent was appointed, and in 1859 a reservation was surveyed for the two tribes, and \$10,000 in goods distributed among them as a recognition of past services. In 1870 the agency was established at Sacaton on the reservation, since which time they have been regularly under Government supervision. The important problem of irrigation, upon which the future prosperity of the tribes depends, is now in process of satisfactory solution by the Government. As a body the Indians are now civilized, industrious as farmers and labourers, and largely Christian, divided between Presbyterian and Catholic. Presbyterian work was begun in 1870. The Catholics re-entered the field shortly afterwards, and have now a flourishing mission school, St. John Baptist, at Gila Crossing, built in 1899, in charge of Franciscan Fathers, with several small chapels, and a total Catholic population of 600 in the two tribes, including fifty Maricopa. The 5000 or more Pápago attached to the same agency have been practically all Catholic from the Jesuit period.

In their primitive condition the Pima were agricultural and sedentary, living in villages of lightly-built dome-shaped houses, occupied usually by a single family each, and cultivating by the help of irrigation large crops of corn, beans, pumpkins, and native cotton, from which the women spun the simple clothing, consisting of a breech-cloth and head-band for the man, and a short skirt for the women, with sandals or moccasins for special occasion and a buckskin shirt in extreme cold weather. They also prepared clothing fabrics from the inner bark of the willow. The heavier labour of cultivation was assumed by the men. Besides their cultivated foods, they made use of the fruit of the *saguaro cactus*, from which also they prepared the intoxicating *tizwin*, and the mesquite bean, besides the ordinary game of the country. They painted and tattooed their faces and wore their hair at full length. The women were not good potters, but they excelled as basket makers. Their arms were the bow, the club, and the shield, fighting always on foot. Their allies were the Pápago and Maricopa, their enemies the Apache and Yuma. The killing of an enemy was followed by an elaborate purification ceremony closing with a victory dance. There was a head tribunal chief, with subordinate village chiefs. Polygamy was allowed, but not frequent. Descent was in the male line. Unlike Indians generally, they had large families and welcomed twins. Also unlike their neighbours, they buried in the ground instead of cremating their dead. Deformed infants were killed at birth, as were also in later times the infants born of white or Mexican fathers. They had, and still retain, many songs of ceremony, war, hunting, gaming, love, medicine, and of childhood.

According to their elaborate genesis myth, the earth was formed by "Earth Doctor", who himself evolved from a dense cloud of darkness. He made the plants and animals, and a race of never-dying humans, who by their increase so crowded the earth that he

destroyed his whole creation and made a new world with a new race subject to thinning out by death. Another hero god is "Elder Brother", and prominent place is assigned to Sun, Moon, Night, and Coyote. The myth also includes a deluge story. Although the linguistic relations of the Pima are well known, all that is recorded in the language is comprised chiefly in a few vocabularies, none exceeding 200 words, several of which in manuscript are in the keeping of the Bureau of American Ethnology. (See KINO; PÁ-PAGO INDIANS.)

JAMES MOONEY.

Pinara, titular see in Lycia, suffragan of Myra. Pinara was one of the chief cities of the Lycian confederation. The Lycian hero, Pandarus, was held there in great honour. It was supposed to have been founded by Pinarus, who embarked with the first Cretans. According to another tradition, it was a colony of Xanthus and was first called Artymnessus. As in Lycian Pinara signifies "round hill", the city being built on a hill of this nature would have derived its new name from this fact. It is now the village of Minara or Minareh in the vilayet of Koniah. It contains magnificent ruins: walls, a theatre, an acropolis, sarcophagi and tombs, rare inscriptions (often Lycian), and the remains of a church. Five bishops of Pinara are known: Eustathius, who signed the formula of Acaecius of Cæsarea at the Council of Selencia in 359; Heliodorus, who signed the letter from the bishops of Lycia to the Emperor Leo (458); Zenas, present at the Trullan Council (692); Theodore, at the Council of Nicæa (787); Athanasius, at the Photian Council of Constantinople (879).

S. PÉTRIDÈS.

Pinar del Rio, DIOCESE OF (Pinetensis ad Flumen), in Cuba, erected by the Brief "Actum præclare" of Leo XIII, 20 Feb., 1903. The boundaries of the diocese are those of the civil province; it occupies the western part of the island and has an area of 2867 square miles. Its first bishop was Braulio de Orne y Vivanco, consecrated at Havana, 28 October, 1903, died the following year. The present bishop is Manuel Ruiz y Rodriguez, consecrated at Cienfuegos, 11 June, 1907. The diocese contains 27 parishes with 19 secular priests. There is a boys' school conducted by the Piarist Fathers, and a girls' school under the care of religious women.

FERMIN FRAGA BARRO.

Pindemonte, IPPOLITO, an Italian poet of noble birth, b. at Verona, 13 Nov., 1753; d. there, 18 Nov., 1828. He received his training at the Collegio di San Carlo in Modena. As a result of much travelling in Italy and foreign lands he acquired a wide acquaintance, and formed close relations with many men of letters. He witnessed the beginnings of the Revolution in Paris, and poetized thereupon in his "Francia". Thence he went to London, Berlin, and Vienna. In 1791 he returned to Verona, with health impaired and saddened at the failure of his hopes for the regeneration and aggrandizement of Italy, and devoted his

last years to study and religious practices. The chief poetical works of Pindemonte are the "Poesie" and "Prose campestri", the "Sepolcri" and his version of the Odyssey. The "Poesie" and "Prose campestri" were published between 1788 and 1794; the most admired portions are those entitled "Alla Luna", "Alla Salute", "La Melanconia", and "La Giovinezza". They evince his reading of the English descriptive poets. The "Sepolcri" is in the form of a letter and is largely a response to the similarly named poem of Foscolo, with whose views, respecting the patriotic and other emotions evoked by the aspect of the tombs of the well-deserving, he sympathizes; he rebukes Foscolo, however, for having neglected to recount, among the other emotions, that of the comfort brought to us by religious considerations. The influence of the English poet Gray is noticeable in this work. Upon his version of the Odyssey he seems to have laboured fifteen years, and is quite faithful to the letter and spirit of the original. It appeared in print in 1822. His lesser work include among others several tragedies, the "Ulisse", the "Geta e Caracalla", the "Eteocle e Polinice", and especially the "Arminio", composed in 1804 and revealing the influence exerted upon him by the Ossianic matter. In prose he produced the "Clementina", and a short story, "Abaritite", which imitates Johnson's "Rasselas". He left a large correspondence exchanged with noted persons of his time and a few minor documents.

Poesie originali di I. Pindemonte (Florence, 1858-9); *Odissea*, ed. LONZOGUS, SANSONI; TORRACA, *I. Sepolcri di I. Pindemonte in Discussioni* (Leghorn, 1888); MONTANARI, *Storia della vita de opere di I. P.* (Venice, 1855); ZANELLA, *I. Pindemonte e gli Inglese in Paralleli letterari* (Verona, 1885).

J. D. M. FORD.

Pineda, JOHN DE, b. in Seville, 1558; d. there, 27 Jan., 1637. He entered the Society of Jesus in 1572, taught philosophy and theology five years in Seville and Cordova, and specialized in Scripture, which he taught for eighteen years at Cordova, Seville, and Madrid. He held the posts of Provost of the professed house and rector of the college of Seville. He was consultor to the Spanish Inquisition, and, in this capacity, visited the chief libraries of Spain. The result of his visits was the "Index Librorum Prohibitorum" (1612), which won the appreciation of the Inquisition and of the chief inquisitor, Cardinal Sandoval, Archbishop of Toledo; it was re-edited (1632) for Cardinal Zapata. His learning is evidenced by the nineteen printed works and six manuscripts, chiefly on exegetical subjects, which remain to us of his writings: (1) "Commentariorum in Job Libri tredecim" (Madrid, 1597-1601). Each chapter is paraphrased and fully commented upon. These two folios were often re-issued in Madrid, Cologne, Seville, Venice, and Paris. Seven indexes served as guides to the student. Both Catholic and Protestant exegetes still praise this colossal storehouse of erudition. The archæology, textual criticism, comparison of various interpretations, use of historical data from profane writers, all show Pineda to have been far ahead of his time in scientific criticism of the Bible; (2) "Prælectio sacra in Cantica Canticorum" (Seville, 1602), issued as a greeting to Cardinal de Guevera, Archbishop of Seville, on the occasion of his visit to the Jesuit college there; (3) "Salomon prævius, sive de rebus Salomonis regis libri octo" (fol., pp. 587; Lyons, 1609; Mainz, 1613). The life, kingdom, wisdom, wealth, royal buildings, character, and death of Solomon are treated in scholarly fashion; five indexes are added as helps to the student. (4) "De C. Plinii loco inter eruditos controverso ex lib. VII. Atque etiam morbus est aliquis per sapientiam mori". Considerable controversy resulted from his interpretation of Pliny (see Sommervogel, *infra*). (5) "Commentarii in Ecclesiasten, liber unus" (fol., pp. 1224; Seville, 1619), appeared in various editions, as did the

commentary on Solomon. The fame he won by his erudition and sanctity is attested in many ways. On a visit to the University of Evora he was greeted by a Latin speech, and a memorial tablet was set up with the legend: *Hic Pineda fuit*. What astounds one most in the writings of this exegete of the old school is his vast knowledge not merely of Latin, but of Greek and Hebrew.

WALTER DRUM.

Pinerolo, DIOCESE OF (PINEROLIENSIS), in the province of Turin, in Piedmont, Northern Italy, suffragan of Turin. In the Middle Ages the city of Pinerolo was one of the keys of Italy, and was therefore one of the principal fortresses of the dukes of Savoy. It is now the seat of a military school. Those of its churches deserving mention are the cathedral (which dates from the ninth century, and has a beautiful campanile) and San Maurizio, a beautiful Gothic church, from the belfry of which there is a superb view of the Alps and of the sub-Alpine plain. The earliest mention of Pinerolo is in the tenth century; it belonged to the Marca di Torino (March of Turin) and was governed by the abbots of Pinerolo, even after the city had established itself as a commune (1200). From 1235, however, Amadeus IV of Savoy exercised over the town a kind of protectorate which, in 1243, became absolute, and was exercised thereafter either by the house of Savoy, or of Savoy-Acaia. When the French invaded Piedmont (1536), Pinerolo fell into their hands and they remained in possession until 1574. However, by the treaty of Cherasco it again fell to France (1630), and it remained under French rule until restored by the treaty of Turin to Savoy. The latter state, at the same time, withdrew from the league against Louis XIV. Pinerolo was originally an abbey nullius. It was founded in 1064 by Adelaide, Princess of Susa, and was made a diocese, in 1748, at the request of Charles Emmanuel, its first prelate being G. B. d'Orlié. In 1805, conformably with the wish of Napoleon, the diocese was united with that of Saluzzo, but, in 1817, was re-established as an independent see. Within its territory is the famous fortress of Fenestrelle. It has 58 parishes, 16,200 inhabitants, 3 religious houses of women, and 3 educational institutes for girls.

U. BENIGNI.

Pingré, ALEXANDRE GUY, b. in Paris 11 September, 1711; d. 1 May, 1796. He was educated in Senlis at the college of the Genovefan fathers, Regulars of the Order of St. Augustine, which he entered at sixteen. In 1735 he was made professor of theology there. About 1749 he accepted the professorship of astronomy in the newly-founded academy at Rouen. Already famous for detecting an error of four minutes in Lacaille's calculation of the lunar eclipse of 23 December, 1749, in 1753 he further distinguished himself by the observation of the transit of Mercury and was consequently appointed corresponding member of the Académie des Sciences. Later he was made librarian of Ste-Geneviève and chancellor of the university. He built an observatory in the Abbey of Ste-Geneviève and there spent forty years of strenuous labour. He compiled in 1753 the first nautical almanac for the year 1754, and subsequently for 1755-57, when Lalande was charged with the publication. Lacaille had calculated for his treatise, "L'art de vérifier les dates", the eclipses of the first nineteen centuries of the Christian era; Pingré in a second edition took up his calculations and extended them over ten centuries before Christ. In 1760 he joined an unsuccessful expedition to the Island Rodriguez in the Pacific to observe the transit

of Venus on 6 June, 1761. More satisfactory results were obtained from an expedition to the French Cape on Haiti where the next transit was observed on 3 June, 1769. About 1757 he became engrossed in the history of comets, and in his "Cométographie ou Traité historique et théorique des comètes" (2 vols., Paris, 1783-4), the material contained in all the ancient annals and more recent publications is methodically arranged and critically sifted. In 1756 he published a "Projet d'une histoire d'astronomie du dix-septième siècle", completed in 1786. Through Lalande's influence the National Assembly granted three thousand francs to defray the expenses of publication, but it proceeded slowly and at Pingré's death was discontinued. In 1901 the whole work was re-edited by Bigourdan under the title: "Annales célestes du dix-septième siècle". Pingré also published "Manuale Astronomicum libri quinque et Arati Phenomena, cum interpretatione Gallica et notis" (2 vols., 1786), and numerous astronomical observations in the "Mémoires de l'Institut" (1753-87), in the "Journal de Trévoux", in the "Phil. Trans." etc.

In encyclopedic works it is commonly asserted that Pingré took an active part in Jansenistic quarrels, and hence was relegated to provincial towns and colleges. Consequently he is often said to have fallen a victim to Roman intolerance. The fact is that during his earlier career Pingré seems to have been imbued with Jansenistic views, as is borne out by the "Nouvelles Ecclésiastiques", the great Jansenist organ. In 1737 Mgr de Salignac, Bishop of Pamiers, active against Jansenism, summoned Pingré, who was severely rebuked and finally had to submit to an examen by some Jesuit fathers. He expressed himself willing to condemn the five propositions, *de cœur et d'esprit*, at the same time maintaining that he could not condemn them as propositions of Jansenius, as they were not to be found in his works. (It should be remembered that in 1653 and 1656 the popes had declared repeatedly that the propositions were *de facto* contained in the "Augustinus".) In 1745 a general chapter of the fathers of Ste-Geneviève was convened; by order of the king Father Chambroy was elected superior general. Strict orders had been issued to the superiors of the conventual establishments that only such members should be deputed as were willing to subscribe to the papal Bulls and especially "Unigenitus". This measure excited opposition. Father Pingré, then living at Senlis, and some of his fellow religious entered a vehement protest against the proceedings of the chapter. Father Scoffier, one of the most determined opponents of the election, was removed from Senlis. A similar disciplinary punishment was inflicted on Pingré, then professor of theology. According to an introductory notice prefaced to the memoirs of the Jansenist Abbé Arnauld d'Andilly, in the collection "Mémoires sur l'histoire de France de Michaud et Poujoulat" (2nd series, IX), Pingré is their editor (Leyden, 1756). He was therefore an active Jansenist, at least until 1747; his influence, however, never became serious nor lasting. In the ecclesiastical history of the eighteenth century, especially in the "Mémoires pour servir à l'histoire ecclésiastique pendant le 18^e siècle" of Picot, his name is not mentioned.

J. STEIN.

Pinna da Encarnação, MATTHEUS, writer and theologian, b. at Rio de Janeiro, 23 Aug., 1687; d.

there, 18 Dec., 1764. On 3 March, 1703, he became a Benedictine at the Abbey of Nossa Senhora do Montserrat at Rio de Janeiro, where he also studied the humanities and philosophy under the learned José da Natividade. After studying theology at the monastery of Bahia he was ordained priest 24 March, 1708, and appointed professor of philosophy and theology. Along with Gaspar da Madre de Deus (d. about 1780), Antonio de São Bernardo (d. 1774) and a few others, he was the most learned Benedictine of his province and his contemporaries considered him the greatest theologian in Brazil. He was likewise highly esteemed for his piety and charity towards the poor, the sick, and the neglected. In 1726 he was elected abbot of the monastery at Rio de Janeiro, but soon after his election incurred the displeasure of Luiz Vahia Monteiro, the Governor of Brazil, who banished him from his monastery in 1727. Soon afterwards he escaped to Portugal, became very influential at Court and was restored to his monastery by Cardinal Motta in 1729. He held the office of abbot repeatedly thereafter, both at Rio de Janeiro (1729–31 and 1739) and at Bahia in 1746. In 1732 he was elected provincial abbot, in which capacity he visited even the

most distant monasteries of Brazil, despite the great difficulty of travel. He was again elected provincial abbot in 1752, but this time he declined the honour, preferring to spend his old age in prayer and retirement. His works are: "Defensio S. Matris Ecclesiae" (Lisbon, 1729), an extensive treatise on grace and free will against Quesnel, Baius, Jansenius, etc.; "Viridario Evangelico" (Lisbon, 1730–37), four volumes of sermons on the Gospels; "Theologia Scholastica Dogmatica", in six volumes, which he did not complete entirely nor was it published.

S. do Montserrat do Rio de Janeiro, preserved in MS. at the Monastery Library of Rio de Janeiro, 69–74, 312–18; RAMIZ GALVÃO, *Apostamentos históricos sobre a Ordem Beneditina em geral, e em particular sobre o Mosteiro de N. S. do Montserrat do Rio de Janeiro* in *Revista Trimensal do Instituto histórico, geográfico e ethnographico do Brasil* (Rio de Janeiro, 1872), 249 sq.

MICHAEL OTT.

Pinto, FERNÃO MENDES, Portuguese traveller,

b. at Montemor-o-Velho near Coimbra, c. 1509; d. at Almada near Lisbon, 8 July, 1583. After serving as page to the Duke of Coimbra, he went to the East Indies in 1537, and, for twenty-one years, travelled, chiefly in the Far East. In the course of his adventurous career at sea, he was, as he tells on the title

page of his book, several times shipwrecked, taken prisoner many times and sold as a slave. He was the first to make known the natural riches of Japan, and founded the first settlement near Yokohama, in 1548.

In 1558, tired of wandering, he returned to Portugal where he married, settling in the town of Almada. The first account of his travels is to be found in a collection of Jesuit letters published in Venice in 1565, but the best is his own "Peregrinação", the first edition of which appeared in Lisbon in 1614. The work is regarded as a classic in Portugal, where Pinto is considered one of their best prose writers. In other countries, it has been enthusiastically read by some, by others characterized as a highly coloured romance. But it has an element of sincerity which is convincing, and its substantial honesty is now generally admitted. It is probable that, having written it from memory, he put down his impressions, rather than events as they actually occurred. The Spanish edition by Francisco de Herrera appeared in 1620, reprinted in 1627, 1645, 1664. The French translation is by Figuier (Paris, 1628, and 1630). There are three English editions by Cogan (London, 1663, 1692, and 1891), the last abridged and illustrated.

COGAN, *Travels of Fernando Mendes Pinto*, tr. (London, 1891).

V. FUENTES.

Pinturicchio (BERNARDINO DI BETTO, surnamed PINTURICCHIO), b. at Verona, about 1454; d. at Siena, 11 December, 1513. He studied under Fiorenzo di Lorenzo; and his fellow students, perhaps because of his great facility, surnamed him Pinturicchio (the dauber). Pinturicchio did an immense amount of work. His principal easel pictures are: "St. Catherine" (National Gallery, London); a "Madonna" (Cathedral of Sanseverino), with the prothonotary, Liberato Bartello, kneeling; "Portrait of a Child" (Dresden Gallery); "Apollo and Marsyas" (the Louvre), attributed to Perugino, Francia, and even Raphael; the "Madonna enthroned between saints", an altar-piece (Pinacotheca of Perugia); the "Madonna of Monteliveto" (communal palace

PORTRAIT OF PINTURICCHIO BY HIMSELF

ST. CATHERINE, DETAIL FROM "LA DISPUTA"
Pinturicchio, Appartamento Borgia, Rome

of San Gimignano); a "Coronation of the Virgin" (Pinacotheca of the Vatican); the "Return of Ulysses" (National Gallery, London); the "Ascent of Calvary", a splendid miniature (Borromeo Palace, Milan). He was chiefly a frescoist, following principally the process of distemper (*tempera*). There are frescoes of his in the

Sistine Chapel, in the decoration of which he assisted Perugino in 1480, Ara Cœli, the Appartamento Borgia, Spello, Siena, and Sta Maria del Popolo. Modern critics agree in recognizing as his two frescoes in the Sistine Chapel, the "Baptism of Jesus" and "Moses journeying to Egypt". The Bufalini commissioned him to paint the life of St. Bernardine for the chapel at the Ara Cœli; but his chief work was the decoration of the Borgia apartment entrusted to him by Alexander VI. His compositions begin in the Hall of Mysteries, so called because it contains the "Annunciation", the "Visitation", the "Crib", the "Resurrection", the "Pentecost", the "Ascension"; that of the "Resurrection" contains a splendid portrait of Alexander VI. In the Hall of Saints, the most beautiful of all, he has outlined with much grace and brilliancy the histories of various martyrs: St. Susanna, St. Barbara, Disputation of St. Catherine, Visit of St. Anthony to St. Paul the Hermit, and the Martyrdom of St. Sebastian. The next hall is devoted to the representation of the Liberal Arts. Critics generally deny that the decoration of the last two rooms is the work of Pinturicchio, but the three large rooms which he certainly decorated form an exquisite museum. Following the Sienese school Pinturicchio enlivened his paintings by making use of sculptured reliefs glistening with gold which he mixed with his frescoes. In 1501 he decorated the chapel of the Blessed Sacrament in St. Mary Major at Spello. On the ceiling he painted four Sibyls and on the walls the Annunciation, the Adoration of the Shepherds and the Arrival of the Magi, and Jesus in the midst of the Doctors. He had a special love for these pictures for in them he placed his own portrait. In 1502 Cardinal Francisco Piccolomini commissioned him to depict the life of his uncle, Pius II, in ten large compositions on the side walls of the Piccolomini library at Siena. These frescoes are fifteenth-century *tableaux vivants* in which people of all conditions are represented. Above the altar erected at the entrance to the Library is seen the Coronation of Pius III. Pinturicchio, again summoned to Rome by Julius II, painted on the ceiling of the choir of Sta Maria del Popolo splendid Sibyls and Doctors of the Church, in stucco frames separated by graceful arabesques.

GASTON SORTAIS.

Pinzón, MARTÍN ALONSO, Spanish navigator and companion of Columbus on his first voyage to the New World, b. at Palos de Moguer, 1441; d. there at the convent of La Rábida, 1493. Sprung from a family of seamen, he became a hardy sailor and skilful pilot. According to Parkman and other historians, he sailed under Cousin, a navigator from Dieppe, to the eastern coast of Africa, whence they were carried far to the south-west. They there discovered an unknown land and a mighty river. Pinzón's conduct on this voyage was so mutinous that Cousin entered a complaint to the admiralty on their return home, and had him dismissed from the maritime service of Dieppe. Returning to Spain Pinzón became acquainted with Columbus through Fray Juan Perez de Marchina, prior of the convent of La Rábida, and became an enthusiastic promoter of the scheme of the great navigator. Other historians account differently for the origin of Pinzón's interest in Columbus's project. According to these, he heard of the scheme several years after he had retired from active life as a sailor, and established with his brothers a shipbuilding firm

in his native town. During a visit to Rome he learned from the Holy Office of the tithes which had been paid from the beginning of the fifteenth century from a country named Vinland, and examined the charts of the Norman explorers. On his return home he supported the claims of Columbus, when his opinion was sought by Queen Isabella's advisers concerning the proposed voyage. It was he who paid the one-eighth of the expense demanded from Columbus as his share, and built the three vessels for the voyage. Through his influence also Columbus secured the crews for the transatlantic journey. Pinzón commanded one "Pinta", and his brother Vicente Yañez the "Niña". On 21 November, 1492, he deserted Columbus off Cuba, hoping to be the first to discover the imaginary island of Osabeque. He was the first to discover Haiti (Hispaniola), and the river where he landed (now the Porto Caballo) was long called after him the River of Martin Alonso. He carried off thence four men and two girls, intending to steal them as slaves, but he was compelled to restore them to their homes by Columbus, whom he rejoined on the coast of Haiti on 6 January, 1493. It was during this absence that the flagship was driven ashore, and Columbus compelled to take to the "Niña". In excuse for his conduct, Pinzón afterwards alleged stress of weather. Off the coast of the Azores he again deserted, and set sail with all speed for Spain, hoping to be the first to communicate the news of the discovery. Driven by a hurricane into the port of Bayonne in Galicia, he sent a letter to the king asking for an audience. The monarch refusing to receive anyone but the admiral, Pinzón sailed for Palos, which he reached on the same day as Columbus (15 March, 1493). Setting out immediately for Madrid to make a fresh attempt to see the king, he was met by a messenger who forbade him to appear at court. Anger and jealousy, added to the privations of the voyage, undermined his health, and led to his death a few months later.

In addition to the various biographies of Columbus, consult especially ASCENSIO, *Martín Alonso Pinzón, estudio histórico* (Madrid, 1892); FERNANDEZ DURO, *Colón, Pinzón* (Madrid, 1883).

THOMAS KENNEDY.

Piombo, SEBASTIAN DEL, more correctly known as SEBASTIAN LUCIANI, Venetian portrait painter, b. at Venice, 1485; d. in Rome, 1547. He was known as del Piombo, from the office, conferred upon him by Clement VII, of keeper of the leaden seals. He was a pupil of Giovanni Bellini, and later on of Giorgione. His first idea was to become a religious or an ecclesiastic, and it is probable that he took minor orders and had every intention of proceeding to the priesthood, but he was strongly interested in music, devoted considerable time to studying that art, and in so doing became acquainted with Giorgione, a clever musician, who it appears induced him to delay his procedure towards the priesthood and give some attention to painting. It was on Giorgione's recommendation that he entered the studio of Bellini and, later, worked with Giorgione in his own studio. From the time of his acquaintance with him, we hear

no more of his intention to embrace an ecclesiastical career. His earlier paintings were executed in Venice, but he was invited to Rome by Agostino Chigi, who was then building the Farnesina Palace, and some of the decoration of the rooms was put in the hands of Luciani. His work attracted the attention of Michelangelo, and the two men became warm friends. A little later Raphael saw his work and praised it highly, but they were never friends because of the jealousy existing between Michelangelo and Raphael and the friendship between Luciani and Michelangelo. The works which Luciani executed in Rome and at Viterbo betrayed the strong influence of

was marked by vigour of colouring, sweetness, and grace; his portraits are exceedingly true and lifelike, the draperies well painted, and well drawn, but the feature of his work is the extraordinary quality of his colour and the atmosphere with all the delicate subtleties of colour value which it gives. In many of his pictures the colouring is as clear and fresh to-day as it was when it was first painted, and this more especially applies to the carnations, in other men's work the first to fade. After the death of Raphael, he was regarded as the chief painter in Rome, and it was then that he acquired his position as keeper of the lead seals, an office which was lucrative and important, and which enabled him to have more leisure than hitherto had been at his disposal. His death took place at the time that he was painting the chapel of the Chigi family, a work which was to be finished by Salviati. His pictures can be studied in Florence, Madrid, Naples, Parma, St. Petersburg, and Travesio, three of his most notable portraits being those at Naples and Parma, and the fine portrait of Cardinal Pole, now at St. Petersburg.

See VASARI's *Lives of the Painters*, various editions; and a work by CLAUDIO TOLOMEI, cited by LANZI, and known as *Pitturi di Lendinara*.

GEORGE CHARLES WILLIAMSON.

THE RAISING OF LAZARUS

Sebastiano Piombo, National Gallery, London

Michelangelo. Their grandeur of composition could have come from no other artist of the time, but their magnificence of colour has nothing to do with the great sculptor, and is the result of Luciani's genius. A special event in Luciani's career is connected with the commission given to Raphael to paint the picture of the Transfiguration. Cardinal de' Medici, who commissioned the picture, desired at the same time to give an altar-piece to his titular cathedral at Narbonne, and commissioned a painting to be called the "Raising of Lazarus", and to be of the same size as Raphael's "Transfiguration". The two works were finished at about the same time, and were exhibited. It was perfectly evident that Luciani owed a great deal to the influence and the assistance of Michelangelo, but the colouring was so magnificent, and the effect so superb, that it created great excitement in Rome; notwithstanding that the "Transfiguration" by Raphael was regarded as the greater picture, Luciani's work was universally admired. The picture is now in the English National Gallery.

Luciani painted a great many portraits, one of Cardinal de' Medici, another of Aretino, more than one portrait of members of the Doria family, of the Farnese, and of the Gonzaga families, and a clever one of Baccio Bandinelli the painter. His painting

Pionius, SAINT, martyred at Smyrna, 12 March, 250. Pionius, with Sabina and Asclepiades, was arrested on 23 February, the anniversary of St. Polycarp's martyrdom. They had passed the previous night in prayer and fasting. Knowing of his impending arrest, Pionius had fastened fetters round the necks of himself and his companions to signify that they were already condemned. People seeing them led off unbound might suppose that they were prepared, like so many other Christians in Smyrna, the bishop included, to sacrifice. Early in the morning, after they had partaken of the Holy Bread and of water, they were conducted to the forum. The place was thronged with Greeks and Jews, for it was a great Sabbath and therefore a general holiday in the city—an indication of the importance of the Jews in Smyrna. Pionius harangued the multitude. He begged the Greeks to remember what Homer had said about not mocking the corpse of an enemy. Let them refrain therefore from mocking those Christians who had apostatized. He then turned to the Jews and quoted Moses and Solomon to the same effect. He ended with a vehement refusal to offer sacrifice. Then followed the usual interrogatories and threats, after which Pionius and his companions were relegated to prison, to await the arrival of the proconsul. Here they found other confessors, among them a Montanist. Many pagans visited them, and Christians who had sacrificed, lamenting their fall. The latter Pionius exhorted to repentance. A further attempt before the arrival of the proconsul was made to force Pionius and his companions into an act of apostasy. They were carried off to a temple where every effort was made to compel them to participate in a sacrifice. On 12 March, Pionius was brought before the proconsul who first tried persuasion and then torture. Both having failed, Pionius was condemned to be burnt alive. He suffered in company with Metrodorus, a Marcionite priest. His feast is kept by the Latins on 1 Feb.; by the Greeks on 11 March. The true day of his martyrdom, according to the Acts, was 12 March. Eusebius ("H.E.", IV, xv; "Chron.", p. 17, ed. Schoene) places the martyrdom in the reign of Antoninus. His mistake was probably due to the fact that he found the martyrdom of Pionius in a volume containing the Acts of Martyrs of an earlier date. Possibly his MS. lacked the chronological note in our present ones. For the Life of Polycarp by Pionius, see POLYCARP, SAINT. Did Pionius before his martyrdom celebrate with bread and water? We know from St. Cyprian (Ep. 63) that this abuse existed in his time. But note

(1) the bread is spoken of as Holy, but not the water; (2) it is unlikely that Pionius would celebrate with only two persons present. It is more likely therefore that we have here an account, not of a celebration, but of a private Communion (see Funk, "Abhandlungen", I, 287).

The Acts of Pionius exist in two Latin translations, one published by SURIUS and the BOLLANDISTS (Feb., 1), the other by RUINART. The Greek original was first published by GEBHARDT in *Archiv für slavische Philologie*, XVIII (Berlin, 1896), reprinted in his *Acta martyrum selecta* (Berlin, 1902) and in KNOPE, *Ausgewählte Märtyracten* (Tübingen, 1901). See also LECLERCQ, *Les martyrs*, II, 17 sqq.; ALLARD, *Hist. des persécutions*, II, 375 sqq.; ZAHN, *Forschungen zur Gesch. des neuest. Kanons*, IV, 271 sqq.

J. F. BACCHUS.

Pious Bequests. See LEGACIES.

Pious Fund of the Californias, THE (FONDO PIADOSO DE LAS CALIFORNIAS), had its origin, in 1697, in voluntary donations made by individuals and religious bodies in Mexico to members of the Society of Jesus, to enable them to propagate the Catholic Faith in the territory then known as California. The early contributions to the fund were placed in the hands of the missionaries, the most active of whom were Juan Maria Salvatierra and Francisco Eusebio Kino. The later and larger donations took the form of agreements by the donors to hold the property donated for the use of the missions and to devote the income therefrom to that purpose. In 1717 the capital sums of practically all of the donations were turned over to the Jesuits, and from that year until the expulsion of the members of the Society of Jesus from Mexico the Pious Fund was administered by them. In 1768, with the expulsion of all members of the Society from Spanish territory by the Pragmatic Sanction of Charles III of Spain, the Crown of Spain assumed the administration of the fund and retained it until Mexican independence was achieved in 1821. During this period (1768-1821) missionary labours in California were divided, the territory of Upper California being confided to the Franciscans, and that of Lower California to the Dominicans. Prior to the expulsion of the Jesuits thirteen missions had been founded in Lower California, and by the year 1823 the Franciscans had established twenty-one missions in Upper California. In 1821 the newly established Government of Mexico assumed the administration of the fund and continued to administer it until 1840.

In 1836 Mexico passed an Act authorizing a petition to the Holy See for the creation of a bishopric in California, and declaring that upon its creation "the property belonging to the Pious Fund of the Californias shall be placed at the disposal of the new bishop and his successors, to be by them managed and employed for its objects, or other similar ones, always respecting the wishes of the founders". In response to this petition, Gregory XVI, in 1840, erected the Californias into a diocese and appointed Francisco Garcia Diego (then president of the missions of the Californias) as the first bishop of the diocese. Shortly after his consecration, Mexico delivered the properties of the Pious Fund to Bishop Diego, and they were held and administered by him until 1842, when General Santa Ana, President of Mexico, promulgated a decree repealing the above-quoted provision of the Act of 1836, and directing that the Government should again assume charge of the fund. The properties of the fund were surrendered under compulsion to the Mexican Government in April, 1842, and on 24 October of that year a decree was promulgated by General Santa Ana directing that the properties of the fund be sold, and the proceeds incorporated in the national treasury, and further providing that the sale should be for a sum representing the annual income of the properties capitalized at six per cent per annum. The decree provided that "the public treasury will acknowledge an indebtedness of six per cent per annum on the total proceeds of the sales", and specially

pledged the revenue from tobacco for the payment of that amount "to carry on the objects to which said fund is destined".

By the Treaty of Guadalupe Hidalgo, 2 Feb., 1848, Upper California was ceded to the United States by Mexico, and all claims of citizens of the United States against the Republic of Mexico which had theretofore accrued were discharged by the terms of the treaty. After the Treaty of Guadalupe Hidalgo (and indeed for some years before) Mexico made no payments for the benefit of the missions. The archbishop and bishops of California claimed that, as citizens of the United States, they were entitled to demand and receive from Mexico for the benefit of the missions within their dioceses a proper proportion of the sums which Mexico had assumed to pay in its legislative decree of 24 October, 1842. By a convention between the United States and Mexico, concluded 4 July, 1868, and proclaimed 1 February, 1869, a Mexican and American Mixed Claims Commission was created to consider and adjudge the validity of claims held by citizens of either country against the Government of the other which had arisen between the date of the Treaty of Guadalupe Hidalgo and the date of the convention creating the commission. To this commission the prelates of Upper California, in 1869, presented their claims against Mexico for such part of twenty-one years' interest on the Pious Fund (accrued between 1848 and 1869) payable under the terms of the Santa Ana decree of October, 1842, as was properly apportionable to the missions of Upper California (Lower California having remained Mexican territory).

Upon the submission of this claim for decision the Mexican and American commissioners disagreed as to its proper disposition, and it was referred to the umpire of the commission, Sir Edward Thornton, then British Ambassador at Washington. On 11 Nov., 1875, the umpire rendered an award in favour of the archbishop and bishops of California. By that award the value of the fund at the time of its sale under the decree of 1842 was finally fixed at \$1,435,033. The annual interest on this sum at six per cent (the rate fixed by the decree of 1842) amounted to \$86,101.98 and for the twenty-one years between 1848 and 1869 totalled \$1,808,141.58. The umpire held that of this amount one-half should equitably be held apportionable to the missions in Upper California, located in American territory, and therefore awarded to the United States for the account of the archbishop and bishops of California, \$904,070.79. This judgment was paid in gold by Mexico in accordance with the terms of the Convention of 1868, in thirteen annual instalments. Mexico, however, then disputed its obligations to pay any interest accruing after the period covered by the award of the Mixed Claims Commission (that is, after 1869), and diplomatic negotiations were opened by the Government of the United States with the Government of Mexico, which resulted, after some years, in the signing of a protocol between the two Governments, on 22 May, 1902, by which the question of Mexico's liability was submitted to the Permanent Court of Arbitration at The Hague. This was the first International controversy submitted to that tribunal. By the terms of the protocol the Arbitral Court was to decide first whether the liability of Mexico to make annual payments to the United States for the account of the Roman Catholic prelates of California had been rendered *res judicata* by the award of the Mixed Claims Commission and, second, if not, whether the claim of the United States, that Mexico was bound to continue such payments, was just.

On 14 October, 1902, the tribunal at The Hague made an award adjudging that the liability of Mexico was established by the principle of *res judicata*, and by virtue of the arbitral sentence of Sir Edward

Thornton, as umpire of the Mixed Claims Commission; that in consequence the Mexican Government was bound to pay to the United States, for the use of the Roman Catholic archbishop and bishops of California, the sum of \$1,420,682.67, in extinguishment of the annuities which had accrued from 1869 to 1902, and was under the further obligation to pay "perpetually" an annuity of \$43,050.99, in money having legal currency in Mexico. The Government of Mexico has since the date of The Hague award complied with its provisions, and annually pays to the Government of the United States, in Mexican silver, for the use of the Catholic prelates of California, the sum adjudged to be due from it as a "perpetual" annuity.

GARRET W. McENERNEY.

Pious Society of Missions, THE, founded by Ven. Vincent Mary Pallotti in 1835. The members of the society are generally called Pallottini Fathers. Its object is to preserve the Faith among Catholics, especially among emigrants, who are exposed to many grave dangers, and to propagate the Faith among non-Catholics and infidels. The Society of Missions embraces three classes: (1) priests, clerics, and lay-brothers; (2) sisters, who help the priests in their missionary works as teachers and catechists, and who care for the temporal necessities of their churches and houses; (3) affiliated ecclesiastics and lay people. The sisters live a community life, and follow the Rule of St. Francis. They dedicate themselves to the spiritual and temporal welfare of their sex. They are especially engaged in missionary work among the emigrants in America, and the infidels in Africa and Australia. The third class consists of both the secular and regular clergy and the laity who are affiliated with the Society of Missions and help by their prayers, works, and financial aid the propagation of the Faith.

The founder prescribed that his society should be a medium between the secular and the regular clergy. He desired to foster the work of the Catholic Apostolate. This desire of his was strikingly symbolized by the annual celebration of the octave (which he inaugurated in 1836) and the feast of Epiphany in Rome (see PALLOTTI, VINCENT MARY, VENERABLE). He gave to his society the name of "Catholic Apostolate", afterwards changed by Pius IX to the "Pious Society of Missions". The word Pious is to be taken in the sense of the Latin *pia*, i. e., devoted or dedicated to God. On 9 Jan., 1835, Pallotti conceived the plan of his institute and submitted it to the Apostolic See, and received the required approbation through the cardinal vicar, Odescalchi, on 4 April, 1835, as again by another rescript on 29 May, and finally by Pope Gregory XVI on 14 July of the same year. Nearly all religious orders and communities favoured the newly-created institute with a share in all their spiritual works and indulgences. In the first years of its existence the Pious Society of Missions had among its affiliated members, twenty-five cardinals, many bishops, Roman princes, and religious communities and societies, as also men known in that time as great apostles, Blessed Caspar del Buffalo, the founder of the Congregation of the Most Precious Blood and Maria Clausi of the Order of St. Francis of Paula. For a time the Society of the Propagation of Faith in Lyons feared that the new society would interfere with its special work. Pallotti satisfied the Holy See that the purpose of his society was different from that of the Propagation. As the name, "Catholic Apostolate", occasioned objections in some quarters, it was changed to the "Pious Society of Missions".

At the Camaldolese convent near Frascati, he wrote

the constitution and rules for the society, which Pius IX approved *ad tempus*, 1846. According to them, the members of the society should, after two years' novitiate, promise four things, poverty, chastity, obedience, and refusal of any ecclesiastical dignity, except by obedience to the Holy See. Pope Pius X approved *ad experiendum* the newly-revised rules and constitutions, December, 1903, for six years, and gave the final approbation on 5 Nov., 1909. The mother-house is in the Via Pettinari 57, Rome, attached to the church of San Salvatore. Pallotti sent his first missionary fathers to London in 1844, to take care of Italian emigrants in the Sardinian Oratory. Rev. D. Marquese Joseph Faà di Bruno built the church of St. Peter in Hatton Garden which is the principal church of the Italians in London. He was one of the generals of the society, and wrote "Catholic Belief", a clear and concise exposition of Catholic doctrine, especially intended for non-Catholics. Over one million copies of this book were sold, and it was translated into Italian by the author. Under his generalate, the society extended its activity beyond Rome, Rocca Priora, and London to other countries. He received from Leo XIII the church of S. Silvestre in Capite in Rome for the use of the English-speaking colony there. In Masio in northern Italy, he established an international college, a mission at Hastings, England, and in London (St. Boniface's) for the German colony; in Limburg, Ehrenbreitstein, and Vallemdar there are flourishing colleges for the missions in Kamerun, West Africa. These missions have now a vicar Apostolic and 12 houses, with 70 schools belonging to it. In South America there are establishments at Montevideo, Mercedes, Saladas, and Suipacha; 14 missions of the society in Brazil embrace a territory three times the size of the State of New York. Rev. Dr. E. Kirner started the first Italian Mission in New York City in 1883, afterwards one in Brooklyn, N. Y., Newark, N. J., Hammondton, N. J., and Baltimore, Md. In North America the Pallottini Fathers have at present over 100,000 Italian emigrants under their spiritual care. The society, in the year 1909, was divided into four provinces, the Italian, American, English, and German.

Piranesi, GIAMBATTISTA, an Italian etcher and engraver, b. at Venice, 1720; d. in Rome, 9 Nov., 1778. His uncle Lucchesi gave him lessons in drawing, until in 1738 his father, a mason, sent him to Rome to study architecture under Valeriani and engraving under Vasi. He did not return except for a brief visit to his family. In 1741 he brought out a work on arches, bridges, and other remains of antiquity, a notable monument of black and white art; thereafter he opened a gallery for the sale of prints, chiefly his own. He was a rapid and facile worker and etched more than 2000 large plates, full of detail, vigour, and brilliancy. As a rule he drew directly on copper, and hence his work is bold, free, and spirited to a marked degree; his shadows are luminous, but at times there is too much *chiaroscuro*. The result is a dramatic alternation of black and white, and of light and shade, which deservedly won for him the name of "the Rembrandt of architecture".

Skilful and artistic printing lent an added charm to his proofs, and the poor impressions that exist in western Europe come from plates that were captured by British warships during the Napoleonic wars. Some of the etchings in his twenty-nine folio volumes are on double-elephant paper, ten feet in length. While he achieved a work of magnitude in pictorial records of Roman monuments of antiquity and of the Renaissance, and gave immense archæological, antiquarian, and topographical value to this work, the artistic

killed, the Ucayali missions were abandoned. They were renewed after some years with a fair degree of success, but in 1742 were again wiped out and all the missionaries brutally butchered in a terrible rising headed by the Campa, under the leadership of an apostate Indian, Juan Santos, who took the name of Atahualpa, claiming to be a descendant of the last of the Incas. In 1747 Fr. Manuel Albarán, descending the Apurímac, was killed by the Piro. In 1767 another general rising resulted in the death of all but one of sixteen missionaries of the Franciscan college of Ocopa, Peru, which had taken over the work in 1754. In 1790 the Franciscans again had eighteen missions in operation in the upper Ucayali and Huallaga region, with a total population of 3494 souls. In 1794 an attempt to gather the Piro into a mission was defeated by an epidemic, which caused them to scatter into the forests. In 1799 (or 1803–Raimondi) the attempt was successfully carried out by Fr. Pedro García at the mission of Nuestra Señora del Pilar de Bepuano. In 1815 the principal and last mission for the tribe was established by Fr. Manuel Plaza under the name of Santa Rosa de Lima de los Piro. After the revolution, which made Peru a separate government, the missions were neglected, most of the missionaries were withdrawn, the neophytes sought employment at the river ports or in the rubber forests, or rejoined their wild kindred, and in 1835 only one mission station, Sarayacu, remained upon the Ucayali. The Piro, however, still rank among the important tribes, although, on account of their wandering habit, their true number is unknown. Hervas gives the Piro language three dialects, and states that Fr. Enrique Richter (c. 1685) prepared a vocabulary and catechism in it and in several other languages. Castelnau and Marcoy also give vocabularies.

JAMES MOONEY.

Pisa, ARCHDIOCESE OF (PISÆ), in Tuscany, central Italy. The city is situated on the Arno, six miles from the sea, on a fertile plain, while the neighbouring mountains yield marble, alabaster, copper, and other mineral products; mineral waters abound in the province. The famous *duomo*, or cathedral, begun (1063) by Buschetto and consecrated by Gelasius II (1118), is a basilica in the shape of a Latin cross, with five naves, the columns of which are of oriental granite. The upper portion of the façade is formed by five rows of columns, one above the other; the bas-reliefs of the four bronze doors were executed by Domenico Partegiani and Augusto Serrano, after the designs of Giam-bologna and others. The cupola was painted by Orazio Riminaldi and Michele Cinganelli; the altars are all of Luna marble. Among the notable objects in this cathedral are the octagonal pulpit, the urn of St. Ranieri, and the lamp of Possenti da Pietrasanta, under which Galileo studied the isochronism of the pendulum. In front of the *duomo* is the baptistery, a round structure, with a cupola surmounted by a statue of St. John the Baptist; it was erected in 1152. Beside the *duomo* is the celebrated leaning campanile. The *camposanto* (begun in 1278, completed in 1464) is a real museum of painting and of medieval sculpture; its architect was Giovanni Pisano, by whom also are six statues placed over one of the entrances. The frescoes are by Giotto, Orcagna, Benozzo Gozzoli,

Spinello Aretino, Simone Memmi, and Pietro Laurati. It contains the tomb of the Emperor Henry VII. Other churches are Santa Maria della Spina (1230; 1323); San Nicola, dating from about 1000; the church of the Knights of S. Stefano (1555), a work of Vasari; S. Francesco (thirteenth century); S. Caterina (1253), which belongs to the seminary and contains the mausoleums of Bishop Saltarelli and of Gherardo Compagni; S. Anna has two canvasses by Ghirlandajo; S. Michele (1018); S. Frediano (ninth century); S. Sepolero (1150); S. Paolo (805?) called the old *duomo*; S. Pietro in Grado, which dates from the fifth century, and was restored in the ninth. The episcopal residence, of the twelfth century, has important archives. Other buildings of interest are the Loggia dei mercanti, by Bontalenti, and the university (1105–1343), with which were united several colleges, as the Puteano, Ferdinando, Vittoriano, and Ricci. Outside the city are the Certosa di Calci, the Bagni di Pisa, ancient baths which were restored by Countess Matilda, and the Villa Reale di S. Rossore.

Pisa is the ancient Pisæ, in antiquity held to be a

COURTYARD OF THE ARCHIEPISCOPAL PALACE, PISA
(XV CENTURY)

colony of Pisæ in Elis. Later, it probably belonged to the Etruscans, though often troubled by the Ligurians. The people devoted themselves to commerce and to piracy. From 225 B. C., they were in amicable relations with the Romans, who used the port of Pisæ in the Punic War, and against the Ligurians, in 193. By the Julian law, if not earlier, the town obtained Roman citizenship. Little mention is made of it in the Gothic War. In 553 it submitted to Narses, of its own accord; after the Lombard invasion, it seems to have enjoyed a certain independence, and it was not until the eighth century that Pisa had a Lombard *dux*, while, in the ninth century, it alternated with Lucca as the seat of the Marquis of Tuscany. The war between Pisa and Lucca (1003) was the first war between two Italian cities. In 1005, the town was sacked by the Saracens, under the famous Musetto (Mugheid al Ameri), who, in turn, was vanquished by the Pisans and Genoese, in Sardinia. In 1029, the Pisans blockaded Carthage; and in 1050, Musetto having again come to Sardinia, they defeated him with the assistance of Genoa and of the Marquis of Lunigiana; but the division of the conquered island became a source of dissension between the allied cities, and the discord was increased when Urban II invested the Pisans with the suzerainty of Corsica, whose petty lords (1077) had declared their wish to be fiefs only of the Holy See. In 1126, Genoa opened hostilities by an assault on Porto Pisano, and only through the intervention of Innocent II (1133) was peace re-established. Meanwhile, the Pisans, who for centuries had had stations in Calabria and in Sicily, had extended their commerce to Africa and to Spain, and also to the Levant.

The Pisans obtained great concessions in Palestine and in the principality of Antioch by lending their ships for the transportation of crusaders in 1099, and thereafter people of all nations were to be found in their city. In 1063 they had made an attempt against Palermo, and in 1114 led by the consul, Azzo Marignani, conquered the Balearic Islands. Pisa supported the emperors at an early date, and Henry IV, in 1084, confirmed its statutes and its maritime rights. With its fleet, it supported the expedition of Lothair II to Calabria, destroying in 1137 the maritime cities of Ravello, La Scala, la Fratta, and above all, Amalfi, which then lost its commercial standing. The Pisans also gave their assistance to Henry IV in the conquest of Sicily, and as reward lost the advantages that they had then enjoyed.

The reprisals of Innocent III in Sardinia led the Pisans to espouse the cause of Otto IV and that of Frederick II, and Pisa became the head and refuge of the Ghibellines of Tuscany, and, accordingly, a fierce enemy of Florence. The victory of Montaperti (1260) marks the culmination of Pisan power. Commercial jealousy, political hatred, and the fact that Pisa accorded protection to certain petty lords of Corsica, who were in rebellion against Genoa, brought about another war, in which one hundred and seven Genoese ships defeated one hundred and three ships of the Pisans, at La Meloria, the former taking ten thousand prisoners. All would have been lost, if Ugolino della Gherardesca, *capitano del popolo* and *podestà*, had not providently taken charge of the Government. But as he had protected the Guelphs, Archbishop Ruggieri degli Ubaldini took up arms against him, and shut him up (1288) in the tower of the Gualandi, where with his sons he starved to death (*Inferno*, XXXIII, 13). At the peace of 1290, Pisa was compelled to resign its rights over Corsica and the possession of Sassari in Sardinia. The Pisans hoped to retrieve themselves by inviting Henry VII to establish himself in their city, offering him two million florins for his war against Florence, and their fleet for the conquest of Naples; but his death in 1313 put an end to these hopes. Thereupon they elected (1314) Uguccione della Fagiuola of Lucca as their lord; but they rid themselves of him in the same year. At the approach of Louis the Bavarian, they besought that prince not to enter Pisa; but Castruccio degli Antelminelli incited Louis to besiege the city, with the result that Pisa surrendered in 1327, and paid a large sum of money to the victor. In 1329 Louis resided there again, with the antipope, Pietro di Corvara. Internal dissensions and the competition of Genoa and Barcelona brought about the decay of Pisan commerce. To remedy financial evils, the duties on merchandise were increased, which, however, produced a greater loss, for Florence abandoned the port of Pisa. In 1400 Galeazzo Visconti bought Pisa from Gherardo Appiani, lord of the city. In 1405, Gabriele M. Visconti having stipulated the sale of Pisa to the Florentines, the Pisans made a supreme effort to oppose that humiliation; the town, however, was taken and its principal citizens exiled. The expedition of Charles VIII restored its independence (1494-1509); but the city was unable to rise again to its former prosperity. Under Cosimo de' Medici, there were better times, especially for the university.

Among the natives of Pisa were: B. Pellegrino (seventh century); B. Chiara (d. in 1419), and B. Pietro, founder of the Hermits of St. Jerome (d. in 1435); B. Giordano da Pisa, O.P. (d. in 1311); and Gregory X. Connected with the church of San Pietro in Grado there is a legend according to which St. Peter landed at Pisa, and left there his disciple St. Pierinus. The first known bishop was Gaudentius, present at the Council of Rome (313). Other bishops were St. Senior (410), who consecrated St. Patrick; Joannes (493); one, name unknown, who took part in the schism of

the Three Chapters (556); Alexander (648); Maurianus (680); one, name unknown, taken prisoner by Charlemagne at the siege of Pavia (774); Oppizo (1039), the founder of the Camaldolite convent of S. Michele; Landulfus (1077), sent by Gregory VII as legate to Corsica; Gerardus (1080), an able controversialist against the Greeks; Diabertus (1085), the first archbishop, to whom Urban II gave the sees of Corsica as suffragans in 1099, the first Latin Patriarch of Jerusalem; Pietro Moriconi (1105). In 1121, on account of the jealousy of Genoa, the bishops of Corsica were made immediately dependent upon the Holy See, but Honorius II (1126) restored the former status of Pisa as their metropolitan; in 1133, however, Innocent II divided them between Pisa and Genoa which was then made an archdiocese. Thereafter, Pisa received for suffragans also Populonia and two sees in Sardinia. Other bishops were: Cardinal Uberto Lanfranchi (1132), who often served as pontifical legate; Cardinal Villano Gaetani (1145), compelled to flee from the city

SEPULCHRAL MONUMENT OF THE EMPEROR HENRY VII
Tino da Camaino, Campo Santo, Pisa

on account of his fidelity to Alexander III (1167); Lotario Rosari (1208), also Patriarch of Jerusalem (1216); Federico Visconti (1254), who held provincial synods in 1258, 1260, and 1262; Oddone della Sala (1312) had litigations with the republic, and later became Patriarch of Alexandria; Simone Saltorelli; Giovanni Searlatti (1348), who had been legate to Armenia and to the emperor at Constantinople; Lotto Gambacorta (1381), compelled to flee, after the death of his brother Pietro, tyrant of Pisa (1392); Alamanno Adinari (1406), a cardinal who had an important part in the conciliabulum of Pisa and in the Council of Constance; Cardinal Francesco Salviati Riario (1475), hung at Florence in connexion with the conspiracy of the Pazzi; in 1479 he was succeeded by his nephew, Raffaele Riario, who narrowly escaped being a victim of the same conspiracy; Cesare Riario (1499); Cardinal Scipione Rebiba (1556); Cardinal Giovanni de' Medici (1560), a son of Cosimo; Cardinal Angelo Niccolini (1564); Carlo Antonio Pozzi (1582), founder of the Puteano college, and author of works on canon and on civil law; Giulio de' Medici (1620), served on missions for the duke, founded the seminary, introduced wise reforms, and evinced great charity during the pest of 1629; Cardinal Scipione Pannocchieschi (1636); Cardinal Cosimo Corsi (1853-70). Important councils have been in 1135, against Anacletus II and the heretic Enrico, leader of the Petrobrusiani in 1409, which increased the schism by the deposition of Gregory XII and of Benedict XIII, and by the election of Alexander V; in 1511, brought about by a few schismatic cardinals and French bishops at the instigation of Louis XII against Julius II.

Leghorn, Pescia, Pontremoli, and Volterra are the suffragans of Pisa; the archdiocese has 136 parishes;

190,000 inhabitants; 10 religious houses of men, and 29 of women; 6 educational establishments for boys, and 13 for girls; 1 Catholic daily paper.

U. BENIGNI.

UNIVERSITY OF PISA.—In the eleventh century there were many jurisconsults at Pisa who lectured on law; prominent among them were Opitone and Sigerdo. There also was preserved a codex of the Pandects, dated, it was said, from Justinian. Four professors of the Law School of Bologna, Bulgarus, Burgundius, Uguccione, and Bandino, successors of Irnerius, were trained here; Burgundius acquired renown by his translation of the Pandects and of Greek works on medicine. Gerardo de Fasiano, Lambertuccio Arminzochi, Zacchia da Volterra, Giovanni Fagioli, Ugo Benci, Baldo da Forlì, and Giovanni d'Andrea taught at Pisa in the thirteenth century. In the same century medicine also was taught; the most famous professor was Guido of Pisa, who afterwards went to Bologna (1278). In 1338, as Benedict XII had placed Bologna under interdict, Ranieri da Forlì and Bartolo removed to Pisa with a large following. The *Studium* of Pisa is mentioned in the communal documents of 1340. In 1343 Clement VI erected a *studium generale*, with all the faculties, including theology; and Charles IV confirmed it in 1355.

The university, however, did not flourish. From 1359 to 1364 it was closed, and was only reopened by Urban VI. Meantime, however, the teaching of law was not discontinued. In 1406 Pisa fell into the power of the Florentines who suppressed the university. In 1473 Lorenzo de' Medici with Sixtus IV's approval closed the University of Florence and reopened Pisa. For its endowment the goods of the Church and clergy were put under contribution to such an extent that Paul III in 1534 recalled the concessions of his predecessors. The most celebrated teachers of this first epoch were the jurisconsults Francesco Tigrini, Baldo degli Ubaldi, Lancellotto Decio, Francesco Alcolti, Baldo Bartolini, Giasone del Maino, Bartolommeo and Mariano Socini; the physicians, Guido da Prato, Ammanati, Ugolino da Montecatini, Alessandro Sermoneta, Albertino da Cremona, Pietro Leoni, and Cristoforo Prati; the Humanists, Bartolommeo da Pratoccechi, Lorenzo Lippi, Andrea Dati, Mariano Tucci; the theologians, Bernardino Cherichini (1478) and Giorgio Benigni Salviati.

In 1543 Cosimo de' Medici undertook to restore the university, and to this end Paul III made large concessions out of the revenues of the Church and monasteries. Several colleges were founded, such as the Ducal College, the Ferdinando, and the Puteano (Pozzi for the Piedmontese). The university at this time became famous especially by its cultivation of the natural sciences. Among its noted scientists were: Cesalpino (botany, medicine, philosophy); Galileo Galilei (mathematics and astronomy); Borelli (mechanics and medicine); Luca Ghini, first director of the botanical gardens (1544); Andrea Vesalio, Realdo Colombo, Gabriele Falloppo; Giovanni Risicchi, and Lambeccari in anatomy; Baccio Baldini, Vidio Vidi, Girolamo Mercuriale, Rodrigo Fonseca (seventeenth century), Fil. Cavriani, Marcello Malpighi in medicine. In view of its progressive spirit, Pisa may be called the cradle of modern science. The professors of jurisprudence were rather conservative, but there were not wanting able thinkers, such as the two Torellis, Francesco Vegio, Asinio, Giacomo Mandelli, the two Facchinis, and the Scotsman Dempster; Nicola Bonaparte, who introduced into Pisa the critical-historical study of Roman Law inaugurated by

Cujas, Giuseppe Averani, Stefano Fabrucci, historian of the university, Bernardo Tanucci, afterwards minister of Charles III of Naples.

At the beginning of the eighteenth century the university was again in a precarious condition; but the new Lorenzian dynasty sought to strengthen it by increasing the scientific institutes, and revising the statutes; thus after 1744 the rector was no longer elected by the scholars or from their ranks, but had to be one of the professors. In the eighteenth century Valsecchi and Berti won distinction in theology; Andrea Guadagni, Bart. Franc. Pellegrini, Migliorotto Maccioni, Flaminio Dal Borgo, Gian Maria Lampredi, Sandonnini (canonist), the criminalists della Pura and Ranuccia in jurisprudence; Politi, Corsini, Antonioli, Sarti, in letters; Guido Grandi, Claudio Fromond, Anton Nicola Branchi, Lorenzo Pignotti, Lorenzo Tilli, and Giorgio Santi in natural science; Angelo Gatti, Antonio Matani, Franc. Torrigiani in medicine; Brogiani and Berlinghieri in anatomy. In 1808 the regulations of the French universities were introduced, but were superseded by others in 1814. The professors were then divided into the faculties of theology, law (comprising philosophy and literature), and medicine. But the number of the chairs increased; in 1840 there were six faculties. In 1847 the "Annali delle Università toscane" were published.

In 1851, for political reasons, the Universities of Pisa and Siena were united, the faculties of jurisprudence and theology located at Siena, and those of philosophy and medicine at Pisa. The former regime was re-established in 1859 with such modifications as the Law of Casati required. In 1873 all chairs of theology were suppressed throughout Italy. Noted professors in law were Lorenzo Quartieri, Federico, del Rosso, Valeri, Poggi, Salvagnoli, Franc. Ferrara. P. Emilio Imbriani, and Franc. Carrara (criminalist). Science and letters were represented by the physicist Gerbi; the chemist Piria; the mathematician Betti; the physicians Puccinotti, Pacini, Marcacci, Ranzi (pathology); the criminalist Rosellini, the Latinist Ferrucci; and Francesco de Sanctis, literary critic. Besides the usual faculties, Pisa has schools of engineering, agriculture, veterinary medicine and pharmacy, and a normal high school. In 1910-11 there were 159 instructors and 1160 students.

Pisanae* (Pisa, 1791); DAL BORGO, *Dissertazione epistolare sull'origine dell'univ. di Pisa* (Pisa, 1765); CALISSE, *Cenni storici sull'Università di Pisa in Annuario della Università di Pisa* (1899-1900); BUONAMICI, *Della scuola Pisana del diritto romano ecc.* (Pisa, 1874); IDEM, *I giureconsulti di Pisa al tempo della scuola Bolognese* (Rome, 1888); FEDELI, *I documenti pontifici riguardanti l'Università di Pisa* (Pisa, 1908).

U. BENIGNI.

Pisa, COUNCIL OF.—*Preliminaries.*—The Great Schism of the West had lasted thirty years (since 1378), and none of the means employed to bring it to an end had been successful. Compromise or arbitral agreement between the two parties had never been seriously attempted; surrender had failed lamentably owing to the obstinacy of the rival popes, all equally convinced of their rights; action, that is the interference of princes and armies, had been without result. During these deplorable divisions Boniface IX, Innocent VII, and Gregory XII had in turn replaced Urban VI (Bartholomew Prignano) in the See of Rome, while Benedict XIII had succeeded Clement VII (Robert of Geneva) in that of Avignon.

The cardinals of the reigning pontiffs being greatly dissatisfied, both with the pusillanimity and nepotism of Gregory XII and the obstinacy and bad will of Benedict XIII, resolved to make use of a more efficacious means, namely a general council. The French king, Charles V, had recommended this, at the beginning of the schism, to the cardinals assembled at Anagni and Fondi in revolt against Urban VI, and on his deathbed he had expressed the same wish (1380). It had been upheld by several councils, by the cities

BAPTISTERY, CATHEDRAL, AND BELL TOWER, PISA

of Ghent and Florence, by the Universities of Oxford and Paris, and by the most renowned doctors of the time, for example: Henry of Langenstein ("Epistola pacis", 1379, "Epistola concilii pacis", 1381); Conrad of Gelnhausen ("Epistola Concordiæ", 1380); Gerson (Sermo coram Anglicis); and especially the latter's master, Pierre d'Ailly, the eminent Bishop of Cambrai, who wrote of himself: "A principio schismatis materiam concilii generalis primus . . . instanter prosequi non timui" (Apologia Concilii Pisani, apud Tschackert). Encouraged by such men, by the known dispositions of King Charles VI and of the University of Paris, four members of the Sacred College of Avignon went to Leghorn where they arranged an interview with those of Rome, and where they were soon joined by others. The two bodies thus united were resolved to seek the union of the Church in spite of everything and thenceforth to adhere to neither of the competitors. On 2 and 5 July, 1408, they addressed to the princes and prelates an encyclical letter summoning them to a general council at Pisa on 25 March, 1409. To oppose this project Benedict convoked a council at Perpignan while Gregory assembled another at Aquileia, but these assemblies met with little success, hence to the Council of Pisa were directed all the attention, unrest, and hopes of the Catholic world. The Universities of Paris, Oxford, and Cologne, many prelates, and the most distinguished doctors, like d'Ailly and Gerson, openly approved the action of the revolted cardinals. The princes on the other hand were divided, but most of them no longer relied on the good will of the rival popes and were determined to act without them, despite them, and, if needs were, against them.

Meeting of the Council.—On the feast of the Annunciation, 4 patriarchs, 22 cardinals, and 80 bishops assembled in the cathedral of Pisa under the presidency of Cardinal de Malesset, Bishop of Palestrina. Among the clergy were the representatives of 100 absent bishops, 87 abbots with the proxies of those who could not come to Pisa, 41 priors and generals of religious orders, 300 doctors of theology or canon law. The ambassadors of all the Christian kingdoms completed this august assembly. Judicial procedure began at once. Two cardinal deacons, two bishops, and two notaries gravely approached the church doors, opened them, and in a loud voice, in the Latin tongue, called upon the rival pontiffs to appear. No one replied. "Has anyone been appointed to represent them?" they added. Again there was silence. The delegates returned to their places and requested that Gregory and Benedict be declared guilty of contumacy. On three consecutive days this ceremony was repeated without success, and throughout the month of May testimonies were heard against the claimants, but the formal declaration of contumacy did not take place until the fourth session. In defence of Gregory, a German embassy unfavourable to the project of the assembled cardinals went to Pisa (15 April) at the instance of Robert of Bavaria, King of the Romans. John, Archbishop of Riga, brought before the council several excellent objections, but in general the German delegates spoke so blunderingly that they aroused hostile manifestations and were compelled to leave the city as fugitives. The line of conduct adopted by Carlo Malatesta, Prince of Rimini, was more clever. Robert by his awkward friendliness injured Gregory's otherwise most defensible cause; but Malatesta defended it as a man of letters, an orator, a politician, and a knight, though he did not attain the desired success. Benedict refused to attend the council in person, but his delegates arrived very late (14 June), and their claims aroused the protests and laughter of the assembly. The people of Pisa overwhelmed them with threats and insults. The Chancellor of Aragon was listened to with little favour, while the Archbishop of Tarragona made a declaration

of war more daring than wise. Intimidated by rough demonstrations, the ambassadors, among them Boniface Ferrer, Prior of the Grande Chartreuse, secretly left the city and returned to their master.

The pretended preponderance of the French delegates has been often attacked, but the French element did not prevail either in numbers, influence, or boldness of ideas. The most remarkable characteristic of the assembly was the unanimity which reigned among the 500 members during the month of June, especially noticeable at the fifteenth general session (5 June, 1409). When the usual formality was completed with the request for a definite condemnation of Peter de Luna and Angelo Corrarior, the Fathers of Pisa returned a sentence until then unexampled in the history of the Church. All were stirred when the Patriarch of Alexandria, Simon de Cramaud, addressed the august meeting: "Benedict XIII and Gregory XII", said he, "are recognised as schismatics, the approvers and makers of schism, notorious heretics, guilty of perjury and violation of solemn promises, and openly scandalising the universal Church. In consequence, they are declared unworthy of the Sovereign Pontificate, and are *ipso facto* deposed from their functions and dignities, and even driven out of the Church. It is forbidden to them henceforward to consider themselves to be Sovereign Pontiffs, and all proceedings and promotions made by them are annulled. The Holy See is declared vacant and the faithful are set free from their promise of obedience." This grave sentence was greeted with joyful applause, the Te Deum was sung, and a solemn procession was ordered next day, the feast of Corpus Christi. All the members appended their signatures to the decree of the council, and every one thought that the schism was ended forever. On 15 June the cardinals met in the archiepiscopal palace of Pisa to proceed with the election of a new pope. The conclave lasted eleven days. Few obstacles intervened from outside to cause delay. Within the council, it is said, there were intrigues for the election of a French pope, but, through the influence of the energetic and ingenious Cardinal Cossa, on 26 June, 1409, the votes were unanimously cast in the favour of Cardinal Peter Philarghi, who took the name of Alexander V (q. v.). His election was expected and desired, as testified by universal joy. The new pope announced his election to all the sovereigns of Christendom, from whom he received expressions of lively sympathy for himself and for the position of the Church. He presided over the last four sessions of the council, confirmed all the ordinances made by the cardinals after their refusal of obedience to the antipopes, united the two sacred colleges, and subsequently declared that he would work energetically for reform.

Judgment of the Council of Pisa.—The right of the cardinals to convene a general council to put an end to the schism seemed to themselves indisputable. This was a consequence of the natural principle that demands for a large corporation the capacity of discovering within itself a means of safety: *Salus populi suprema lex esto*, i. e., the chief interest is the safety of the Church and the preservation of her indispensable unity. The tergiversations and perjuries of the two pretenders seemed to justify the united sacred colleges. "Never", said they, "shall we succeed in ending the schism while these two obstinate persons are at the head of the opposing parties. There is no undisputed pope who can summon a general council. As the pope is doubtful, the Holy See must be considered vacant. We have therefore a lawful mandate to elect a pope who will be undisputed, and to convoke the universal Church that her adhesion may strengthen our decision". Famous universities urged and upheld the cardinals in this conclusion. And yet, from the theological and judicial point of view, their reasoning might seem false, dangerous, and

revolutionary. For if Gregory and Benedict were doubtful, so were the cardinals whom they had created. If the fountain of their authority was uncertain, so was their competence to convoke the universal Church and to elect a pope. Plainly, this is arguing in a circle. How then could Alexander V, elected by them, have indisputable rights to the recognition of the whole of Christendom? Further, it was to be feared that certain spirits would make use of this temporary expedient to transform it into a general rule, to proclaim the superiority of the sacred college and of the council to the pope, and to legalize henceforth the appeals to a future council, which had already commenced under King Philip the Fair. The means used by the cardinals could not succeed even temporarily. The position of the Church became still more precarious; instead of two heads there were three wandering popes, persecuted and exiled from their capitals. Yet, inasmuch as Alexander was not elected in opposition to a generally recognized pontiff, nor by schismatic methods, his position was better than that of Clement VII and Benedict XIII, the popes of Avignon. An almost general opinion asserts that both he and his successor, John XXIII, were true popes. If the pontiffs of Avignon had a colourable title in their own obedience, such a title can be made out still more clearly for Alexander V in the eyes of the universal Church. In fact the Pisan pope was acknowledged by the majority of the Church, i. e. by France, England, Portugal, Bohemia, Prussia, a few countries of Germany, Italy, and the County Venaissin, while Naples, Poland, Bavaria, and part of Germany continued to obey Gregory, and Spain and Scotland remained subject to Benedict.

Theologians and canonists are severe on the Council of Pisa. On the one hand, a violent partisan of Benedict's, Boniface Ferrer, calls it "a conventicle of demons". Theodore Urie, a supporter of Gregory, seems to doubt whether they gathered at Pisa with the sentiments of Dathan and Abiron or those of Moses. St. Antoninus, Cajetan, Turrecremata, and Raynald openly call it a conventicle, or at any rate cast doubt on its authority. On the other hand, the Gallican school either approves of it or pleads extenuating circumstances. Noël Alexander asserts that the council destroyed the schism as far as it could. Bossuet says in his turn: "If the schism that devastated the Church of God was not exterminated at Pisa, at any rate it received there a mortal blow and the Council of Constance consummated it." Protestants, faithful to the consequences of their principles, applaud this council unreservedly, for they see in it "the first step to the deliverance of the world", and greet it as the dawn of the Reformation (Gregorovius). Perhaps it is wise to say with Bellarmine that this assembly is a general council which is neither approved nor disapproved. On account of its illegalities and inconsistencies it cannot be quoted as an œcumenical council. And yet it would be unfair to brand it as a conventicle, to compare it with the "robber council" of Ephesus, the pseudo-council of Basle, or the Jansenist council of Pistoia. This synod is not a pretentious, rebellious, and sacrilegious coterie. The number of the fathers, their quality, authority, intelligence and their zealous and generous intentions, the almost unanimous accord with which they came to their decisions, the royal support they met with, remove every suspicion of intrigue or cabal. It resembles no other council, and has a place by itself in the history of the Church, as unlawful in the manner in which it was convoked, unpractical in its choice of means, not indisputable in its results, and having no claim to represent the Universal Church. It is the original source of all the ecclesiastico-historical events that took place from 1409 to 1414, and opens the way for the Council of Constance.

Piscataway Indians, a tribe of Algonquian linguistic stock formerly occupying the peninsula of lower Maryland between the Potomac River and Chesapeake Bay and northward to the Patapsco, including the present District of Columbia, and notable as being the first tribe whose Christianization was attempted under English auspices. The name by which they were commonly known to the Maryland colonists *Pascatae* in the Latin form—was properly that of their principal village, on Piscataway Creek near its mouth, within the present Prince George county. After their removal to the north they were known as Conoy, a corruption of their Iroquois name. There seems to be no good ground for the assertion of Smith (1608) that they were subject to the Powhatan tribes of Virginia. Besides Piscataway, which was a palisaded village or "fort", they had about thirty other settlements, among which may be named Yaocomoco, Potopaco (Port Tobacco), Patuxent, Mattapanient (Mattapony), Mattawoman, and Nacochtank (Lat. *Anacostan*, now Anacostia, D. C.). The original relation of these towns to one another is not very clear, but under the Maryland Government their chiefs or "kings" all recognized the chief of Piscataway as their "emperor", and held the succession subject to the ratification of the colonial "assembly". Their original population was probably nearly 2500.

The recorded history of the Piscataway begins in 1608, when Captain John Smith of Virginia sailed up the Potomac and touched at several of their villages, including Nacochtank, where "the people did their best to content us". In 1822 the same town was destroyed by a band of plunderers from Virginia, but afterward rebuilt. On 25 March, 1634, the Catholic English colony of Lord Baltimore, including the Jesuit Fathers Andrew White and John Altham, and two lay brothers, landed on St. Clement's (Blackistone's) Island and established friendly relations with the people of Yaocomoco, as well as with the great chief of Piscataway, as also the chief of Potomac town on the Virginia side. The first altar was set up in an Indian wigwam. Owing to the attacks of the powerful Susquehanna at the head of the bay the people of Yaocomoco were about to remove, apparently to combine with those of Piscataway, and the English settlers bargained with them for the abandoned site.

The Jesuits at once set to work to study the language and customs of the Indians in order to reach them with Christianity. Father White, superior of the mission, whose valuable "Relatio" is almost our only monument to the Maryland tribes, composed a grammar, dictionary, and catechism in the Piscataway dialect, of which the last, if not the others,

was still in existence in Rome in 1832. Another catechism was compiled later by Father Roger Riggie at Patuxent. The Indians generally were well-disposed to the new teaching, and, other Jesuits having arrived, missions were established at St. Mary's (Yaocomoco), Mattapony, Kent Island, and, in 1639, by Father White, at the tribal capital Piscataway, which, from the name of the *tayac* or great chief, Kittamaquund, "Big Beaver", was sometimes known as Kittamaquindi. Here on 5 July, 1640, in presence of the governor and several of the colonial officers who attended for the purpose, Father White, with public ceremony, baptized and gave Christian names to the great chief, his wife, and daughter, and to the chief councillor and his son, afterward uniting the chief and his wife in Christian marriage. A year later the missionaries were invited to Nacochtank, and in 1642 Father White baptized the chief and several others of the Potomac tribe.

About this time the renewed inroads of the Susquehanna compelled the removal of the mission from Piscataway to Potopaco, where the woman chief and over 130 others were Christians. The work prospered until 1644, when Claiborne with the help of the Puritan refugees who had been accorded a safe shelter in the Catholic colony, seized the government, deposed the governor, and sent the missionaries as prisoners to England. They returned in 1648 and again took up the work, which was again interrupted by the confusion of the civil war in England until the establishment of the Cromwellian government in 1652 outlawed Catholicism in its own colony and brought the Piscataway mission to an end.

Under the new Government the Piscataway rapidly declined. Driven from their best lands by legal and illegal means, demoralized by liquor dealers, hunted by slave-catchers, wasted by smallpox, constantly raided by the powerful Susquehanna while forbidden the possession of guns for their own defence, their plantations destroyed by the cattle and hogs of the settlers and their pride broken by oppressive restrictions, they sank to the condition of helpless dependents whose numbers constantly diminished. In 1666 they addressed a pathetic petition to the assembly: "We can flee no further. Let us know where to live, and how to be secured for the future from the hogs and cattle". As a result reservations were soon afterward established for each of twelve villages then occupied by them. Encroachments still continued, however, and the conquest of the Susquehanna by the Iroquois in 1675 only brought down upon the Piscataway a more cruel and persistent enemy. In 1680 nearly all the people of one town were massacred by the Iroquois, who sent word to the assembly that they intended to exterminate the whole tribe. Peace was finally arranged in 1685. In 1692 each principal town was put under a nominal yearly tribute of a bow and two arrows, their chiefs to be chosen and to hold at the pleasure of the assembly. At last, in 1697, the "emperor" and principal chiefs, with nearly the entire tribe excepting apparently those on the Chaptico river reservation, abandoned their homes and fled into the backwoods of Virginia. At this time they seemed to have numbered under four hundred and this small remnant was in 1704 still further reduced by a wasting epidemic. Refusing all offers to return, they opened negotiations with the Iroquois for a settlement under their protection, and, permission being given, they began a slow migration northward, stopping for long periods at various points along the Susquehanna until in 1765 we find them living with other remnant tribes at or near Chenango (now Binghamton, New York) and numbering only about 120 souls. Thence they drifted west with the Delawares and made their last appearance in history at a council at Detroit in 1793. Those who remained in Maryland are repre-

sented to-day by a few negro mongrels who claim the name.

In habit and ceremony the Piscataway probably closely resembled the kindred Powhatan Indians of Virginia as described by Smith and Strachey, but except for Father White's valuable, though brief, "Relatio" we have almost no record on the subject. Their houses, probably communal, were oval wigwams of poles covered with mats or bark, and with the fire-hole in the centre and the smoke-hole in the roof above. The principal men had bed platforms, but the common people slept upon skins upon the ground. Their women made pottery and baskets, while the men made dug-out canoes and carried the bows and arrows. They cultivated corn, pumpkins, and a species of tobacco. The ordinary dress consisted simply of a breech-cloth for the men and a short deerskin apron for the women, while children went entirely naked. They painted their faces with bright colours in various patterns. They had descent in the female line, believed in good and bad spirits, and paid special reverence to corn and fire. Father White gives a meagre account of a ceremony which he witnessed at Patuxent. They seem to have been of kindly and rather unwarlike disposition, and physically were dark, very tall, muscular, and well proportioned.

JAMES MOONEY.

Piscina (Lat. from *piscis*, a fish, fish-pond, pool or basin, called also *sacrarium*, *thalassicon*, or *fenestella*),

the name was used to denote a baptismal font or the cistern into which the water flowed from the head of the person baptized; or an excavation, some two or three feet deep and about one foot wide, covered with a stone slab, to receive the water from the washing of the priest's hands, the water used for washing the palls, purifiers, and corporals, the bread crumbs, cotton, etc. used after sacred unctions, and for the ashes of sacred things no longer fit for use.

It was constructed near the altar, at the south wall of the sanctuary, in the sacristy, or some other suitable place. It is found also in the form of a small column or niche of stone or metal.

Pise, CHARLES CONSTANTINE, priest, poet, and prose writer, b. at Annapolis, Maryland, 22 Nov., 1801; d. at Brooklyn, New York, 26 May, 1866. He was educated at Georgetown College, and was for some time a member of the Society of Jesus. He taught rhetoric at Mount St. Mary's College, Emmitsburg, Md., where John Hughes, afterwards Archbishop of New York, was among his pupils. In 1825 he was ordained to the priesthood and officiated for some time

CHARLES CONSTANTINE PISE

at the cathedral in Baltimore. He afterwards served at St. Patrick's church, Washington, as assistant pastor, and while there was elected (11 Dec., 1832) chaplain to the United States Senate—the only Catholic priest hitherto appointed to that office. He was a personal friend of President Tyler. In 1848 he became pastor of St. Peter's Church, New York; he had previously been assistant pastor in the same church under the vicar-general, Dr. Powers. In 1849 he was appointed pastor of St. Charles Borromeo's, Brooklyn, where he officiated until his death. Dr. Pise wrote several works in prose and verse, among them being "A History of the Catholic Church" (5 vols., 1829), "Father Rowland" (1829), "Aletheia, or Letters on the Truth of the Catholic Doctrines" (1845), "St. Ignatius and His First Companions" (1845), "Christianity and the Church" (1850). His "Clara", a poem of the fifteenth century, and "Montezuma", a drama, were never published. He contributed to the magazine literature of the day, was a distinguished lecturer and preacher, and a writer of Latin verse.

HENRY A. BRANN.

Pisidia, a country in the southwestern part of Asia Minor, between the high Phrygian tableland and the maritime plain of Pamphilia. This district, formed by the lofty ridges of the western Taurus range, was in pre-Christian times the abode of stalwart, half-civilized, and unruly tribes, never entirely subdued. Ancient writers describe them as a restless, plunder-loving population. St. Paul, no doubt, had in mind Pisidia, which he had traversed twice (Acts, xiii, 13-14; note here that, according to the more probable text, in the latter verse we should read "Pisidian Antioch"; xiv, 20-23), perhaps three times (Acts, xvi, 6), when in II Cor., xi, 26, he mentions the "perils of waters" and "perils of robbers" he had confronted. Independent until 36 B. C., the Pisidians were then conquered by the Galatian king, Amyntas, and soon after, together with their conquerors, forced to acknowledge Roman suzerainty. Joined first to one province, then to another, it received a governor of its own in 297 A. D. The principal cities were Cremna, Adada (the modern name of which, Kara Bavlo, preserves the memory of St. Paul), Serge, Termessos, Pednalisos, Sagalassos. Heaps of imposing ruins are all that is now left.

CHARLES L. SOUVAY.

Pistis, SOPHIA. See Gnosticism.

Pistoia, SYNOD OF, held 18 to 28 September, 1786, by Scipio de' Ricci, Bishop of Pistoia and Prato. It marks the most daring effort ever made to secure for Jansenism and allied errors a foothold in Italy. Peter Leopold, created Grand Duke of Tuscany in 1763, emulated the example of his brother, Emperor Joseph II, in assuming to control religious affairs in his domain. Imbued with Regalism and Jansenism he extended a misguided zeal for reform to minutest details of discipline and worship. In two instructions of 2 August, 1785, and 26 January, 1786, he sent to each of the bishops of Tuscany a series of fifty-seven "points of view of His Royal Highness" on doctrinal, disciplinary, and liturgical matters, directing that diocesan synods be held every two years to enforce reform in the Church and "to restore to the bishops their native rights abusively usurped by the Roman Court". Of the eighteen Tuscan bishops but three convoked the synod; and of these his only partisan was Scipio de' Ricci in whom he found a kindred spirit. Born in 1714 of an eminent family, de' Ricci gave early promise of worth and eminence. Made Bishop of Pistoia and Prato, the most populous of the Tuscan dioceses, 19 June, 1780, he planned and energetically pursued, with the encouragement of Pius VI, the work of much-needed reform, but influenced by the times, his zeal came to be marked by reckless audacity. He condemned devotion to the Sacred Heart, discouraged the use of relics and images, undervalued indulgences, improvised liturgy, and founded a press for Jansenistic propaganda. On 31 July, 1786, de' Ricci, in convoking the synod, invoked the authority of Pius VI who had previously recommended a synod as the normal means of diocesan reform. With characteristic energy and prevision he prepared for the council by inviting from without his diocese, theologians and canonists notorious for Gallican and Jansenistic tendencies, and issued to his clergy pronouncements which reflected the dominant errors of the times. On 18 September, 1786, the synod was opened in the church of St. Leopold in Pistoia and continued through seven sessions until 28 September. De' Ricci presided, and at his right sat the royal commissioner, Giuseppe Paribeni, professor at the University of Pisa, and a regalist. The promoter was Pietro Tamburini, professor at the University of Pavia, conspicuous for his learning and for Jansenistic sympathies. At the opening session 234 members were present; but at the fifth session 246 attended, of whom 180 were pastors, 13 canons, 12 chaplains, 28 simple priests of the secular clergy, and 13 regulars. Of these many, including even the promoter, were extra-diocesans irregularly intruded by de' Ricci because of their sympathy with his designs. Several Pistorian priests were not invited while the clergy of Prato, where feeling against the bishop was particularly strong, was all but ignored.

The points proposed by the grand duke and the innovations of the bishop were discussed with warmth and no little acerbity. The Regalists pressed their audacity to heretical extremes, and evoked protests from the papal adherents. Though these objections led to some modifications, the propositions of Leopold were substantially accepted, the four Gallican Articles of the Assembly of the French Clergy of 1682 were adopted, and the reform programme of de' Ricci carried out virtually in its entirety. The theological opinions were strongly Jansenistic. Among the vagaries proposed were: the right of civil authority to create matrimonial impediments; the reduction of all religious orders to one body with a common habit and no perpetual vows; a vernacular liturgy with but one altar in a church etc. Two hundred and thirty-three members signed the acts in the final session of 28 September, when the synod adjourned intending to reconvene in the following April and September. In

February, 1787, the first edition (thirty-five hundred copies) of the Acts and Decrees appeared, bearing the royal *imprimatur*. De Ricci, wishing the Holy See to believe that the work was approved by his clergy, summoned his priests to pastoral retreat in April with a view to obtaining their signatures to an acceptance of the synod. Only twenty-seven attended, and of these twenty refused to sign. Leopold meantime summoned all the Tuscan bishops to meet at Florence, 23 April, 1787, to pave the way for acceptance of the Pistorian decrees at a provincial council; but the assembled bishops vigorously opposed his project, and after nineteen stormy sessions he dismissed the assembly and abandoned hope of the council. De Ricci became discredited, and, after Leopold's accession to the imperial throne in 1790, was compelled to resign his see. Pius VI commissioned four bishops, assisted by theologians of the secular clergy, to examine the Pistorian enactments, and deputed a congregation of cardinals and bishops to pass judgment on them. They condemned the synod and stigmatized eighty-five of its propositions as erroneous and dangerous. Pius VI on 28 August, 1794, dealt the death-blow to the influence of the synod and of Jansenism in Italy in his Bull "Auctorem Fidei".

Atti e Decreti del Concilio Diocesano di Pistoia (2nd ed., Florence, 1788); tr. JOHN B. PETERSON.

Pistoia and Prato, DIOCESE OF (PISTORIENSIS ET PRATENSIS), in the Province of Florence. The city of Pistoia is situated at the foot of the Apennines in the valley of the Ombrone. The chief industries of the town are the manufacture of paper and objects in straw. The cathedral dates from the fifth century, but was damaged by fire several times prior to the thirteenth century, when Niccolò Pisano designed its present form; the outer walls are inlaid with bands of black and white marble; the tribune was painted by Passignano and by Sorri; the paintings by Alessio d'Andrea and by Buonaccorso di Cino (1347), which were in the centre aisle, have disappeared. Other things to be admired, are the ancient pulpit, the cenotaphs of Cino da Pistoia and Cardinal Forteguerra, by Verrocchio, the altar of S. Atto, with its silver work, the baptismal font by Ferrucci, and the equipments of the sacristy. Opposite the cathedral is S. Giovanni

Rotondo, the former baptistry; it is an octagonal structure, the work of Andrea Pisano (1333-59), with decorations by Cellino di Nese; the font itself is a square base with four wells, surmounted by a statue of St. John the Baptist by Andrea Vaccà. The church of S. Giovanni Fuoricivitas is surrounded, on the upper part, by two rows of arches; it is a work of the twelfth century; within, there is the pulpit, with its sculptures by Fra Gulielmo d'Agnello, and the holy-water font, representing the theological virtues, by Giovanni Pisano. The name of Pistoia appears for the first time in history in connexion with the conspiracy of Catiline (62 B. C.), but it was only after the sixth century that it became important; it was governed, first, by its bishops, later by stewards of the Marquis of Tuscany. It was the first to establish its independence, after the death of Countess Matilda, and its municipal statutes are the most ancient of their kind in Italy. It was a Ghibelline town, and had subjugated several cities and castles; but, after the death of Frederick II, the Florentines compelled it to become Guelph. About 1300, the Houses of the Cancellieri (Guelphs), and Panciatichi (Ghibellines), struggled with each other for supremacy. The former having triumphed

it soon divided into Bianchi and Neri, which made it easy for Castruccio Castracane to subject the town to his domination, in 1328. Florence assisted the Pistoians to drive Castruccio from their town, but that aid soon weighed upon them, and they revolted (1343), taking part with Pisa. In 1351 Pistoia became definitively subject to Florence. Clement IX was a Pistoian.

PRATO is also a city in the Province of Florence, situated in the fertile valley of the Bisenzio, which supports

many industries, among them flour mills, woolen and silk manufactories, quarries, iron, and copper works. The Cicognani college of Prato is famous. The cathedral, which was erected before the tenth century, was restored in the thirteenth and fourteenth centuries, according to plans of Giovanni Pisano; it contains paintings by Fra Filippo Lippi and by Gaddi, a pulpit that is a masterpiece of Donatello, and the mausoleums of Carlo de' Medici and of Vincenzo Danti. In the chapel of la Cintola there is preserved a girdle that, according to the legend, was given by Our Lady to St. Thomas. Prato is first mentioned in history, in 1007, as being in rebellion against Florence; after that it had several wars with Florence and Pistoia. In 1350, it was bought by the Florentines, to prevent it from falling into the hands of the Visconti. In 1512, it was sacked by the Spaniards. Fra Arlotto, author of the first Biblical concordance, was a native of Prato, as were also Fra Bartolommeo della Porta and several personages of the Inghirami family. Pistoia claims to have received the Gospel from St. Romulus, the first Bishop of Fiesole. The first mention of a Bishop of Pistoia is in 492, though the name of this prelate, like that of another Bishop of Pistoia, referred to in 516, is unknown. The first historically known bishop is Joannes (700); Leo (1067), important in the schism of Henry IV; Jacobus

FAÇADE OF THE CATHEDRAL, PISTOIA (XIII CENTURY)
Designed by Niccolò Pisano

(1118-41); the Blessed Atto (1135-53); Bonus (1189), author of "De cohabitatione clericorum et mulierum"; the Ven. Giovanni Vivenzi (1370); Matteo Diamanti (1400); Donato de' Medici (1436) Nicolò Pandolfini (1475), who later became a cardinal; three Pucci, Cardinal Lorenzo (1516), Cardinal Antonio (1519) and Roberto (1541); Alessandro de' Medici (1573) became Leo XI. In 1653, Prato was made a diocese, and united, *æque principaliter*, with Pistoia; as early as 1409, Florence asked for the creation of a diocese at Prato, on account of the dissensions of the collegiate church of Prato with the Bishops of Pistoia; and in 1460, it had been made a *prelatura nullius*, and given, as a rule, to some cardinal, *in commendam*. Other bishops of these sees were the Ven. Gerardo Gerardi (1679-90), under whom Prato founded its seminary; Leone Strozza (1690), Abbot of Vallombrosa, founded the seminary of Pistoia, enlarged by Michele C. Visdomini (1702); Scipione Ricci (1780), famous on account of the Synod of Pistoia which he convened in 1786, and which Pius VI afterwards condemned. The diocese is a suffragan of Florence; has 194 parishes, with 200,100 inhabitants, 5 religious houses of men, and 19 of women, and 7 educational establishments for girls.

U. BENIGNI.

Pistorius, JOHANN, controversialist and historian, b. at Nidda in Hesse, 14 February, 1546; d. at Freiburg, 18 July, 1608. He is sometimes called Niddanus from the name of his birthplace. His father was a well-known Protestant minister, Johann Pistorius the Elder (d. 1583 at Nidda), who from 1541 was superintendent or chief minister of Nidda, and took part in several religious disputations between Catholics and Protestants. Pistorius the Younger studied theology, law, and medicine at Marburg and Wittenberg 1559-67. He received the degree of Doctor of Medicine, and in 1575 was appointed court physician to the Margrave Karl II of Baden-Durlach, who frequently sought his advice in political and theological matters. In search of more consistent beliefs, Pistorius turned from Lutheranism to Calvinism; through his influence the Margrave Ernst Friedrich of Baden-Durlach made the same change. As time went on, however, Pistorius became dissatisfied with Calvinism also. In 1584 he became a privy councillor of Margrave James III of Baden-Hochberg at Emmendingen; after further investigation he entered the Catholic Church in 1588. At his request the Margrave James brought about the religious disputations of Baden, 1589, and Emmendingen, 1590. After the second disputation the court preacher Zehender and the margrave himself became Catholics. James III, however, died on 17 August, 1590, and being succeeded by his Protestant brother Ernst Friedrich, Pistorius was obliged to leave. He went to Freiburg, became a priest in 1591, then vicar-general of Con-

stance until 1594; after this he was an imperial councillor, cathedral provost of Breslau, Apostolic protonotary, and in 1601 confessor to the Emperor Rudolph II. After his death his library came into the possession of the Jesuits of Molsheim and later was transferred to the theological seminary at Strasbourg.

Pistorius published a detailed account of the conversion of Margrave James III: "Jakobs Marggrafen zu Baden . . . christliche, erhebliche und wol-

fundirte Motifen" (Cologne, 1591). His numerous writings against Protestantism, while evincing clearness, skill, and thorough knowledge of his opponents, especially of Luther, are marked by controversial sharpness and coarseness. The most important are: "Anatomia Lutheri" (Cologne, 1595-8); "Hochwichtige Merkzeichen des alten und neuen Glaubens" (Münster, 1599); "Wegweiser vor alle verführte Christen" (Münster, 1599). Pistorius was attacked violently by the Protestants; e. g., by Huber, Spangenberg, Ment-

zer, Horstius, and Christoph Agricola. Replies to the "Anatomia Lutheri" were written by the Protestant theologians of Wittenberg and Hesse. Pistorius also busied himself with cabalistic studies, and published "Artis cabbalisticæ, h. e. reconditæ theologiæ et philosophiæ scriptorum tomus unus" (Basle, 1587). As court historiographer to the Margrave of Baden, he investigated the genealogy of the princely house of Zähringen; he also issued two works on historical sources: "Polonica historia corpus, i. e. Polonicarum rerum latini veteres et recentiores scriptores quotquot exstant" (Basle, 1582), and "Rerum Germanicarum veteres jam primum publicati scriptores aliquot insignes medii ævi ad Carolum V" (Frankfort, 1583-1607).

FRIEDRICH LAUCHERT.

Pitaval, JOHN BAPTIST. See SANTA FÉ, ARCHDIOCESE OF.

Pithou, PIERRE, writer, b. at Troyes, 1 Nov., 1539; d. at Nogent-sur-Seine, 1 Nov., 1596. His father, a distinguished lawyer, had secretly embraced Calvinism. Pierre studied the classics in Paris under Turnèbe, and afterwards with his brother, François Pithou, attended lectures in law at Bourges and Valence under Cujas, who often said: *Pithæi fratres, clarissima lumina*. In 1560 he was admitted to practise at the Paris bar; but on the outbreak of the second war of religion, he withdrew to Troyes. Not being admitted to the bar at Troyes on account of his Calvinist belief, he withdrew to Sedan which was a Protestant district, and, at the request of the Duc de Bouillon, he

THE CATHEDRAL, PRATO
Enlarged by Giovanni Pisano in 1312

codified the legal customs into the form of laws. He then proceeded to Basle, where he published Otto de Freisingen's "Vie de Frédéric Barberousse" and Warnfrid's "Historia Miscellanea". After the Edict of Pacification of 1570 he returned to France, escaped during the Massacre of St. Bartholomew, and, in 1573, joined the Catholic Church. In the struggles between the future Henry IV and the League, he was an ardent adherent of Henry; he collaborated in the production of the "Satire Ménippée", and being skilled in canon law, made a study, in an anonymous letter published

in 1593, of the right of the French bishops to absolve Henry IV without consulting the pope. In 1594 he published an epoch-making work "Les libertés de l'église gallicane". For the first time the maxims of Gallicanism were really codified, in eighty-three articles. The first edition was dedicated to Henry IV. The permission to publish the edition of 1651 under Louis XIV contains these words:

"We wish to show our favour to a work of so great importance for the rights of our crown". Pithou's book was the basis of the Four Articles of 1682. D'Aguesseau declared that the book was "the palladium of France", President Hénault, that "the maxims of Pithou have in a sense the force of laws". An edict of 1719, and a decree of the Parliament of Dauphiné on 21 April, 1768, ordered the enforcement of certain articles in Pithou's book, as if these eighty-three articles were legal enactments. They were reprinted by Dupin in 1824.

Henry IV appointed Pithou procurator general of the Parliament of Paris; but he soon resigned the post, preferring to return to his juristic and literary studies. He edited Salvian, Quintilian, Petronius, Phædrus, the Capitularies of Charlemagne, and the "Corpus juris canonici". His brother François (1541-1621), who became a Catholic in 1578, wrote in 1587 a treatise on "The greatness of the rights, and of the pre-eminence of the kings and the kingdom of France", and was distinguished for his fanatical hostility to the Jesuits. Pierre Pithou, more equitable, saved the Jesuits from some of the dangers that threatened them for a short time after the attempted assassination of Henry IV by Châtel.

GROSLEY, *Vie de Pierre Pithou* (Paris, 1756); DUPIN, *Libertés de l'Eglise gallicane* (Paris, 1824), preface.

GEORGES GOYAU.

Pitigliano. See SOVANA AND PITIGLIANO, DIOCESE OF.

Pitoni, JOSEPH, musician, b. at Rieti, Perugia, Italy, 18 March, 1657; d. at Rome, 1 Feb., 1743, and buried in the church of San Marco, where he had been choirmaster, in the Pitoni family vault. His biography, by his pupil Girolamo Chiti, is in the library of the Corsini palace. At five years he began to study music at Rome. Not yet sixteen, he composed pieces which were sung in the church of the Holy Apostles. At that age he was in charge of the choir at Monte Rotondo; at seventeen at the Cathedral of Assisi. At twenty (1677) he returned to Rome, and was *maestro*

di cappella in many churches; in 1708 he was appointed director of St. John Lateran. In 1719 he became choirmaster of St. Peter's, and remained in that office for twenty-four years. In the Accademia di S. Cecilia he was one of the four *esaminatori dei maestri*. Pitoni acquired such a marvellous facility, that for his compositions, which were of great musical value, he could write every part separately, without making a score. The number of his compositions, says Chiti, is infinite. Many of them are written for three and four choirs. He also began a Mass for twelve choirs; but his advanced age did not allow him to finish it. He left a work "Notizie dei maestri di Cappella si di Roma che oltramontani".

Dictionary of Music from 1450-1880 (London, 1880); EITNER, *Quellenlexicon*, VII (1902), 462-64; BAINI, *Memorie . . . di G. P. da Palestrina*, II (Rome, 1828), 55, nota 502, Ger. tr. KANDLER (Vienna, 1834).

A. WALTER.

Pitra, JEAN-BAPTISTE-FRANÇOIS, cardinal, famous archæologist and theologian, b. 1 August, 1812, at Champforgeuil in the Department of Saône-et-Loire, France; d. 9 Feb., 1889, in Rome. He was educated at Autun, ordained priest on 11 December, 1836, and occupied the chair of rhetoric at the *petit séminaire* of Autun from 1836 to 1841. From his early youth he manifested an indefatigable diligence which, combined with brilliant talents and a remarkable memory, made him one of the most learned men of his time. The first fruit of his scholarship was his decipherment, in 1839, of the fragments of a sepulchral monument, discovered in the cemetery of Saint-Pierre at Autun and known as the "Inscription of Autun". It probably dates back to the third century, was composed by a certain Pectorius and placed over the grave of his parents. The initials of the first five verses of the eleven-line inscription form the symbolical word *ixθvs* (fish), and the whole inscription is a splendid testimony of the early belief in baptism, the Holy Eucharist, prayer for the dead, communion of saints, and life everlasting. He published the inscription in "Spicilegium Solesmense" (III, 554-64).

In 1840 Pitra applied to Abbot Guéranger of Solesmes for admission into the Benedictine order but, to accommodate the Bishop of Autun, he remained another year as professor at the *petit séminaire* of Autun. He finally began his novitiate at Solesmes on 15 January, 1842, and made his profession on 10 February, 1843. A month later, he was appointed prior of St-Germain in Paris. During his sojourn there he was one of the chief collaborators of Abbé Migne in the latter's colossal "Cursus patrologiæ". Pitra drew up the list of the authors whose writings were to find a place in the work, and collaborated in the edition of the Greek writers up to Photius, and of the Latin up to Innocent III. At the same time he contributed extensively to the newly founded periodical "Auxiliaire catholique". In 1845 he had to break his connexion with the great work of Migne, owing to the financial difficulties of the priory of St-Germain, which finally had to be sold to satisfy the creditors. Pitra undertook a journey through Champagne, Burgundy, Lorraine, Alsace, Switzerland, Belgium, Holland, and England in the interests of his priory. At the same time he visited numerous libraries in these countries in search of unpublished manuscripts bearing on the history of the early Christian Church. The fruits of his researches he gave to the world in his famous "Spicilegium Solesmense" (see below).

His many great archæological discoveries and his unusual acquaintance with whatever bore any relation to the Byzantine Church, induced Pius IX to send him on a scientific mission to the libraries of Russia in 1858. Before setting out on his journey he studied the manuscripts relative to Greek canon law, in the libraries of Rome and other Italian cities. In Russia, where he spent over seven months (July, 1859-March, 1860),

PIERRE PITHOU

From a contemporary portrait, Versailles

he had free access to all the libraries of St. Petersburg and Moscow. On his return he made an official visit of the twenty Basilian monasteries of Galicia at the instance of the papal nuncio at Vienna. After arranging his writings at the monasteries of Solesmes and Ligugé, he was called to Rome in August, 1861, to consult with the pope on the advisability of erecting at the Propaganda a special department for Oriental affairs and to make a personal report on his findings in the libraries of Russia. Pitra was also chosen to supervise the new edition of the liturgical books of the Greek Rite, which was being prepared by the Propaganda. He was created cardinal on 16 March, 1863, with the titular church of St. Thomas in Parione. As his residence he chose the palace of San Callisto where he continued to live the simple life of a monk as far as his new duties permitted.

On 23 Jan., 1869, he was appointed librarian of the Vatican. He drew up new and more liberal regulations for the use of the library and facilitated in every way access of scholars to the Vatican manuscripts. Above all, however, he himself made diligent researches among the manuscripts and published many rare and valuable specimens in his "Analecta" (see below). At the Vatican Council in 1870, he ably maintained against the inopportunist that the Catholics of the Greek and Oriental Churches upheld the papal infallibility. After the accession of Leo XIII (20 Feb., 1878) he supervised the edition of a catalogue of the Vatican manuscripts, of which the first volume, "Codices Palatini Græci", appeared in 1885 and was prefaced by Cardinal Pitra with a laudatory epistle addressed to Leo XIII. On 21 May, 1879, he was appointed Cardinal-Bishop of Frascati and for five years laboured incessantly for the welfare of his diocese, which had been greatly neglected. On 24 March, 1884, he was transferred to the episcopal See of Porto and Santa Rufina to which was annexed the dignity of subdean of the Sacred College. On 19 May, 1885, Abbé Brouwers published in the "Amstelbode", a Catholic journal of Belgium, a letter of Pitra, which the hostile press construed into an attack upon the policy of Leo XIII; but Pitra soon satisfied the Holy See of his filial devotion.

Cardinal Pitra was one of the most learned and pious members of the Sacred College. Besides being Librarian of the Holy Roman Church and member of various Roman congregations and cardinalitial commissions, he was cardinal protector of the Cistercians, the Benedictine congregation of France, the Benedictine nuns of St. Cecilia at Solesmes and of Stanbrook in England, the Eudists, the Brothers of Christian schools, the Sisters of Mercy of St. Charles in Nancy, and the Sisters of the Atonement in Paris. The following are his literary productions:—(1) "Histoire de Saint Léger, évêque d'Autun et martyr, et de l'église des Francs au VII^e siècle" (Paris, 1846), one of the most complete monographs on the Church of the Franks during the seventh century; (2) "La Hollande catholique" (Paris, 1850), consisting mostly of letters concerning Holland and its people, which he wrote while travelling in that country in 1849; (3) "Etudes sur la collection des Actes des Saints par les RR. PP. Jésuites Bollandistes" (Paris, 1850), a complete history of the "Acta Sanctorum" of the Bollandists, preceded by a treatise on the hagiological collections up to the time of Rosweyde (d. 1629); (4) "Spicilegium Solesmense" (4 vols., Paris, 1852-1858), a collection of hitherto unpublished works of Greek and Latin Fathers of the Church and other early ecclesiastical writers; (5) "Vie du P. Libermann" (Paris, 1855; 2nd ed., 1872; 3rd ed., 1882), a very reliable life of the Venerable Paul Libermann, founder of the Congregation of the Sacred Heart of Mary. Libermann had been a personal acquaintance of Pitra; (6) "Juris ecclesiastici Græcorum historia et monumenta" (2 vols., Rome, 1864-8), containing the canonical writings of the

Greeks from the so-called "Apostolic Constitutions" to the "Nomocanon", generally ascribed to Photius. With its learned introduction and its many notes and comments, the work forms a complete history of Byzantine law; (7) "Hymnographie de l'église grecque" (Rome, 1867), a dissertation on Greek hymnography, accompanied by numerous Greek hymns in honour of Sts. Peter and Paul; (8) "Analecta sacra Spicilegio Solesmensi parata" (8 vols.), a supplement to "Spicilegium Solesmense". The first volume (Paris, 1876) contains Greek hymns; the second (Frascati, 1883), the third (Venice, 1883), and the fourth (Paris, 1883) contain writings of ante-Nicene Fathers; the fifth (Paris, 1888) is composed of writings of the Fathers and of a few pagan philosophers; the seventh (Paris, 1891) contains writings bearing on the canon law of the Greeks and was published posthumously by Battandier, who had been Pitra's secretary; the eighth (Monte Cassino, 1881) contains the writings of St. Hildegard; the sixth, which was to contain Greek melodies, has not been published; (9) "Analecta novissima" (2 vols., Frascati, 1885-8), a second supplement to "Spicilegium Solesmense". The first volume contains a French treatise on papal letters, bullaria, catalogues of popes etc., and a hitherto unpublished treatise on Pope Vigilius by Dom Constant. The second volume is devoted to writings of Odon d'Ourcamp, Odon de Châteauroux, Jacques de Vitry, and Bertrand de la Tour, four medieval French bishops of Frascati; (10) "Sancti Romani cantica sacra" (Rome, 1888), a collection of hymns written by Romanos, the greatest Byzantine hymnodist. Pitra presented this work to Leo XIII on the occasion of his sacerdotal jubilee. In addition to these works Pitra contributed numerous archaeological, theological, historical, and other articles to various scientific periodicals of France.

MICHAEL OTT.

Pitts, JOHN, b. at Alton, Hampshire, 1560; d. at Liverdun, Lorraine, 17 Oct., 1616. He was educated at Winchester and New College, Oxford, where he remained, 20 March, 1578-1580. He was admitted to the English College, Rome, 18 Oct., 1581, ordained priest 2 March, 1588, became professor of rhetoric and Greek at the English College, Reims, proceeded M.A. and B.D. at Pont-à-Musson, Lic.D. at Trèves (1592), and D.D. at Ingolstadt (1595). After holding a canonry at Verdun for two years he was appointed confessor and almoner to the Duchess of Cleves, and held this position for twelve years. After her death his former pupil, the Bishop of Toul, appointed him dean of Liverdun. His chief work is the "Relationum Historicarum de rebus Angliæ", of which only one part, "De Illustribus Angliæ Scriptoribus", was published (Paris, 1619). The other sections, "De Regibus Angliæ", "De Episcopis Angliæ", and "De Viris Apostolicis Angliæ", remained in MS. at Liverdun. The "De Scriptoribus" is chiefly valuable for the notices of contemporary writers. On other points it must be used with caution, being largely compiled from the uncritical work of Bale. Pitts also published "Tractatus de legibus" (Trier, 1592); "Tractatus de beatitudine" (Ingolstadt, 1595); and "Libri septem de peregrinatione" (Düsseldorf, 1604).

EDWIN BURTON.

Pittsburg, DIOCESE OF (PITTSBURGENSIS), suffragan of Philadelphia, in the United States of America. It comprises the counties of Allegheny, Armstrong, Beaver, Butler, Fayette, Greene, Indiana, Lawrence, Washington, and Westmoreland in the State of Pennsylvania, an area of 7238 square miles, the total population of which is 1,944,942 (U. S. Census, 1910). About 24.42 per cent of these are Catholics.

It is probable that the first religious services held by white men within the limits of what is now the Diocese of Pittsburg were conducted by a Jesuit, Father Bonnacamp, who accompanied Celeron in his exploration along the Allegheny and Ohio Rivers in 1749. The strategic character of the ground where the Monongahela and Allegheny Rivers meet to form the Ohio pointed this place out to George Washington as a spot of future importance. He first saw "the Forks", as the place was called by the Indians, on 24 November, 1753, when engaged in bearing a letter from Robert Dinwiddie, Lieutenant-Governor of Virginia, to the commander of the French forces, asserting the British claims to the territory of Western Pennsylvania. Both England and France regarded the Forks as a valuable military position, opening a way for exploration to the west and south, and each was determined to occupy it. At that time the adjacent country was occupied by various Indian tribes—the Shawnees, Delawares, Senecas—dwelling along the Allegheny, Monongahela, and Ohio Rivers. The first place of public worship within this territory was a chapel erected by the French in the stockade of Fort Duquesne, after Captain Contrecoeur and his forces had driven Ensigns Ward and Frazier from the Fort they were constructing at the fork of the Ohio. This chapel was built at some time later than 16 April, 1754, and dedicated under the title of "The Assumption of the Blessed Virgin of the Beautiful River". In those days and for long afterwards, the Ohio—on account of its clear water and rugged scenery—was known as the "beautiful river".

There is preserved in the archives of the city of Montreal a register of baptisms and deaths kept by the army chaplain at Fort Duquesne, from which we learn that the first interment in the cemetery of the fort was that of Toussaint Boyer, who died 20 June, 1754. The first white child born on the site of the city of Pittsburg was John Daniel Norment. His godfather was the chief officer of Fort Duquesne, John Daniel Sieur Dumas. These entries are signed by "Friar Denys Baron, Recollect Priest, Chaplain". If written evidence alone were to be considered, Father Baron, and not Father Bonnacamp (mentioned above), must be regarded as the first priest to offer the Holy Sacrifice, and the first white man to perform any public act of religious worship in the territory of the diocese. The register of baptisms and interments which took place at Fort Duquesne begins 11 July, 1753, and ends 10 October, 1756. The records before June, 1754, are from posts occupied by the French in the north-western part of Pennsylvania, now in the Diocese of Erie, before they took possession of the spot on which Fort Duquesne stood. In the register we find entries made by Friar Gabriel Amheuser and Friar Luke Collet, but they were chaplains from other French forts. Friar Denys Baron alone signs himself "Chaplain" of Fort Duquesne. These records testify to the baptism and burial of a number of Indians, showing that the French chaplains did not neglect their missionary duties.

The French evacuated the fort, the British army under General Forbes took possession in 1758, and the place was named Pittsburg, or Fort Pitt, after William Pitt, Prime Minister of England. For thirty or forty years the Catholic religion was almost, if not entirely, without adherents in Western Pennsylvania. Gradually, as the western part of the state was settled, the Catholics gained a foothold, but met with much

opposition in this strongly Calvinistic section. In 1784 their numbers had increased sufficiently about Pittsburg to warrant them in sending Felix Hughes to the Very Rev. John Carroll, at Baltimore, who was then superior of the clergy in the United States, asking that a priest be sent to minister to them at least once or twice a year. By this time there were seventy-five or eighty families along the Chartiers Creek, up the Monongahela Valley, and about Pittsburg. Priests were few in the country then, and the request could not be complied with. Under such conditions some of the Catholics in Western Pennsylvania became indifferent, abandoned their religion altogether, or neglected their religious duties, even when the priests came. It is probable that the first priest to pass through Western Pennsylvania and minister to the Catholics there was a Carmelite, Father Paul, who came in 1785. Another was the Rev. Charles Whalen, a Capuchin, who remained a short time in 1787. In 1792 the Rev. Benedict Joseph Flaget, afterwards Bishop of Bardstown, remained here for some weeks. In 1793 the Revs. Baden and Barrièrès came to Pittsburg and remained from September until November. The Rev. Michael Fournier was here fourteen weeks in the winter of 1796-7.

The site on which St. Vincent's Archabbey now stands, in Unity township, Westmoreland county, was the first place where a permanent Catholic settlement was made in Western Pennsylvania. This was about 1787. The Rev. Theodore Browsers purchased the tract of land then known as "Sportsman's Hall" in 1790, and became the first priest of the little colony. When the Rev. Peter Heilbron came to take charge of the parish, in November, 1799, he found seventy-five communicants. In March, 1789, ground was purchased at Greensburg, where the Rev. John B. Causse said Mass for the first time in June, 1789. A log chapel was begun in 1790, but was never completed. The Rev. Patrick Lonergan went with a colony of Catholics from Sportsman's Hall in 1798 and, after a short stay at West Alexander, began a church at Waynesburg, Greene County, in 1799, or 1800, "which", says Archbishop Kenrick of Baltimore, writing in 1862, "was completed by me thirty years later". In the summer of 1799, the Rev. Demetrius A. Gallitzin came to reside with a colony of Catholics at Maguire's Settlement, now known as Loretto, in Cambria County, in the present Diocese of Altoona, and his mission-field included much of what is now the Diocese of Pittsburg. These, with the churches at Sugar Creek, Armstrong County, where the Rev. Lawrence S. Phelan took up his residence in 1805, and at Pittsburg, where the Rev. William F. X. O'Brien settled in 1808, were the first centres of the Faith in Western Pennsylvania. The Franciscans, who had reared the first altar at Fort Duquesne, furnished the first missionaries to attempt permanent centres of Catholic life, and establish places of worship in Western Pennsylvania. The Revs. Theodore Browsers, John B. Causse, Patrick Lonergan, Peter Heilbron, Charles B. Maguire, all belonged to one or another branch of the Order of St. Francis.

The Rev. William F. X. O'Brien, the first resident pastor of Pittsburg, was ordained at Baltimore 11 June, 1808, came to Pittsburg in November of the same year, and took up the erection of the church which is known in history as "Old St. Patrick's". It stood at the corner of Liberty and Epiphany streets, at the head of Eleventh Street, in front of the present Union Station. The Right Rev. Michael Egan dedicated this church in August, 1811, and its dedication and the administration of the Sacrament of Confirmation mark the first visit of a bishop to this part of the state. After twelve years of labour and exposure on the missions of his extensive territory, in which there were perhaps not more than 1800 souls, Father

O'Brien's health declined, and in March, 1820, he retired to Maryland, where he died 1 November, 1832. He was succeeded in May, 1820, by the Rev. Charles B. Maguire, who had been pastor of the church at Sportsman's Hall since 1817. "Priest Maguire", as he was called by the Protestant people of Pittsburg, was a man of great ability and extensive learning, and in his day one of the best known and most respected and influential citizens of the community. He gave to the parish of St. Patrick, and to the Church in Western Pennsylvania something of his own strong personality and splendid qualities of order, progress, industry, love, and fidelity to Jesus Christ—influences that are still felt. He began in 1827 the erection of St. Paul's church, which, when finished and dedicated 4 May, 1834, was the largest and most imposing church edifice in the United States. The Poor Clare Nuns opened a convent and academy in 1828 on Nunnery Hill in what was then Allegheny (now the North Side of Pittsburg). The community left Nunnery Hill in 1835 and, after remaining in another part of Allegheny until 1837, the sisters either returned to Europe, or entered other religious communities in the United States.

Father Maguire died of cholera 17 July, 1833, and was succeeded as pastor by his assistant, the Rev. John O'Reilly, who completed St. Paul's church, introduced the Sisters of Charity from Emmitsburg, Maryland, in 1835, and established in the same year a Catholic school, and in 1838 an orphan asylum which the Sisters of Charity conducted until they were withdrawn from the diocese by their superiors in 1845. In April, 1837, Father O'Reilly was transferred to Philadelphia, and the Rev. Thomas Heyden, of Bedford, took his place. In November of the same year, Father Heyden returned to Bedford, and the Rev. P. R. Kenrick, the late Archbishop of St. Louis, became pastor of St. Paul's, Pittsburg. In the summer of 1838, Father O'Reilly exchanged places with Father Kenrick, and returned to Pittsburg. He remained at St. Paul's until succeeded by the Rev. Michael O'Connor, 17 June, 1841. He then went to Rome, entered the Congregation of the Mission, and died at St. Louis, Missouri, 4 March, 1862. The first religious community of men was established in Pittsburg, 8 April, 1839, which date marks the advent of the Fathers of the Congregation of Our Most Holy Redeemer, in the person of the Rev. Father Prost, who came to take charge of St. Patrick's parish, and establish St. Philomena's.

Bishop Flaget appears to have been the first to regard Pittsburg as the future see of a bishop, having entertained this idea in 1825. As early as 1835 Bishop Kenrick proposed to the cardinal prefect of Propaganda a division of the Diocese of Philadelphia by the erection at Pittsburg of an episcopal see, and he recommended the appointment of the Rev. John Hughes as Bishop either of Philadelphia or of Pittsburg. The suggestion of Bishop Kenrick was officially approved in Rome, and in January, 1836, the Rev. John Hughes was named Bishop of Philadelphia, and Bishop Kenrick was transferred to Pittsburg. Some obstacle intervened, and the appointments were recalled. The matter was again discussed in the Third Provincial Council of Baltimore, 16 April, 1837, but no definite action was taken. In the Fifth Provincial Council, which assembled at Baltimore, 14 May, 1843, the division of the State of Pennsylvania into two dioceses was recommended to the Holy See, and the Rev. Dr. Michael O'Connor was named as the most suitable person to govern the new see. Both actions of the council were confirmed at Rome. The new Diocese of Pittsburg, according to the Bull of erection, issued 11 August, 1843, was "Western Pennsylvania". This designation being rather vague, Bishop Kenrick, of Philadelphia, and Bishop O'Connor agreed to consider the Diocese of Pittsburgh as com-

prising the Counties of Bedford, Huntingdon, Clearfield, McKean, and Potter, and all west of them in the State of Pennsylvania. This agreement was afterwards confirmed by a rescript of the Holy See. The new diocese contained an area of 21,300 sq. miles, or a little less than one-half of the state, and not more than one-third either of the entire, or of the Catholic population. Dr. Michael O'Connor was in Rome at the time of the division of the Diocese of Philadelphia, and his appointment to the new see was announced to him by Gregory XVI, while the future bishop knelt at his feet to ask permission to enter the Society of Jesus. "You shall be a bishop first, and a Jesuit afterwards", said the venerable pontiff. These prophetic words were literally fulfilled. The Bull of his appointment was dated 11 August, 1843, and he was consecrated four days later by Cardinal Franzoni in the church of S. Agata, at Rome, on the feast of the Assumption of the Blessed Virgin, the titular feast of the first chapel at Fort Duquesne.

Michael O'Connor was born near the city of Cork, Ireland, 27 September, 1810. His early education was received at Queenstown, in his native county. At the age of fourteen he went to France, where he studied for several years. Then he was sent by the Bishop of Cloyne and Ross to the College of the Propaganda, at Rome where he won the title of Doctor of Divinity. Cardinal Wiseman, then Rector of the English College at Rome, in his "Recollections of the Last Four Popes", speaks in terms of high commendation of the ability of the youthful O'Connor, and of the manner in which he won his doctor's cap and ring. On 1 June, 1833, he was ordained, and immediately afterwards was appointed professor of Sacred Scripture at the Propaganda. The post of vice-rector of the Irish College was next assigned to him, and, returning to his native land, he was stationed for a time in the parish of Fermoy. At the invitation of Bishop Kenrick he came to the United States in 1839, and was at once appointed to a professorship in St. Charles Borromeo's Seminary, Philadelphia, afterwards becoming its president. During his connexion with the seminary, he attended the mission at Morristown, and built the church of St. Francis Xavier at Fairmount. In June, 1841, he was appointed vicar-general of the western part of the State of Pennsylvania, and came to Pittsburg to succeed the Rev. John O'Reilly, as pastor of St. Paul's. The event is chronicled in his notebook as follows: "June 17, 1841, arrived at Pittsburg on this day (Thursday); lodging at Mrs. Timmons, at \$4.00 per week". One month after his arrival, Father O'Connor undertook the erection of a parochial school, organized a literary society for the young men of the city, and opened a reading-room. He was consecrated Bishop of Pittsburg 15 August, 1843, at Rome. Soon after his consecration he left Rome and passed through Ireland on his way to America, with a view of providing priests and religious for his diocese. He called at Maynooth in October, 1843, and made an appeal to the students, asking some of them to volunteer their services for the new Diocese of Pittsburg. Five students whose course of studies was almost completed and three others also far advanced resolved to accompany the bishop. Coming to Dublin, he obtained a colony of seven Sisters of the recently-founded Order of Our Lady of Mercy to take charge of the parochial schools and of the higher education of young ladies. These were the first Sisters of the Order of Mercy, founded by Mother Catherine McCauley, to establish a convent in the United States. He sailed for America 12 November, and arrived at Pittsburg in December, 1843. At that time the bishop had in his vast diocese 33 churches, a few of which were unfinished, 16 priests, and a Catholic population of less than 25,000 souls.

The following were the churches and priests of Western Pennsylvania at the time of the erection of

the Diocese of Pittsburg. In Allegheny County: Pittsburg, St. Paul's Cathedral, the Very Rev. M. O'Connor and his assistant, the Rev. Joseph F. Deane; St. Patrick's, the Rev. E. F. Garland; St. Philomena's (German), the Revs. John N. Neuman, Julius P. Saenderl, F. X. Tschenheus, Peter Czackert, C.S.S.R. The Rev. A. P. Gibbs resided in Pittsburg and attended a number of small congregations and missions in Allegheny and other counties: St. Philip's, Broadhead (now Crafton); St. Mary's, Pine Creek; St. Alphonsus, Wexford; St. Peter's, McKeesport. Westmoreland County: St. Vincent's; Mt. Carmel (near Derry), the Rev. Jas. A. Stillinger. Indiana County: Blairsville, Sts. Simon and Jude, and St. Patrick's, Cameron's Bottom; the Rev. Jas. A. Stillinger, from St. Vincent's. Butler County: Butler, St. Peter's, the Rev. H. P. Gallagher; Donegal, St. Joseph's (now North Oakland);

CATHEDRAL OF ST. PAUL, PITTSBURG

Murrinsville, St. Alphonsus; St. Mary's (now Herman), the Rev. H. P. Gallagher (residing at Butler). Armstrong County: St. Patrick's, Sugar Creek; St. Mary's, Freeport; the Rev. Joseph Cody, residing at Sugar Creek. Washington County: St. James, West Alexander. Fayette County: St. Peter's, Brownsville (in course of erection), the Rev. M. Gallagher. Greene County: Waynesburg, St. Ann's; other stations in Greene County, Washington County, and Fayette County, attended by the Rev. M. Gallagher, from Brownsville. Beaver County: Beaver, Sts. Peter and Paul. Bedford County: Bedford, St. Thomas, the Rev. Thomas Heyden. Somerset County: Harman Bottom, St. John's, the Rev. Thomas Heyden (residing at Bedford). Huntingdon County: Huntingdon, Holy Trinity, attended from Newry by the Rev. James Bradley. Blair County: Newry, St. Patrick's; St. Luke's, Sinking Valley and St. Mary's, Hollidaysburg, attended from Newry by the Rev. James Bradley. Cambria County: Loretto, St. Michael's; Jefferson (now Wilmore), St. Bartholomew's; Johnstown, St. John Gaulbert; Ebensburg, St. Patrick's (now Holy Name of Jesus); Hart's Sleeping Place, St. Joseph's; Summit, St. Aloysius's (these places attended in 1843 by the Rev. Peter H. Lemke, pastor of Loretto, and his assistant, the Rev. Matthew W. Gibson). Mercer County: Mercer, St. Raphael's, attended from Butler, by the Rev. H. P.

Gallagher. Clearfield County: Clearfield, St. Francis; French Settlement, St. Mary's; Grampian Hills, St. Bonaventure. Crawford County: Cupewago (dedication unknown); French Settlement, St. Hippolyte's; Oil Creek, St. Stephen's. Erie County: Erie, St. Patrick's; Erie, St. Mary's. Elk County: Elk Creek (dedication unknown); Marysville (dedication unknown). Clarion County: Erismans, St. Michael's; Red Bank, St. Nicholas's. The Rev. J. A. Berti seems to have attended the missions of Clearfield, Crawford, Erie, Elk, and Clarion Counties in 1843.

As yet there were but two religious communities in the diocese, the Redemptorist Fathers at St. Philomena's church, and the Sisters of Charity, who had charge of St. Paul's Orphan Asylum, and two schools in Pittsburg. The first parochial school building at St. Paul's, which has already been mentioned, was opened 14 April, 1844. On 16 June of the same year the first diocesan synod was held, and statutes were enacted for the government of the Church. On the 30th of the same month a chapel was opened for the use of the coloured Catholics of the city. In the same year the publication of "The Catholic" was begun, and the paper has been regularly issued every week down to the present time. St. Michael's ecclesiastical seminary, for the education of candidates for the priesthood, was established also in 1844. Thus in the brief space of a single year Bishop O'Connor had succeeded in thoroughly organizing all the departments of his vast diocese. The Presentation Brothers came in 1845 to take charge of St. Paul's Boys' School. They withdrew from the diocese, however, in 1848. In 1846 Bishop O'Connor received the Benedictine Order into the diocese. Their abbey was founded at St. Vincent's, Beatty, Pa., by the late Archabbot Boniface Wimmer (then the Rev. Boniface Wimmer, O.S.B.) from the Benedictine monastery of Melten, in Bavaria, and in its college and seminary many young men have received their higher education and completed their studies for the priesthood. The little seed sown at Sportsman's Hall has developed into the great Archabbey of St. Vincent's, which is, at this date (1911), the largest Benedictine institution in the world. In 1847 a community of the members of the Third Order of St. Francis came from Ireland and settled at Loretto, Cambria County, Pa. In 1848 the Sisters of Notre Dame opened a convent and school at St. Philomena's, Pittsburg. The Passionists, then an Italian order, were introduced into the diocese in 1852, and from their first monastery of St. Paul's, Pittsburg, the order has since spread into many States of the Union.

By 1852 the diocese had increased to such an extent that the bishop began to consider the propriety of having it divided, and a new one formed from the northern counties. He laid the matter before the Fathers of the First Plenary Council of Baltimore, which assembled 9 May, 1852, and the division was recommended to the Holy See. The Bulls dividing the Diocese of Pittsburg and erecting the new Diocese of Erie were dated 29 July, 1853. The dividing line ran east and west along the northern boundaries of Cambria, Indiana, Armstrong, Butler, and Lawrence, taking from Pittsburg all the counties lying north thereof, and giving thirteen counties to the new and fifteen to the old diocese. The area of the Diocese of Pittsburg was reduced from 21,300 sq. miles to 11,314 sq. miles. Bishop O'Connor chose the new and poorer diocese as his portion, and the Holy See approved his choice. The Rev. Joshua M. Young, of the Archdiocese of Cincinnati, was named Bishop of Pittsburg. The reluctance of Father Young to be the successor of Bishop O'Connor in the See of Pittsburg and the urgent petition of the clergy and the people of the diocese moved the Holy See to restore Bishop O'Connor after five months (20 December, 1853) to his former bishopric, and appoint Bishop

Young to the new Diocese of Erie. A comparison of the condition of the diocese at the date of its division to form the Diocese of Erie with what it was at the time of its erection ten years before will furnish the most convincing evidence of the zeal, prudence, and energy which characterized the administration of Bishop O'Connor. At the time of the division, the 43 churches had increased to 78, and 4 more were in course of erection. The 16 priests had increased to 64, and the Catholic population from less than 25,000 to at least 50,000.

On 23 May, 1860, Bishop O'Connor resigned his see to carry out his cherished purpose of entering the Society of Jesus. He made his novitiate in Germany and then returned to this country, where he laboured with characteristic energy and zeal as a professor, also preaching and lecturing all over the United States and Canada. With his other acquirements, Bishop O'Connor was a linguist of considerable note, being familiar with Latin, Greek, and Hebrew, and speaking English, Irish, French, German, Italian, and Spanish. He was called to his reward 18 October, 1872, in his sixty-third year. His remains were deposited by the side of his Jesuit brethren at Woodstock, Maryland, and there still lies all that is mortal of one of the most brilliant lights that has ever shed its lustre on the Church in the United States. When Bishop O'Connor resigned, the statistics of the diocese were as follows: 77 churches, 86 priests, 30 clerical students, 4 male and 2 female religious orders, 1 seminary, 3 male and 2 female institutions of higher education, 2 orphan asylums, 1 hospital, and a Catholic population of 50,000. Any one who understands the resources of the diocese in 1843 would find it difficult to comprehend how the bishop could have accomplished so much for the good of religion. A stranger, after examining all that had been done—the charitable and educational establishments founded, churches built—would at once conclude that the person who accomplished so much must have had control of vast means, or must have been at the head of a numerous and influential, wealthy, and munificent, Catholic body. Yet Bishop O'Connor in fact enjoyed none of these advantages. The Catholics of the Diocese of Pittsburg at that time, though generous to support religion, cannot be said to have been influential in the community, or possessed of great means. Indeed they were, almost without exception, the poorer people of the community. But during sixteen years they had enjoyed the advantages of an episcopal administration, all things considered, the most brilliant and most successful in the history of the American Church. The Very Revs. James A. Stillinger and Edward McMahon were Bishop O'Connor's vicars-general.

The Right Rev. Michael Domenec, who succeeded Bishop O'Connor, 28 September, 1860, was, at the time of his appointment, pastor of the church of St. Vincent de Paul, Germantown. He was born at Ruez, near Tarragona, Spain, in 1816. His early education was received at Madrid. The outbreak of the Carlist War interrupted his studies, and at the age of fifteen he went to France to complete his education. Having spent some years in the Lazarist seminary in Paris, he entered that order. In the company of the Very Rev. John Timon, then visitor-general of the Lazarists, he came to the United States in 1838, and was ordained at the seminary at Barrens, Missouri, 29 June, 1839. Having acted as professor in that seminary, at the same time labouring as a missionary in various parts of Missouri, he was sent in 1845 with some other Lazarist Fathers to take charge of the diocesan seminary at Philadelphia, a position formerly occupied by the first Bishop of Pittsburg. In conjunction with his work at the seminary he was pastor, first at Nicetown, and afterwards at Germantown. He was consecrated in St. Paul's Cathedral, Pittsburg, on 9 December, 1860, by Archbishop F. P. Kenrick of

Baltimore, and entered upon his new duties with zeal and activity, the effects of which were soon evident all over the diocese in new churches, schools, hospitals, and asylums for the sick and poor.

While Bishop Domenec was recognized as a man of great learning, an eloquent preacher, and a zealous and indefatigable chief pastor of the diocese, it is to be regretted that the closing chapter in the life and history of this amiable and saintly prelate was darkened by the gloom of one of the severest trials that any bishop in the United States has ever passed through. When the panic of 1873 had destroyed the prosperity of the country and disheartened the people of the Diocese of Pittsburg, the bishop, probably overcome by financial and other difficulties which beset him, set out on a visit to Rome, 5 Nov., 1875, to petition for the division of the Diocese of Pittsburg, and the formation of a new diocese with Allegheny City as its see. Priests and people were taken by surprise when the division was announced from Rome, and found difficulty in crediting the report. But further intelligence confirmed it. The Diocese of Pittsburg was divided, and Bishop Domenec was transferred to the new See of Allegheny. The Bulls for both the division and the transfer were dated 11 January, 1876. Many persons had expected that the division of the diocese with Altoona as the new see would take place in time, but felt that the panic which the people were passing through must necessarily defer it for a few years to come. By Bulls dated 16 January, 1876, the Very Rev. John Tuigg of Altoona was elevated to the vacant See of Pittsburg. The new diocese of Allegheny had 8 counties, with an area of 6530 sq. miles, leaving the parent diocese 6 counties, and an area of 4784 sq. miles. Broken in health and saddened by the trials which he had passed through, Bishop Domenec resigned the See of Allegheny 27 July, 1877, and retired to his native land, where he died at Tarragona, 7 January, 1878. Bishop Domenec had for his vicars-general the Very Revs. Tobias Mullen, afterwards Bishop of Erie, and John Hickey. The Fathers of the Congregation of the Holy Ghost entered the diocese 15 April, 1874, and, on 1 October, 1878, opened the Pittsburg College of the Holy Ghost, which is now (1911) attended by over 400 students.

The Right Rev. John Tuigg was born in County Cork, Ireland, 19 February, 1821. He began his studies for the priesthood at All Hallows College, Dublin, and completed his theological course at St. Michael's Seminary, Pittsburg. He was ordained by Bishop O'Connor on 14 May, 1850, and was assigned to the cathedral as an assistant priest, and secretary to the bishop. He organized the parish of St. Bridget, Pittsburg, in 1853. He was then entrusted with the charge of the important mission of Altoona, where monuments of his pastoral zeal and energy exist in the shape of a church, convent, and schools. In 1869 he was appointed vicar-forane for the eastern portion of the diocese. On 11 January, 1876, he was appointed to fill the vacant See of Pittsburg, and was consecrated bishop in the Cathedral of St. Paul on 19 March, 1876, by the Most Rev. James Frederic Wood, Archbishop of Philadelphia. At that time, owing mainly to the effects of the panic of three years previous, and the discontent arising from the division of the former Diocese of Pittsburg, he found great financial and other cares to encounter. The division of the diocese was the beginning of the darkest period in the history of the Church in Western Pennsylvania. It was followed by disputes, mistrust, and litigations, which sundered many old friendships, created clerical and lay factions, and did violence to the peace and charity which had hitherto blessed the diocese. In the manner in which it was brought about, in the lines which designated the limits of each diocese, in the apportionment of debt, in fact from every

point of view, the division proved unsatisfactory and resulted in bitter contention and disorder which ended only with the suppression of the See of Allegheny and the reunion of the two dioceses as though no division had taken place. With foresight, energy, determination, and perseverance the new bishop faced the difficulties with which he was surrounded, and entered upon the task of restoring order and confidence, and placing the embarrassed properties of the diocese upon a safe and sound footing. He sacrificed his personal comfort, his own private means, and reduced the expense of the diocese by the strictest economy, in order that the creditors of the Church might not suffer loss, and although his once vigorous constitution was shattered by the labours and trials through which he passed, confidence was restored, and the diocese started on one of the most prosperous periods of its history. Although these heavy burdens rested on his shoulders, as Bishop of Pittsburgh, yet the Holy See, on 3 August, 1877, after Bishop Domenec resigned, entrusted to him the administration of the vacant See of Allegheny.

In the year 1883 Bishop Tuigg was warned of his approaching end by a stroke of paralysis, and, although he lingered for some years longer, suffering and pain were his constant companions. By slow but sure degrees he continued to grow worse, until on 7 December, 1889, the soul of the venerable prelate passed away to its heavenly home. His last moments were singularly peaceful, and his death was a fitting close to his long and saintly career. It may be said of him that he combined the qualities of firmness and gentleness to a degree rarely found in the same individual; strong and unyielding when confident of the justice and propriety of any position he took, he was at the same time kind and courteous to those from whom he differed. Proofs of his executive ability, his piety, and his self-sacrificing zeal abound throughout the diocese over which God called him to rule, and which he left in better condition than it had known for some years.

The Right Rev. Richard Phelan, the fourth occupant of the See of Pittsburgh, was born 1 January, 1828, at Sralee, County Kilkenny, Ireland. He was one of a family of nine children, four of whom embraced the religious life. He entered St. Kieran's College, Kilkenny, in 1844, to study for the priesthood. When Bishop O'Connor visited Ireland, in 1850, in search of students to labour in the Diocese of Pittsburgh, Richard Phelan volunteered his services. He came to the United States, completed his theological studies at St. Mary's, Baltimore, and was ordained at Pittsburgh by Bishop O'Connor, 4 May, 1854. He served as vicar-general to Bishop Tuigg. By a Bull dated 12 May, 1885, he was appointed titular Bishop of Cybara, and by a Bull dated 15 May, 1885, he was appointed coadjutor to Bishop Tuigg with right of succession, and was consecrated by Archbishop Ryan in St. Paul's Cathedral, Pittsburgh, on 2 August, 1885. He succeeded as bishop to the united Dioceses of Pittsburgh and Allegheny, 7 December, 1889. By a Bull dated 1 July, 1889, the See of Allegheny was totally suppressed, and the Diocese of Pittsburgh was declared to embrace the territory of what had been the two dioceses, as though no division had ever taken place. The administration of Bishop Phelan was a remarkably successful one. He was a man of prudent zeal and extraordinary business ability. The people of many nationalities who were coming in large numbers to find work in the mines and mills of Western Pennsylvania were formed into regular congregations, supplied with pastors who could speak their own languages, and the material and spiritual development of the diocese kept pace with the growth of the population. In May, 1901, the counties of Cambria, Blair, Bedford, Huntingdon, and Somerset were taken from the Diocese of Pittsburgh to form, with several counties taken from the Diocese of Harrisburg, the new

Diocese of Altoona, leaving the Diocese of Pittsburgh its present territory (see beginning of this article).

When Bishop Phelan, as a priest, began his work in the Diocese of Pittsburgh, religious prejudices ran high, and misguided men said and did things against Catholics which have passed into history. Placed in the most trying positions, he always disarmed bigotry by his straightforward adherence to principles of justice and charity towards all men, and by his considerate treatment of those who in belief and worship were separated from him. His life as priest and bishop was coincident with a remarkable transitional period in Western Pennsylvania. No region has experienced so great changes within the last fifty years as has Western Pennsylvania. During the administration of Bishop Phelan these changes were most marked. He saw the wonderful growth and development of the iron, steel, coal, and coke industries, to which the western portion of the state owes its distinction and prosperity. The sudden advent of immense Catholic populations with strange tongues and strange customs, and all of them impoverished, gave rise to problems that would have taxed the ablest men. Here was a field in which Bishop Phelan showed his splendid administrative ability. By his wise and prudent counsel, by the exercise of judgment and foresight which in the light of events to-day are seen to have been of the first excellence, either the difficulties that arose were solved or the way for their solution was prepared. At his death, which occurred 20 December, 1904, at St. Paul's Orphan Asylum, Idlewood, Pennsylvania, he was the head of a diocese which in organization, in the personnel of its clergy and its adequate equipment for the needs of its people, was second to none in the United States. His vicars-general were Very Rev. Stephen Wall, Very Rev. F. L. Tobin, and Very Rev. E. A. Bush.

The Right Rev. Regis Canevin, present (1911) Bishop of Pittsburgh, was born in Westmoreland County, Pennsylvania, 5 June, 1853, educated at St. Vincent's College and the seminary at Beatty, and ordained priest in St. Paul's Cathedral, Pittsburgh, 4 June, 1879. He became coadjutor to Bishop Phelan, with right of succession, being consecrated in the same cathedral by Archbishop Ryan, of Philadelphia, 24 February, 1903. His vicars-general are Rt. Rev. F. L. Tobin and Rt. Rev. Joseph Suhr. The present Catholic population is about 475,000, and is composed of so many nationalities that the Gospel is preached in at least fourteen languages: English, German, French, Italian, Slovak, Polish, Bohemian, Magyar, Slovenian, Lithuanian, Croatian, Rumanian, Ruthenian, and Syrian.

The religious communities of men in the diocese number as follows: Redemptorists, 6 members; Benedictine Fathers, 134; Passionist Fathers, 32; Brothers of Mary (Dayton, Ohio), 11; Capuchin Fathers, 50; Holy Ghost Fathers, 42; Carmelite Fathers, 7; Italian Franciscan Fathers, 10. Total, 292 members. The religious communities of women number: Sisters of Mercy, 353 members; Sisters of Notre Dame (Motherhouse, Baltimore), 50; Franciscan Sisters, 239; Sisters of St. Joseph, 189; Benedictine Nuns, 78; Ursuline Nuns, 26; Sisters of Charity, 331; Little Sisters of the Poor, 32; Sisters of the Good Shepherd, 61; Sisters of Divine Providence, 180; Sisters of Mercy (Motherhouse, Cresson), 13; Sisters of Nazareth (Motherhouse, Chicago), 64; Slovak Sisters of Charity, 27; Third Order of St. Francis Nuns (Motherhouse, Allegheny, New York), 7; Sisters of St. Joseph (Motherhouse, Watertown, New York), 16; Sisters of the Incarnate Word, 3; Missionary Franciscan Sisters (Motherhouse, Rome), 5; Sisters of St. Joseph (Motherhouse, Rutland, Vermont), 7; Felician Sisters (Motherhouse, Detroit), 40; Sisters of St. Agnes (Motherhouse, Fond du Lac, Wisconsin), 5; Passionist Nuns, 8; Immaculate Heart Nuns (Motherhouse,

Scranton), 15; Bernardine Sisters (Motherhouse, Reading, Pennsylvania), 5. Total, 1754 members.

General statistics of the diocese (1911): bishop, 1; archabbot, 1; diocesan priests, 353; regular, 145; churches with resident priests, 275; missions, 29; parochial schools, 145; pupils, 45,593; diocesan seminarians, 70; seminaries of religious orders, 3; boys' colleges, 3, with 700 students; girls' academies, 4, with 490 pupils; preparatory schools for boys, 2, with 129 pupils; deaf-mute school, 1, with 37 pupils; orphan asylums, 4, with 1586 orphans; foundling asylum, 1; industrial school for boys, 2 for girls, 1. Total number of pupils in schools and asylums, 48,555; hospitals, 7; home for aged poor, 2; homes of the Good Shepherd, 2; homes for working girls, 2. Catholic population, about 475,000.

REGIS CANEVIN.

Pityus, a titular see in Pontus Polemoniacus, suffragan of Neocæsarea. Pityus was a large and wealthy Greek city on the northeast of the Black Sea (Artemidorus, in Strabo, XI, 496), which was destroyed before the time of Pliny (Hist. nat., VI, v, 16). Arrianus mentions its anchorage in "Periplus Ponti Euxini", 27. The city was rebuilt and fortified by the Romans, captured by the Scythians under Gallienus, and destroyed by the Byzantines to prevent Chosroes from entering it (Zosimus, I, 32; Procopius, "De bello gothico", IV, 4; "De ædificiis", IV, 7). In 535 it was "a fortress rather than a city" (Justinian, "Novella", 28). Stratophilus, Bishop of Pityus, assisted at the Council of Nicæa in 325; since then there is no mention of the see, which does not figure in any of the Greek "Notitiæ episcopatum" (Le Quien, "Oriens christ.", I, 519). It was towards Pityus that St. John Chrysostom (q. v.) was being led by the imperial soldiers, in execution of the decree of exile, when he died on the way (Theodoret, "Hist. eccl.", V, 34). Pityus was located at the end of the gulf, east of Cape Pitsunda, near the River Chypesta and the village of Abchasik, in the vilayet of Trebizond.

S. PÉTRIDÈS.

Pius I, SAINT, POPE, date of birth unknown; pope from about 140 to about 154. According to the earliest list of the popes, given by Irenæus ("Adv. hæc.", II, xxxi; cf. Eusebius, "Hist. eccl.", V, vi), Pius was the ninth successor of St. Peter. The dates given in the Liberian Catalogue for his pontificate (146-61) rest on a false calculation of earlier chroniclers, and cannot be accepted. The only chronological datum we possess is supplied by the year of St. Polycarp of Smyrna's death, which may be referred with great certainty to 155-6. On his visit to Rome in the year before his death Polycarp found Anicetus, the successor of Pius, bishop there; consequently, the death of Pius must have occurred about 154. The "Liber Pontificalis" (ed. Duchesne, I, 132) says the father of Pius was Rufinus, and makes him a native of Aquileia; this is, however, probably a conjecture of the author, who had heard of Rufinus of Aquileia (end of fourth century). From a notice in the "Liberian Catalogue" (in Duchesne, "Liber Pontificalis", I, 5), which is confirmed by the Muratorian Fragment (ed. Preuschen, "Analecta", I, Tübingen, 1910), we learn that a brother of this pope, Hermas by name, published

"The Shepherd" (see HERMAS). If the information which the author gives concerning his personal conditions and station (first a slave, then a freedman) were historical, we should know more about the origin of the pope, his brother. It is very possible that the story which Hermas relates of himself is a fiction.

During the pontificate of Pius the Roman Church was visited by various heretics, who sought to propagate their false doctrine among the faithful of the capital. The Gnostic Valentinus, who had made his appearance under Pope Hyginus, continued to sow his heresy, apparently not without success. The Gnostic Cerdon was also active in Rome at this period, during which Marcion arrived in the capital (see MARCIONITES). Excluded from communion by Pius, the latter founded his heretical body (Irenæus, "Adv. hæc.", III, iii). But Catholic teachers also visited the Roman Church, the most important being St. Justin, who expounded the Christian teachings during the pontificate of Pius and that of his successor. A great activity thus marks the Christian community in Rome, which stands clearly conspicuous as the centre of the Church. The "Liber Pontificalis" (ed. cit.) speaks of a decision of this pope to the effect that Jewish converts to Christianity should be admitted and baptized. What this means we do not know; doubtless the author of the "Liber Pontificalis", here as frequently, refers to the pope a decree valid in the Church of his own time. A later legend refers the foundation of the two churches, the *titulus Pudentis* (*ecclesia Pudentiana*) and the *titulus Praxedis*, to the time of this pope, who is also supposed to have built a baptistery near the former and to have exercised episcopal functions there (Acta SS., IV May, 299 sq.; cf. de Rossi, "Mosaici delle chiese di Roma: S. Pudenziana, S. Prassede"). The story, however, can lay no claim to historical credibility. These two churches came into existence in the fourth century, although it is not impossible that they replaced Christian houses, in which the faithful of Rome assembled for Divine service before the time of Constantine; the legend, however, should not be alleged as proof of this fact. In many later writings (e. g. the "Liber Pontificalis") the "Pastor" or "Shepherd" in the work of Hermas is erroneously accepted as the name of the author, and, since a Roman priest Pastor is assigned an important rôle in the foundation of these churches, it is quite possible that the writer of the legend was similarly misled, and consequently interwove Pope Pius into his legendary narrative (see PRAXEDES AND PUDENTIANA). Two letters written to Bishop Justus of Vienne (P. L., V, 1125 sq.; Jaffé, "Regesta", I, 2nd ed., pp. 7 sq.), ascribed to Pius, are not authentic. The feast of St. Pius I is celebrated on 11 July.

Liber Pontif., I, ed. DUCHESNE, 132 sq.; LANGEN, Gesch. der röm. Kirche, I (Bonn, 1881), 111 sq.; DUCHESNE, Hist. ancienne de l'église, I (Paris, 1906), 236 sqq. On chronological questions cf. J. P. KIRSCH.

Pius II, POPE (ENEA SILVIO DE' PICCOLOMINI), b. at Corsignano, near Siena, 18 Oct., 1405; elected 19 Aug., 1458; d. at Ancona, 14 Aug., 1464. He was the eldest of eighteen children of Silvio de' Piccolomini and Vittoria Forteguerra. Although of noble birth, straitened circumstances forced him to help his father in the cultivation of the estate which the family owned at Corsignano. This village he later ranked as a town and made an episcopal residence with the name of Pienza (Pius). Having received some elementary instruction from a priest, he entered, at the age of eighteen, the University of Siena. Here he gave himself up to diligent study and the free enjoyment of sensual pleasures. In 1425 the preaching of St. Bernardine of Siena kindled in him the desire of embracing a monastic life, but he was dissuaded from his purpose

by his friends. Attracted by the fame of the celebrated Filelfo, he shortly after spent two years in the study of the classics and poetry at Florence. He returned to Siena at the urgent request of his relatives, to devote his time to the study of jurisprudence. Passing through Siena on his way to the Council of Basle (q. v.), Capranica, Bishop of Fermo, invited Enea to accompany him as his secretary. Bishop and secretary arrived there in 1432, and joined the opposition to Pope Eugene IV.

Piccolomini, however, soon left the service of the impecunious Capranica for more remunerative employment with Nicodemo della Scala, Bishop of Freising, with Bartolomeo, Bishop of Novara, and with Cardinal Albergati. He accompanied the latter on several journeys, particularly to the Congress of Arras, which in 1435 discussed peace between Burgundy and France. In the same year his master sent him on a secret mission to Scotland. The voyage was very tempestuous and Piccolomini vowed to walk, if spared, barefoot from the port of arrival to the nearest shrine of Our Lady. He landed at Dunbar and, from the pilgrimage of ten miles through ice and snow to the sanctuary of Whitekirk, he contracted the gout from which he suffered for the rest of his life. Although on his return from Scotland Cardinal Albergati was no

longer at Basle, he determined to remain in the city, and to his humanistic culture and oratorical talent owed his appointment to different important functions by the council. He continued to side with the opposition to Eugene IV, and associated particularly with a small circle of friends who worshipped classical antiquity and led dissolute lives. That he freely indulged his passions is evidenced not only by

HERALDIC ACHIEVEMENT ON THE
PICCOLOMINI MANSION
(XVI Century)

the birth of two illegitimate children to him (the one in Scotland, the other at Strasburg), but by the frivolous manner in which he glories in his own disorders. The low moral standard of the epoch may partly explain, but cannot excuse his dissolute conduct. He had not yet received Holy orders, however, and shrank from the ecclesiastical state because of the obligation of continence which it imposed. Even the inducement to become one of the electors of a successor to Eugene IV, unlawfully deposed, could not overcome this reluctance; rather than receive the diaconate he refused the proffered honour.

He was then appointed master of ceremonies to the conclave which elected Amadeus of Savoy to the papacy. He likewise belonged to the delegation which was to escort to Basle in 1439 the newly-elected antipope, who assumed the name of Felix V and chose Piccolomini as his secretary. The latter's clear-sightedness, however, soon enabled him to realize that the position of the schismatic party could not fail to become untenable, and he profited by his presence as envoy of the council at the Diet of Frankfort in 1442 again to change masters. His literary attainments were brought to the attention of Frederick III, who crowned him imperial poet, and offered him a position in his service which was gladly accepted. On 11 Nov., 1442, Enea left Basle for Vienna, where he assumed in

January of the following year the duties of secretary in the imperial chancery. Receding gradually from his attitude of supporter of Felix V, he ultimately became, with the imperial chancellor Schlick, whose favour he enjoyed, a partisan of Eugene IV. The formal reconciliation between him and this pope took place in 1445, when he came on an official mission to Rome. He was first absolved of the censures which he had incurred as partisan of the Council of Basle and official of the antipope. Hand in hand with this change in personal allegiance went a transformation in his moral character and in March, 1446, he was ordained subdeacon at Vienna. The same year he succeeded in breaking up the Electors' League, equally dangerous to Eugene IV and Frederick III, and shortly afterwards a delegation, of which he was a member, laid before the pope the conditional submission of almost all Germany. In 1447 he was appointed Bishop of Trieste; the following year he played a prominent part in the conclusion of the Concordat of Vienna; and in 1450 he received the Bishopric of Siena. He continued, however, until 1455 in the service of Frederick III, who had frequent recourse to his diplomatic ability. In 1451 he appeared in Bohemia at the head of a royal embassy, and in 1452 accompanied Frederick to Rome for the imperial coronation. He was created cardinal 18 Dec., 1456, by Calixtus III, whose successor he became.

The central idea of his pontificate was the liberation of Europe from Turkish domination. To this end he summoned at the beginning of his reign all the Christian princes to meet in congress on 1 June, 1459. Shortly before his departure for Mantua, where he was personally to direct the deliberations of this assembly, he issued a Bull instituting a new religious order of knights. They were to bear the name of Our Lady of Bethlehem and to have their headquarters in the Island of Lemnos. History is silent concerning the actual existence of this foundation, and the order was probably never organized. At Mantua scant attendance necessitated a delay in the opening of the sessions until 26 Sept., 1459. Even then but few delegates were present, and the deliberations soon revealed the fact that the Christian states could not be relied on for mutual co-operation against the Turks. Venice pursued dilatory and insincere tactics; France would promise nothing, because the pope had preferred Ferrante of Aragon for the throne of Naples to the pretender of the House of Anjou. Among the German delegates, Gregory of Heimburg (q. v.) assumed an ostentatiously disrespectful attitude toward Pius II; the country, however, ultimately agreed to raise 32,000 footmen and 10,000 cavalry. But the promise was never redeemed, and although a three years' war was decreed against the Turks, the congress failed of its object, as no practical results of any importance were attained. It was apparent that the papacy no longer commanded the assent and respect of any of the Powers. This was further demonstrated by the fact that Pius, on the eve of his departure from Mantua, issued the Bull "Execrabilis", in which he condemned all appeals from the decisions of the pope to an œcumenical council (18 Jan., 1460).

During the congress war had broken out in southern Italy about the possession of the Kingdom of Naples. The pope continued to support Ferrante against the Angevin claimant. This attitude was adverse to ecclesiastical interests in France, where he aimed at the repeal of the Pragmatic Sanction of Bourges. At his accession to the throne in 1461, Louis XI suppressed indeed that instrument; but this papal success was more apparent than real. For Louis's expectation of support in southern Italy was not realized; and opposition to the suppression manifesting itself in France, his dealings with the Church underwent a corresponding change, and royal ordinances were even issued aiming at the revival of the former Gallican

liberties. In Germany Frederick III showed readiness to comply with the obligations assumed at Mantua, but foreign and domestic difficulties rendered him powerless. Between Pius II and Duke Sigismund of Tyrol, however, an acute conflict developed concerning the Bishopric of Brixen (q. v.). Likewise the refusal of the Archbishop of Mainz, Diether of Isenburg (q. v.), to abide by the pope's decree of deposition led to civil strife. Diether was ultimately defeated and supplanted by Adolf of Nassau, who had been appointed in his stead. More difficult to adjust were the troubles in Bohemia. Hussitism was rampant in the kingdom, which was governed by the wily George Podiebrad, a king seemingly devoid of religious convictions. He had promised in a secret coronation oath personally to profess the Catholic faith and to restore, in his realm, union with Rome in ritual and worship. This was tantamount to a renunciation of the "Compact of Basle", which, under certain conditions subsequently not observed by the Bohemians, had granted them communion under both kinds and other priv-

ileges exercised over him by the environment in which his lot was cast, are so many factors, the bearing of which can be justly and precisely estimated only with the greatest difficulty. In the early period of his life he was, like many humanists, frivolous and immoral in conduct and writing. More earnest were his conceptions and manner of life after his entrance into the ecclesiastical state. As pope he was indeed not sufficiently free from nepotism, but otherwise served the best interests of the Church. Not only was he constantly solicitous for the peace of Christendom against Islam, but he also instituted a commission for the reform of the Roman court, seriously endeavoured to restore monastic discipline, and defended the doctrine of the Church against the writings of Reginald Peacock, the former Bishop of Chichester. He retracted the errors contained in his earlier writings in a Bull, the gist of which was "Reject Eneas, hold fast to Pius". St. Catherine of Siena was canonized during his pontificate.

Even among the many cares of his pontificate he found time for continued literary activity. Two important works of his were either entirely or partly written during this period: his geographical and ethnographical description of Asia and Europe; and his "Memoirs", which are the only autobiography left us by a pope. They are entitled "Pii II Commentarii rerum memorabilium, quæ temporibus suis contigerunt". Earlier in his life he had written, besides "Eurialus and Lucretia" and the recently discovered comedy "Chrysis", the following historical works: "Libellus dialogorum de generalis concilii auctoritate et gestis Basileensium"; "Commentarius de rebus Basileæ gestis"; "Historia rerum Frederici III imperatoris"; "Historia Bohemica". Incomplete collections of his works were published in 1551 and 1571 at Basle. A critical edition of his letters by Wolkan is in course of publication.

THE PALAZZO PICCOLOMINI
Bernardo Rossellino, Pienza

ileges. The pope, deceived for a time by the protestations of royal fidelity, used his influence to bring back the Catholic city of Breslau to the king's allegiance. But in 1461 Podiebrad, to further his fanciful schemes of political aggrandizement, promised his subjects to maintain the Compact. When in 1462 his long-promised embassy appeared in Rome, its purpose was not only to do homage to the pope, but also to obtain the confirmation of that agreement. Pius II, instead of acceding to the latter request, withdrew the misused concessions made by Basle. He continued negotiations with the king, but died before any settlement was reached.

The prevalence of such discord in Christendom left but little hope for armed opposition to the Turks. As rumours had been circulated that the sultan doubted the faith of Islam, the pope attempted to convert him to the Christian faith. But in vain did he address to him in 1461 a letter, in which were set forth the claims of Christianity on his belief. Possibly the transfer with extraordinary pomp of the head of St. Andrew to Rome was also a fruitless attempt to rekindle zeal for the Crusades. As a last resort, Pius II endeavoured to stir up the enthusiasm of the apathetic Christian princes by placing himself at the head of the crusaders. Although seriously ill he left Rome for the East, but died at Ancona, the mustering-place of the Christian troops.

There have been widely divergent appreciations of the life of Pius II. While his varied talents and superior culture cannot be doubted, the motives of his frequent transfer of allegiance, the causes of the radical transformations which his opinions underwent, the

Pius III, POPE (FRANCESCO TODESCHINI PICCOLOMINI), b. at Siena, 29 May, 1439; elected 22 Sept., 1503; d. in Rome, 18 Oct., 1503, after a pontificate of four weeks. Piccolomini was the son of a sister of Pius II. He had passed his boyhood in destitute circumstances when his uncle took him into his household, bestowed upon him his family name and arms, and superintended his training and education. He studied law in Perugia and immediately after receiving the doctorate as canonist was appointed by his uncle Archbishop of Siena, and on 5 March, 1460, cardinal-deacon with the title of S. Eustachio.

The following month he was sent as legate to the March of Ancona, with the experienced Bishop of Marsico as his counsellor. "The only thing objectionable about him", says Voigt (*Enea Silvio*, III, 531), "was his youth; for in the administration of his legation and in his later conduct at the curia he proved to be a man of spotless character and many-sided capacity." He was sent by Paul II as legate to Germany, where he acquitted himself with eminent success, the knowledge of German that he had acquired in his uncle's house being of great advantage to him. During the worldly reigns of Sixtus IV and Alexander

ARMS OF PIUS III

VI he kept away from Rome as much as possible. Sigismondo de Conti, who knew him well tells us that "he left no moment unoccupied; his time for study was before daybreak; he spent his mornings in prayer and his midday hours in giving audiences, to which the humblest had easy access. He was so temperate in food and drink that he only allowed himself an evening meal every other day." Yet this is the excellent man to whom Gregorovius in his "Lucrezia Borgia", without a shadow of authority, gives a dozen children—the calumny being repeated by Brosch and Creighton. After the death of Alexander VI, the conclave could not unite on the principal candidates, d'Amboise, Rovere, and Sforza; hence the great majority cast their votes for Piccolomini, who though only sixty-four was, like his uncle, tortured with gout and was prematurely old. He took the name of Pius III in honour of his uncle, was crowned on 8 Oct., after receiving priestly and episcopal orders. The strain of the long ceremony was so great that the pope sank under it. He was buried in St. Peter's, but his remains were later transferred to S. Andrea della Valle where he rests by the side of Pius II.

JAMES F. LOUGHLIN.

Pius IV, POPE
(GIOVANNI ANGELO MEDICI), b. 31

March, 1499, at Milan; elected 26 December, 1559; d. in Rome 9 Dec., 1565. The Medici of Milan lived in humble circumstances and the proud Florentine house of the same name claimed no kindred with them until Cardinal Medici was seated on the papal throne. His father Bernardino had settled in Milan and gained his livelihood by farming the taxes. Bernardino had two enterprising sons, both able to rise in the world by different roads. The oldest, Giangiacomo, became a soldier of fortune and after an adventurous career received from the emperor the title of Marchese di Marignano. He commanded the imperial troops who conquered Siena. Giovanni Angelo was as successful with his books as his brother with his sword. He made his studies first at Pavia, then at Bologna, devoting himself to philosophy, medicine, and law, in the last mentioned branch taking the degree of doctor. He gained some reputation as a jurist. In his twenty-eighth year he determined to embrace the ecclesiastical state and seek his fortune in Rome. He arrived in the Eternal City, 26 Dec., 1527, just thirty-two years to a day before his election to the papacy. From Clement VII he obtained the office of prothonotary, and by his intelligence, industry, and trustworthiness commended himself to Paul III who entertained the greatest confidence in his integrity and ability and employed him in the governorship of many cities of the papal states. In the last year of Paul III's reign, Medici, whose brother had married an Orsini, sister to the pope's daughter-in-law, was created cardinal-priest with the title of S. Pudenziana. Julius III made him legate in Romagna and commander of the papal troops. The antipathy of Paul IV was rather to his advantage than otherwise; for in the reaction which followed the death of that morose pontiff all eyes finally settled on the man who in every respect was Paul's opposite. The conclave

dragged along for over three months, when it was obvious that neither the French nor the Spanish-Austrian faction could win the election. Then, mainly through the exertions of Cardinal Farnese, the conclave by acclamation pronounced in favour of Medici. He was crowned 6 Jan., 1560, and took the name of Pius IV.

His first official act was to grant an amnesty to those who had outraged the memory of his predecessor, Paul IV; but he refused clemency to Pompeo Colonna, who had murdered his mother-in-law. "God forbid", he said, "that I should begin my pontificate with condoning a parricide." The enmity of Spain and the popular detestation of the Caraffas caused him to open a process against the relatives of Paul IV, as a result of which Cardinal Carlo Caraffa and his brother, to whom Paul had given the Duchy of Paliano, were condemned and executed. The sentence was afterwards declared unjust by St. Pius V and the memory

of the victims vindicated and their estates restored. Cardinal Morone and other dignitaries whom Paul had imprisoned for suspicion of heresy were released.

Pius IV now devoted his undivided attention to the completion of the labours of the Council of Trent. He was luckier than his predecessors in the youth whom he created cardinal-nephew. This was St. Charles Borromeo, the glory of

RECUMBENT EFFIGY OF PIUS III
Crypt of the Vatican (XVI Century)

Milan and of the Universal Church in the sixteenth century. Pius had the satisfaction of seeing the close of the long-continued council and the triumph of the papacy over the antipapal tendencies which at times asserted themselves. His name is immortally connected with the "Profession of Faith", which must be sworn to by everyone holding an ecclesiastical office. The few years which remained to him after the close of the council were devoted to much needed improvements in Rome and the papal states. Unfortunately for his popularity, these works could not be perfected without the imposition of additional taxes. Amid the numerous embellishments with which his name is connected, one of the most useful was the founding of the pontifical printing-office for the issuing of books in all languages. He procured the necessary type and placed the institution under the able superintendence of Paul Minutius. In addition to the heavy expenses incurred in the fortification and embellishment of Rome, Pius was under obligation to contribute many hundred thousands of *scudi* to the support of the war against the Turks in Hungary.

The mildness of Pius IV in dealing with suspects of heresy, so different from the rigour of his predecessor, made many suspect his own orthodoxy. A fanatic named Benedetto Ascoli, "inspired by his guardian angel", made an attempt upon his life. A more formidable foe, the Roman fever, carried him off 9 Dec., 1565, with St. Philip Neri and St. Charles Borromeo at his pillow. He was buried first in St. Peter's, but 4 June, 1583, his remains were transferred to Michelangelo's great church of S. Maria degli Angeli, one of Pius's most magnificent structures. "Pius IV", says the fearless Muratori, "had faults (who is without them?); but they are as nothing compared with his many virtues. His memory shall ever remain in benediction for having brought to a

glorious termination the Council of Trent; for having reformed all the Roman tribunals; for having maintained order and plenty in his dominion; for having promoted to the cardinalate men of great merit and rare literary ability; finally, for having avoided excess of love for his kindred, and enriched Rome by the building of so many fine edifices."

Pius V, SAINT, POPE (MICHELE GHISLERI), b. at Bosco, near Alexandria, Lombardy, 17 Jan., 1504; elected 7 Jan., 1566; d. 1 May, 1572. Being of a poor

MONUMENT TO ST. PIUS V

L. Sarzana and G. Della Porta, Basilica of S. Maria Maggiore, Rome

though noble family his lot would have been to follow a trade, but he was taken in by the Dominicans of Voghera, where he received a good education and was trained in the way of solid and austere piety. He entered the order, was ordained in 1528, and taught theology and philosophy for sixteen years. In the meantime he was master of novices and was on several occasions elected prior of different houses of his order, in which he strove to develop the practice of the monastic virtues and spread the spirit of the holy founder. He himself was an example to all. He fasted, did penance, passed long hours of the night in meditation and prayer, travelled on foot without a cloak in deep silence, or only speaking to his companions of the things of God. In 1556 he was made Bishop of Sutri by Paul IV. His zeal against heresy caused him to be selected as inquisitor of the faith in Milan and Lombardy, and in 1557 Paul II made him a cardinal and named him inquisitor general for all Christendom. In 1559 he was transferred to Mondovì, where he restored the purity of faith and discipline, gravely impaired by the wars of Piedmont. Frequently called to Rome, he displayed his unflinching zeal in all the affairs on which he was consulted. Thus he offered an insurmountable opposition to Pius IV when the latter wished to admit Ferdinand de'

Medici, then only thirteen years old, into the Sacred College. Again it was he who defeated the project of Maximilian II, Emperor of Germany, to abolish ecclesiastical celibacy. On the death of Pius IV, he was, despite his tears and entreaties, elected pope, to the great joy of the whole Church.

He began his pontificate by giving large alms to the poor, instead of distributing his bounty at haphazard like his predecessors. As pontiff he practised the virtues he had displayed as a monk and a bishop. His piety was not diminished, and, in spite of the heavy labours and anxieties of his office, he made at least two meditations a day on bended knees in presence of the Blessed Sacrament. In his charity he visited the hospitals, and sat by the bedside of the sick, consoling them and preparing them to die. He washed the feet of the poor, and embraced the lepers. It is related that an English nobleman was converted on seeing him kiss the feet of a beggar covered with ulcers. He was very austere and banished luxury from his court, raised the standard of morality, laboured with his intimate friend, St. Charles Borromeo, to reform the clergy, obliged his bishops to reside in their dioceses, and the cardinals to lead lives of simplicity and piety. He diminished public scandals by relegating prostitutes to distant quarters, and he forbade bull fights. He enforced the observance of the discipline of the Council of Trent, reformed the Cistercians, and supported the missions of the New World. In the Bull "In Cœna Domini" he proclaimed the traditional principles of the Roman Church and the supremacy of the Holy See over the civil power.

But the great thought and the constant preoccupation of his pontificate seems to have been the struggle against the Protestants and the Turks. In Germany he supported the Catholics oppressed by the heretical princes. In France he encouraged the League by his counsels and with pecuniary aid. In the Low Countries he supported Spain. In England, finally, he excommunicated Elizabeth, embraced the cause of Mary Stuart, and wrote to console her in prison. In the ardour of his faith he did not hesitate to display severity against the dissidents when necessary, and to give a new impulse to the activity of the Inquisition, for which he has been blamed by certain historians who have exaggerated his conduct. Despite all representations on his behalf he condemned the writings of Baius (q. v.), who ended by submitting.

MONUMENT TO ST. PIUS V, PAVIA

He worked incessantly to unite the Christian princes against the hereditary enemy, the Turks. In the first year of his pontificate he had ordered a solemn jubilee, exhorting the faithful to penance and almsgiving to obtain the victory from God. He supported the Knights of Malta, sent money for the fortification of

the free towns of Italy, furnished monthly contributions to the Christians of Hungary, and endeavoured especially to bring Maximilian, Philip II, and Charles IX together for the defence of Christendom. In 1567 for the same purpose he collected from all convents one-tenth of their revenues. In 1570 when Solymán II attacked Cyprus, threatening all Christianity in the West, he never rested till he united the forces of Venice, Spain, and the Holy See. He sent his blessing to Don John of Austria, the commander-in-chief of the expedition, recommending him to leave behind all soldiers of evil life, and promising him the victory if he did so. He ordered public prayers, and increased his own supplications to heaven. On the day of the Battle of Lepanto, 7 Oct., 1571, he was working with the cardinals, when, suddenly, interrupting his work, opening the window and looking at the sky, he cried out, "A truce to business; our great task at present is to thank God for the victory which He has just given the Christian army". He burst into tears when he heard of the victory, which dealt the Turkish power a blow from which it never recovered. In memory of this triumph he instituted for the first Sunday of October the feast of the Rosary, and added to the Litany of Loreto the supplication "Help of Christians". He was hoping to put an end to the power of Islam by forming a general alliance of the Italian cities, Poland, France, and all Christian Europe, and had begun negotiations for this purpose when he died of gravel, repeating "O Lord, increase my sufferings and my patience!" He left the memory of a rare virtue and an unfailing and inflexible integrity. He was beatified by Clement X in 1672, and canonized by Clement XI in 1712.

LATASTE.

Pius VI (GIOVANNI ANGELICO BRASCHI), POPE, b. at Cesena, 27 Dec., 1717; elected 15 Feb., 1775; d. at Valence, France, 29 Aug., 1799. He was of a noble but impoverished family, and was educated at the Jesuit College of Cesena and studied law at Ferrara. After a diplomatic mission to Naples, he was appointed papal secretary and canon of St. Peter's in 1755. Clement XIII appointed him treasurer of the Roman Church in 1766, and Clement XIV made him a cardinal in 1775. He then retired to the Abbey of Subiaco, of which he was commendatory abbot, until his election as Pius VI.

ARMS OF PIUS VI

Spain, Portugal, and France had at first combined to prevent his election, because he was believed to be a friend of the Jesuits; he was well disposed towards the order, but he dared not revoke the Bull of their suppression. Still he ordered the liberation of their general, Ricci, a prisoner in the Castle of Sant' Angelo in Rome, but the general died before the decree of liberation arrived. Upon the request of Frederick II of Prussia he permitted the Jesuits to retain their schools in Prussia; while in Russia, he permitted an uninterrupted continuation of the order. Soon after his accession he took steps to root out the Gallican idea on papal supremacy which had been spread in Germany by Hontheim (q. v.; see FEBRONIANISM). Joseph II forbade the Austrian bishops to apply to Rome for faculties of any kind, and suppressed innumerable monasteries. Pius VI resolved to go to Vienna; he left Rome on 27 Feb., 1782, and arrived in Vienna on 22 March. The emperor received him respectfully, though the minister, Kaunitz (q. v.), neglected even the ordinary rules of etiquette. The

pope remained at Vienna until 22 April, 1782. All that he obtained from the emperor was the promise that his ecclesiastical reforms would not contain any violation of Catholic dogmas, or compromise the dignity of the pope. The emperor accompanied the pope on his return as far as the Monastery of Mariabrunn, and suppressed this monastery a few hours after the pope had left it. Scarcely had the pope reached Rome when he again saw himself compelled to protest against the emperor's unjustifiable confiscation of ecclesiastical property. But when Joseph II filled the vacant See of Milan of his own authority, Pius solemnly protested, and it was probably at this occasion that he threatened the emperor with excommunication.

On 23 Dec., 1783, the emperor unexpectedly came to Rome to return the papal visit. He was determined to continue his ecclesiastical reforms, and made known to the Spanish diplomat, Azara, his project of separating the German Church entirely from Rome. The latter however, dissuaded him from taking this fatal step. To avoid worse things, the pope granted him the right of nominating the bishops in the Duchies of Milan and Mantua, in a concordat dated 20 Jan., 1784 (see Nussi, "Conventiones de rebus ecclesiasticis et civilibus inter S. Sedem et civilem potestatem", Mainz, 1870, 138-9).

STATUE OF PIUS VI
Angelo Siciliano, Milan Cathedral

Joseph's example was followed in Tuscany by his brother, the Grand Duke Leopold II and Bishop Scipio Ricci of Pistoia. Here the antipapal reforms culminated in the Synod of Pistoia (q. v.) in 1786, where the doctrines of Jansenius and Quesnel were sanctioned, and the papal supremacy was eliminated. In his Bull "Auctorem fidei" of 28 Aug., 1794, the pope condemned the acts, and in particular eighty-five propositions of this synod. In Germany the three ecclesiastical Electors of Mainz, Trier, and Cologne, and the Archbishop of Salzburg attempted to curtail the papal authority by convening a congress at Ems (q. v.). With Portugal the papal relations became very friendly after the accession of Maria I in 1777, and a satisfactory concordat was concluded in 1778 (Nussi, loc. cit., 138-39). In Spain, Sardinia, and Venice the Governments to a great extent followed in the footsteps of Joseph II. But the most sweeping anti-ecclesiastical reforms were carried out in the Two Sicilies. Ferdinand IV refused the exequatur to all papal briefs that were obtained without the royal permission, and claimed the right to nominate all ecclesiastical beneficiaries. Pius VI refused to accept the bishops that were nominated by the king and, as a result, there were in 1784 thirty vacant sees in the Kingdom of Naples alone, which number had increased to sixty in 1798. The king, moreover, refused to acknowledge the papal suzerainty which had existed for eight hundred years. The pope repeatedly made overtures, but the king persisted in nominating to all

the vacant sees. In April, 1791, when more than half the sees in the Kingdom of Naples were vacant, a temporary compromise was reached and in that year sixty-two vacant sees were filled (Rinieri, loc. cit., infra).

In response to the application of the clergy of the United States, the Bull of April, 1789, erected the See of Baltimore (see BALTIMORE, ARCHDIOCESE OF).

Pius VI put the papal finances on a firmer basis; drained the marshy lands near Città della Pieve, Perugia, Spoleto, and Trevi; deepened the harbours of Porto d'Anzio and Terracina; added a new sacristy to the Basilica of St. Peter; completed the Museo Pio-Clementino, and enriched it with many costly pieces of art; restored the Via Appia; and drained the greater part of the Pontine Marshes.

After the French Revolution, Pius rejected the "Constitution civile du clergé" on 13 March, 1791, suspended the priests that accepted it, provided as well as he could for the banished clergy and protested against the execution of Louis XVI. France retaliated by annexing the small papal territories of Avignon and Venaissin. The pope's co-operation with the Allies against the French Republic, and the murder of the French attaché, Basseville, at Rome, brought on by his own fault, led to Napoleon's attack on the Papal States. At the Truce of Bologna (25 June, 1796) Napoleon dictated the terms: twenty-one million francs, the release of all political criminals, free access of French ships into the papal harbours, the occupation of the Romagna by French troops etc. At the Peace of Tolentino (19 Feb., 1797) Pius VI was compelled to surrender Avignon, Venaissin, Ferrara, Bologna, and the Romagna; and to pay fifteen million francs and give up numerous costly works of art and manuscripts. In an attempt to revolutionize Rome the French General Duphot was shot and killed, whereupon the French took Rome on 10 Feb., 1798, and proclaimed the Roman Republic on 15 Feb. Because the pope refused to submit, he was forcibly taken from Rome on the night of 20 Feb., and brought first to Siena and then to Florence. At the end of March, 1799, though seriously ill, he was hurried to Parma, Piacenza, Turin, then over the Alps to Briançon and Grenoble, and finally to Valence, where he succumbed to his sufferings before he could be brought further. He was first buried at Valence, but the remains were transferred to St. Peter's in Rome on 17 Feb., 1802 (see NAPOLEON I). His statue in a kneeling position before the crypt of the Prince of the Apostles.

MICHAEL OTT.

Pius VII, POPE (BARNABA CHIARAMONTI), b. at Cesena in the Pontifical States, 14 Aug., 1740; elected at Venice 14 March, 1800; d. 20 Aug., 1823. His

father was Count Scipione Chiaramonti, and his mother, of the noble house of Ghini, was a lady of rare piety who in 1763 entered a convent of Carmelites at Fano. Here she foretold, in her son's hearing, as Pius VII himself later related, his elevation to the papacy and his protracted sufferings. Barnaba received his early education in the college for nobles at Ravenna. At the age of sixteen he entered the Benedictine monastery of Santa Maria del Monte, near Cesena, where he was called Brother Gregory. After the completion of his philosophical and theological studies, he was appointed professor at Parma and at Rome in colleges of his order. He was teaching at the monastery of San Callisto in the latter city at the accession of Pius VI, who was a friend of the Chiaramonti family and subsequently appointed Barnaba abbot of his monastery. The appointment did not meet with the universal approbation of the inmates, and complaints were soon lodged with the papal authority against the new abbot. Investigation, however, proved the charges to be unfounded, and Pius VI soon raised him to further dignities. After conferring upon him successively the Bishoprics of Tivoli and Imola he created him cardinal 14 Feb., 1785. When in 1797 the French invaded northern Italy, Chiaramonti as Bishop of Imola addressed to his flock the wise and practical instruction to refrain from useless resistance to the overwhelming and threatening forces of the enemy. The town of Lugo refused to submit to the invaders and was delivered up to a pillage which had an end only when the prelate, who had counselled subjection, suppliantly cast himself on his knees before General Augereau. That Chiaramonti could adapt himself to new situations clearly appears from a Christmas homily delivered in 1797, in which he advocates submission to the Cisalpine Republic, as there is no opposition between a democratic form of government and the constitution of the Catholic Church. In spite of this attitude he was repeatedly accused of treasonable proceedings towards the republic, but always successfully vindicated his conduct.

ARMS OF PIUS VII

According to an ordinance issued by Pius VI, 13 Nov., 1798, the city where the largest number of cardinals was to be found at the time of his death was to be the scene of the subsequent election. In conformity with these instructions the cardinals met in conclave, after his death (29 Aug., 1799), in the Benedictine monastery of San Giorgio at Venice. The place was agreeable to the emperor, who bore the expense of the election. Thirty-four cardinals were in attendance on the opening day, 30 Nov., 1799; to these was added a few days later Cardinal Herzan, who acted simultaneously as imperial commissioner. It was not long before the election of Cardinal Bellisomi seemed assured. He was, however, unacceptable to the Austrian party, who favoured Cardinal Mattei. As neither candidate could secure a sufficient number of votes, a third name, that of Cardinal Gerdil, was proposed, but his election was vetoed by Austria. At last, after the conclave had lasted three months, some of the neutral cardinals, including Maury, suggested Chiaramonti as a suitable candidate and, with the tactful support of the secretary of the conclave, Ercole Consalvi, he was elected. The new pope was crowned as Pius VII on 21 March, 1800, at Venice. He then left this city in an Austrian vessel for Rome, where he made his solemn entry on 3 July, amid the universal joy of the populace. Of all-important consequence for his reign was the elevation on 11 Aug., 1800, of Ercole Consalvi, one of the greatest statesmen of the nineteenth century, to the college of cardinals and to the office of secretary of state. Consalvi retained to the end the confidence of the pope, although the con-

flict with Napoleon forced him out of office for several years.

With no country was Pius VII more concerned during his reign than with France, where the revolution had destroyed the old order in religion no less than in politics. Bonaparte, as first consul, signified his readiness to enter into negotiations tending to the settlement of the religious question. These advances led to the conclusion of the historic Concordat of 1801, which for over a hundred years governed the relations of the French Church with Rome (on this compact; the journey of Pius VII to Paris for the imperial coronation; his captivity and restoration, see CONCORDAT; CONSALVI; and NAPOLEON I). After the fall of Napoleon a new concordat was negotiated between Pius VII and Louis XVIII. It provided for an additional number of French bishoprics and abrogated the Organic Articles. But liberal and Gallican opposition to it was so strong that it could never be carried out. One of its objects was later realized when in 1822 the circumscription Bull "*Paternæ Caritatis*" erected thirty new episcopal sees.

At the Peace of Lunéville in 1801, some German princes lost their hereditary rights and dominions through the cession of the left bank of the Rhine to France. When it became known that they contemplated compensating their loss by the secularization of ecclesiastical lands, Pius VII instructed Dalberg, Elector of Mainz, on 2 Oct., 1802, to use all his influence for the protection of the rights of the Church. Dalberg, however, displayed more ardour for his own advancement than zeal in the defence of religious interests, and the seizure of ecclesiastical property was permitted in 1803 by the Imperial Deputation at Ratisbon. The measure resulted in enormous loss for the Church, but the pope was powerless to resist its execution. The ecclesiastical reorganization of Germany now became a pressing need. Bavaria soon opened negotiations in view of a concordat and was shortly after followed by Würtemberg. But Rome would rather treat with the central imperial government than with individual states, and after the suppression of the Holy Roman Empire in 1806, Napoleon's aim was to obtain a uniform concordat for the whole Confederation of the Rhine. Subsequent events prevented any agreement before Napoleon's downfall. At the Congress of Vienna (1814-15) Consalvi in vain advocated the restoration of the former ecclesiastical organization. Soon after this event the individual German States separately entered into negotiations with Rome and the first concordat was concluded with Bavaria in 1817. In 1821 Pius VII promulgated in the Bull "*De salute animarum*" the agreement concluded with Prussia, and the same year another Bull, "*Provida Solersque*", made a fresh distribution of dioceses in the ecclesiastical province of the Upper Rhine. An arrangement with Rome based on mutual concessions was likewise contemplated in England in regard to Irish ecclesiastical affairs, notably episcopal nominations (the veto). The papal administration favoured the project the more readily seeing that common resistance to Napoleon had brought the Holy See and the British Government more closely together, and that it still stood in need of the assistance of English might and diplomacy. But Irish opposition to the scheme was so determined that nothing could be done, and the Irish clergy remained free from all state control. Similar freedom prevailed in the growing Church of the United States, in which country Pius VII erected in 1808 the Dioceses of Boston, New York, Philadelphia, and Bardstown, with Baltimore as the metropolitan see. To these dioceses were added those of Charleston and Richmond in 1820, and that of Cincinnati in 1821.

One of the most remarkable successes of his pontificate was the restoration of the Pontifical States, secured at the Congress of Vienna by the papal represen-

tative Consalvi. Only a small strip of land remained in the power of Austria, and this usurpation was protested. In the temporal administration of these states some of the features making for uniformity and efficiency introduced by the French were judiciously retained, the feudal rights of the nobility were abolished, and the ancient privileges of the municipalities suppressed. Considerable opposition developed against these measures, and the Carbonari even threatened rebellion; but Consalvi had their leaders prosecuted and on 13 Sept., 1821, Pius VII condemned their principles. Of a more serious nature was the revolution which in 1820 broke out in Spain and which, owing to its anticlerical character, gave great concern to the papacy. It restricted the authority of ecclesiastical courts (26 Sept., 1830); decreed (23 Oct.) the suppression of a large number of monasteries, and prohibited (14 April, 1821) the forwarding of financial contributions to Rome. It also secured the

MONUMENT TO PIUS VII
Thorwaldsen, St. Peter's, Rome

appointment of Canon Villanueva, a public advocate of the abolition of the papacy, as Spanish ambassador to Rome, and, upon the refusal of Pius VII to accept him, broke off diplomatic relations with the Holy See in 1823. This same year, however, the armed intervention of France suppressed the revolution and King Ferdinand VII repealed the anti-Catholic laws.

During the latter part of the reign of Pius VII, the prestige of the papacy was enhanced by the presence in Rome of several European rulers. The Emperor and Empress of Austria, accompanied by their daughter, made an official visit to the pope in 1819. The King of Naples visited Rome in 1821 and was followed in 1822 by the King of Prussia. The blind Charles Emmanuel IV of Savoy, and King Charles IV of Spain and his queen, permanently resided in the Eternal City. Far more glorious to Pius VII personally is the fact that, after the downfall of his persecutor Napoleon, he gladly offered a refuge in his capital to the members of the Bonaparte family. Princess Letitia, the deposed emperor's mother, lived there; likewise did his brothers Lucien and Louis and his uncle, Cardinal Fesch. So forgiving was Pius that upon hearing of the severe captivity in which the imperial prisoner was held at St. Helena, he requested Cardinal Consalvi to plead for leniency with the Prince-Regent of England. When he was informed of Napoleon's desire for the ministrations of a Catholic priest, he sent him the Abbé Vignali as chaplain.

Under Pius's reign Rome was also the favourite abode of artists. Among these it suffices to cite the illustrious names of the Venetian Canova, the Dane Thorwaldsen, the Austrian Führich, and the Germans Overbeck, Pforr, Schadow, and Cornelius. Pius VII added numerous manuscripts and printed volumes to the Vatican Library; reopened the English, Scottish, and German Colleges at Rome, and established new chairs in the Roman College. He reorganized the Congregation of the Propaganda, and condemned the Bible

Societies (q. v.). In 1805 he received at Florence the unconditional submission of Scipione Ricci, the former Bishop of Pistoia-Prato, who had refused obedience to Pius VI in his condemnation of the Synod of Pistoia. The suppressed Society of Jesus he re-established for Russia in 1801, for the Kingdom of the Two Sicilies in 1804; for America, England, and Ireland in 1813, and for the Universal Church on 7 August, 1814.

On 6 July, 1823, Pius VII fell in his apartment and fractured his thigh. He was obliged to take to his bed, never to rise again. During his illness the magnificent basilica of St. Paul Without the Walls was destroyed by fire, a calamity which was never revealed to him. The gentle but courageous pontiff breathed his last in the presence of his devoted Consalvi, who was soon to follow him to the grave.

The Bulls of Pius VII are partly in *Bullarii Romani continuatio*, ed. BARBERI, XI-XV (Rome, 1846-53); DROCHON, *Mémoires du cardinal Consalvi* (Paris, 1896); PACCA, tr. N. A. WEBER.

Pius VIII, POPE (FRANCESCO XAVERIO CASTIGLIONE), b. at Cingoli, 20 Nov., 1761; elected 31 March, 1829; d. 1 Dec., 1830. He came of a noble family and attended the Jesuit school at Osimo, later taking courses of canon law at Bologna and Rome. In Rome

ARMS OF PIUS VIII

he associated himself with his teacher Devoti, assisted him in the compilation of his "Institutiones" (1792), and, when Devoti was appointed Bishop of Anagni, became his vicar-general. He subsequently filled the same position under Bishop Severoli at Cingoli, and, after some time, became provost of the cathedral in his native city. In 1800 Pius VII named him Bishop of Montalto, which see he shortly afterwards exchanged for that of Cesena. Under the French domination he was arrested, having refused to take the oath of allegiance to the King of Italy, and brought to Macerata, then to Mantua, and finally to France. In 1816 the pope conferred upon him the cardinal's hat, and in 1822 appointed him Bishop of Frascati and Grand Penitentiary. As early as the conclave of 1823, Castiglione was among the candidates for the papacy. At the election of 1829, France and Austria were desirous of electing a pope of mild and temperate disposition, and Castiglione, whose character corresponded with the requirements, was chosen after a five weeks' session. His reign, which lasted but twenty months, was not wanting in notable occurrences. In April, 1829, the Catholic Emancipation Bill, which made it possible for Catholics to sit in Parliament and to hold public offices, was passed in England. Leo XII had taken a great interest in Catholic Emancipation, but had not lived to see it become law. On 25 March, 1830, Pius published the Brief "Litteris altero abhinc", in which he declared that marriage could be blessed by the Church only when the proper promises were made regarding the Catholic education of the children; otherwise, the parish priest should only assist passively at the ceremony. Under his successor this matter became a cause of conflict in Prussia between the bishops and the Government (see DROSTE-VISCHERING, CLEMENS AUGUST VON). The pope's last months were troubled. In France, the Revolution of July broke out and the king was obliged to flee, being succeeded on the throne by the younger Orleans branch. The pope recognized the

new regime with hesitation. The movement, which also affected Belgium and Poland, even extended to Rome, where a lodge of Carbonari with twenty-six members was discovered. In the midst of anxiety and care, Pius VIII, whose constitution had always been delicate, passed away. Before the coronation of his successor, revolution broke out in the Papal States. The character of Pius VIII was mild and amiable, and he enjoyed a reputation for learning, being especially versed in canon law, numismatics, and Biblical literature. In addition, he was extremely conscientious. Thus, he ordered all his relatives, upon his accession to the pontifical throne, to resign the positions which they held.

KLEMENS LÖFFLER.

Pius IX (GIOVANNI MARIA MASTAI-FERRETTI), POPE from 1846-78, b. at Sinigaglia, 13 May, 1792; d. in Rome, 7 February, 1878. After receiving his classical education at the Piarist College in Volterra from 1802-09 he went to Rome to study philosophy and theology, but left there in 1810 on account of political disturbances. He returned in 1814 and, in deference to his father's wish, asked to be admitted to the pope's Noble Guard. Being subject to epileptic fits, he was refused admission and, following the desire of his mother and his own inclination, he studied theology at the Roman Seminary, 1814-18. Meanwhile his malady had ceased and he was ordained priest, 10 April, 1819. Pius VII appointed him spiritual director of the orphan asylum, popularly known as "Tata Giovanni", in Rome, and in 1823 sent him, as auditor of the Apostolic delegate, Mgr Muzi, to Chili in South America. Upon his return in 1825 he was made canon of Santa Maria in Via Lata and director of the large hospital of San Michele by Leo XII. The same pope created him Archbishop of Spoleto, 21 May, 1827. In 1831 when 4000 Italian revolutionists fled before the Austrian army and threatened to throw themselves upon Spoleto, the archbishop persuaded them to lay down their arms and disband, induced the Austrian commander to pardon them for their treason, and gave them sufficient money to reach their homes. On 17 February, 1832, Gregory XVI transferred him to the more important Diocese of Imola and, 14 December, 1840, created him cardinal priest with the titular church of Santi Pietro e Marcellino, after having reserved him *in petto* since 23 December, 1839. He retained the Diocese of Imola until his elevation to the papacy. His great charity and amiability had made him beloved by the people, while his friendship with some of the revolutionists had gained for him the name of liberal.

On 14 June, 1846, two weeks after the death of Gregory XVI, fifty cardinals assembled in the Quirinal for the conclave. They were divided into two factions, the conservatives, who favoured a continuance of

PIUS VII

JACQUES-LOUIS DAVID, LOUVRE

PIVS IX
PONTIFEX MAXIMVS

absolutism in the temporal government of the Church, and the liberals, who were desirous of moderate political reforms. At the fourth scrutiny, 16 June, Cardinal Mastai-Ferretti, the liberal candidate, received three votes beyond the required majority. Cardinal Archbishop Gaysruck of Milan had arrived too late to make use of the right of exclusion against his election, given him by the Austrian Government. The new pope accepted the tiara with reluctance and in memory of Pius VII, his former benefactor, took the name of Pius IX. His coronation took place in the Basilica of St. Peter on 21 June. His election was greeted with joy, for his charity towards the poor, his kindheartedness, and his wit had made him very popular.

"Young Italy" was clamouring for greater political freedom. The unyielding attitude of Gregory XVI and his secretary of state, Cardinal Lambruschini, had brought the papal states to the verge of a revolution. The new pope was in favour of a political reform. His first great political act was the granting of a general amnesty to political exiles and prisoners on 16 July, 1846. This act was hailed with enthusiasm by the people, but many prudent men had reasonable fears of the results. Some extreme reactionaries denounced the pope as in league with the Freemasons and the Carbonari. It did not occur to the kindly nature of Pius IX that many of the pardoned political offenders would use their liberty to further their revolutionary ideas. That he was not in accord with the radical ideas of the times he clearly demonstrated by his Encyclical of 9 Nov., 1846, in which he laments the oppression of Catholic interests, intrigues against the Holy See, machinations of secret societies, sectarian bitterness, the Bible associations, indifferentism, false philosophy, communism, and the licentious press. He was, however, willing to grant such political reforms as he deemed expedient to the welfare of the people and compatible with the papal sovereignty. On 19 April, 1847, he announced his intention to establish an advisory council (*Consulta di Stato*), composed of laymen from the various provinces of the papal territory. This was followed by the establishment of a civic guard (*Guardia Civica*), 5 July, and a cabinet council, 29 December. But the more concessions the pope made, the greater and more insistent became the demands. Secret clubs of Rome, especially the "Circolo Romano", under the direction of Ciceruacchio, fanaticized the mob with their radicalism and were the real rulers of Rome. They spurred the people on to be satisfied with nothing but a constitutional government, an entire laicization of the ministry, and a declaration of war against hated and reactionary Austria.

On 8 February, 1848, a street riot extorted the promise of a lay ministry from the pope and on 14 March he saw himself obliged to grant a constitution, but in his allocution of 29 April he solemnly proclaimed that, as the Father of Christendom, he could never declare war against Catholic Austria. Riot followed riot, the pope was denounced as a traitor to

his country, his prime minister Rossi was stabbed to death while ascending the steps of the Cancelleria, whither he had gone to open the parliament, and on the following day the pope himself was besieged in the Quirinal. Palma, a papal prelate, who was standing at a window, was shot, and the pope was forced to promise a democratic ministry. With the assistance of the Bavarian ambassador, Count Spaur, and the French ambassador, Duc d' Harcourt, Pius IX escaped from the Quirinal in disguise, 24 November, and fled to Gaëta where he was joined by many of the cardinals. Meanwhile Rome was ruled by traitors and adventurers who abolished the temporal power of the pope, 9 February, 1849, and under the name of a democratic republic terrorized the people and committed untold outrages. The pope appealed to France, Austria, Spain, and Naples. On 29 June French troops under General Oudinot restored order in his territory. On 12 April, 1850, Pius IX returned to Rome, no longer a political liberalist. Cardinal Antonelli, his secretary of state, exerted a paramount political influence until his death on 6 Nov., 1876. The temporal reign of Pius IX, up to the seizure of the last of his temporal possessions in 1870, was one continuous

struggle, on the one hand against the intrigues of the revolutionaries, on the other against the Piedmontese ruler Victor Emmanuel, his crafty premier Cavour, and other antipapal statesmen who aimed at a united Italy, with Rome as its capital, and the Piedmontese ruler as its king. The political difficulties of the pope were still further increased by the double dealing of Napoleon III, and the necessity of relying on French and Austrian troops for the maintenance

TOMB OF PIUS IX
Crypt of S. Lorenzo, Rome

of order in Rome and the papal legations in the north.

When Pius IX visited his provinces in the summer of 1857 he received everywhere a warm and loyal reception. But the doom of his temporal power was sealed, when a year later Cavour and Napoleon III met at Plombières, concerting plans for a combined war against Austria and the subsequent territorial extension of the Sardinian Kingdom. They sent their agents into various cities of the Papal States to propagate the idea of a politically united Italy. The defeat of Austria at Magenta on 4 July, 1859, and the subsequent withdrawal of the Austrian troops from the papal legations, inaugurated the dissolution of the Papal States. The insurrection in some of the cities of the Romagna was put forth as a plea for annexing this province to Piedmont in September, 1859. On 6 Feb., 1860, Victor Emmanuel demanded the annexation of Umbria and the Marches and, when Pius IX resisted this unjust demand, made ready to annex them by force. After defeating the papal army at Castelfidardo on 18 Sept., and at Ancona on 30 Sept., he deprived the pope of all his possessions with the exception of Rome and the immediate vicinity. Finally on 20 Sept., 1870, he completed the spoliation of the papal possessions by seizing Rome and making it the capital of United Italy. The so-called Law of Guarantees, of 15 May, 1871, which accorded the pope the rights of a sovereign, an annual remuneration of

3¼ million lire (\$650,000), and extritoriality to a few papal palaces in Rome, was never accepted by Pius IX or his successors. (See STATES OF THE CHURCH; ROME; GUARANTEES, LAW OF.)

The loss of his temporal power was only one of the many trials that filled the long pontificate of Pius IX. There was scarcely a country, Catholic or Protestant, where the rights of the Church were not infringed upon. In Piedmont the Concordat of 1841 was set aside, the tithes were abolished, education was laicized, monasteries were suppressed, church property was confiscated, religious orders were expelled, and the bishops who opposed this anti-ecclesiastical legislation were imprisoned or banished. In vain did Pius IX protest against such outrages in his allocutions of 1850, 1852, 1853, and finally in 1855 by publishing to the world the numerous injustices which the Piedmontese government had committed against the Church and her representatives. In Würtemberg he succeeded in concluding a concordat with the Government, but, owing to the opposition of the Protestant estates, it never became a law and was revoked by a royal rescript on 13 June, 1861. The same occurred in the Grand Duchy of Baden where the Concordat of 1859 was abolished on 7 April, 1860. Equally hostile to the Church was the policy of Prussia and other German states, where the anti-ecclesiastical legislations reached their height during the notorious *Kulturkampf* (q. v.), inaugurated in 1873. The violent outrages committed in Switzerland against the bishops and the remaining clergy were solemnly denounced by Pius IX in his encyclical letter of 21 Nov., 1873, and, as a result, the papal internuncio was expelled from Switzerland in January, 1874. The concordat which Pius IX had concluded with Russia in 1847 remained a dead letter, horrible cruelties were committed against the Catholic clergy and laity after the Polish insurrection of 1863, and all relations with Rome were broken in 1866. The anti-ecclesiastical legislation in Colombia was denounced in his allocution of 27 Sept., 1852, and again, together with that of Mexico, on 30 Sept., 1861. With Austria a concordat, very favourable to the Church, was concluded on 18 August, 1855 ("Conventiones de rebus eccl. inter s. sedem et civilem potestatem", Mainz, 1870, 310-318). But the Protestant agitation against the concordat was so strong, that in contravention to it the emperor reluctantly ratified marriage and school laws, 25 March, 1868. In 1870 the concordat was abolished by the Austrian Government, and in 1874 laws were enacted, which placed all but the inner management of ecclesiastical affairs in the hands of the Government. With Spain Pius IX concluded a satisfactory concordat on 16 March, 1851 (Nussi, 281-297; "Acta Pii IX", I, 293-341). It was supplemented by various articles on 25 Nov., 1859 (Nussi, 341-5). Other satisfactory concordats concluded by Pius IX were those with: Portugal in 1857 (Nussi, 318-21); Costa Rica, and Guatemala, 7 Oct., 1852 (Ib., 297-310); Nicaragua, 2 Nov., 1861 (Ib., 361-7); San Salvador, and Honduras, 22 April, 1862 (Ib., 367-72; 349); Haiti, 28 March, 1860 (Ib., 346-8); Venezuela, 26 July, 1862 (Ib., 356-61); Ecuador, 26 Sept., 1862 (Ib., 349-56). (See CONCORDAT: Summary of Principal Concordats.)

His greatest achievements are of a purely ecclesiastical and religious character. It is astounding how fearlessly he fought, in the midst of many and severe trials, against the false liberalism which threatened to destroy the very essence of faith and religion. In his Encyclical "Quanta Cura" of 8 Dec., 1864, he condemned sixteen propositions touching on errors of the age. This Encyclical was accompanied by the famous "Syllabus errorum", a table of eighty previously censured propositions bearing on pantheism, naturalism, rationalism, indifferentism, socialism, communism, freemasonry, and the various kinds of religious liberalism. Though misunderstandings and

malice combined in representing the Syllabus as a veritable embodiment of religious narrow-mindedness and cringing servility to papal authority, it has done an inestimable service to the Church and to society at large by unmasking the false liberalism which had begun to insinuate its subtle poison into the very marrow of Catholicism. Previously, on 8 January, 1857, he had condemned the philosophico-theological writings of Günther (q. v.), and on many occasions advocated a return to the philosophy and theology of St. Thomas. Through his whole life he was very devout to the Blessed Virgin. As early as 1849, when he was an exile at Gaëta, he issued letters to the bishops of the Church, asking their views on the subject of the Immaculate Conception (q. v.), and on 8 Dec., 1854, in the presence of more than 200 bishops, he proclaimed the Immaculate Conception of the Blessed Virgin as a dogma of the Church. He also fostered the devotion to the Sacred Heart, and on 23 Sept., 1856, extended this feast to the whole world with the rite of a double major. At his instance the Catholic world was consecrated to the Sacred Heart of Jesus on 16 June, 1875. He also promoted the inner life of the Church by many important liturgical regulations, by various monastic reforms, and especially by an unprecedented number of beatifications and canonizations. On 29 June, 1869, he issued the Bull "Æterni Patris" (q. v.), convoking the Vatican Council which he opened in the presence of 700 bishops on 8 Dec., 1869. During its fourth solemn session, on 18 July, 1870, the papal infallibility (q. v.) was made a dogma of the Church. (See VATICAN COUNCIL.)

The healthy and extensive growth of the Church during his pontificate was chiefly due to his unselfishness. He appointed to important ecclesiastical positions only such men as were famous both for piety and learning. Among the great cardinals created by him were: Wiseman and Manning for England; Cullen for Ireland; McCloskey for the United States; Diepenbroek, Geissel, Reisach, and Ledochowski for Germany; Rauscher and Franzelin for Austria; Mathieu, Donnet, Gousset, and Pitra for France. On 29 Sept., 1850, he re-established the Catholic hierarchy in England by erecting the Archdiocese of Westminster with the twelve suffragan Sees of Beverley, Birmingham, Clifton, Hexham, Liverpool, Newport and Menevia, Northampton, Nottingham, Plymouth, Salford, Shrewsbury, and Southwark. The widespread commotion which this act caused among English fanatics, and which was fomented by Prime Minister Russell and the London "Times", temporarily threatened to result in an open persecution of Catholics (see ENGLAND). On 4 March, 1853, he restored the Catholic hierarchy in Holland by erecting the Archdiocese of Utrecht and the four suffragan Sees of Haarlem, Boissle-Duc, Roermond, and Breda (see HOLLAND).

In the United States of America he erected the Dioceses of: Albany, Buffalo, Cleveland, and Galveston in 1847; Monterey, Savannah, St. Paul, Wheeling, Santa Fe, and Nesqually (Seattle) in 1850; Burlington, Covington, Erie, Natchitoches, Brooklyn, Newark, and Quincy (Alton) in 1853; Portland (Maine) in 1855; Fort Wayne, Sault Sainte Marie (Marquette) in 1857; Columbus, Grass Valley (Sacramento), Green Bay, Harrisburg, La Crosse, Rochester, Scranton, St. Joseph, Wilmington in 1868; Springfield and St. Augustine in 1870; Providence and Ogdensburg in 1872; San Antonio in 1874; Peoria in 1875; Leavenworth in 1877; the Vicariates Apostolic of the Indian Territory and Nebraska in 1851; Northern Michigan in 1853; Florida in 1857; North Carolina, Idaho, and Colorado in 1868; Arizona in 1869; Brownsville in Texas and Northern Minnesota in 1874. He encouraged the convening of provincial and diocesan synods in various countries, and established at Rome the Latin American College in 1853, and the College of the United States of America, at his own private expense, in 1859. His

was the longest pontificate in the history of the papacy. In 1871 he celebrated his twenty-fifth, in 1876 his thirtieth, anniversary as pope, and in 1877 his golden episcopal jubilee. His tomb is in the church of San Lorenzo fuori le mura. The so-called diocesan process of his beatification was begun on 11 February, 1907.

MICHAEL OTT.

Pius X, POPE (GIUSEPPE MELCHIORRE SARTO), b. 2 June, 1835, at Riese, Province of Treviso, in Venice. His parents were Giovanni Battista Sarto and Margarita (*née* Sanson); the former, a postman, died in 1852, but Margarita lived to see her son a cardinal. After finishing his elements, Giuseppe at first received private lessons in Latin from the archpriest of his town, Don Tito Fusaroni, after which he studied for four years at the gymnasium of Castelfranco Veneto, walking to and fro every day. In 1850 he received the tonsure from the Bishop of Treviso, and was given a scholarship of the Diocese of Treviso in the seminary of Padua, where he finished his classical, philosophical, and theological studies with distinction. He was ordained in 1858, and for nine years was chaplain at Tombolo, having to assume most of the functions of parish priest, as the pastor was old and an invalid. He sought to perfect his knowledge of theology by assiduously studying Saint Thomas and canon law; at the same time he established a night school for adult students, and devoted himself to the ministry of preaching in other towns to which he was called. In 1867 he was named archpriest of Salzano, a large borough of the Diocese of Treviso, where he restored the church, and provided for the enlargement and maintenance of the hospital by his own means, consistently with his habitual generosity to the poor; he especially distinguished himself by his abnegation during the cholera. He showed great solicitude for the religious instruction of adults. In 1871 he was made a canon of the cathedral of Treviso, and filled several offices, among them those of spiritual director and rector of the seminary, examiner of the clergy, and vicar-general; moreover, he made it possible for the students of the public schools to receive religious instruction. In 1878, on the death of Bishop Zanelli, he was elected vicar-capitular. On 10 November, 1884, he was named Bishop of Mantua, then a very troublesome see, and consecrated on 20 November. His chief care in his new position was for the formation of the clergy at the seminary, where, for several years, he himself taught dogmatic theology, and for another year moral theology. He wished the doctrine and method of St. Thomas to be followed, and to many of the poorer students he gave copies of the "Summa theologia"; at the same time he cultivated the Gregorian

Chant in company with the seminarians. The temporal administration of his see imposed great sacrifices upon him. In 1887 he held a diocesan synod. By his attendance at the confessional, he gave the example of pastoral zeal. The Catholic organization of Italy, then known as the "Opera dei Congressi", found in him a zealous propagandist from the time of his ministry at Salzano.

At the secret consistory of June, 1893, Leo XIII created him a cardinal under the title of San Bernardo alle Terme; and in the public consistory, three days later, he was preconized Patriarch of Venice, retaining meanwhile the title of Apostolic Administrator of Mantua. Cardinal Sarto was obliged to wait eighteen months before he was able to take possession of his new diocese, because the Italian government refused its exequatur, claiming the right of nomination as it had been exercised by the Emperor of Austria. This matter was discussed with bitterness in the newspapers and in pamphlets; the Government, by way of reprisal, refused its exequatur to the other bishops who were appointed in the meantime, so that the number of vacant sees grew to thirty. Finally, the minister Crispi having returned to power, and

ARMS OF PIUS X

the Holy See having raised the mission of Eritrea to the rank of an Apostolic Prefecture in favour of the Italian Capuchins, the Government withdrew from its position. Its opposition had not been caused by any objection to Sarto personally. At Venice the cardinal found a much better condition of things than he had found at Mantua. There, also, he paid great attention to the seminary, where he obtained the establishment of the faculty of canon law. In 1898 he held the diocesan synod. He promoted the use of the Gregorian Chant, and was a great patron of Lorenzo Perosi; he favoured social works, especially the rural parochial banks; he discerned and energetically opposed the dangers of certain doctrines and the conduct of certain Christian-Democrats. The international Eucharistic Congress of 1897, the centenary of St. Gerard Sagredo (1900), and the blessing of the corner-stone of the new belfry of St. Mark's, also of the commemorative chapel of Mt. Grappa (1901), were events that left a deep impression on him and his people. Meanwhile, Leo XIII having died, the cardinals entered into conclave and after several ballots Giuseppe Sarto was elected on 4 August by a vote of 55 out of a possible 60 votes. His coronation took place on the following Sunday, 9 August, 1903.

In his first Encyclical, wishing to develop his programme to some extent, he said that the motto of his pontificate would be "instaurare omnia in Christo" (Ephes., i, 10). Accordingly, his greatest care always turned to the direct interests of the Church. Before all else his efforts were directed to the promotion of piety among the faithful, and he advised all (Decr. S. Congr. Concil., 20 Dec., 1905) to receive Holy Communion frequently and, if possible, daily, dispensing the sick from the obligation of fasting to the extent of enabling them to receive Holy Communion twice each month, and even oftener (Decr. S. Congr. Rit., 7 Dec., 1906). Finally, by the Decree "Quam Singulari" (15 Aug., 1910), he recommended that the first Communion of children should not be deferred too long after they had reached the age of discretion. It was by his desire

that the Eucharistic Congress of 1905 was held at Rome, while he enhanced the solemnity of subsequent Eucharistic congresses by sending to them cardinal legates. The fiftieth anniversary of the proclamation of the dogma of the Immaculate Conception was an occasion of which he took advantage to enjoin devotion to Mary (Encyclical "Ad illum diem", 2 February, 1904); and the Marian Congress, together with the coronation of the image of the Immaculate Conception in the choir of St. Peter's, was a worthy culmination of that solemnity. As a simple chaplain, a bishop, and a patriarch, Giuseppe Sarto was a promoter of sacred music; as pope, he published, 22 November, 1903, a Motu Proprio on sacred music in churches, and at the same time ordered the authentic Gregorian Chant to be used everywhere, while he caused the choir books to be printed with the Vatican font of type under the supervision of a special commission. In the Encyclical "Acerbo nimis" (15 April, 1905) he treated of the necessity of catechismal instruction, not only for children, but also for adults, giving detailed rules, especially in relation to suitable schools for the religious instruction of students of the public schools, and even of the universities. He caused a new catechism to be published for the Diocese of Rome.

As bishop, his chief care had been for the formation of the clergy, and in harmony with this purpose, an Encyclical to the Italian episcopate (28 July, 1906) enjoined the greatest caution in the ordination of priests, calling the attention of the bishops to the fact that there was frequently manifested among the younger clergy a spirit of independence that was a menace to ecclesiastical discipline. In the interest of Italian seminaries, he ordered them to be visited by the bishops, and promulgated a new order of studies, which had been in use for several years at the Roman Seminary. On the other hand, as the dioceses of Central and of Southern Italy were so small that their respective seminaries could not prosper, Pius X established the regional seminary which is common to the sees of a given region; and, as a consequence, many small, deficient seminaries were closed. For the more efficient guidance of souls, by a Decree of the Sacred Congregation of the Consistory (20 August, 1910), instructions were given concerning the removal of parish priests, as administrative acts, when such procedure was required by grave circumstances that might not constitute a canonical cause for the removal. At the time of the jubilee in honour of his ordination as a priest, he addressed a letter full of affection and wise counsel to all the clergy. By a recent Decree (18 Nov., 1910), the clergy have been barred from the temporal administration of social organizations, which was often a cause of grave difficulties.

The pope has at heart above all things the purity of the faith. On various occasions, as in the Encyclical regarding the centenary of Saint Gregory the Great, Pius X had pointed out the dangers of certain new theological methods, which, based upon Agnosticism and upon Immanentism, necessarily divest the doctrine of the faith of its teachings of objective, absolute, and immutable truth, and all the more, when those methods are associated with subversive criticism of the Holy Scriptures and of the origins of Christianity. Wherefore, in 1907, he caused the publication of the Decree "Lamentabili" (called also the Syllabus of Pius X), in which sixty-five propositions are condemned. The greater number of these propositions concern the Holy Scriptures, their inspiration, and the doctrine of Jesus and of the Apostles, while others relate to dogma, the sacraments, and the primacy of the Bishop of Rome. Soon after that, on 8 Sept., 1907, there appeared the famous Encyclical "Pascendi", which expounds and condemns the system of Modernism (q. v.). It points out the danger of Modernism in relation to philosophy, apologetics, exegesis, history,

liturgy, and discipline, and shows the contradiction between that innovation and the ancient faith; and, finally, it establishes rules by which to combat efficiently the pernicious doctrines in question. Among the means suggested mention should be made of the establishment of an official body of "censors" of books and the creation of a "Committee of Vigilance".

Subsequently, by the Motu Proprio "Sacrorum Antistitum", Pius X called attention to the injunctions of the Encyclical and also to the provisions that had already been established under Leo XIII on preaching, and prescribed that all those who exercised the holy ministry or who taught in ecclesiastical institutions, as well as canons, the superiors of the regular clergy, and those serving in ecclesiastical bureaux should take an oath, binding themselves to reject the errors that are denounced in the Encyclical or in the Decree "Lamentabili". Pius X reverted to this vital subject on other occasions, especially in those Encyclicals that were written in commemoration of St. Anselm (21 April, 1909) and of St. Charles Borromeo (23 June, 1910), in the latter of which Reformist Modernism was especially condemned. As the study of the Bible is both the most important and the most dangerous study in theology, Pius X wished to found at Rome a centre for these studies, to give assurance at once of unquestioned orthodoxy and scientific worth; and so, with the assistance of the whole Catholic world, there was established at Rome the Biblical Institute, under the direction of the Jesuits.

A need that had been felt for a long time was that of the codification of the Canon Law, and with a view to effecting it, Pius X, on 19 March, 1904, created a special congregation of cardinals, of which Mgr Gasparri, now a cardinal, became the secretary. The most eminent authorities on canon law, throughout the world, are collaborating in the formation of the new code, some of the provisions of which have already been published, as, for example, that modifying the law of the Council of Trent on secret marriages, the new rules for diocesan relations and for episcopal visits *ad limina*, and the new organization of the Roman Curia (Constitution "Sapienti Consilio", 29 June, 1908). Prior to that time, the Congregations for Relics and Indulgences and of Discipline had been suppressed, while the Secretariate of Briefs had been united to the Secretariate of State. The characteristic of the new rule is the complete separation of the judicial from the administrative; while the functions of the various bureaux have been more precisely determined, and their work more equalized. The offices of the Curia are divided into Tribunals (3), Congregations (11), and Offices (5). With regard to the first, the Tribunal of the Signature (consisting of cardinals only) and that of the Rota were revived; to the Tribunal of the Penitentiary were left only the cases of the internal forum (conscience). The Congregations remained almost as they were at first, with the exceptions that a special section was added to that of the Holy Office of the Inquisition, for indulgences; the Congregation of Bishops and Regulars received the name of Congregation of the Religious, and has to deal only with the affairs of religious congregations, while the affairs of the secular clergy are to be referred to the Congregation of the Consistory or of that of the Council; from the latter were taken the matrimonial causes, which are now sent to the tribunals or to the newly-created Congregation of the Sacraments. The Congregation of the Consistory has increased greatly in importance, since it has to decide questions of competence between the various other Congregations. The Congregation of Propaganda lost much of its territory in Europe and in America, where religious conditions have become regular. At the same time were published the rules and regulations for employees and those for the various bureaux. Another

PIUS X

recent Constitution relates to the suburbicarian sees.

The Catholic hierarchy has greatly increased in numbers during these first years of the pontificate of Pius X, in which twenty-eight new dioceses have been created, mostly in the United States, Brazil, and the Philippine Islands; also one abbey nullius, 16 vicariates Apostolic, and 15 prefectures Apostolic.

Leo XIII brought the social question within the range of ecclesiastical activity. Pius X, also, wishes the Church to co-operate, or rather to play a leading part in the solution of the social question; his views on this subject were formulated in a syllabus of nineteen propositions, taken from different Encyclicals and other Acts of Leo XIII, and published in a *Motu Proprio* (18 Dec., 1903), especially for the guidance of Italy, where the social question was a thorny one at the beginning of his pontificate. He sought especially to repress certain tendencies leaning towards Socialism and promoting a spirit of insubordination to ecclesiastical authority. As a result of ever increasing divergencies, the "Opera dei Congressi", the great association of the Catholics of Italy, was dissolved. At once, however, the Encyclical "Il fermo proposito" (11 June, 1905) brought about the formation of a new organization consisting of three great unions, the Popolare, the Economica, and the Elettorale. The firmness of Pius X obtained the elimination of, at least, the most quarrelsome elements, making it possible now for Catholic social action to prosper, although some friction still remains. The desire of Pius X is for the economical work to be avowedly Catholic, as he expressed it in a memorable letter to Count Medolago-Albani. In France, also, the Sillon, after promising well, had taken a turn that was little reassuring to orthodoxy; and dangers in this connexion were made manifest in the Encyclical "Notre charge apostolique" (15 Aug., 1910), in which the Sillonists were ordered to place their organizations under the authority of the bishops.

In its relations with Governments, the pontificate of Pius X has had to carry on painful struggles. In France the pope had inherited quarrels and menaces. The "Nobis nominavit" question was settled through the condescension of the pope; but the matter of the appointment of bishops proposed by the Government, the visit of the president to the King of Italy, with the subsequent note of protestation, and the resignation of two French bishops, which was desired by the Holy See, became pretexts for the Government at Paris to break off diplomatic relations with the Court of Rome. Meanwhile the law of Separation had been already prepared, despoiling the Church of France, and also prescribing for the Church a constitution which, if not openly contrary to her nature, was at least full of danger to her. Pius X, paying no attention to the counsels of short-sighted opportunism, firmly refused his consent to the formation of the *associations culturelles*. The separation brought some freedom to the French Church, especially in the matter of the selection of its pastors. Pius X, not looking for reprisals, still recognizes the French right of protectorate over Catholics in the East. Some phrases of the Encyclical "Editæ Sæpe", written on the occasion of the centenary of St. Charles, were misinterpreted by Protestants, especially in Germany, and Pius X made a declaration in refutation of them, without belittling the authority of his high office. At present (Dec., 1910) complications are feared in Spain, as, also, separation and persecution in Portugal; Pius X has already taken opportune measures. The new Government of Turkey has sent an ambassador to the Pope. The relations of the Holy See with the republics of Latin America are good. The delegations to Chile and to the Argentine Republic were raised to the rank of internuntiations, and an Apostolic Delegate was sent to Central America.

Naturally, the solicitude of Pius X extends to his own habitation, and he has done a great deal of work of restoration in the Vatican, for example, in the quarters of the cardinal-secretary of State, the new palace for employees, the new picture-gallery, the Specola, etc. Finally, we must not forget his generous charity in public misfortunes: during the great earthquakes of Calabria, he asked for the assistance of Catholics throughout the world, with the result that they contributed, at the time of the last earthquake, nearly 7,000,000 francs, which served to supply the wants of those in need, and to build churches, schools, etc. His charity was proportionately no less on the occasion of the eruption of Vesuvius, and of other disasters outside of Italy (Portugal and Ireland). In few years Pius X has secured great, practical, and lasting results in the interest of Catholic doctrine and discipline, and that in the face of great difficulties of all kinds. Even non-Catholics recognize his apostolic spirit, his strength of character, the precision of his decisions, and his pursuit of a clear and explicit programme.

X* and *Acta Apostolica Sedis* (Vatican press).

U. BENIGNI.

Piusverein, the name given to Catholic associations in various countries of Europe.

I. THE PIUS ASSOCIATION OF GERMANY, named after Pius IX, was founded at Mainz in 1848 by the cathedral canon, Adam Franz Lennig (d. 1866), and Professor Caspar Riffel (d. 1856), to organize the Catholics of Germany in defence of their religious freedom and civil rights. The platform and by-laws were published in the "Katholik" (Mainz, 1848). The organizers of the association called a congress of the Catholic societies of Germany which met at Mainz, 3-6 October, 1848. At this assembly 38 societies were represented, and all the Catholic associations of Germany founded to protect religious interests were united into the "Catholic Association of Germany". The annual congresses of this association led to other efficient organizations; in 1848 the Society of St. Vincent de Paul and the Association of St. Elizabeth; in 1849 the Association of St. Boniface; in 1850 the Society for Christian Art; in 1851 the Catholic Journeymen's Union; these assemblies were the precursors of the "General Congress of the Catholics of Germany" that is held annually.

II. THE PIUS ASSOCIATION OF SWITZERLAND.—This was founded in 1855 by Count Theodore Scherer-Boccard who remained at its head until his death (d. 1885). Its aim is to develop and centralize Catholic associational life in Switzerland. It is directed by two central committees, and the general meetings are held nearly every year; in addition, there are also cantonal and district assemblies. Many of the local associations have branches for women. Since 1899 the society was called the "Swiss Catholic Association"; it then contained 225 groups with 35,000 members. On 22 November, 1904, it combined with the "United Societies of Catholic Men and Workingmen" and the "Fédération Romande" to form the "Swiss Catholic Peoples Union". (See the "Yearbook" of the Union, Stans, 1907.)

III. THE PIUS ASSOCIATION FOR PROMOTING THE CATHOLIC PRESS OF AUSTRIA, named after Pius X, was founded at the Fifth Catholic Congress held at Vienna in 1905 after the presentation of a convincing report by the Jesuit, Father Victor Kolb, in order to offset the demoralizing Liberal daily Press with an equally able Christian Press. This end was to be gained largely by developing the Catholic daily newspapers of

Vienna. The president of the association since its founding has been Count Franz Walterskirchen-Walfstal. In January, 1911, the Pius Association included 840 local groups with a membership of more than 63,000, and headquarters at Vienna. The annual fee is one krone (twenty cents). In 1910 the annual income was 126,000 Kr. (\$25,200); of this amount 40,000 Kr. (\$8000) went to two daily newspapers of Vienna, the "Reichspost" and the "Vaterland"; 25,000 Kr. (\$5000) for campaign purposes and associational periodicals; 5000 Kr. (\$1000) for the support of Catholic newspaper writers; 27,000 Kr. (\$5400) for a press and correspondence bureau. The bureau sends daily, Sundays excepted, the "Piusvereinskorrespondenz", which is six to eight pages in size, to about fifty Christian newspapers. Since 1910 it has also issued a supplement for use in different papers and thus contributes largely to the intellectual and religious development of the Catholic provincial Press in Austria. There are 12 diocesan subsidiary councils, besides an Italian section at Triest, and a Czech section at Prague. The money collected outside of Vienna is partially used for the local Press. Since the founding of the Pius Association there has been a very noticeable development of the Catholic Press of Austria, due largely to writings in behalf of the cause and to the holding of meetings, of which there are about 700 yearly; but the desired aim is still far from being realized.

IV. ACADEMIC PIUS ASSOCIATIONS in Germany, for promoting religious interests and attachment to the Church among Catholic students and training them both socially and scientifically, were greatly weakened by the *Kulturkampf*. In Southern Germany they have recently been organized as the "Unio Piana" or "Union of the Academic Pius Associations"; this union has 9 branch associations with about 1300 members, of whom 800 are regular members. Since 1909 the organ of the association has been "Der Akademiker".

KARL HILGENREINER.

Pizarro, FRANCISCO, b. in Trujillo, Estremadura, Spain, probably in 1471; d. at Lima, Peru, 26 June, 1541. He was the illegitimate son of Gonzalo Pizarro and Francisca González, who paid little attention to his education and he grew up without learning how to read or write. His father was a captain of infantry and had fought in the Neopolitan wars with el Gran Capitán Gonzalo de Córdoba. Filled with enthusiasm at the accounts of the exploits of his countrymen in America, Pizarro set sail (10 Nov., 1509) with Alonzo de Ojeda from Spain, on the latter's expedition to Urabá, where Ojeda founded the city of San Sebastian, and left it in Pizarro's care when he returned to the ship for provisions. Hardships and the climate having thinned the ranks of his companions, Pizarro sailed to the port of Cartagena. There he joined the fleet of Martín Fernández de Enciso, and later attached himself to the expedition of Nuñez de Balboa, whom he accompanied on his journey across the Isthmus of Panama to discover the Pacific Ocean (29 Sept., 1513). When Balboa was beheaded by his successor, Pedrarias Dávila, Pizarro followed the fortunes of the latter until 1515 when Dávila sent him to trade with the natives along the Pacific coast. When the capital was transferred to Panama he helped Pedrarias to subjugate the warlike tribes of Veraguas, and in 1520 accompanied Espinosa on his expedition into the territory of the Cacicue Urraca, situated in the present Republic of Costa Rica.

In 1522 the accounts of the achievements of Hernán Cortés, and the return of Pascual de Andagoya from

his expedition to the southern part of Panama, bringing news of the countries situated along the shore of the ocean to the south, fired him with enthusiasm. With the approbation of Pedrarias he formed together with Diego de Almagro, a soldier of fortune who was at that time in Panama, and Hernando de Luque, a Spanish cleric, a company to conquer the lands situated to the south of Panama. Their project seemed so utterly unattainable that the people of Panama called them the "company of lunatics". Having collected the necessary funds Pizarro placed himself at the head of the expedition; Almagro was entrusted with the equipping and provisioning of the ships; and Luque was to remain behind to look after their mutual interests and to keep in Pedrarias's favour so that he might continue to support the enterprise. In November, 1524, Pizarro set sail from Panama with a party of one hundred and fourteen volunteers and four horses, and Almagro was to follow him in a smaller ship just as soon as it could be made ready. The result of this first expedition was disheartening. Pizarro went no further than Punta Quemada, on the coast of what is now Colombia, and having lost many of his men he went to Chicamá, a short distance from Panama. From here he sent his treasurer, with the small quantity of gold which he had obtained, to the governor to give an account of the expedition. Meanwhile Almagro had followed him, going as far as the Rio de San Juan (Cauca, Colombia), and, not finding him, returned to rejoin him at Chicamá.

A second request to obtain Pedrarias's permission to recruit volunteers for the expedition was met with hostility, because the governor himself was planning an expedition to Nicaragua. Luque, however, contrived to change his attitude, and the new governor, D. Pedro de los Rios, was from the beginning favourably disposed towards the expedition. On 10 March, 1528, the three partners signed a contract, whereby they agreed to divide equally all the territory that should be conquered and all the gold, silver, and precious stones that should be found. They purchased two ships, and Pizarro and Almagro directed their course to the mouth of the San Juan River, where they separated. Pizarro remained with a portion of the soldiers to explore the mainland; Almagro returned to Panama to get re-enforcements; and the other ship under the command of Ruiz set sail for the south. He went as far as Punta de Pasados, half a degree south of the equator, and after making observations and collecting an abundance of information, returned to join Pizarro, who in the meantime, together with his companions, had suffered severely. Shortly afterwards Almagro arrived from Panama, bringing soldiers and abundant provisions. Once more re-enforced they started together taking a southerly route until they reached Tacamez, the extreme south of Colombia. They then decided that Almagro should return to Panama, and Pizarro should remain on the Island del Gallo to await further re-enforcements. The arrival of Almagro and the news of the sufferings of the explor-

FRANCISCO PIZARRO
After the Portrait formerly in the Palace
of the Viceroys, Lima

ers alarmed Pedro de los Rios, who sent two ships to the Island del Gallo with orders to bring back all the members of the expedition. Pizarro and thirteen of his companions refused to return, and the little party was abandoned on the island. Fearful of being molested by the inhabitants on account of their reduced number, they built a raft and sought refuge on the Island of Gorgona on the coasts of Colombia.

Meanwhile Almagro and Luque endeavoured to pacify the governor who at last consented that a ship be sent, but only with a sufficient force to man it, and with positive orders to Pizarro to present himself at Panama within six months. When the ship arrived without reinforcements Pizarro determined, with the aid of the few men that he still had with him, to undertake an expedition southward. Skirting the coast of the present Republic of Ecuador, he directed his course towards the city of Tumbez in the north of what is now Peru. Seeing that the natives were friendly towards him, he continued his voyage as far as Payta, doubled the point of Aguja, and sailed along the coast as far as the point where the city of Trujillo was later founded. He was everywhere well received, for the Spaniards in obedience to his strict orders had refrained from any excesses that might have incurred the enmity of the Indians and endangered the ultimate result of the expedition. Finally after an absence of eighteen months Pizarro returned to Panama. Notwithstanding the gold he brought and the glowing accounts he gave, the governor withdrew his support and permission to continue the explorations. The three partners then determined that Pizarro should go to Spain and lay his plans before Charles V.

He landed in Seville in 1538 and was well received by the emperor, then in Toledo, who was won by the account of the proposed expedition, and, 26 June, 1529, signed the memorable agreement (*capitulacion*), in which the privileges and powers of Pizarro and his associates were set forth. On the former, Charles conferred the order of Knight of St. James, the titles of *Adelantado*, Governor and Captain General, with absolute authority in all the territories he might discover and subjugate. A government independent of that of Panama was granted to him in perpetuity, extending two hundred leagues to the south of the River Santiago, the boundary between Colombia and Ecuador. He had the privilege of choosing the officers who were to serve under him, of administering justice as chief constable (*alguacil*), and his orders were revocable only by the *Consejo Real*. Pizarro agreed to take 250 soldiers and provide the boats and ammunition indispensable for such an expedition. He sailed from Seville 18 January, 1530, taking with him his brothers, Hernando, who was the only legitimate son, Juan, and Gonzalo, all of whom were to play an important part in the history of Peru. Arrived in Panama he had the task of pacifying his two associates who were dissatisfied with the scant attention he had secured for them from the Court. Early in January, 1531, Pizarro set sail from the port of Panama with 3 ships, 180 men, and 27 cavaliers. Almagro and Luque remained behind to procure further assistance and send reinforcements. He landed in the Bay of San Mateo near the mouth of the Santiago River, and started to explore the coast on foot. The three boats were sent back to Panama for reinforcements.

The explorers passed by Puerto Viejo and came as far as the city of Tumbez, where they embarked in some Indian rafts and passed over to the Island of Puna in the Gulf of Guayaquil. Here they were hard pressed by the attacks of the islanders, when relief came in the form of two vessels with a hundred men and some horses commanded by Hernando de Soto. Thus reinforced and knowing that the brothers Atahualpa and Huascar were at war with each other, Pizarro determined to penetrate into the interior of the empire and left Tumbez early in May, 1532. On

15 Nov., after a long, distressing journey and without opposition from the Indians, he entered the city of Caxamalca (now Caxamarca). Treacherously invited into the camp of the Spaniards, the Indian prince Atahualpa presented himself accompanied by his bodyguard but unarmed. At a given signal the Spaniards rushed upon the unsuspecting Indians, massacred them in the most horrible manner, and took possession of their chief. Deprived of its leader the great army that was encamped near Caxamalca, not knowing what to do, retreated into the interior. As the price of his release the Inca monarch offered his captives gold enough to fill the room (22 by 17 feet) in which he was held captive. In a few months the promise was fulfilled. Gold to the amount of 4,605,670 ducats (15,000,000 pesos), according to Garcilaso de la Vega, was accumulated and Atahualpa claimed his freedom. At this juncture Almagro arrived with soldiers to strengthen their position, and naturally insisted that they too should share in the booty. This was agreed to and after the fifth part, the share of the king, had been set apart an adequate division was made of the remainder, a share of \$52,000 falling to the lot of each soldier, even those who had come at the end. Notwithstanding Atahualpa was accused and executed 24 June, 1534.

From Caxamalca he passed to the capital of the Incas, while his lieutenants were obtaining possession of all the remaining territory. In order to keep the Indians together Pizarro had Manco Capac, an Inca, crowned king, and on 6 Jan., 1535, founded the city of Lima. He obliged Pedro de Alvarado, who had come from Guatemala in search of adventure, to return to his own territory, and sent his brother Hernando to Spain to give an account to the Court of the new empire he had united to the Crown. He was well received by the emperor, who conferred on Pizarro the title of marquess and extended the limits of his territory seventy leagues further along the southern coast. The title of *Adelantado*, besides that of Governor of Chile, which, however, had not yet been conquered, was conferred on Diego de Almagro. Luque was no longer living. Almagro at once set about the conquest of Chile, taking with him all those who were willing to follow.

Manco Capac was meanwhile trying to foment an uprising in the whole of Peru, actually besieging the cities of Lima and Cuzco. The arrival of Alonso de Alvarado, brother of the companion of Cortés, saved Lima, but Cuzco, where the three brothers of Pizarro were, was only saved by the return of Almagro from his expedition to Chile and his claim that the city of Cuzco was situated in the territory which had been assigned to him in the royal decrees. The Indians were put to flight, Almagro took forcible possession of the city, April, 1537, and made Hernando and Gonzalo prisoners, Juan having died. Troops, however, were hurrying from Lima to the rescue; Almagro was defeated, taken prisoner, and executed, July, 1538. Hernando went to Spain but was not received well at the Court; he was imprisoned until 1560, and died at the age of one hundred almost in dire poverty. Gonzalo launched on his intrepid expedition to explore the Amazon, returning to find that his brother Francisco was no more. The followers of Almagro, offended by the arrogant conduct of Pizarro and his followers after the defeat and execution of Almagro, organized a conspiracy which ended in Pizarro's assassination of the conqueror of Peru in his palace at Lima.

Pizarro had four children: a son whose name and the name of his mother are not known, and who died in 1544; Gonzalo by an Indian girl, Inés Huailas Yupanqui, who was legitimized in 1537 and died when he was fourteen; by the same woman, a daughter, Francisca, who subsequently married after having been legitimized by imperial decree, together with her uncle Hernando Pizarro, 10 Oct., 1537; and a son,

Francisco, by a relative of Atahualpa, who was never legitimized, and died shortly after reaching Spain.

CAMILLUS CRIVELLI.

Placet. See EQUATUR.

Placidia, GALLA, Queen of Rome, b. in 393; d. 27 Nov., 450; the daughter of Theodosius the Great by his second wife Galla, whom he married in 388 and for whom he afterwards took the field against the usurper Maximus and conquered Italy, which he restored to his wife's brother Valentinian. The death of the latter put an end to the last imperial dynasty of the Western Roman Empire and Theodosius became the sole ruler of the Roman Empire. He was succeeded (395) by Arcadius and Honorius, two sons by his first marriage. Stilicho conducted the government in Western Rome for Honorius. In his house Galla Placidia grew up to maturity at the side of his wife Serena. When, after the execution of Stilicho, Alaric, with his army of Goths, bore down on Italy and Rome, the wrath of the people against Serena became intense. The opinion prevailed that her vengeance had bidden this invasion. She was condemned to death by the Senate, which compelled the consent of Placidia to its sentence against her. With this act of desperation, Placidia makes her appearance on the world's stage. After the second storming of Rome by the Goths, she was taken a hostage by Alaric on his return to Calabria. After the latter's death Ataulf became king, and, urged by Placidia, began peace negotiations with Honorius at Ravenna. These being fruitless, he traversed the Italian peninsula with his Goths, crossed the Alps and established himself in Southern Gaul where he and Placidia were married at Narbo (417). In spite of the opposition of her enemies, Ataulf yielded to her influence in negotiating peace with Honorius. In Barcelona, Placidia gave birth to a son, Theodosius, who died soon afterwards. Death also overtook her husband, who died a victim of revenge. Singerich,

his brother, on ascending the throne, drove Placidia from the palace. She was again delivered to the Emperor Honorius by King Waller, and in 416 went to the Court of Ravenna. Next Constantius, the Emperor's chief general and later *Patricius* of Gaul, desired to marry her. Necessity forced her consent (417) to the marriage, the fruits of which were a daughter, Justa Grata Honoria, and later a son, Placidus Valentinianus.

In 421 Constantius was made emperor and Placidia received the title of Augusta. Constantius died this same year. Fearful of new disturbances in Ravenna, Honorius sent her to Constantinople. When the latter died (423), Johannes took possession of Italy by force. Placidia, with her son Valentinianus, and escorted by an Eastern Roman army, left for Aquila, and thence to Ravenna. Johannes was conquered and captured. Valentinian III was called to the throne in Rome. Placidia conducted the government as regent with skill and foresight, her advisers being the faithful

Boniface, Prefect of the Province of Africa, and the Patricius Aetius. In her children she had little pleasure. Placidia deserves great praise for her services to the Church. She used her influence to further the plans of Leo I when he pleaded with Theodosius II to put an end to the heresy of Eutyches. She built many churches in Ravenna, Rimini, and Rome, restored others, or adorned them with mosaics. Among these are the church of St. John the Evangelist and that of Sts. Nazaro and Celso in Ravenna. Her zeal in the building and beautifying of

churches gave a new stimulus to Christian art in the fifth century.

NAGL, G. *Placidia in Studien zur Gesch. d. Allertums*, II, 3 (Paderborn, 1908).

KARL HOEBER.

Placidus, SAINT, disciple of St. Benedict, the son of the patrician Tertullus, was brought as a child to St. Benedict at Sublaqueum (Subiaco) and dedicated to God as provided for in chapter lxix of St. Benedict's Rule. Here too occurred the incident related by St. Gregory (Dialogues, II, vii) of his rescue from drowning when his fellow monk, Maurus, at St. Benedict's

INTERIOR OF THE MAUSOLEUM OF GALLA PLACIDIA, RAVENNA
V Century. (See Article, Painting, Religious.)

MARTYRDOM OF STS. PLACIDUS AND FLAVIA
Correggio, Pinacoteca, Parma

order ran across the surface of the lake below the monastery and drew Placidus safely to shore. It appears certain that he accompanied St. Benedict when, about 529, he removed to Monte Cassino, which was said to have been made over to him by the father of Placidus. Of his later life nothing is known, but in an ancient *psalterium* at Vallombrosa his name is found in the Litany of the Saints placed among the confessors immediately after those of St. Benedict and St. Maurus; the same occurs in Codex CLV at Subiaco, attributed to the ninth century (see Bäumér, "Johannes Mabillon", p. 199, n. 2).

There seems now to be no doubt that the "Passio S. Placidi", purporting to be written by one Gordianus, a servant of the saint, on the strength of which he is usually described as abbot and martyr, is really the work of Peter the Deacon, a monk of Monte Cassino in the twelfth century (see Delehaye, *op. cit. infra*). The writer seems to have begun by confusing St. Placidus with the earlier Placitus, who, with Euticius and thirty companions, was martyred in Sicily under Diocletian, their feast occurring in the earlier martyrologies on 5 October. Having thus made St. Placidus a martyr, he proceeds to account for this by attributing his martyrdom to Saracen invaders from Spain—an utter anachronism in the sixth century but quite a possible blunder if the "Acta" were composed after the Moslem invasions of Sicily. The whole question is discussed by the Bollandists (*infra*).

G. ROGER HUDLESTON.

Placitum Regium. See EXEQUATUR.

Plagues of Egypt, ten calamities inflicted on the Egyptians to overcome Pharaoh's obstinacy and force him to let the Israelites leave Egypt (Ex., vii, 8–xii, 30; Ps. lxxvii, 42–51; civ, 26–36). Moses's notification of God's will to Pharaoh only produced an aggravation of the condition of the Israelites, and the wonder of changing Aaron's rod into a serpent, which was wrought in proof of Moses's Divine mission, made no impression, as it was imitated by the Egyptian magicians (Ex., v; vii, 8–13). A series of afflictions, culminating in the destruction of all the first-born of Egypt, was required before Pharaoh yielded. Of the ten plagues seven were produced through the agency of Moses and Aaron or of Moses alone, and three, namely the fourth, fifth, and tenth, by the direct action of God Himself. The interval of time within which they occurred cannot be stated with certainty. The last four must have followed in close succession between the beginning of March and the first days of April. For when the hail fell barley was in the ear and flax in bud, which in Lower Egypt happens about March, and the Israelites left on the 14th of Nisan, which falls in the latter part of March or the early part of April. The first six seem also to have succeeded one another at short intervals, but the interval, if any, between them and the last four is uncertain. The Scriptural account produces the impression that the ten plagues were a series of blows in quick succession, and this is what the case would seem to have required. The scene of the interviews of Moses and Aaron with Pharaoh was Tanis or Soan in Lower Egypt (Ps. lxxvii, 12, 43).

In the *first* plague, the water of the river and of all the canals and pools of Egypt was turned to blood and became corrupted, so that the Egyptians could not drink it, and even the fishes died (Ex., vii, 14–25). Commentators are divided as to whether the water was really changed into blood, or whether only a phenom-

enon was produced similar to the red discoloration of the Nile during its annual rise, which gave the water the appearance of blood. The latter view is now commonly accepted. It should be noted, however, that the red discoloration is not usual in Lower Egypt, and that, when so discoloured, the water is not unfit to drink, though it is during the first, or green, stage of the rise. Besides, the change did not take place during the inundation (cf. Ex., vii, 15). The *second* plague came seven days later. Aaron stretched his hand upon the waters and there appeared an immense number of frogs, which covered the land and penetrated into the houses to the great discomfort of the inhabitants. Pharaoh now promised to let the Israelites go to sacrifice in the desert if the frogs were removed, but broke his promise when this was done. The *third* plague consisted of swarms of gnats which tormented man and beast. The magicians who in some way had imitated the first two wonders could not imitate this, and were forced to exclaim "This is the finger of God". The *fourth* was a pest of flies. Pharaoh now agreed to allow the Israelites a three days' journey into the desert, but when at the prayer of Moses the flies were taken away, he failed to keep his promise. The *fifth* was a murrain or cattle-pest, which killed the beasts of the Egyptians, while sparing those of the Israelites. The *sixth* consisted in boils which broke out both on men and beasts. The *seventh* was a fearful hailstorm. "The hail destroyed through all the land of Egypt all things that were in the field, both man and beast: and the hail smote every herb of the field, and it broke every tree of the country. Only in the land of Gessen, where the children of Israel were, the hail fell not." The frightened king again promised and again became obstinate when the storm was stopped. At the threat of an unheard of plague of locusts (the *eighth*) the servants of Pharaoh interceded with him and he consented to let the men go, but refused to grant more. Moses therefore stretched forth his rod, and a south wind brought innumerable locusts which devoured what the hailstorm had left. The *ninth* plague was a horrible darkness which for three days covered all Egypt except the land of Gessen. The immediate cause of this plague was probably the *hamsin*, a south or south-west wind charged with sand and dust, which blows about the spring equinox and at times produces darkness rivalling that of the worst London fogs. As Pharaoh, though willing to allow the departure, insisted that the flocks should be left behind, the final and most painful blow (the *tenth*) was struck—the destruction in one night of all the first-born of Egypt.

As the plagues of Egypt find parallels in natural phenomena of the country, many consider them as merely natural occurrences. The last evidently does not admit of a natural explanation, since a pestilence does not select its victims according to method. The others, howsoever natural they may be at times, must in this instance be considered miraculous by reason of the manner in which they were produced. They belong to the class of miracles which the theologians call preternatural. For not to mention that they were of extraordinary intensity, and that the first occurred at an unusual time and place and with unusual effects, they happened at the exact time and in the exact manner predicted. Most of them were produced at Moses's command, and ceased at his prayer, in one case at the time set by Pharaoh himself. Purely natural phenomena, it is clear, do not occur under such conditions. Moreover, the ordinary phenomena, which were well known to the Egyptians, would not have produced such a deep impression on Pharaoh and his court.

F. BECHTEL.

Plain Chant.—By plain chant we understand the church music of the early Middle Ages, before the advent of polyphony. Having grown up gradually in the service of Christian worship, it remained the exclusive music of the Church till the ninth century, when polyphony made its first modest appearance. For centuries again it held a place of honour, being, on the one hand, cultivated side by side with the new music, and serving, on the other hand, as the foundation on which its rival was built. By the time vocal polyphony reached its culminating point, in the sixteenth century, plain chant had lost greatly in the estimation of men, and it was more and more neglected during the following centuries. But all along the Church officially looked upon it as her own music, and as particularly suited for her services, and at last, in our own days, a revival has come which seems destined to restore plain chant to its ancient position of glory. The name, *cantus planus*, was first used by theorists of the twelfth or thirteenth century to distinguish the old music from the *musica mensurata* or *mensurabilis*, music using notes of different time value in strict, mathematical proportion, which began to be developed about that time. The earliest name we meet is *cantilena romana* (the Roman chant), probably used to designate one form of the chant having its origin in Rome from others, such as the Ambrosian chant (see GREGORIAN CHANT). It is also commonly called Gregorian chant, being attributed in some way to St. Gregory I.

HISTORY.—Although there is not much known about the church music of the first three centuries, and although it is clear that the time of the persecutions was not favourable to a development of solemn Liturgy, there are plenty of allusions in the writings of contemporary authors to show that the early Christians used to sing both in private and when assembled for public worship. We also know that they not only took their texts from the psalms and canticles of the Bible, but also composed new things. The latter were generally called hymns, whether they were in imitation of the Hebrew or of the classical Greek poetic forms. There seem to have been from the beginning, or at least very early, two forms of singing, the responsorial and the antiphonal. The responsorial was solo singing in which the congregation joined with a kind of refrain. The antiphonal consisted in the alternation of two choirs. It is probable that even in this early period the two methods caused that differentiation in the style of musical composition which we observe throughout the later history of plain chant, the choral compositions being of a simple kind, the solo compositions more elaborate, using a more extended compass of melodies and longer groups of notes on single syllables. One thing stands out very clearly in this period, namely, the exclusion of musical instruments from Christian worship. The main reason for this exclusion was perhaps the associations of musical instruments arising from their pagan use. A similar reason may have militated in the West, at least, against metrical hymns, for we learn that St. Ambrose was the first to introduce these into public worship in Western churches. In Rome they do not seem to have been admitted before the twelfth century. (See, however, an article by Max Springer in "Gregorianische Rundschau", Graz, 1910, nos. 5 and 6.)

In the fourth century church music developed considerably, particularly in the monasteries of Syria and Egypt. Here there seems to have been introduced about this time what is now generally called antiphon, i. e., a short melodic composition sung in connexion with the antiphonal rendering of a psalm. This antiphon, it seems, was repeated after every verse of the psalm, the two choir sides uniting in it. In the Western Church where formerly the responsorial method seems to have been used alone, the antiphonal method was introduced by St. Ambrose. He first used it in

Milan in 386, and it was adopted soon afterwards in nearly all the Western churches. Another importation from the Eastern to the Western Church in this century was the Alleluia chant. This was a peculiar kind of responsorial singing in which an Alleluia formed the responsorium or refrain. This Alleluia, which from the beginning appears to have been a long, melismatic composition, was heard by St. Jerome in Bethlehem, and at his instance was adopted in Rome by Pope Damasus (368-84). At first its use there appears to have been confined to Easter Sunday, but soon it was extended to the whole of Paschal time, and eventually, by St. Gregory, to all the year excepting the period of Septuagesima.

In the fifth century antiphony was adopted for the Mass, some psalms being sung antiphonally at the beginning of the Mass, during the oblations, and during the distribution of Holy Communion. Thus all the types of the choral chants had been established and from that time forward there was a continuous development, which reached something like finality in the time of St. Gregory the Great. During this period of development some important changes took place. One of these was the shortening of the Gradual. This was originally a psalm sung responsorially. It had a place in the Mass from the very beginning. The alternation of readings from scripture with responsorial singing is one of the fundamental features of the Liturgy. As we have the responses after the lessons of Matins, so we find the Gradual responses after the lessons of Mass, during the singing of which all sat down and listened. They were thus distinguished from those Mass chants that merely accompanied other functions. As the refrain was originally sung by the people, it must have been of a simple kind. But it appears that in the second half of the fifth century, or, at latest, in the first half of the sixth century, the refrain was taken over by the *schola*, the body of trained singers. Hand in hand with this went a greater elaboration of the melody, both of the psalm verses and of the refrain itself, probably in imitation of the Alleluia.

This elaboration then brought about a shortening of the text, until, by the middle of the sixth century, we have only one verse left. There remained, however, the repetition of the response proper after the verse. This repetition gradually ceased only from the twelfth century forward, until its omission was sanctioned generally for the Roman usage by the Missal of the Council of Trent. The repetition of the refrain is maintained in the Alleluia chant, except when a second Alleluia chant follows, from the Saturday after Easter to the end of Paschal time. The Tract, which takes the place of the Alleluia chant during the period of Septuagesima, has presented some difficulty to liturgists. Prof. Wagner (Introduction to the Gregorian Melodies, i, 78, 86) holds that the name is a translation of the Greek term *εἰρημός*, which means a melodic type to be applied to several texts, and he thinks that the Tracts are really Graduals of the older form, before the melody was made more elaborate and the text shortened. The Tracts, then, would represent the form in which the Gradual verses were sung in the fourth and fifth centuries. Of the antiphonal Mass chants the Introit and Communion retained their form till the eighth century, when the psalm began to be shortened. Nowadays the Introit has only one verse, usually the first of the psalm, and the Doxology, after which the Antiphon is repeated. The Communion has lost psalm and repetition completely, only the requiem Mass preserving a trace of the original custom. But the Offertory underwent a considerable change before St. Gregory; the psalm verses, instead of being sung antiphonally by the choir, were given over to the soloist and accordingly received rich melodic treatment like the Gradual verses. The antiphon itself

also participated to some extent in this melodic enrichment. The Offertory verses were omitted in the late Middle Ages, and now only the Offertory of the requiem Mass shows one verse with a partial repetition of the antiphon.

After the time of St. Gregory musical composition suddenly began to flag. For the new feasts that were introduced, either existing chants were adopted or new texts were fitted with existing melodies. Only about twenty-four new melodies appear to have been composed in the seventh century; at least we cannot prove that they existed before the year 600. After the seventh century, composition of the class of chants we have discussed ceased completely, with the exception of some Alleluias which did not gain general acceptance till the fifteenth century, when a new Alleluia was composed for the Visitation and some new chants for the Mass of the Holy Name (see "The Sarum Gradual and the Gregorian Antiphonale Missarum" by W. H. Frere, London, 1895, pp. 20, 30). It was different, however, with another class of Mass chants comprised under the name of "Ordinarium Misse". Of these the Kyrie, Gloria, and Sanctus were in the Gregorian Liturgy, and are of very ancient origin. The Agnus Dei appears to have been instituted by Sergius I (687-701) and the Credo appears in the Roman Liturgy about the year 800, but only to disappear again, until it was finally adopted for special occasions by Benedict VIII. (1012-24). All these chants, however, were originally assigned, not to the *schola*, but to the clergy and people. Accordingly their melodies were very simple, as those of the Credo are still. Later on they were assigned to the choir, and then the singers began to compose more elaborate melodies. The chants now found in our books assigned to *Ferias* may be taken as the older forms.

Two new forms of Mass music were added in the ninth century, the Sequences and the Tropes or Proses. Both had their origin in St. Gall. Notker gave rise to the Sequences, which were originally meant to supply words for the *longissimæ melodice* sung on the final syllable of the Alleluia. These "very long melodies" do not seem to have been the *melismata* which we find in the Gregorian Chant, and which in St. Gall were not longer than elsewhere, but special melodies probably imported about that time from Greece (Wagner, op. cit., I, 222). Later on new melodies were invented for the Sequences. What Notker did for the Alleluia, his contemporary Tuotilo did for other chants of the Mass, especially the Kyrie, which by this time had got some elaborate melodies. The Kyrie melodies were, in the subsequent centuries, generally known by the initial words of the Tropes composed for them, and this practice has been adopted in the new Vatican edition of the "Kyriale". Sequences and Tropes became soon the favourite forms of expression of mediæval piety, and innumerable compositions of the kind are to be met with in the mediæval service books, until the Missal of the Council of Trent reduced the Sequences to four (a fifth, the *Stabat Mater*, being added in 1727) and abolished the Tropes altogether. As regards the Office, Gevaert (*La Mélodie Antique*) holds that one whole class of antiphons, namely those taken from the "Gesta Martyrum", belong to the seventh century. But he points out also that no new melodic type is found amongst them. So here again we find the ceasing of melodic invention after St. Gregory. The responses of the Office received many changes and additions after St. Gregory, especially in Gaul about the ninth century, when the old Roman method of repeating the whole response proper after the verses was replaced by a repetition of merely the second half of the response. This Gallican method eventually found its way into the Roman use and is the common one now. But as the changes affected only the verses, which

have fixed formulæ easily applied to different texts, the musical question was not much touched.

St. Gregory compiled the Liturgy and the music for the local Roman use. He had no idea of extending it to the other Churches, but the authority of his name and of the Roman See, as well as the intrinsic value of the work itself, caused his Liturgy and chant to be adopted gradually by practically the whole Western Church. During his own lifetime they were introduced into England and from there, by the early missionaries, into Germany (Wagner, "Einführung", II, p. 88). They conquered Gaul mainly through the efforts of Pepin and Charlemagne, and about the same time they began to make their way into Northern Italy, where the Milanese, or Ambrosian, Liturgy had a firm hold, and into Spain, although it took centuries before they became universal in these regions. While the *schola* founded by St. Gregory kept the tradition pure in Rome, they also sent out singers to foreign parts from time to time to check the tradition there, and copies of the authentic choir books kept in Rome helped to secure uniformity of the melodies. Thus it came about that the MS. in neumatic notation (see NEUM) from the ninth century forward, and those in staff notation from the eleventh to the fourteenth century, present a wonderful uniformity. Only a few slight changes seem to have been introduced. The most important of these was the change of the reciting note of the 3rd and 8th modes from *b* to *c*, which seems to have taken place in the ninth century. A few other slight changes are due to the notions of theorists during the ninth and following centuries.

These notions included two things: (1) the tone system, which comprised a double octave of natural tones, from *A* to *a'* with *G* added below, and allowing only one chromatic note, namely *b* flat instead of the second *b*; and (2) eight modes theory. As some of the Gregorian melodies did not well fit in with this theoretic system, exhibiting, if ranged according to the mode theory, other chromatic notes, such as *e* flat, *f* sharp, and a lower *B* flat, some theorists declared them to be wrong, and advocated their emendation. Fortunately the singers, and the scribes who noted the traditional melodies in staff notation, did not all share this view. But the difficulties of expressing the melodies in the accepted tone system, with *b* flat as the only chromatic note, sometimes forced them to adopt curious expedients and slight changes. But as the scribes did not all resort to the same method, their differences enable us, as a rule, to restore the original version. Another slight change regards some melodic ornaments entailing tone steps smaller than a semitone. The older chant contained a good number of these, especially in the more elaborate melodies. In the staff notation, which was based essentially on a diatonic system, these ornamental notes could not be expressed, and, for the small step, either a semitone or a repetition of the same note had to be substituted. Simultaneously these non-diatonic intervals must have disappeared from the practical rendering, but the transition was so gradual that nobody seems to have been conscious of a change, for no writer alludes to it. Wagner (op. cit., II, *passim*), who holds that these ornaments are of Oriental origin though they formed a genuine part of the sixth-century melodies, sees in their disappearance the complete latinization of the plain chant.

A rather serious, though fortunately a singular, interference of theory with tradition is found in the form of the chant the Cistercians arranged for themselves in the twelfth century (Wagner, op. cit., II, p. 286). St. Bernard, who had been deputed to secure uniform books for the order, took as his adviser one Guido, Abbot of Cherlieu, a man of very strong theoretical views. One of the things to which he held firmly was the rule that the compass of a melody should not exceed the octave laid down for each mode

by more than one note above and below. This rule is broken by many Gregorian melodies. But Guido had no scruple in applying the pruning knife, and sixty-three Graduals and a few other melodies had to undergo considerable alteration. Another systematic change affected the Alleluia verse. The long melisma regularly found on the final syllable of this verse was considered extravagant, and was shortened considerably. Similarly a few repetitions of melodic phrases in a melismatic group were cut out, and finally the idea that the fundamental note of the mode should begin and end every piece caused a few changes in some intonations and in the endings of the Introit psalmody. Less violent changes are found in the chant of the Dominicans, fixed in the thirteenth century (Wagner, *op. cit.*, p. 305). The main variations from the general tradition are the shortening of the melisma on the final syllable of the Alleluia verse and the omission of the repetition of some melodic phrases.

From the fourteenth century forward the tradition begins to go down. The growing interest taken in polyphony caused the plain chant to be neglected. The books were written carelessly; the forms of the neums, so important for the rhythm, began to be disregarded, and shortenings of melismata became more general. No radical changes, however, are found until we come to the end of the sixteenth century. The reform of Missal and Breviary, initiated by the Council of Trent, gave rise to renewed attention to the liturgical chant. But as the understanding of its peculiar language had disappeared, the results were disastrous. Palestrina was one of the men who tried their hands, but he did not carry his work through (see P. R. Molitor, "Die Nach-Tridentinische Choral Reform", 2 vols., Leipzig, 1901-2). Early in the seventeenth century, however, Raimondi, the head of the Medicean printing establishment, took up again the idea of publishing a new Gradual. He commissioned two musicians of name, Felice Anerio and Francesco Suriano, to revise the melodies. This they did in an incredibly short time, less than a year, and with a similarly incredible recklessness, and in 1614 and 1615 the Medicean Gradual appeared. This book has considerable importance, because in the second half of the nineteenth century, the Congregation of Rites, believing it to contain the true chant of St. Gregory, had it republished as the official chant book of the Church, which position it held from 1870 to 1904. During the seventeenth and eighteenth centuries various other attempts were made to reform the Gregorian chant. They were well intentioned, no doubt, but only emphasized the downward course things were taking. The practice of singing became worse and worse, and what had been the glory of centuries fell into general contempt (see P. R. Molitor, "Reform-Choral", Freiburg, 1901).

From the beginning of the nineteenth century dates a revival of the interest taken in plain chant. Men began to study the question seriously, and while some saw salvation in further "reforms", others insisted on a return to the past. It took a whole century to bring about a complete restoration. France has the honour of having done the principal work in this great undertaking (see P. R. Molitor, "Restauration des Gregorianischen Choralen im 19. Jahrhundert" in "Historisch-politische Blätter", CXXXV, nos. 9-11). One of the best attempts was a Gradual edited about 1851 by a commission for the Dioceses of Reims and Cambrai, and published by Lecoffre. Being founded on limited critical material, it was not perfect; but the worst feature was that the editors had not the courage to go the whole way. The final solution of the difficult question was to come from the Benedictine monastery of Solesmes. Guéranger, the restorer of the Liturgy, also conceived the idea of restoring the liturgical chant. About 1860 he ordered two of his monks, Dom Jausions and Dom Pothier, to make a thorough exam-

ination of the codices and to compile a Gradual for the monastery. After twelve years of close work the Gradual was in the main completed, but another eleven years elapsed before Dom Pothier, who on the death of Dom Jausions had become sole editor, published his "Liber Gradualis". It was the first attempt to return absolutely to the version of the MSS., and though capable of improvements in details solved the question substantially. This return to the version of the MSS. was illustrated happily by the adoption of the note forms of the thirteenth century, which show clearly the groupings of the neums so important for the rhythm. Since that date the work of investigating the MSS. was continued by the Solesmes monks, who formed a regular school of critical research under Dom Mocquereau, Dom Pothier's successor. A most valuable outcome of their studies is the "Paléographie Musicale", which has appeared, since 1889, in quarterly volumes, giving photographic reproductions of the principal MSS. of plain chant, together with scientific dissertations on the subject. In 1903 they published the "Liber Usualis", an extract from the Gradual and antiphonary, in which they embodied some melodic improvements and valuable rhythmical directions.

A new epoch in the history of plain chant was inaugurated by Pius X. By his *Motu Proprio* on church music (22 Nov., 1903) he ordered the return to the traditional chant of the Church and accordingly the Congregation of Rites, by a decree of 8 Jan., 1904, withdrawing the former decrees in favour of the Ratisbon (Medicean) edition, commanded that the traditional form of plain chant be introduced into all churches as soon as possible. In order to facilitate this introduction, Pius X, by a *Motu Proprio* of 25 April, 1904, established a commission to prepare an edition of plain chant which was to be brought out by the Vatican printing press and which all publishers should get permission to reprint. Unfortunately differences of opinion arose between the majority of the members of the commission, including the Solesmes Benedictines, and its president, Dom Joseph Pothier, with the result that the pope gave the whole control of the work to Dom Pothier. The consequence was that magnificent MS. material which the Solesmes monks, expelled from France, had accumulated in their new home on the Isle of Wight, first at Appuldurcombe afterwards at Quarr Abbey, remained unused. The Vatican edition, however, though it is not all that modern scholarship could have made it, is a great improvement on Dom Pothier's earlier editions and represents fairly well the reading of the best MSS.

TONE SYSTEM AND MODES.—The theory of the plain chant tone system and modes is as yet somewhat obscure. We have already remarked that the current medieval theory laid down for the tone system a heptatonic diatonic scale of about two octaves with the addition of *b* flat in the higher octave. In this system four notes, *d*, *e*, *f*, and *g*, were taken as fundamental notes (tonics) of modes. Each of these modes was subdivided according to the compass, one class, called authentic, having the normal compass, from the fundamental note to the octave, the other, called plagal, from a fourth below the fundamental note to a fifth above. Thus there result eight modes. These, of course, are to be understood as differing not in absolute pitch, as their theoretical demonstration and also the notation might suggest, but in their internal construction. The notation, therefore, refers merely to relative pitch, as does, e. g., the tonic sol-fa notation. Not being hampered by instrumental accompaniment, singers and scribes did not bother about a system of transposition, which in ancient Greek music, for instance, was felt necessary at an early period.

The theoretical distinction between authentic and plagal modes is not borne out by an analysis of the existing melodies and their traditional classification

(see Fr. Krasuski, "Ueber den Ambitus der gregorianischen Messgesänge", Freiburg, 1903). Melodies of the fourth mode having a constant *b* flat fall in badly with the theoretic conception of a fourth mode having *b* natural as its normal note, and some antiphon melodies of that mode, although they use no *b* flat but have *a* as their highest note, e. g. the Easter Sunday Introit, are out of joint with the psalmody of that mode. It would, therefore, seem certain that the eight mode theory was, as a ready made system, imposed on the existing stock of plain chant melodies. Historically the first mention of the theory occurs in the writings of Alcuin (d. 804), but the "Paléographie Musicale" (IV, p. 204) points out that the existence of cadences in the Introit psalmody based on the literary *cursus planus* tends to show that an eight mode theory was current already in St. Gregory's time. From the tenth century forward the four modes are also known by the Greek terms, Dorian, Phrygian, Lydian, and Mixolydian, the plagals being indicated by the prefix Hypo. But in the ancient Greek theory these names were applied to the scales *e-e*, *d-d*, *c-c*, *b-b* respectively. The transformation of the theory seems to have come to pass, by a complicated and somewhat obscure process, in Byzantine music (see Riemann, "Handbuch der Musikgeschichte", I, §31). The growth of the melodies themselves may have taken place partly on the basis of Hebrew (Syrian) elements, partly under the influence of the varying Greek or Byzantine theories.

RHYTHM.—Practically, the most important question of plain chant theory is that of the rhythm. Here again opinions are divided. The so-called equalists or oratorists hold that the rhythm of plain chant is the rhythm of ordinary prose Latin; that the time value of all the notes is the same except in as far as their connexion with the different syllables makes slight differences. They hold, however, the prolongation of final notes, *mora ultimæ vocis*, not only at the end of sentences and phrases but also at the minor divisions of neum groups on one syllable. In the Vatican edition the latter are indicated by vacant spaces after the notes. The mensuralists, on the other hand, with Dechevrens as their principal representative, hold that the notes of plain chant are subject to strict measurement. They distinguish three values corresponding to the modern quavers, crotchets, and minims. They have in their favour numerous expressions of medieval theorists and the manifold rhythmical indications in the MSS., especially those of the St. Gall School (see NEUM). But their rhythmical translations of the MS. readings do not give a satisfactory result, which they admit themselves by modifying them for practical purposes. Moreover, their interpretation of the MS. indications does not seem correct, as has been shown by Baralli in the "Rassegna Gregoriana", 1905-8. We may mention here also the theory of Riemann (Handbuch der Musikgeschichte, I, viii), who holds that plain chant has a regular rhythm based on the accents of the texts and forming two-bar phrases of four accents. He transcribes the antiphon "Apud Dominum" in this way:

This looks quite plausible. But he has to admit that this antiphon suits his purposes particularly, and when he comes to more complicated pieces the result is altogether impossible, and for the long final neumata of Graduals he has even to suppose that they were sung on an added Alleluia, a supposition which has no historical foundation. Possibly the melodies of Office

antiphons, as they came from Syria, had originally some such rhythm, as Riemann states. But in the process of adaptation to various Latin texts and under the influence of psalmody singing they must have lost it at an early period. A kind of intermediate position between the oratorists and the mensuralists is taken up by the school of Dom Mocquereau. With the oratorists they hold the free combination of duple and triple note groups. With the mensuralists they state various time values ranging from the normal duration of the short note, which is that of a syllable in ordinary recitation, to the doubling of that duration. Their system is based on the agreement of the rhythmical indications in the MSS. of St. Gall and Metz, and recently Dom Beyssac has pointed out a third class of rhythmical notation, which he calls that of Chartres ("Revue Grégorienne", 1911, no. 1). Moreover, they find their theories supported by certain proceedings in a large number of other MSS., as has been shown in the case of the "Quilisma" by Dom Mocquereau in the "Rassegna Gregoriana", 1906, nos. 6-7. Their general theory of rhythm, according to which it consists in the succession of arsis and thesis, i. e., one part leading forward and a second part marking a point of arrival and of provisional or final rest, is substantially the same as Riemann's (see his "System der musikalischen Rhythmik und Metrik", Leipzig, 1903), and is becoming more and more accepted. But their special feature, which consists in placing the word accent by preference on the arsis, has not found much favour with musicians generally.

FORMS.—Plain chant has a large variety of forms produced by the different purposes of the pieces and by the varying conditions of rendering. A main distinction is that between responsorial and antiphonal chants. The responsorial are primarily solo chants and hence elaborate and difficult; the antiphonal are choral or congregational chants and hence simple and easy. Responsorial are the Graduals, Alleluia verses, and Tracts of the Mass, and the responses of the Office. The antiphonal type is most clearly shown in the Office antiphons and their psalmody. The Mass antiphons, especially the Introit and Communion, are a kind of idealized antiphon type, preserving the general simplicity of antiphons, but being slightly more elaborated in accordance with their being assigned from the beginning to a trained body of singers. The Offertories approach more closely to the responsorial style, which is accounted for by the fact that their verses were at an early period assigned to soloists, as explained above. Another distinction is that between psalmody and what we may call hymnodic melodies. The psalmody is founded on the nature of the Hebrew poetry, the psalm form, and is characterized by recitation on a unison with the addition of melodic formulæ at the beginning and at the end of each member of a psalm verse. This type is most clearly recognized in the Office psalm tones, where only the melodic formula at the beginning of the second part of the verse is wanting. A slightly more ornamental form is found in the Introit psalmody, and a yet richer form in the verses of the Office responses. But the form can also still be recognized in the responsorial forms of the Mass and the body of the Office responses (see Pal. Mus., III). Of a psalmody nature are various other chants, such as the tones for the prayers, the Preface, some of the earlier compositions of the Ordinary of the Mass, etc. The hymnodic chants, on the other hand, show a free development of melody; though there may be occasionally a little recitation on a monotone, it is not employed methodically. They are more like hymn tunes or folk songs. This style is used for the antiphons, both of the Office and of the Mass. Some of these show pretty regular melodic phrases, often four in number, corresponding like the lines of a hymn stanza, as, e. g., the "Apud Dominum" quoted above. But oftentimes the correspondence of the melodic

phrases, which is always of great importance, is of a freer kind.

A marked feature in plain chant is the use of the same melody for various texts. This is quite typical for the ordinary psalmody, in which the same formula, the "psalm tone", is used for all the verses of a psalm, just as in a hymn or a folk song the same melody is used for the various stanzas. But it is also used for the more complicated psalmodic forms, Graduals, Tracts etc., though oftentimes with considerable liberty. Again we find it in the case of the Office antiphons. In all these cases great art is shown in adapting the melodic type to the rhythmical structure of the new texts, and oftentimes it can be observed that care is taken to bring out the sentiments of the words. On the other hand it seems that for the Mass antiphons each text had originally its own melody. The present Gradual, indeed, shows some instances where a melody of one Mass antiphon has been adapted to another of the same kind, but they are all of comparatively late date (seventh century and after). Among the earliest examples are the Offertory, "Posuisti" (Common of a Martyr Non-Pontiff), taken from the Offertory of Easter Monday, "Angelus Domini", and the Introit, "Salve sancta Parens", modelled on "Ecce advenit" of the Epiphany. The adaptation of a melodic type to different texts seems to have been a characteristic feature of antique composition, which looked primarily for beauty of form and paid less attention to the distinctive representation of sentiment. In the Mass antiphons, therefore, we may, in a sense, see the birth of modern music, which aims at individual expression.

ÆSTHETIC VALUE AND LITURGICAL FITNESS.—There is little need to insist on the æsthetic beauty of plain chant. Melodies, that have outlived a thousand years and are at the present day attracting the attention of so many artists and scholars, need no apology. It must be kept in mind, of course, that since the language of plain chant is somewhat remote from the musical language of to-day, some little familiarity with its idiom is required to appreciate its beauty. Its tonality, its rhythm, as it is generally understood, the artistic reserve of its utterance, all cause some difficulty and demand a willing ear. Again it must be insisted that an adequate performance is necessary to reveal the beauty of plain chant. Here, however, a great difference of standard is required for the various classes of melodies. While the simplest forms are quite fit for congregational use, and forms like the Introits and Communions are within the range of average choirs, the most elaborate forms, like the Graduals, require for their adequate performance highly trained choirs, and soloists that are artists. As to the liturgical fitness of plain chant it may be said without hesitation that no other kind of music can rival it. Having grown up with the Liturgy itself and having influenced its development to a large extent, it is most suitable for its requirements. The general expression of the Gregorian melodies is in an eminent degree that of liturgical prayer. Its very remoteness from modern musical language is perhaps an additional element to make the chant suitable for the purpose of religious music, which above all things should be separated from all mundane associations. Then the various forms of plain chant are all particularly appropriate to their several objects. For the singing of the psalms in the Office, for instance, no other art form yet invented can be compared with the Gregorian tones. The *Falsi Bordoni* of the sixteenth century are doubtless very fine, but their continuous use would soon become tedious, while the Anglican chants are but a poor substitute for the everlasting vigour of the plain chant formulæ. No attempt even has been made to supply a substitute for the antiphons that accompany this singing of the psalms. At the Mass, the Ordinary, even in the most elaborate forms

of the later Middle Ages, reflects the character of congregational singing. The Introit, Offertory, and Communion are each wonderfully adapted to the particular ceremonies they accompany, and the Graduals display the splendour of their elaborate art at the time when all are expected to listen, and no ceremony interferes with the full effect of the music.

The revival of religious life about the middle of the nineteenth century gave the impetus for a renewed cultivation of plain chant. The extended use and perfected rendering of plain chant, so ardently desired by Pope Pius X, will in its turn not only raise the level of religious music and enhance the dignity of Divine worship, but also intensify the spiritual life of the Christian community.

H. BEWERUNGE.

Plantagenet, HENRY BEAUFORT, cardinal, Bishop of Winchester, b. c. 1377; d. at Westminster, 11 April, 1447. He was the second illegitimate son of John of Gaunt, and Katherine Swynford, later legitimized by Richard II (1397). After his ordination he received much preferment, becoming successively dean of Wells (1397), Bishop of Lincoln (1398), Chancellor of Oxford University (1399), Chancellor of England (1403-4), and Bishop of Winchester (1404). He was much in favour with Henry, Prince of Wales, and on his accession as Henry V, Beaufort again became chancellor (1413). He attended the Council of Constance (1417), and it was due to him that the Emperor Sigismund in alliance with Henry V withdrew his opposition to the plan of electing a new pope before measures for Church reform had been taken. This election ended the unhappy Western Schism. The new pope, Martin V, created Beaufort a cardinal, though the king forbade him to accept this dignity. On Henry's death he was left guardian of the infant Henry VI and again acted as chancellor (1424-26). He was created cardinal-priest of St. Eusebius in 1426, and was employed as papal legate in Germany, Hungary, and Bohemia, where he assisted the pope in the Hussite War. Employed in French affairs in 1430-31, he crowned Henry, as King of France, in Paris (1431). The following year he defeated the Duke of Gloucester's effort to deprive him of his see on the ground that a cardinal could not hold an English bishopric. When war broke out with France he assisted the war-party with large financial advances. He completed the building of Winchester cathedral, where he is buried.

EDWIN BURTON.

Plantin, CHRISTOHE, book-binder and publisher of Antwerp, b. 1514, at or near Tours (France); d. 1 July, 1589, at Antwerp. The son of a servant, he learned the art of book-binding and printing (1535-

40) with the prototypographer, Robert Macé II at Caen. At an early age he had already learned Latin and shown a pronounced taste for scientific books. After a short residence in Paris, he went to Antwerp (1548-9), where he opened a book-bindery and soon became famous for his beautiful inlaid bindings and book covers. In 1555 he opened his publishing house which, notwithstanding keen competition, soon prospered. Within five years, he attained the highest rank among typographers of his time, surpassing his

COURTYARD OF THE PLANTIN-MORETUS MUSEUM, ANTWERP

rivals in the Netherlands by the perfection, beauty, and number of his publications. In 1562, charged with holding intercourse with two religious reformers (Niclaes and Barrefelt), he was obliged to flee from Antwerp. He succeeded, however, in dissipating the suspicions against him, and it was only after two centuries that his relations with the Familists, or "Famille de la Charité" came to light, and also that he printed the works of Barrefelt and other heretics. In 1563, having returned to Antwerp, Plantin formed business associations with prominent citizens with whom he conducted a printing establishment for three years. In 1566 we first hear of Plantin's scheme to reprint the Polyglot Bible of Cardinal Ximenes. His beautiful proofs secured the support of King Philip II, and the eight volumes of the "Biblia Regia" were completed in 1573 (see POLYGLOT BIBLES). Immediately after the king appointed him Royal Architypographer, in charge of the printing of the newly-edited breviaries, missals, psalters, and other liturgical texts which were sent to Spain in great numbers at the expense of the king. Plantin also published many new editions of the classics, works on jurisprudence, and the "Index Expurgatorius". Wars stopped the execution of the king's orders for the new Liturgical formularies; but Plantin had, long before, obtained privileges for this work from Rome. This exclusive privilege, possessed by Plantin's successors for two hundred years, became a source of great profit and balanced the extensive losses incurred by the "Biblia Regia". In 1583, leaving his business at Antwerp to his two nephews, Moretus and Rapheligen, Plantin settled in Leyden, where he conducted a second-hand book store and a small printing office with three presses, but sought principally for quiet and the restoration of his failing health. In 1585 Rapheligen took charge of the printing office at Leyden, and Plantin returned to Antwerp, where, until his death, he endeavoured by the sale of his Bible to indemnify himself for the loss of the twenty thousand florins which the king still owed him. These losses were finally made good after his death.

The extensive character of Plantin's undertakings is shown by the fact that between 1555 and 1589 he

published over sixteen hundred works, eighty-three in 1575 alone. His press room at this time contained twenty-two presses. His editions, as a rule, consisted of from twelve to fifteen hundred copies, in some cases considerably more; thus thirty-nine hundred copies of his Hebrew Bible were published. His emblem shows a hand reaching out of the clouds holding a pair of compasses; one point is fixed, the other marks a line. The motto is "Labore et Constantia". He was justly considered the first typographer of his time. Moreover, money was not his only object. He thoroughly appreciated the ethical side of his profession, as is proved by his publishing useful works, excelling in scientific value and artistic worth. The astonishing number of his publications, the extreme care which he devoted to the simplest as well as to the greatest of his publications, the monumental character of a whole series of his books, his good taste in their adornment, his correct judgment in the choice of subjects to be published, and his success in gaining the sympathy of his assistants prove that his fame was well deserved. There is but one blot on Plantin's reputation, his relations with the "Famille de la Charité", which can only be explained as due to the unsettled conditions of the times. His Antwerp business remained in the possession of his second daughter, Martina, wife of Johannes Moerentorf (Latinized Moretus), who was his assistant for many years. Their son, Balthasar, a friend of Rubens in his youth, was the most famous of the Moretus name, and a worthy successor to his grandfather. After the death of Balthasar in 1641, his heirs made a great fortune out of their monopoly of Liturgical books. Unfortunately they abandoned almost entirely the publication of scientific books. It was only at the beginning of 1800 that the privilege ceased in consequence of the decree of the King of Spain, forbidding the importation of foreign books and this practically put an end to the printing house of Plantin. In 1867, after three hundred and twelve years, the firm of Plantin ceased to exist. The City of Antwerp and the Government of Belgium in 1876 purchased from the last owner, Edward Moretus, all the buildings, as well as the printing house with its appurtenances and collections for 1,200,000 florins.

INTERIOR OF THE PLANTIN-MORETUS MUSEUM, ANTWERP

The entire plant was converted into the Plantin-Moretus Museum.

ROOSES, *Christophe Plantin* (Anvers, 1882, 2nd ed., 1897); IDEM, *Corresp. de P.* (Ghent, 1884 sq.); IDEM, *Le Musée P.-Moretus* (Brussels, 1894).

HEINRICH WILH. WALLAU.

Plants in the Bible.—When Moses spoke to the people about the Land of Promise, he described it as a "land of hills and plains" (Deut., xi, 11), "a good land, of brooks and of waters, and of fountains: in the plains of which and the hills deep rivers break out:

■ land of wheat, and barley, and vineyards, wherein fig-trees and pomegranates, and oliveyards grow: a land of oil and honey" (Deut., viii, 7-8). This glowing description, sketched exclusively from an utilitarian point of view, was far from doing justice to the wonderful variety of the country's productions, to which several causes contributed. First the differences of elevation; for between Lebanon, 10,000 feet above sea level, and the shores of the Dead Sea, 1285 feet below the Mediterranean, every gradation of altitude is to be found, within less than 200 miles. Sinuous valleys furrow the highland, causing an incredible variation in topography; hence, cultivated land lies almost side by side with patches of desert. The soil is now of clay, now of clay mixed with lime, farther on of sand; the surface rock is soft limestone, and basalt. In addition to these factors, variations of climate consequent on change of altitude and geographical position cause forms of vegetation which elsewhere grow far apart to thrive side by side within the narrow limits of Palestine. The vegetation along the west coast, like that of Spain, southern Italy, Sicily, and Algeria, is composed of characteristic species of Mediterranean flora. Near the perennial snows of the northern peaks grow the familiar plants of Alpine and sub-Alpine regions; the highlands of Palestine and the eastern slopes of the northern ranges produce the Oriental vegetation of the steppes; whereas the peculiar climatic conditions prevailing along the Ghôr and about the Dead Sea favour a sub-tropical flora, characterized by species resembling those which thrive in Nubia and Abyssinia.

Over 3000 species of Palestinian flora are known to exist, but the Holy Land of our day can give only an imperfect idea of what it was in Biblical times. The hill-country of Juda and the Negeb are, as formerly, the grazing lands of the Judean herds, yet groves, woods, and forest flourished everywhere, few traces of which remain. The cedar-forests of Lebanon had a world-wide reputation; the slopes of Hermon and the mountains of Galaad were covered with luxuriant pine woods; oak forests were the distinctive feature of Basan; throughout Ephraim clumps of terebinths dotted the land, while extensive palm groves were both the ornament and wealth of the Jordan Valley. The arable land, much of which now lies fallow, was all cultivated and amply rewarded the tiller. The husbandman derived from his orchards and vineyards abundant crops of olives, figs, pomegranates, and grapes. Nearly every Jewish peasant had his "garden of herbs", furnishing in season vegetables and fruits for the table, flowers, and medicinal plants. Only some 130 plants are mentioned in Scripture, which is not surprising since ordinary people are interested only in a few, whether ornamental or useful. The first attempt to classify this flora is in Gen., i, 11-12, where it is divided into: (1) *deshe*, signifying all low plants, e. g., cryptogamia; (2) *'esebh*, including herbaceous

plants; (3) *'es peri*, embracing all trees. In the course of time, the curiosity of men was attracted by the riches of Palestinian vegetation; Solomon, in particular, is said to have treated about the trees (i. e., plants) from the lofty cedar "unto the hyssop that cometh out of the wall" (III Kings, iv, 33). Of the plants mentioned in the Bible, the most common varieties may be identified either with certainty or probability; but a large proportion of the biblical plant-names are generic rather than specific, e. g., briars, grass, nettles, etc.; and just what plants are meant in some cases is impossible to determine, e. g., algum, cockle, gall, etc. A complete alphabetical list of the plant-names found in the English Versions is here given, with an attempt at identification.

Acacia. See *Setim*.

Acanth. See *Brier*.

Algum (A. V., II Chron., ii, 8; D. V., ix, 10, 11, "thyine trees", "fir trees"), written "almug" in A. V., I Kings, x, 11, 12). No doubt the same tree is signified, the double name being due to a mere accidental transposition of the letters; if linguistic analogy may be trusted in, *almug* is correct (cf. Tamil, *valguka*). The algum tree is spoken of as a valuable exotic product imported to Palestine by Hiram's and Solomon's fleets (III Kings, x, 11; II Par., ii, 8; ix, 10), suitable for fine joinery and making musical instruments (III Kings, x, 12; II Par., ix, 11). Josephus (Ant., VIII, vii, 1) says it was somewhat like the wood of the fig tree, but whiter and more glittering. Accord-

PAPYRUS GROWING ON THE BANKS OF THE ANAPO.

ing to most modern scholars and certain rabbis, the red sandal-wood, *Pterocarpus santalina*, is intended, though some of the uses made of it appear to require a stouter material. The identification proposed by Vulg. (see *Thyine*) is much more satisfactory.

Almond tree, Heb. *luz* (Gen., xxx, 37; "hazel" in A. V. is a mistranslation; cf. Arab. *lauz*), apparently an old word later supplanted by *shaged* (Gen., xliii, 11; Num., xvii, 8; Eccles., xii, 5); which alludes to the early blossoming of the tree. Almonds are (Gen., xliii, 11) considered one of the best fruits in the Orient, and the tree, *Amygdalus communis*, has always been cultivated there. Several varieties, *A. orientalis*, Ait., or *A. argentea*, *A. lycioides*, Spach, *A. spartioides*, Spach, grow wild in districts such as Lebanon, Carmel, Moab.

Almug. See *Algum*.

Aloes (Prov., vii, 17; Cant., iv, 14; John, xix, 39; A. V., Ps. xlv, 8) is reckoned among "the chief perfumes". In A. V., Num., xxiv, 6 ("lign aloes"; D. V., "tabernacles" is an erroneous translation), a tree is clearly intended. The officinal aloes, *Liliacea*, is not alluded to; the aloes of the Bible is the product of a tree of the genus *Aquilaria*, perhaps *A. agallocha*, Roxb., a native of northern India; at a certain stage of decay, the wood develops a fragrance well known to the ancients (Dioscorides, i, 21), and from it a rare perfume was obtained.

Amomum (Apoc., xviii, 13, neither in the Greek New Testament, Vulg., A. V., nor D. V., but found in critical editions, such as Griesbach, Lachmann, Tischendorf, Nestle), a perfume well known in antiquity (Dioscor., i, 14; Theophr., "Hist. plant.", ix, 7; "De odor.", 32; etc.). The Assyrian variety was particularly prized (Virg., Eclog., iv, 25; Josephus, "Ant.", XX, ii, 3; Martial., "Epigr.", vii, 77; Ovid., "Heroid.", xxi, 166; etc.), and probably obtained from *Cissus vitigenea*, a climbing plant native of India but found also in Armenia, Media, and Pontus (Pliny, "Nat. hist.", xii, 13).

Anise (Matt., xxiii, 23), not the anise, *Pimpinella anisum*, but rather the dill, *Anethum graveolens*, *shabath* of the Talmud, *shibith* of the Arabs, is meant. Dill has always been much cultivated in Palestine; its seeds, leaves, and stems were subject to tithe, according to Rabbi Eliezer (Maasarith, i, 1; cf. Matt., xxiii, 23), which opinion, however, others thought excessive (Schwab, "Talmud de Jerus.", III, 182).

Apple tree, Heb. *thappuakh* (cf. Arab. *tiffah*; Egypt. *daphi*, "apple") and the description of the tree and its fruit indicate the common apple tree, *Malus communis*, which is beautiful, affording shade for a tent or a house (Cant., ii, 3; viii, 5), and bears a sweet fruit, the aroma (Cant., vii, 8) of which is used in the East to revive a fainting person (cf. Cant., ii, 5). Apple groves flourished at an early date (Ramses II) in Egypt (Loret, "Flore pharaonique", p. 83); place-names like Tappuah (Jos., xii, 17) or Beth-tappuah A. V. (Jos., xv, 53) indicate that they were a distinct feature of certain districts of Palestine.

Arum. See *Cockle*.

Ash tree. Is., xlv, 14 (A. V. for Heb. 'oren; D. V. "pine") depicts a planted tree, watered only by rain, whose wood is suitable to be carved into images and used as fuel (Is., xlv, 15). Probably the tree intended is *Pinus pinea*, the maritime or stone pine, rather than the ash, as the various species of *Fraxinus* grow only in the mountains of Syria, outside Palestine.

Aspalathus (Ecclus., xxiv, 20; Greek, xxiv, 20; D. V. "aromatical balm") is quite frequently alluded to by ancient writers (Theognis Hippocrates, Theophrastes, Plutarch, Pliny etc.) as a thorny plant yielding a costly perfume. It is impossible to identify it with certainty, but most scholars believe it to be *Convolvulus scoparius*, also called *Lignum rhodium* (rose-scented wood).

Aspen. See *Mulberry*.

Astragalus a genus of Papilionaceous plants of the tribe *Logae*, several species of which yield the gum tragacanth (Heb. *nek'oth*, Arab. *neka'at*) probably meant in Gen., xxxvii, 25; xliii, 11 (D. V. "spices"; "storax"). In IV Kings, xx, 13, and Is., xxxix, 2, Heb. *nekothoth* has been mistaken for the plural of *nek'oth* and mistranslated accordingly "aromatical spices"; A. V. and R. V. give, in margin, "spicery"; A. V. "precious things" is correct. The gum spoken of in Gen. was probably gathered from the species found in Palestine, *A. gummifer*, *A. rousseaunus*, *A. kurdicus*, *A. stromatodes*.

Balm, *Balsam*, the regular translation of Heb. *çori* (Gen., xxxvii, 25; xliii, 11; Jer., viii, 22; xlv, 11; li, 8), except in Ezech., xxvii, 17 (Heb. *pannag*) and Ecclus., xxiv, 20a (Greek *ἀσπάλθος*; see *Aspalathus*); xxiv, 20b (Greek *σμήρνα*). The *çori* is described as coming from Galaad (Jer., viii, 22; xlv, 11) and having medicinal properties (Jer., li, 8). It is obtained from *Balsamodendron opobalsamum*, Kunth, which is extant in tropical regions of east Africa and Arabia and yields the "balm of Mecca"; and *Amyris gileadensis*, a variety of the former, which gave the more extravagantly prized "balm of Judea", and is now extinct; it was extensively cultivated around the Lake of Tiberias, in the Jordan Valley, and on the shores of the Dead Sea (Talm. Babyl. Shabbath, 26a; Josephus,

"Ant.", IX, i, 2; Jerome, "Quæst. in Gen.", xiv, 7; Pliny, "Nat. hist.", xii, 25, etc.). The word *çori* is also applied to the gum from the mastic tree, or lentisk (*Pistacia lentiscus*, cf. Arab. *daru*), and that from *Balanites egyptiaca*, Del., falsely styled "balm of Galaad". The meaning of *pannag*, mentioned in Ezech., xxvii, 17, is not known with certainty; modern commentators agree with R. V. (marginal gloss) that it is "a kind of confection".

Balsam, *Aromatical*. See *Aspalathus*.

Barley (Heb. *se'orah*, "hairy", an allusion to the length of the awns) was cultivated through the East as provender for horses and asses (III Kings, iv, 28), also as a staple food among the poor, working men, and the people at large in times of distress. The grain was either roasted (Lev., ii, 14; IV Kings, iv, 43) or milled, kneaded and cooked in ovens as bread or cake. Barley, being the commonest grain, was considered a type of worthless things, hence the contemptuous force of Ezech., xiii, 19; Judges, vii, 13; and Osee, iii, 2. *Hordeum ithaburense*, Boiss., grows wild in many districts of Palestine; cultivation has developed the two (*H. distichum*), four (*H. tetrastichum*), and six-rowed (*H. hexastichum*) barley. The harvest begins in April in the Ghôr, and continues later in higher altitudes; a sheaf of the new crop was offered in oblation on the "sabbath of the Passover".

Bay tree, so A. V. in Ps. xxxvii, 35; D. V. (xxxvi) "cedar of Libanus", which renderings are erroneous. The correct meaning of the Heb. text is: "as a green tree", any kind of evergreen tree, "in its native soil".

Bdellium (Gen., ii, 12; Num., xi, 7), either a precious stone or the aromatic gum of *Amyris agallochum*, a small resinous tree of northern India, found also, according to Pliny, in Arabia, Media, and Babylonia.

Beans (II Kings, xvii, 28; Ezech., iv, 9), the horse-bean (*Faba vulgaris*; cf. Heb. *pol* and Arab. *ful*), an ordinary article of food, extensively cultivated in the East. The string-bean, *Vigna sinensis*, kidney-bean, *Phaseolus vulgaris*, and *Phaseolus molliflorus*, also grow in Palestine.

Blackthorn. See *Bur*.

Blasting. See *Mildew*.

Borith, a Heb. word transliterated in Jer., ii, 22, and translated in Mal., iii, 2 by "fuller's herb" (A. V. "soap"). St. Jerome in his Commentary on Jer., ii, 22, identifies *borith* with the "fuller's weed", which was not used, like the *Dipsacus fullonum*, Mill., to dress cloth, but to wash it; St. Jerome adds that the plant grew on rich, damp soil, which description applies to a species of *Saponaria*; yet many modern scholars think he refers to some vegetable alkali procured by burning plants like *Salsola kali* and the *Salicornias* (*S. fruticosa*; *S. herbacea*) abundant on the coast.

Boxthorn. See *Bramble*.

Box tree (Is., xli, 19; lx, 13; in D. V., Ezech., xxvii, 6, instead of "ivory and cabins", we should read: "ivory inlaid in boxwood"), probably the Heb. *the'ashshur*. The box tree does not grow in Palestine, and indeed the Bible nowhere intimates this, but it mentions the box tree of Lebanon, *Buxus longifolia*, Boiss., and that imported from the islands of the Mediterranean.

Bramble, translated from Heb. 'atad in Judges, ix, 14-15, also rendered "thorn", in Ps. lvii, 10. The Latin version has in both places *rhamnus*, "buckthorn"; of which several species grow in Palestine and Syria, but Arabic writers hold that the various kinds of *Lycium* or *boxthorn* are meant.

Briers. (1) Heb. *kharul* rendered "burning" in D. V., Job, xxx, 7, "thorns" in Prov., xxiv, 31 and Sophon., ii, 9, according to which texts it must be large enough for people to sit under, and must develop rapidly in uncultivated lands. Its translation as "thistles" or "nettles" is unsuitable, for these plants do not reach the proportions required by Job, xxx, 7,

hence it is generally believed to be either the acanth, *Acanthus spinosus*, or rest-harrow, two species of which, *Ononis antiquorum*, and particularly *O. leiosperma*, Boiss., are very common in the Holy Land. (2) Heb. *barganim* (Judges, viii, 7, 16) probably corresponds to the numerous species of *Rubus* which abound in Palestine; according to Moore (Judges, *ad loc.*), *Phacopappus scoparius*, Boiss., is intended. (3) Heb. *khedeq* (Mich., vii, 4). See *Mad-apple*. (4) Heb. *shamir* (Is., v, 6; ix, 18; x, 17; xxxii, 13), the flexible *Paliurus aculeatus*, Lam., Arab. *samur*, the supposed material of Christ's crown of thorns. (5) Heb. *shayth* (Is., vii, 23-5), a word not found outside of Isaiah, and possibly designating prickly bushes in general.

Broom. See *Juniper*.

Buckthorn. See *Bramble*.

Bulrush represents three Heb. words: (1) *gome* (Ex., ii, 3; Is., xviii, 2; xxxv, 7), *Cyperus papyrus*, is now extinct in Egypt (cf. Is., xix, 6-7), where it was formerly regarded as the distinctive plant of the country (Strab., xvii, 15) and the Nile was styled "the papyrus-bearer" (Ovid., "Metam.", xv, 753), but still grows around the Lake of Tiberias, Lake Huleh. (2) *Agmon* (A. V., Is., lviii, 5; D. V. "circle") is variously rendered (D. V. Is., xix, 15; Job, xl, 21). The plant whose flexibility is alluded to in Is., lviii, 5, A. V. appears to be either the common reed, *Arundo donax*, or some kind of rush: *Juncus communis*, *J. maritimus*, Lam., *J. acutus* are abundant in Palestine. (3) *Suph* (Is., xix, 6; A. V. "flag"; etc.), Egypt. *táf*, probably designates the various kinds of rush and sea-weeds (Jon., ii, 6). *Yam Suph* is the Hebrew name for the Red Sea.

Bur, so, D. V., Os., ix, 6; x, 8, translating Vulg. *lappa*, "burdock", for Heb. *khoakh* and *qosh*. *Khoakh* recurs in Prov., xxvi, 9; Cant., ii, 2 (D. V. "thorns"); IV Kings, xiv, 9; II Par., xxv, 18; Job, xxxi, 40 (D. V. "thistle"); "thorn" is the ordinary meaning of *qosh*. If burdock is the equivalent of *khoakh*, then *Lappa major*, D. C., growing in Lebanon is signified, as *Lappa minor*, D. C., is unknown in Palestine; however, the many kinds of thistles common in the East suit better the description. Yet, from the resemblance of Arab. *khaukh* with Heb. *khoakh*, some species of black-thorn or sloe tree *Prunus ursina*, and others, Arab. *khaukh al-dib* might be intended.

Burnet. See *Thistle* (5).

Bush, Burning, Heb. *seneh*, "thorny" (Ex., iii, 2-4; Deut., xxxiii, 16), probably a kind of whitethorn of goodly proportions (*Crataegus sinaitica*, Boiss.) common throughout the Sinaitic Peninsula. Arab. *sanna* is applied to all thorny shrubs.

Calamus, Heb. *qaneh* (Ex., xxx, 23; Ezek., xxvii, 19; Cant., iv, 14, and Is., xliii, 24; D. V. "sweet cane"; Jer., vi, 20: "sweet-smelling cane"), a scented reed yielding a perfume entering into the composition of the spices burned in sacrifices (Is., xliii, 24; Jer., vi, 20) and of the oil of unction (Ex., xxx, 23-5). The *qaneh* is, according to some, *Andropogon schœnanthus*, which was used in Egypt for making the *Kyphi* or sacred perfume; according to others, *Acorus aromaticus*.

Cane, Sweet (Cant., iv, 14; Is., xliii, 24). See *Calamus*.

Cane, Sweet-smelling (Jer., vi, 20). See *Calamus*.

Camphire (A. V., Song of Sol., i, 14; D. V. iv, 13; "cypress"). From Heb. *kopher*. The modern "camphor" was unknown to the ancients. Pliny identifies cyprus with the *ligustrum* of Italy, but the plant is no other than the henna tree (*Lawsonia alba*) the Orientals are so fond of. Its red sweet-scented spikes (D. V., Cant., i, 13: "clusters") yield the henna oil; from its powdered leaves is obtained the reddish-orange paste with which Eastern women stain their finger and toe nails and dye their hair. Ascalon and Engaddi were particularly renowned for their henna.

Caper, Heb. *abiyyonah* (D. V., Eccl., xii, 5), the fruit of the caper tree, probably *Capparis spinosa*;

C. herbacea, and *C. ægyptiaca* are also found in Palestine.

Carob, Greek *κεράτιον* (Luke, xv, 16), translated "husks" (A. V.; D. V.), the coarse pods of the locust tree, *Ceratonía siliqua*, "St. John's bread-tree".

Cassia, Heb. *giddah* (Ex., xxx, 24; Ezek., xxvii, 19; D. V. "stacte"). Egypt. *qad*, the aromatic bark of *Cinnamomum cassia*, Bl., of India, an ingredient of the oil of unction (Ex., xxx, 24), and the Egyptian *Kyphi*. In Ps. xlv (A. V., xlv, 8), 9, *qeci'ah*, the Aramaic equivalent of *giddah*, is possibly an explanation of *ahaloth*. There is no Biblical reference to the cassia, from which the senna of medicine is obtained.

Cedar, indiscriminately applied to *Cedrus libani*, *C. bermudensis*, *Juniperus virginiana*, and *Cupressus thyoides*, as Heb. 'erez was used for three different trees: (1) The cedar wood employed in certain ceremonies of purification (Lev., xiv, 4, 6; 49-52; Num., xix, 6) was either *Juniperus phœnicea*, or *J. oxycedrus*, which pagans burned during sacrifices and at funeral piles (Hom., "Odys.", v, 60; Ovid., "Fast.", ii, 558), and Pliny calls "little cedar" (Nat. Hist., XIII, i, 30). (2) The tree growing "by the water side" (Num., xxiv, 6) appears from Ez., xxxi, 7, to be the *Cedrus libani*, which usually thrives on dry mountain slopes. (3) In most of the other passages of Holy Writ, *Cedrus libani*, Barr, is intended, which "prince of trees", by its height (Is., ii, 13; Ezek., xxxi, 3, 8; Am., ii, 9), appropriately figured the mighty Eastern empires (Ezek., xxxi, 3-18, etc.). From its trunk ship-masts (Ezek., xxvii, 5), pillars, beams, and boards for temples and palaces (III Kings, vi, 9; vii, 2) were made; its hard, close-grained wood, capable of receiving a high polish, was a suitable material for carved ornamentations (III Kings, vi, 18) and images (Is., xlv, 14-5). Cedar forests were a paradise of aromatic scent, owing to the fragrant resin exuding from every pore of the bark (Cant., iv, 11; Osee, xiv, 7); they were "the glory of Libanus" (Is., xxxv, 2; lx, 13), as well as a source of riches for their possessors (III Kings, v, 6 sqq.; I Par., xxii, 4) and an object of envy to the powerful monarchs of Nineveh (Is., xxxvii, 24; inser. of several Assyrian kings).

Cedrat, *Citrus medica*, or *C. cedra* is, according to the Syriac and Arabic Bibles, the "Targum" of Onkelos, Josephus (Ant. III, x, 4) and the Talmud (Sukka, iii, 5), the *hadar* (D. V. "the fairest tree") spoken of in Lev., xxiii, 40, in reference to the feast of Tabernacles.

Centaurea. See *Thistles*.

Charlock. See *Mustard*.

Chestnut-tree. See *Plane-tree*.

Cinnamon, Heb. *qinnamon* (Ex., xxx, 23; Prov., vii, 17; Cant., iv, 14; Ecclus., xxiv, 20; Apoc., xviii, 13), the inner aromatic bark of *Cinnamomum zeylanicum*, Nees, an ingredient of the oil of unction and of the *Kyphi*.

Citron, *Citrus limonum*, supposed by some Rabbis to be intended in the text of Lev., xxiii, 40: "boughs of *hadar*", used regularly in the service of the synagogue and hardly distinguishable from cedrat.

Cockle, A. V., Job, xxxi, 40, for Heb. *be'osha*: D. V. "thorns". The marginal renderings of A. V. and R. V. "stinking weeds", "noisome weeds", are much more correct. D. V., Matt., xiii, 24-30, translates the Greek *ζιζάνια* by cockle. The two names used in the original text point to plants of quite different characters: (1) According to etymology, *be'osha* must refer to some plant of offensive smell; besides the stink-weed (*Datura stramonium*) and the ill-smelling goose-weeds (*Solanum nigrum*) there are several fetid arums, henbanes, and mandrakes in Palestine, hence *be'osha* appears to be a general term applicable to all noisome and harmful plants. In the English Bibles, Is., v, 2, 4, the plural form is translated by "wild grapes", a weak rendering in view of the terrible judgment pronounced against the vineyard in the con-

text; *be'ūshim* may mean stinking fruits, as *be'osha* means stinking weeds. (2) *ḡšāvia*, from Aram. *zonin*, stands for *Lolium temulentum*, or bearded darnel, the only grass with a poisonous seed, "entirely like wheat till the ear appears". The rendering of both versions is therefore inaccurate.

Colocynth, *Citrullus colocynthis*, Schr., *Cucumis c.*, probably the "wild gourd" of IV Kings, iv, 38-40, common throughout the Holy Land. In III Kings, vi, 18; vii, 24, we read about carvings around the inside of the Temple and the brazen sea, probably representing the ornamental leaves, stems, tendrils, and fruits of the colocynth.

Coriander seed (Ex., xvi, 31; Num., xi, 7), the fruit of *Coriandrum sativum*, allied to aniseed and caraway.

Corn, a general word for cereals in English Bibles, like *dagan* in Heb. Wheat, barley, spelt (*fitches*), vetch, millet, pulse; rye and oats are neither mentioned in Scripture nor cultivated in the Holy Land.

Corn Winter, Heb. *kussemeth* (D. V., Ex., ix, 32; A. V. "rye"), rendered "spelt" in Is., xxviii, 25, yet the close resemblance of Arab. *kirsanah* with Heb. suggests a leguminous plant, *Vicia ervilia*.

Cotton, Heb. or Persian *karpas*, *Gossypium herbaceum*, translated "green". Probably the *shesh* of Egypt and the *buç* of Syria (Ezech., xxvii, 7, 16, "fine linen") were also cotton.

Cucumber, Heb. *qishshu'im* (Num., xi, 5; Is., i, 8), evidently the species *Cucumis chate* (cf. Arab. *qiththa*), indigenous in Egypt; *C. sativus* is also extensively cultivated in Palestine.

Cummin, Heb. *kammon*, Arab. *kammun*, the seed of *Cuminum cyminum* (Is., xxviii, 25, 27; Matt., xxiii, 23).

Cypress, in D. V., Cant., i, 16 (A. V., 17) a poor translation of Heb. *eq shemen* (see *Oil tree*); elsewhere Heb. *berosh* is rendered "fir tree"; in Eccles., xxiv, 17, the original word is not known. Among the identifications proposed for *beroth* are *Pinus halepensis*, Miel., and *Cupressus sempervirens*, the latter more probable.

Cyprus (Cant., i, 13; iv, 13). See *Camphire*.

Darnel, bearded. See *Cockle* (2).

Dill (R. V., Matt., xxiii, 23). See *Anise*.

Ear of corn translates three Heb. words: (1) *shibboleth*, the ripe ear ready for harvest; (2) *melilah*, the ears that one may pluck to rub in the hands, and eat the grains (Deut., xxiii, 25; Matt., xii, 1; Mark, ii, 23; Luke, vi, 1); (3) *abib*, the green and tender ear of corn.

Ebony, Heb. *hobnim*, Arab. *ebnus* (Ezech., xxvii, 15), the black heart wood of *Diospyros ebenum*, and allied species of the same genus, imported from coasts of Indian Ocean by merchantmen of Tyre.

Elecampane. See *Thistles* (6).

Elm translates: (1) Heb. *thidhar* (D. V., Is., xli, 19; Is., lx, 13: "pine trees"), possibly *Ulmus campestris*, Sm. (Arab. *derdar*); (2) Heb. *'elah* (A. V., Hos., iv, 13; D. V. "turpentine tree"). See *Terebinth*.

Figs (Heb. *te'énim*), the fruit of the fig tree (Heb. *te'énah*), *Ficus carica*, growing spontaneously and cultivated throughout the Holy Land. The fruit buds, which appear at the time of the "latter rains" (spring), are called "green figs" (Cant., ii, 13; Heb. *pag*, cf. Beth-phage), which, "late in spring" (Matt., xxiv, 32), ripen under the overshadowing leaves, hence Mark, xi, 13, and the parable of the barren fig tree (Matt., xxi, 19, 21; Mark, xi, 20-6; Luke, xiii, 6-9). Precociously ripening figs (Heb. *bikkurah*) are particularly relished; the ordinary ripe fruit is eaten fresh or dried in compressed cakes (Heb. *debelah*: I Kings, xxv, 18, etc.). Orientals still regard figs as the best poultice (IV Kings, xx, 7; Is., xxxviii, 21; St. Jerome, "In Isaiam", xxxviii, 21, in P. L., XXIV, 396).

Fir, applied to all coniferous trees except the cedar, but should be restricted to the genera *Abies* and *Picea*, meant by Heb. *siakh* (Gen., xxi, 15; D. V. "trees"; cf.

Arab. *shukh*). Among these, *Abies cilicia*, Kotsch, and *Picea orientalis* are found in the Lebanon, Amanus and northward.

Fitches, Heb. *kussemeth* (Ezech., iv, 9), possibly *Vicia ervilia*, rendered "gith" by D. V., "rye" and "spelt" by A. V. and R. V. in Is., xxviii, 25.

Flag, Heb. *akkhu* (A. V., Gen., xli, 2, 18: "meadow"; D. V. "marshy places", "green places in a marshy pasture"; Job, viii, 11: D. V. "sedge-bush"), a plant growing in marshes and good for cattle to feed upon, probably *Cyperus esculentus*.

Flax, Heb. *pistah* (Ex., ix, 31; Deut., xxii, 11: "linen"; Prov., xxxi, 13), *Linum usitatissimum*, very early cultivated in Egypt and Palestine.

Flower of the field, Heb. *khabbaçeleth* (Is., xxv, 1), *kh. sharon* (Cant., ii, 1), like Arab. *bâseil*, by which *Narcissus tazetta* is designated by the Palestinians. Possibly *N. serotinus*, or fall *Narcissus*, was also meant by Heb., which some suppose to mean the meadow-saffron (*Colchicum variegatum*, *C. steveni*), abundant in the Holy Land.

Forest translates five Heb. words: (1) *Ya'ar*, forest proper; (2) *horesh*, "wooded height"; (3) *çebak*, a clump of trees; (4) *'abhim*, thicket; (5) *pardeç*, orchard. Among the numerous forests mentioned in the Bible are: Forest of Ephraim, which, in the Canaanite period, extended from Bethel to Bethsan; that between Bethel and the Jordan (IV Kings, ii, 24); Forest of Hareth, on the western slopes of the Judean hills; Forest of Aialon, west of Bethoron; Forests of Kiriath Yearim; the forest where Joatham built castles and towers (II Par., xxvii, 4) in the mountains of Juda; that at the edge of the Judean desert near Ziph (I Kings, xxiii, 15); Forest of the South (Ezech., xx, 46, 47); and those of Basan (Is., ii, 13) and Ephraim (II Kings, xviii, 6). Lebanon, Carmel, Hermon were also covered with luxuriant forests.

Frankincense (Heb. *lebonah*) should not be confounded with incense (Heb. *qetorah*), which confusion has been made in several passages of the English Bibles, e. g., Is., xliii, 23; lx, 6 (A. V.); Jer., vi, 20. Incense was a mixture of frankincense and other spices (Ex., xxx, 34-5). Arabian frankincense, the frankincense *par excellence*, is the aromatic resin of *Boswellia sacra*, a tree which grows in southern Arabia (Arab. *luban*); *B. papyrifera* of Abyssinia yields African frankincense, which is also good.

Fuller's herb (Mal., iii, 2). See *Borith*.

Galbanum, Heb. *kelbenah* (Ex., xxx, 34; Eccles., xxiv, 21), a gum produced by *Ferula galbaniflua*, Boiss. and other umbelliferous plants of the same genus. Its odour is pungent, and it was probably used in the composition of incense to drive away insects from the sanctuary.

Gall translates two Heb. words: (1) *mererah*, which stands for bile; (2) *rosh*, a bitter plant associated with wormwood, and growing "in the furrows of the field" (Osee, x, 4; D. V. "bitterness"), identified with: poison hemlock (A. V., Hos., x, 4), *Conium maculatum*, not grown in the fields; colocynth, *Citrullus colocynthis*, not found in ploughed ground; and darnel, *Lolium temulentum*, not bitter. Probably the poppy, *Papaver rheas*, or *P. somniferum*, Arab. *ras elhishhash*, is meant.

Garlic, *Allium sativum*, Heb. *shum* (cf. Arab. *thūm*), a favourite article of food in the East. The species most commonly cultivated is the shallot, *Allium ascalonicum*.

Gith, Heb. *queçakh* (Is., xxviii, 25, 27), *Nigella sativa*; A. V. "fitches" is wrong, nor does *queçakh* stand for the nutmeg flower, as G. E. Post suggests.

Goose-weed. See *Cockle*.

Gopher wood (Gen., vi, 14; D. V. "timber planks"), a tree suitable for shipbuilding: cypress, cedar, and other resinous trees have been proposed, but interpreters remain at variance.

Gourd, Heb. *qiqayou* (Jon., iv, 6-10; D. V. "ivy"),

the bottle-gourd, *Cucurbita lagenaria*, frequently used to overshadow booths or as a screen along trellises.

Gourd, Wild. See *Colocynthis*.

Grape. See *Vine*.

Grape, Wild. See *Cockle*.

Grass translates four Heb. words: (1) *deshe'*, pasture or tender grass, consisting mainly of forage plants; (2) *yerek*, verdure in general; (3) *khaçir*, a good equivalent for grass; (4) *'eshb*, herbage, including vegetables suitable for human food. It occurs frequently in the Bible, as in Gen., xlvii, 4; Num., xxii, 4; Job, vi, 5; xxx, 4 (see *Mallows*); xl, 15; Matt., vi, 30; etc.

Grove, English rendering of two Hebrew words: (1) *asherah*, a sacred pole or raised stone in a temple enclosure, which "groves" do not concern us here; (2) *'eshel*, probably the tamarisk tree (q. v.; cf. Arab. *'athl*), but translated "groves" in Gen., xxi, 33, and rendered elsewhere by "wood", as in I Kings, xxii, 6; xxxi, 13.

Hay, Heb. *hasas* (Prov., xxvii, 25), a dried herb for cattle. "Stubble" in Is., v, 24; xxxiii, 11, also translates *hasas*.

Hazel. See *Almond tree*.

Heath, Heb. *'ar' ar' ar'or* (A. V., Jer., xvii, 6; xlviii, 6; D. V. "tamaric", "heath"), a green bush bearing red or pink blossoms, and native of the Cape of Good Hope. The only species in Palestine is the *Erica verticillata*, Forskal. The *E. multiflora* is abundant in the Mediterranean region.

Hemlock, Heb. *rosh* (A. V., Hosea, x, 4; Amos, vi, 12; D. V. "bitterness"; 13, "wormwood"), an umbelliferous plant from which the poisonous alkaloid, conia, is derived. *Conium maculatum* and *Ethusa cynapium* are found in Syria. The water-hemlock is found only in colder zones. See *Gall*.

Henna. See *Camphire*.

Herb. See *Grass*.

Herbs, Bitter, Heb. *meorim* (Exod., xii, 8; Num., ix, 11; D. V. "wild lettuce"), comprise diverse plants of the family of Compositæ, which were eaten with the paschal lamb. Five species are known: wild lettuce, Heb. *hazeret*; endive, *ulsin*; chicory, *tanka*; *harhabina* and *maror*, whose translation is variously rendered a kind of millet or beet, and the bitter coriander or horehound.

Holm (Dan., xiii, 58; Is., xlv, 14; A. V. "cypress") probably Heb. *tirzah*, a kind of evergreen-oak.

Husks. See *Carob*.

Hyssop, Heb. *'ezob*, Arab. *zufa*, an aromatic herb forming a dwarf bush. The *Hyssopus officinalis*, Linné (Exod., xii, 22; Lev., xiv, 4, 6, 49, 51-2; Num., xix, 6; Ps., i, 9; Heb., ix, 19), was used in aspersion. In III Kings, iv, 33, hyssop is a species of moss (*Orthotrichum saxatile*; *Pottia trunculata*) spoken of in contrast to the grandeur of the cedar. The "hyssop" mentioned in John, xix, 29, is written "reed" in Matt., xxvii, 48, and Mark, xv, 36.

Ivy (Jon., iv, 6-10; see *Gourd*), the *Hedera helix*, (II Mach., vi, 7), which grows wild in Palestine.

Juniper (D. V., III Kings, xix, 4-5; Job, xxx, 4; A. V., Ps. cxx, 4; D. V., cxix, "that lay waste", a mistranslation), an equivalent of Heb. *rothem*, a sort of broom (*Relama retem*, cf. Arab. *ratam*).

Knapweed. See *Thistles*.

Ladanum, Heb. *lot* (D. V. "stacte", A. V. "myrrh", in Gen., xxxvii, 25; xliii, 11), a gum from several plants of the genus *Cistus* (rock-rose): *C. villosus* and *C. salvifolius* are very abundant. In Ecclus., xxiv, 21, "storax", Heb. *libneh*, is the equivalent of Greek *στακτή*, used by Septuagint in the above passages of Gen.; whether *ladanum* was meant is not clear, as it is frequently the Greek rendering of Heb. *nataf*.

Leeks, Heb. *khaçir* (Num., xi, 5), also rendered "grass", a vegetable, *Allium porrum*.

Lentils, Heb. *'adashim* (Gen., xxv, 34; II Kings, xvii, 28; Ezech., iv, 9), Arab. *adas*, *Ervum lens*, or

Lens esculenta, Moench., an important article of diet.

Lentisk. See *Balm*; *Mastic tree*.

Lign aloes. See *Aloes*.

Lily. (1) Heb. *shushan*, Arab. *susan*, a generical term applicable to many widely different flowers, not only of the order *Liliaceæ*, but of *Iridaceæ*, *Amaryllidaceæ*, and others. *Lilium candidum* is cultivated everywhere; *Gladiolus illyricus*, Koch, *G. segetum*, Gawl, *G. atroviolaceus*, Boiss., are indigenous in the Holy Land; *Iris sari*, Schott, *I. palestina*, Baker, *I. lorteti*, Barb., *I. helenæ*, are likewise abundant in pastures and swampy places. (2) The "lilies of the field" surpassing Solomon in glory were lilylike plants; needless to suppose that any others, e. g. the wind-flower of Palestine, were intended.

Lily of the valleys, Heb. *khabbaççeeth*. See *Flower of the field*.

Locust tree. See *Carob*.

Lotus. (1) A water plant of the order *Nymphaeaceæ*, the white species of which, *Nymphaea lotus*, was called in Egyptian *seshti*, *sushin*, like the Heb. *shushan*, which may have been applied to water-lilies, but the lotus was probably intended in III Kings, vii, 19, 22, 26, 49. (2) A tree, Heb. *çe'elim* (A. V. Job, xl, 21, 22; D. V., 16, 17: "shadow", "shades"), *Zizyphus lotus*, very common in Africa on the river banks.

Mad-apple, Heb. *khedeq* (Prov., xxvi, 9; D. V. "thorn"; Mich., vii, 4: "briers"), Arab. *khadaq*, *Solanum coagulans*, Forskal, of the same genus as our mad apple, found near Jericho. *Solanum cordatum*, Forskal, may also be intended.

Mallows, a mistranslation in A. V., Job, xxx, 4, for the orache or sea-purslain, *Atriplex halimus*, from Heb. *malluakh*, derived from *melakh*, "salt", as *halimus* from *ḥls*. According to Galen., the extremities are edible; the Talmud tells us that the Jews working in the re-construction of the Temple (520-15 B. C.) ate it (*Kiddushim*, iii, fol. 66^a).

Mandrake, from Heb. *duda*, meaning "love plant", which Orientals believe ensures conception. All interpreters hold *Mandragora officinarum* to be the plant intended in Gen., xxx, 14, and Cant., vii, 13.

Manna of commerce is a sugary secretion of various Oriental plants, *Tamarix mannifera*, Ehrh., *Alhagi camelorum*, Fish., *Cotoneaster nummularia*, *Fraxinus ornus*, and *F. rotundifolia*; it has none of the qualifications attributed to the manna of Ex., xvi.

Mastic tree, an alliteration of the Greek *σῆνος*, *σῆσαι*, Aram. *pistheqa-pesaq* (Dan., xiii, 54), the lentisk, *Pistacia lentiscus*, common in the East, which exudes a fragrant resin extensively used to flavour sweetmeats, wine, etc. See *Balm*.

Meadow, A. V., Gen., xli, 2, 18 (D. V. "marshy places"), for Heb. *akhu*. See *Flag*; *Sedge-bush*.

Meadow saffron. See *Flower of the field*.

Melon, Heb. *'abhattikhim* (Num., xi, 5), like Arab. *bottikh*, old Egypt. *butuqa*, seems to have a generic connotation, yet it designated primarily the water-melon (*Citrullus vulgaris*, Shrad.), and secondarily other melons. The passage of Numbers refers only to the melons of Egypt, and there is no mention in the Bible of melons of Palestine, yet they were in old times cultivated as extensively as now.

Mildew, Heb. *yeraqon*, occurs three times in D. V. and with it is mentioned *shiddaphon*, variously rendered (II Par., vi, 28: "blasting"; Amos, iv, 9: "burning wind"; Agg., ii, 18: "blasting wind"). In Deut., xxviii, 22, and III Kings, viii, 37, *yeraqon* is translated "blasting" (A. V. "mildew"), and *shiddaphon*, "corrupted air". Translators evidently had no definite idea of the nature and difference of these two plagues. *Yeraqon*, or mildew, is caused by parasitic fungi like *Puccinia graminis* and *P. straminis* which suck out of the grain, on which they develop on account of excessive moisture. *Shiddaphon*, or smut, manifests itself, in periods of excessive drought, and

is caused by fungi of the genus *Ustilago*, which, when fully developed, with the aid of the *khamzin* wind, "blast" the grain.

Millet, Heb. *dokhan* (Ezech., iv, 9), Arab. *dokhn*, is applied to *Panicum miliaceum*, and *Setaria italica*, Kth. The rendering "millet", in D. V., Is., xxviii, 25, is not justified, as Heb. *nisman*, found here, means "put in its place".

Mint (Matt., xxiii, 23; Luke, xi, 42). Various species are found in Palestine: *Mentha sylvestris*, the horse-mint, with its variety *M. viridis*, the spear-mint, grow everywhere; *M. sativa*, the garden-mint, is cultivated in all gardens; *M. piperita*, the peppermint, *M. aquatica*, the water-mint, *M. pulegium*, the pennyroyal, are also found in abundance. Mint is not mentioned in the Law amongst titheable things, but the Pharisaic opinion subjecting to tithe all edibles acquired force of law.

Mulberry, Heb. *beka'im* (A. V., II Kings, v, 23-4; I Par., xiv, 14-5; D. V. "pear tree"), a tree, two species of which are cultivated in Palestine: *Morus alba*, *M. nigra*. Neither this nor pear-tree is a likely translation; the context rather suggests a tree the leaves of which rustle like the aspen, *Populus tremula*. In D. V. Luke, xvii, 6, "mulberry tree" is probably a good translation.

Mustard. Several kinds of mustard-plant grow in the Holy Land, either wild, as the charlock, *Sinapis arvensis*, and the white mustard, *S. alba*, or cultivated, as *S. nigra*, which last seems the one intended in the Gospel. Our Lord compares the kingdom of God to a mustard seed (Matt., xiii, 31-2), a familiar term to mean the tiniest thing possible (cf. Talmud Jerus. Peah, 7; T. Babyl. Kethub., iib), "which a man . . . sowed in his field" and which "when it is grown up, it is greater than all herbs"; the mustard tree attains in Palestine a height of ten feet and is a favourite resort of linnets and finches.

Myrrh translates two Heb. words: (1) *mor* (cf. Arab. *morr*), the aromatic resin produced by *Balsamodendron myrrha*, Nees, which grows in Arabia and subtropical east Africa, was extensively used among the ancients, not only as a perfume (Ex., xxx, 23; Ps. xlv, 9; Prov., vii, 17; Cant., i, 12; v, 5), but also for embalming (John, xix, 39) and as an anodyne (Mark, xv, 23); (2) *lot*, see *Ladanum*.

Myrtle, Heb. *hadas* (Is., xli, 19; lv, 13; Zach., i, 8, 10, 11), *Myrtus communis*, Arab. *hadas*, an evergreen shrub especially prized for its fragrant leaves, and found in great abundance in certain districts of Palestine. Its height is usually three to four feet, attaining to eight feet in moist soil, and a variety cultivated in Damascus reaches up ten to twelve feet; hence an erroneous translation in almost all the above Scriptural passages.

Nard, pistic (R. V. margin, Mark, xiv, 3). See *Spikenard*.

Nettles translates two Heb. words: (1) *kharul*, plur. *kharulim* (A. V., Job, xxx, 7; D. V. "briers"; Soph., ii, 9; Prov., xxiv, 31; D. V. "thorns"), see *Bramble*; (2) *qimmosh*, *qimmeshonim* (Prov., xxiv, 31; A. V. "thorns"; Is., xxxiv, 13; Osee, ix, 6): correctly rendered "nettles" (*Urtica urens*, *U. dioica*, *U. pilulifera*, *U. membranacea*, Poir.), which are found everywhere on neglected patches, whilst the deserts abound with *Forskahlea tenacissima*, a plant akin to the *Urtica*.

Nut, equivalent of two Heb. words: (1) *'egoz* (Cant., vi, 10), Arab. *jauz*, the walnut tree, universally cultivated in the East; (2) *botnim* (A. V., Gen., xliii, 11), probably the pistachio nut, Arab. *butm*. See *Pistachio*.

Oak, Heb. *'ayl*, *'elah*, *'elon*, *'allah*, *'allon* are thus indiscriminately translated. From Osee iv, 13, and Is., yi, 13, it appears that the *'elah* is different from the *'allon*; in fact, *'ayl*, *'elah*, *'elon*, are understood by some to be the terebinth *'allah* and *'allon*

representing the oak. The genus *Quercus* is largely represented in Palestine and Syria, as to the number of individuals and species, seven of which have been found: (1) *Quercus robur* is represented by two varieties: *Q. cedrorum* and *Q. pinnatifida*; (2) *Q. infectoria*; (3) *Q. ilex*; (4) *Q. coccifera*, or holm oak, of which there are three varieties: *Q. calliprinos*, *Q. palestina*, and *Q. pseudo-coccifera*, this latter, a prickly evergreen oak with leaves like very small holly, most common in the land, especially as brushwood; (5) *Q. cerris*; (6) *Q. aeglops*, the Valonia oak, also very common and of which two varieties are known: *Q. ithaburensis* and *Q. look*, Ky.; (7) *Q. libani*, Oliv.

Oil tree, Heb. *'es shemen* (Is., xli, 19; III Kings, vi, 23, 31-3; II Esd., viii, 15), the olive-tree in D. V., the oleaster in R. V., and variously rendered in A. V.: "oil tree", "olive tree" and "pine". To meet the requirements of the different passages where the *'es shemen* is mentioned, it must be a fat tree, producing oil or resin, an emblem of fertility, capable of furnishing a block of wood out of which an image ten feet high may be carved, it must grow in mountains near Jerusalem, and have a dense foliage. Wild olive, oleaster, *Elæagnus angustifolius* (Arab. *haleph*), *Balanites ægyptiaca*, Del. (Arab. *zaggum*), are therefore excluded; some kind of pine is probably meant.

Olive tree, *Olea europæa*, one of the most characteristic trees of the Mediterranean region, and universally cultivated in the Holy Land. Scriptural allusions to it are very numerous, and the ruins of oil-presses manifest the extensive use of its enormous produce: olives, the husbandman's only relish; oil which serves as food, medicine, unguent, and fuel for lamps; finally candles and soap. The olive tree was considered the symbol of fruitfulness, blessing, and happiness, the emblem of peace and prosperity.

Olive, Wild (Rom., xi, 17, 24), not the oleaster, *Elæagnus angustifolia*, common throughout Palestine, but the seedling of the olive, on which the *Olea europæa* is grafted.

Onion, Heb. *beçalim* (Num., xi, 5), *Allium cepa*, universally cultivated and forming an important and favourite article of diet in the East.

Orache. See *Mallows*.

Palm tree, Heb. *thamar* (Ex., xv, 27), *tomer* (Judges, iv, 5), *Phoenix dactylifera*, the date palm. The palm tree flourishes now only in the maritime plain, but the Jordan Valley, Engaddi, Mount Olivet, and many other localities were renowned in antiquity for their palm groves. In fact, the abundance of palm trees in certain places suggested their names: Phœnicia (from Greek *φοινίξ*), Engaddi, formerly named Hazazon Thamar, i. e., "Palm grove", Jericho, surnamed "the City of Palm trees", Bethany, "the house of dates", are among the best known. Dates are a staple article of food among the Bedouins; unlike figs, they are not dried into compressed cakes, but separately; date wine was known throughout the East and is still made in a few places; date honey (Heb. *debash*; cf. Arab. *dibs*) has always been one of the favourite sweetmeats of the Orientals. There are many allusions in Scripture to palm trees, which are also prominent in architectural ornamentation (Heb. *timmorah*, III Kings, vi, 29).

Paper reed, Heb. *aroth* (A. V., Is., xix, 7) preferably rendered "the channel of the river" (D. V.), as the allusion seems to be to the meadows on the banks of the Nile.

Pear tree. See *Mulberry*.

Pen, in Ps. xlv, 2 (A. V., xlv, 1); Jer., viii, 8, is probably the stalk of *Arundo donax*, which the ancients used for writing, as do also the modern Orientals.

Pennyroyal. See *Mint*.

Peppermint. See *Mint*.

Pine tree translates the Heb. words: (1) *'oren* (Is., xlv, 14; A. V. "ash", possibly *Pinus pinea*; (2)

thidhar (Is., lx, 13; Is., xli, 19; D. V. "elm"), the elm (q. v.) rather than pine.

Pistachio, Heb. *botnim* (Gen., xliii, 11), probably refers to the nut-fruits of *Pistacia vera*, very common in Palestine; yet Arab. *bulm* is applied to *Pistacia terebinthus*.

Plane tree, Heb. *armon* (Gen., xxx, 37; Ezech., xxxi, 8; A. V. "chestnut tree"; Ecclus., xxiv, 19). *Platanus orientalis*, found throughout the East, fulfills well the condition implied in the Heb. name ("peeled"), as the outer layers of its bark peel off. A. V. translation is erroneous, for the chestnut tree does not flourish either in Mesopotamia or Palestine.

Pomegranate, the fruit of *Punica granatum*, a great favourite in the Orient, and very plentiful in Palestine, hence the many allusions to it in the Bible. Pomegranates were frequently taken as a model of ornamentation; several places of the Holy Land were named after the tree (Heb. *rimmon*): Rimmon, Geth-Remmon, En-Rimmon, etc.

Poplar, Heb. *libneh* (Gen., xxx, 37; Osee., iv, 13), Arab. *lubna*, *Styrax officinalis*, certainly identified with the tree, from the inner layer of whose bark the official storax is obtained.

Poppy. See *Gall*.

Pulse renders two Heb. words: (1) *qali* occurs twice in II Kings, xvii, 28, and is translated by "parched corn" and "pulse"; the allusion is to cereals, the seeds of peas, beans, lentils, and the like, which, in the East, are roasted in the oven or toasted over the fire; (2) *zero'im*, *zer'onim* (Dan., i, 12, 16) refer to no special plants, but possibly to all edible summer vegetables.

Reed, a general word translating several Heb. names of plants: *agmon*, *gome*, *šaph* (see *Bulrush*) and *qaneh* (see *Calamus*).

Rest-harrow. See *Briers*.

Rock-rose. See *Ladanum*.

Rose. (1) Heb. *khabbaggeleth* (A. V., Song of Sol. ii, 1; Is., xxxv, 1) is probably the narcissus (see *Flower of the field*). (2) Wis., ii, 8, seems to indicate the ordinary rose, though roses were known in Egypt only at the epoch of the Ptolemies. (3) The rose plant mentioned in Ecclus., xxiv, 18; xxxix, 17, is rather the oleander, *Nerium oleander*, very abundant around Jericho, where it is doubtful whether roses ever flourished except in gardens, although seven different species of the genus *Rosa* grow in Palestine.

Rue (Luke, xi, 42), probably *Ruta chalepensis*, slightly different from *R. graveolens*, the official rue. St. Luke implies that Pharisees regarded the rue as subject to tithe, although it was not mentioned in the Law among tithable things (Lev., xxvii, 30; Num., xviii, 21; Deut., xiv, 22). This opinion of some overstrict Rabbis did not prevail in the course of time, and the Talmud (*Shebi'ith*, ix, 1) distinctly excepts the rue from tithe.

Rush (Job, viii, 11). See *Bulrush*.

Rye, Heb. *kussemeth* (A. V., Ex., ix, 32; Is., xxviii, 25) like Arab. *kirsanah*, which suggests a leguminous plant, *Vicia ervilia*, Septuagint renders it "spelt"; rye is unknown in Bible lands and thrives only in colder climates, hence a wrong translation.

Saffron, Heb. *karkom* (Cant., iv, 14), cf. Arab. *kurkum*, a fragrant plant, *Crocus sativus*, grown in the East and in Europe for seasoning dishes, bread, etc.

Sandal-wood. See *Algum*.

Sea-purslain. See *Mallows*.

Sedge, Heb. *suph* (D. V., Ex., ii, 3), a generic name for rush. See *Bulrush*.

Sedge-bush, Heb. *'akhu* (D. V., Job, viii, 11; Gen., xli, 2, 18; "marshy places"; A. V., "meadow") probably designates all kinds of green plants living in marshes (cf. Egypt. *akhah*), in particular *Cyperus esculentus*. See *Flag*.

Setim wood, the gum arabic tree, *Acacia Seyal*, Del., which abounds in the oasis of the Sinaitic Peninsula and in the sultry Wadys about the Dead Sea. The wood is light, though hard and close-grained, of a fine orange-brown hue darkening with age, and was reputed incorruptible.

Shrub, Heb. *na'acuṣ* (D. V., Is., vii, 19; lv, 13), a particular kind of shrub, probably some jujube tree, either *Zizyphus vulgaris*, Lam., or *Z. spina-christi*, Willd.

Sloe. See *Bur*.

Smut. See *Mildew*.

Soap. See *Borith*.

Sodom, *Vine of* (Deut., xxxii, 32). See *Vine*.

Spear-mint. See *Mint*.

Spelt, A. V. and R. V. for *kussemeth* (Ezech., iv, 9). See *Fitches*. R. V. for *qeqakh* (Ex., ix, 32; Is., xxviii, 25). See *Gilh*.

Spices translates three Heb. words: (1) *sammun*, a generic word including galbanum onycha, the operculum of a strombus, and stacte (2) *basam*, another generic term under which come myrrh, cinnamon, sweet cane, and cassia (3) *neko'oth*, possibly the same substance as Arab. *neka'ath*. See *Astragalus*.

Spices, *Aromatic* (IV Kings, xx, 13; Is., xxxix, 2), a mistranslation for "precious things". See *Astragalus*.

Spikenard (A. V. Song of Sol., i, 12; D. V., ii, 14; Mark, xiv, 3; John, xii, 3), a fragrant, essential oil obtained from the root of *Nardostachys jatamansi*, D. C., a small herbaceous plant of the Himalayas, which is exported all over the East, and was known even to the Romans; the perfume obtained from it was very expensive.

Stacte translates four Heb. words: (1) *nataph* (Ex., xxx, 34), a fragrant gum identified with the storax (see *Poplar*), and with myrrh in drops or tears; (2) *ahaloth* (D. V., Ps. xlv, 9; A. V., xlv, 8; "aloes", q. v.); (3) *lot* (Gen., xxxvii, 25; xliii, 11), see *Ladanum*; (4) *qiddah* (Ezech., xxvii, 19), see *Cassia*.

Storax. (1) Gen., xliii, 11: see *Astragalus*; (2) Ecclus., xxiv, 21: see *Poplar*; *Stacte* (1).

Sweet cane. See *Cane*.

Sycamine (A. V., Luke, xvii, 6; D. V. "mulberry tree"). As St. Luke distinguishes *συκάμινος* (here) from *συκομορέα* (xix, 4), they probably differ; *συχαίνος* is admitted by scholars to be the black mulberry, *Morus nigra*.

Sycamore or *Sycomore*, Heb. *shiqmim* or *shiqmoth* (III Kings, x, 27; Ps. lxxviii, 47; D. V., lxxvii, 47, "mulberry"; Is., ix, 10; A. V. Amos., vii, 14), not the tree commonly called by that name, *Acer pseudo-platanus*, but *Ficus sycomorus*, formerly more plentiful in Palestine.

Tamarisk, Heb. *'eshel* (Gen., xxi, 33; "grove"; I Kings, xxii, 6; xxxi, 13; D. V. "wood", A. V. "tree"), Arab. *'athl*, a tree of which eight or nine species grow in Palestine.

Teal tree (A. V., Is., vi, 13), a mistranslation of Heb. *'elah*, which is probably the terebinth.

Terebinth (D. V., Is., vi, 13), *Pistacia terebinthus*, the turpentine tree, for Heb. *'ayl*, *'elah*, *'elon* (see *Oak*); it grows in dry localities of south and eastern Palestine where the oak cannot thrive. The turpentine, different from that of the pine trees, is a kind of pleasant-smelling oil, obtained by making incisions in the bark, and is widely used in the East to flavour wine, sweetmeats, etc.

Thistles, or numerous prickly plants, are one of the special features of the flora of the Holy Land; hence they are designated by various Hebrew words, inconsistently translated by the versions, where guess-work seems occasionally to have been employed although the general meaning is certain: (1) *barganim*, see *Briers*; (2) *dardar*, Arab. *shaukat ed-dardar*, possibly *Centaureas*, star-thistles and knapweeds; (3) *khedeq*, see *Mad-apple*; (4) *khoakh* (see *Bur*), a plant, which

grows amidst ruins (Is., xxiv, 13), in fallow-lands (Osee, ix, 6), with lilies (Cant., ii, 2), and in fields where it is harmful to corn (Job, xxxi, 40), all which features suit well the various kinds of thistles (*Carduus pycnocephalus*, *C. argentatus*, *Cirsium lanceolatum*, *C. arvense*, *Attractilis comosa*, *Carthamus oxyacantha*, *Scorolymus maculatus*), most abundant in Palestine; (5) *sirim*, the various star-thistles, or perhaps the thorny burnet, plentiful in ruins; (6) *sirpad*, from the Greek rendering, probably the elecampane, *Inula viscosa*, common on the hills of the Holy Land; (7) *qimmesh-onim*, see *Nettles*; (8) *shayith* and (9) *shamir*, see *Briers*.

Thorns, used in the English Bibles to designate plants like thistles, also includes thorny plants, such as: (1) 'atad, see *Bramble*; (2) *mesukah*, the general name given to a hedge of any kind of thorny shrubs; (3) *na'acuç*, see *Shrub*; (4) *sillôn* (cf. Arab. *sula*), some kind of strong thorns; (5) *sarabhim*, tangled thorns forming thickets impossible to clear; (6) *çinnim*, an unidentified thorny plant; (7) *qoc*, a generic word for thorny bushes; (8) *sikkim* (cf. Arab. *shauk*), also a generic name.

Thyine wood, probably *Thuya articulata*, Desf., especially in Apoc., xviii, 12. See *Algum*.

Turpentine tree. See *Terebinth*.

Vetches (D. V., Is., xxviii, 25). See *Fitches*.

Vine, the ordinary grape-vine, *Vitis vinifera*, of which many varieties are cultivated and thrive in the Holy Land. In Old Testament times vine and wine were so important and popular that in it they are constantly mentioned and alluded to, and a relatively large vocabulary was devoted to expressing varieties of plants and produce. In Ezech., xv, 6, Heb. *çafçafah* is rendered "vine", see *Willow*.

Vine, Wild (IV Kings, iv, 39), probably a wild gourd-vine, most likely the *Colocynth*.

Vine of Sodom (Deut., xxxii, 32), possibly the well known shrub, "Apple of Sodom", *Calotropis procera*, Willd., which peculiar plant grows round the Dead Sea and produces a fruit of the size of an apple, and "fair to behold", which bursts when touched and contains only white silky tufts and small seeds, "dust and ashes" (Josephus).

Walnut. See *Nut*.

Water-mint. See *Mint*.

Wheat, from Heb. *bar* and *dagan*, also translated "corn" and applicable to all cereals, is properly in Heb. *khittah* (cf. Arab. *khintah*), of which two varieties are especially cultivated in Palestine: *Triticum æstivum*, summer wheat, and *T. hybernum*, winter wheat; the harvest takes place from May (Ghôr) to June (highlands). Corn is threshed by cattle or pressed out with a sledge, and winnowed with a shovel, by throwing the grain against the wind on threshing floors upon breezy hills.

Willow. (1) Heb. *çafçafah* (A. V., Ezech., xvii, 5; D. V., "vine"), Arab. *safsaf*, probably willow though some prefer *Elæagnus hortensis*, Marsh., from Arab. *zaizafun*. (2) Heb. 'arabim (Lev., xxiii, 40; Job, xl, 17; Ps. cxxxvi, 2, A. V. cxxxvii; Is., xlv, 4), like Arab. *gharab*, hence the willow. 'Arabim, used only in the plur., probably designates all willows in general (*Salix safsaf*, *S. alba*, *S. fragilis*, *S. babylonica*, or weeping willow, are frequent in the Palestinian Wadys), whereas *çafçafah* may point out some particular species possibly the weeping willow.

Wheel (Ps. lxxii, 14) probably refers to some kind of *Centaurea*, as does "whirlwind" (Is., xvii, 13).

Wormwood, Heb. *la'anah* (Apoc., viii, 11), plants of the genus *Artemisia*, several species of which (*A. monosperma*, Del., *A. herba-alba*, Asso., *A. judaica*, *A. annua*, *A. arborescens*) are common in Palestine, notably on tablelands and in deserts. The characteristic bitterness of the *Artemisias*, coupled with their usual dreariness of habitat, aptly typified for Eastern minds calamity, injustice, and the evil results of sin.

BALFOUR, *The Plants of the Bible* (London, 1885); BONAVIA, *The Flora of the Assyrian Monuments and its Outcomes* (Westminster, 1894); DUNS, *Biblical Natural Science, being the expl. of all references in Holy Scripture to geology, botany, etc.* (London, 1863-5); GROSER, *The Trees and Plants mentioned in the Bible* (London, 1895); HOOKER and TRISTRAM, *Plants of the Bible, with the chief allusions collected and explained in Aids to the Student of the Holy Bible* (London); KNIGHT, *Bible Plants and Animals* (London, 1889); POST, *Flora of Syria, Palestine and Sinai, from the Taurus to the Ras Muhammad, and from the Mediterranean Sea to the Syrian desert* (Beirut, 1896); SMITH, *Bible Plants, their history, with a review of the opinions of various writers regarding their identification* (London, 1878); TRISTRAM, *The Natural History of the Bible* (London, 1889); IDEM, *The Fauna and Flora of Palestine* (London, 1884); ZELLER, *Wild Flowers of the Holy Land* (London, 1876); BOISSIER, *Flora Orientalis* (Bale and Geneva, 1867-88); CELSIUS, *Hierobotanicon, sive de plantis Sacra Scriptura dissertationes breves* (Upsala, 1745-7); FORSKAL, *Flora Ægyptiaco-Arabica* (Copenhagen, 1776); HILLER, *Hierophyton, sive Commentarius in loca Scriptura Sacra quæ plantarum faciunt mentionem* (Treves, 1725); LEMNIUS, *Similitudinum ac parabolarum, quæ in Bibliis ex herbis desumuntur, dilucida explicatio* (Frankfort, 1626); LINNE, *Flora Palestina* (Upsala, 1756); URSINUS, *Arboretum biblicum* (Nuremberg, 1699); IDEM, *Arboreti biblici continuatio* (Nuremberg, 1699); CULTRERA, *Botanique biblique* (Geneva, 1861); FILLION, *Atlas d'histoire naturelle de la Bible* (Paris, 1884); GANDOGER, *Plantes de Judée in Bulletin de la Société botanique de France*, XXXIII, XXXV, XXXVI (Paris); IDEM, articles on several plants in VIGOUROUX, *Dictionnaire de la Bible* (Paris, 1895-); HAMILTON, *La botanique de la Bible* (Nice, 1871); LEVESQUE, articles on various plants in VIG., *Dict. CHARLES L. SOUVAY.

Plasden, POLYDORE, VENERABLE. See **WHITE**, EUSTACE, VENERABLE.

Plasencia, DIOCESE OF (PLACENTINA), comprises the civil provinces of Cáceres, Salamanca, and Badajoz. Its capital has a population of 8044. The city of Plasencia was founded by Alfonso VIII on the site of Ambroz, which he had conquered from the Moors. He gave it the name of Placentia, "that it may be pleasing to God and man" (ut Deo placeat et hominibus), and sought to have it made a see by the pope, which Clement III did in 1189. In 1190, the see was occupied by Bricio and, at his death in 1211, by Domingo, a native of Beja, who was more warrior than shepherd, fighting at Las Navas de Tolosa at the head of the men of Plasencia, and subsequently directing his movements against Jaen, conquering Priego, Doja, Montejo, and other towns. He assisted at the Lateran Council of 1215, with Archbishop Rodrigo Jiménez de Rada, whom he served as vicar when the archbishop became legate in Spain. Dying in 1235, Domingo was succeeded by Adán, third Bishop of Plasencia, a no less warlike prelate, who with four other bishops accompanied St. Ferdinand to the conquest of Córdoba, where the five consecrated the mosque as a Christian cathedral. His successors, Ximeno Simon, and two Pedros, devoted themselves mainly to the government of their diocese; Juan Alonso assisted at the Cortes of 1288, where he obtained from Sancho confirmation of the privileges already granted to Plasencia. His successor Diego spent much time at Valladolid with the king.

The cathedral was originally built on a lofty site, near the citadel, afterwards occupied by the Church of St. Vincent the Martyr, then by that of St. Anne and lastly by the Jesuit college, now an almshouse. Another cathedral was begun early in the fourteenth century; this edifice, in the Early Spanish Gothic style, is now the parish church of Santa Maria. At the end of its cloister are seen the arms of Bishop Gonzalo de Sta. Maria, in whose time the cloister was finished, and the first solemn procession was held there, 26 March, 1348. This cathedral had hardly been built when it began to seem too poor for the see—one of the richest in Spain. In 1498, in the episcopate of Gutierre Alvarez de Toledo,

the twenty-fourth bishop, another cathedral was begun in Late Gothic, and completed in Renaissance. The high altar is the work of Gregorio Hernández, a famous sculptor of Valladolid; the choir grille was made by Juan Bautista Celma in 1604; the stalls are noteworthy, rivalling those of the cathedral of Badajoz. In the sanctuary, on the Gospel side, is the tomb of Bishop Pedro Ponce de León, inquisitor general, who died at Jaraycedo, 18 January, 1573. In the winter chapter house are a "Nativity" by Velázquez and a "St. Augustine" by Española. The adjoining college was founded in 1554 by Bishop Gutierre de Varagas de Carvajal, a native of Madrid, one of the most notable occupants of the see. The parish Church of St. Nicolas, also at Plasencia, contains the tombs of Hernán Pérez de Monroy, the champion of King Pedro I, and Pedro de Carvajal, Bishop of Coria. The Church of S. Juan Bautista, outside the walls, has been converted into a match factory. The noteworthy church of S. Vicente formerly belonged to the Dominicans; in its chapel of St. John is the magnificent tomb with kneeling effigy of Martín Nieto, knight commander of the nine towns, in the Order of St. John, and *comendador* of Yébenes.

The episcopal palace was rebuilt at the expense of Bishop Francisco Laso de La Vega (1737), on the site of one that dated from the fifteenth century. Besides the almshouse already mentioned, there are the hospital of Sta. Maria, popularly known as Doña Engracia de Monroy, which was restored by Bishop Laso; and the hospital of La Merced, known as Las Llagas (The Wounds), intended for persons suffering from wounds or accidental injuries. The conciliar seminary of Purísima Concepción was founded in 1670 by Bishop Diego Sarmiento Valladares and, later on, reorganized by Bishops Antonio Carillo Mayoral and Cipriano Varela. In 1853 Bishop José Avila y Lamas installed it in the convent of S. Vicente.

The Diocese of Plasencia was formerly suffragan of Santiago, but under the last concordat (1851) it became suffragan of Toledo. In this diocese is the famous Hieronymite monastery of Yuste, to which Charles V retired after his abdication. The ancient monastery itself has been destroyed, but the dwelling built for the emperor is preserved, as well as the church. In 1547 the Count and Countess of Oropesa caused this monastery to be rebuilt in Renaissance architecture. The vaultings of the church were reconstructed in 1860; above them are white-washed walls with the emperor's arms, on one side, and on the other, a black wooden casket which contained the body of Charles V, in a leaden case, until 1574, when it was removed to the Escorial. Plasencia has had many distinguished sons; among them Juan de Carvajal, created a cardinal by Eugene IV, filled many important posts under the Holy See and rendered important services at the Council of Basle and in the war against the Turks, while his cousin, Bernardino de Carvajal, presided in the conclaves which elected Adrian VI and Clement VII (see CARVAJAL). Among others were the jurists, Alfonso de Acevedo and Juan Gutiérrez; the chroniclers Lorenzo Galíndez de Carvajal and Alonso Fernández; and Diego de Chaves, confessor to Philip II. Within this diocese is the native home of the conquerors of America: Hernando Cortés, a native of the village of Medellín; and the Pizarros, natives of Trujillo. The bishops of Plasencia were lords of Jaraycejo, the town of Miajadas, and other domains.

RAMÓN RUIZ AMADO

Plata, LA. See LA PLATA, DIOCESE OF.

Platina, BARTOLOMEO, originally named SACCHI,

b. at Piadena, near Mantua, in 1421; d. at Rome, 1481. He first enlisted as a soldier, and was then appointed tutor to the sons of the Marquis Ludovico Gonzaga. In 1457 he went to Florence, and studied under the Greek scholar Argyropoulos. In 1462 he proceeded to Rome, probably in the suite of Cardinal Francesco Gonzaga. After Pius II had reorganized the College of Abbreviators (1463), and increased its number to seventy, Platina in May, 1464, was elected a member. When Paul II abolished the ordinances of Pius, Platina with the other new members was deprived of his office. Angered thereat, he wrote a pamphlet insolently demanding from the pope the recall of his restrictions. When called upon to justify himself he answered with insolence and was imprisoned in the Castle of Sant' Angelo, being released after four months on condition that he remain at Rome. In February, 1486, with about twenty other Humanists, he was again imprisoned on suspicion of heresy and of conspiring against the life of the pope, but the latter charge was dropped for lack of evidence while they were acquitted on the former. But not even Platina denies that the members of the Roman Academy, imbued with half-pagan and materialistic doctrines, were found guilty of immorality. The story about his constancy under trial and torture is unfounded.

After his release, 7 July, 1469, he expected to be again in the employ of Paul II, who, however, declined his services. Platina threatened vengeance and executed his threat, when at the suggestion of Sixtus IV he wrote his "*Vitæ Pontificum Platinae historici liber de vita Christi ac omnium pontificum qui hactenus ducenti fuere et XX*" (Venice, 1479). In it he paints his enemy as cruel, and an archenemy of science. For centuries it influenced historical opinions until critical research proved otherwise. In other places party spirit is evident, especially when he treats of the condition of the Church. Notwithstanding, his "*Lives of the Popes*" is a work of no small merit, for it is the first systematic handbook of papal history. Platina felt the need of critical research, but shirked the examination of details. By the end of 1474 or the beginning of 1475 Platina offered his manuscript to Sixtus IV; it is still preserved in the Vatican Library. The pope's acceptance may cause surprise, but it is probable he was ignorant of its contents except in so far as it concerned his own pontificate up to November, 1474. After the death of Giandrea Bussi, Bishop of Aleria, the pope appointed Platina librarian with a yearly salary of 120 ducats and an official residence in the Vatican. He also instructed him to make a collection of the chief privileges of the Roman Church. This collection, whose value is acknowledged by all the annalists, is still preserved in the Vatican archives. In the preface Platina not only avoids any antagonism towards the Church but even refers with approbation to the punishing of heretics and schismatics by the popes, which is the best proof that Sixtus IV, by his marks of favour, had won Platina for the interests of the Church. Besides his principal work Platina wrote several others of smaller importance, notably: "*Historia inclita urbis Mantuæ et serenissimæ familiæ Gonzagæ*". The new *Pinacotheca Vaticana* contains the magnificent fresco by Melozzo da Forlì. It represents Sixtus IV surrounded by his Court and appointing Platina prefect of the Vatican.

As a paragraph from Platina's "*Vitæ Pontificum*" first gave rise to the legend of the excommunication of Halley's comet by Callistus III, we here give the legend briefly, after recalling some historical facts. After the fall of Constantinople (1453), Nicolas V appealed in vain to the Christian princes for a crusade. Callistus III (1455-58), immediately after his succession, sent legates to the various Courts for the same purpose; and, meeting with no response, pro-

mulgated a Bull 29 June, 1456, prescribing the following: (1) all priests were to say during Mass the "oratio contra paganos"; (2) daily, between noon and vespers, at the ringing of a bell, everybody had to say three Our Fathers and Hail Marys; (3) processions were to be held by the clergy and the faithful on the first Sunday of each month, and the priests were to preach on Faith, patience, and penance; to expose the cruelty of the Turks, and urge all to pray for their deliverance. The first Sunday of July (4 July), the first processions were held in Rome. On the same day the Turks began to besiege Belgrade. On 14 July the Christians gained a small advantage, and on the twenty-first and twenty-second the Turks were put to flight.

In the same year Halley's comet appeared. In Italy it was first seen in June. Towards the end of the month it was still visible for three hours after sunset, causing great excitement everywhere by its extraordinary splendour. It naturally attracted the attention of astrologers as may appear from the long "judicium astrologicum" by Avogario, of Ferrara, dated 17 June, 1456; it was found again by Celoria among the manuscripts of Paolo Toscanelli, who had copied it himself. The comet was seen till 8 July. It is evident, from all the documents of that time, that it had disappeared from sight several days before the battle of Belgrade. These two simultaneous facts—the publication of the Bull and the appearance of the comet—were connected by Platina in the following manner: "Apparente deinde per aliquot dies cometa crinito et rubeo: cum mathematici ingentem pestem: charitatem annonæ: magnam aliquam cladem futuram dicerent: ad avertendam iram Dei Calistus aliquot dierum supplicationes decrevit: ut si quid hominibus immineret, totum id in Thurcos christiani nominis hostes converteret. Mandavit præterea ut assiduo rogatu Deus flecteretur in meridie campanis signum dari fidelibus omnibus: ut orationibus eos juvarent: qui contra Thurcos continuo dimicabant" (A maned and fiery comet appearing for several days, while scientists were predicting a great plague, dearth of food, or some great disaster, Callistus decreed that supplicatory prayers be held for some days to avert the anger of God, so that, if any calamity threatened mankind, it might be entirely diverted against the Turks, the foes of the Christian name. He likewise ordered that the bells be rung at midday as a signal to all the faithful to move God with assiduous petitions and to assist with their prayers those engaged in constant warfare with the Turks).

Platina has, generally speaking, recorded the facts truly; but is wrong at one point, viz., where he says that the astrologers' predictions of great calamities induced the pope to prescribe public prayers. The Bull does not contain a word on the comet, as the present writer can testify from personal examination of the authenticated document.—A careful investigation of the authenticated "Regesta" of Callistus III (about one hundred folios), in the Vatican archives, shows that the comet is not mentioned in any other papal document. Nor do other writers of the time refer to any such prayers against the comet, though many speak both of the comet and of the prayers against the Turks. The silence of St. Antoninus, Archbishop of Florence (1446–59), is particularly significant. In his "Chronicorum libri tres" he enumerates accurately all the prayers prescribed by Callistus; he also mentions the comet of 1456 in a chapter entitled, "De cometis, unde causentur et quid significant"—but never refers to prayers and processions against the comet, although all papal decrees were sent to him. Aeneas Sylvius and St. John Capistrano, who preached the crusade in Hungary, considered the comet rather as a favourable omen in the war against the Turks.

Hence it is clear that Platina has looked wrongly

upon the Bull as the outcome of fear of comets. The historians of the sixteenth and seventeenth centuries contented themselves with quoting Platina more or less accurately (Calvisius 1605, Spondanus 1641, Lubienietzki 1666). Fabre (1726) in his continuation of the "Histoire Ecclésiastique" by Fleury gave a somewhat free paraphrase. Bruys (1733), an apostate (who afterwards entered the Church again), copies Fleury-Fabre adding "que le Pape profita en habile homme de la superstition et de la crédulité des peuples". It is only when we come to Laplace's "Exposition du Système du monde", that we find the expression that the pope ordered the comet and the Turks to be exorcized (*conjuré*), which expression we find again in Daru's poem "L'Astronomie". Arago (Des Comètes en général etc. *Annuaire du Bureau des Longitudes* 1832, 244) converts it into an excommunication. Arago's treatise was soon translated into all the European languages, after which time the appearance of the comet (1456) is hardly ever mentioned, but this historical lie must be repeated in various shapes. Smyth (Cycle of celestial objects) speaks of a special protest and excommunication exorcizing the Devil, the Turks, and the comet. Grant (History of physical astronomy) refers to the publication of a Bull, in which Callistus anathematized both the Turks and the Comet. Babinet (*Revue des deux mondes*, 23 ann., vol. 4, 1853, 831) has the pope "lancer un timide anathème sur la comète et sur les ennemis de la Chrétienté", whilst in the battle of Belgrade "les Frères Mineurs aux premiers rangs, invoquaient l'exorcisme du pape contre la comète". In different ways the legend is repeated by Chambers, Flammarion, Draper, Jamin, Dickson White, and others. However, the truth is gaining ground and it is hoped the story of the excommunicated comet will soon be relegated to the realm of fables.

J. STEIN.

Plato and Platonism.—I. LIFE OF PLATO.—Plato (Πλάτων, the broad-shouldered) was born at Athens in 428 or 427 B. C. He came of an aristocratic and wealthy family, although some writers represented him as having felt the stress of poverty. Doubtless he profited by the educational facilities afforded young men of his class at Athens. When about twenty years old he met Socrates, and the intercourse, which lasted eight or ten years, between master and pupil was the decisive influence in Plato's philosophical career. Before meeting Socrates he had, very likely, developed an interest in the earlier philosophers, and in schemes for the betterment of political conditions at Athens. At an early age he devoted himself to poetry. All these interests, however, were absorbed in the pursuit of wisdom to which, under the guidance of Socrates, he ardently devoted himself. After the death of Socrates he joined a group of the Socratic disciples gathered at Megara under the leadership of Euclid. Later he travelled in Egypt, Magna Græcia, and Sicily. His profit from these journeys has been exaggerated by some biographers. There can, however, be no doubt that in Italy he studied the doctrines of the Pythagoreans. His three journeys to Sicily were, apparently, to influence the older and younger Dionysius in favour of his ideal system of government. But in this he failed, incurring the enmity of the two rulers, was cast into prison, and sold as a slave. Ransomed by a friend, he returned to his school of philosophy at Athens. This differed from the Socratic

School in many respects. It had a definite location in the groves near the gymnasium of Academus, its tone was more refined, more attention was given to literary form, and there was less indulgence in the odd, and even vulgar method of illustration which characterized the Socratic manner of exposition. After his return from his third journey to Sicily he devoted himself unremittingly to writing and teaching, until his eightieth year, when, as Cicero tells us, he died in the midst of his intellectual labours ("scribens est mortuus") ("De Senect.", v, 13).

II. WORKS.—It is practically certain that all Plato's genuine works have come down to us. The lost works ascribed to him, such as the "Divisions" and the "Unwritten Doctrines", are certainly not genuine. Of the thirty-six dialogues, some—the "Phædrus", "Protagoras", "Phædo", "The Republic", "The Banquet" etc.—are undoubtedly genuine; others—e. g. the "Minos"—may with equal certainty be considered spurious; while still a third group—the "Ion", "Greater Hippias", and "First Alcibiades"—is of doubtful authenticity. In all his writings Plato uses the dialogue with a skill never since equalled. That form permitted him to develop the Socratic method of question and answer. For, while Plato elaborated to a high degree the faculty by which the abstract is understood and presented, he was Greek enough to follow the artistic instinct in teaching by means of a clear-cut concrete type of philosophical excellence. The use of the myth in the dialogues has occasioned considerable difficulty to the commentators and critics. When we try to put a value on the content of a Platonic myth, we are often baffled by the suspicion that it is all meant to be subtly ironical, or that it is introduced to cover up the inherent contradictions of Plato's thought. In any case, the myth should never be taken too seriously or invoked as an evidence of what Plato really believed.

III. PHILOSOPHY.—(1) *The Starting-Point*.—The immediate starting-point of Plato's philosophical speculation was the Socratic teaching. In his attempt to define the conditions of knowledge so as to refute sophistic scepticism, Socrates had taught that the only true knowledge is a knowledge by means of concepts. The concept, he said, represents all the reality of a thing. As used by Socrates, this was merely a principle of knowledge. It was taken up by Plato as a principle of Being. If the concept represents all the reality of things, the reality must be something in the ideal order, not necessarily in the things themselves, but rather above them, in a world by itself. For the concept, therefore, Plato substitutes the Idea. He completes the work of Socrates by teaching that the objectively real Ideas are the foundation and justification of scientific knowledge. At the same time, he has in mind a problem which claimed much attention from pre-Socratic thinkers, the problem of change. The Eleatics, following Parmenides, held that there is no real change or multiplicity in the world, that reality is one. Heraclitus, on the contrary, regarding motion and multiplicity as real, maintained that permanence is only apparent. The Platonic theory of Ideas is an attempt to solve this crucial question by a metaphysical compromise. The Eleatics, Plato said, are right in maintaining that reality does not change; for the Ideas are immutable. Still, there is, as Heraclitus contended, change in the world of our experience, or, as Plato terms it, the world of phenomena. Plato, then, supposes a world of Ideas apart from the world of our experience, and immeasurably superior to it. He imagines that all human souls dwelt at one time in that higher world. When, therefore, we behold in the shadow-world around us a phenomenon or appearance of anything, the mind is moved to a remembrance of the Idea (of that same phenomenal thing) which it formerly contemplated. In its delight it wonders at the contrast, and by wonder is led to

recall as perfectly as possible the intuition it enjoyed in a previous existence. This is the task of philosophy. Philosophy, therefore, consists in the effort to rise from the knowledge of phenomena, or appearances, to the *noumena*, or realities. Of all the Ideas, however, the Idea of the beautiful shines out through the phenomenal veil more clearly than any other; hence, the beginning of all philosophical activity is the love and admiration of the Beautiful.

(2) *Division of Philosophy*.—The different parts of philosophy are not distinguished by Plato with the same formal precision found in Aristotelean and post-Aristotelean systems. We may, however, for convenience, distinguish: (a) Dialectic, the science of the Idea in itself; (b) Physics, the knowledge of the Idea as incorporated or incarnated in the world of phenomena, and (c) Ethics and Theory of the State, or the science of the Idea embodied in human conduct and human society.

(a) *Dialectic*.—This is to be understood as synonymous not with logic but with metaphysics. It signifies the science of the Idea, the science of reality, science in the only true sense of the word. For the Ideas are the only realities in the world. We observe, for instance, just actions, and we know that some men are just. But both in the actions and in the persons designated as just there exist many imperfections; they are only partly just. In the world above us there exists justice, absolute, perfect, unmixed with injustice, eternal, unchangeable, immortal. This is the Idea of justice. Similarly, in that world above us there exist the Ideas of greatness, goodness, beauty, wisdom, etc., and not only these, but also the Ideas of concrete material objects such as the Idea of man, the Idea of horse, the Idea of trees, etc. In a word, the world of Ideas is a counterpart of the world of our experience, or rather the latter is a feeble imitation of the former. The Ideas are the prototypes, the phenomena are ectypes. In the allegory of the cave (Republic, VII, 514 d) a race of men are described as chained in a fixed position in a cavern, able to look only at the wall in front of them. When an animal, e. g. a horse, passes in front of the cave, they, beholding the shadow on the wall, imagine it to be a reality, and while in prison they know of no other reality. When they are released and go into the light they are dazzled, but when they succeed in distinguishing a horse among the objects around them, their first impulse is to take that for a shadow of the being which they saw on the wall. The prisoners are "like ourselves", says Plato. The world of our experience, which we take to be real, is only a shadow-world. The real world is the world of Ideas, which we reach, not by sense-knowledge, but by intuitive contemplation. The Ideas are participated by the phenomena; but how this participation takes place, and in what sense the phenomena are imitations of the Ideas, Plato does not fully explain; at most he invokes a negative principle, sometimes called "Platonic Matter", to account for the "falling-off" of the phenomena from the perfection of the Idea. The limiting principle is the cause of all defects, decay, and change in the world around us. The just man, for instance, falls short of absolute justice (the Idea of Justice), because in men the Idea of justice is fragmentated, debased, and reduced by the principle of limitation. Towards the end of his life, Plato leaned more and more towards the Pythagorean number-theory, and, in the "Timæus" especially, he is inclined to interpret the Ideas in terms of mathematics. His followers emphasized this element unduly, and, in the course of neo-Platonic speculation, the Ideas were identified with numbers. There was much in the theory of Ideas that appealed to the first Christian philosophers. The emphatic affirmation of a supermundane, spiritual order of reality and the equally emphatic assertion of the caducity of things material fitted in with the

essentially Christian contention that spiritual interests are supreme. To render the world of Ideas more acceptable to Christians, the Patristic Platonists from Justin Martyr to St. Augustine maintained that that world exists in the mind of God, and that this was what Plato meant. On the other hand, Aristotle understood Plato to refer to a world of Ideas self-subsisting and separate. Instead, therefore, of picturing to ourselves the world of Ideas as existing in God, we should represent God as existing in the world of Ideas. For, among the Ideas, the hierarchical supremacy is attributed to the Idea of God, or Absolute Goodness, which is said to be for the supercelestial universe what the sun in the heavens is for this terrestrial world of ours.

(b) *Physics*.—The Idea incorporated, so to speak, in the phenomenon is less real than the Idea in its own world, or than the Idea embodied in human conduct and human society. Physics, i. e., the knowledge of the Idea in phenomena, is, therefore, inferior in dignity and importance to Dialectic and Ethics. In fact, the world of phenomena has no scientific interest for Plato. The knowledge of it is not true knowledge, nor the source, but only the occasion of true knowledge. The phenomena stimulate our minds to a recollection of the intuition of Ideas, and with that intuition scientific knowledge begins. Moreover, Plato's interest in nature is dominated by a teleological view of the world as animated with a World-Soul, which, conscious of its processes, does all things for a useful purpose, or, rather, for "the best", morally, intellectually, and æsthetically. This conviction is apparent especially in the Platonic account of the origin of the universe, contained in the "Timæus", although the details regarding the activity of the demiurgos and the created gods should not, perhaps, be taken seriously. Similarly, the account of the origin of the soul, in the same dialogue, is a combination of philosophy and myth, in which it is not easy to distinguish the one from the other. It is clear, however, that Plato holds the spiritual nature of the soul as against the materialistic Atomists, and that he believes the soul to have existed before its union with the body. The whole theory of Ideas, in so far, at least, as it is applied to human knowledge, presupposes the doctrine of pre-existence. "All knowledge is recollection" has no meaning except in the hypothesis of the soul's prenatal intuition of Ideas. It is equally incontrovertible that Plato held the soul to be immortal. His conviction on this point was as unshaken as Socrates's. His attempt to ground that conviction on unassailable premises is, indeed, open to criticism, because his arguments rest either on the hypothesis of previous existence or on his general theory of Ideas. Nevertheless, the considerations which he offers in favour of immortality, in the "Phædo", have helped to strengthen all subsequent generations in the belief in a future life. His description of the future state of the soul is dominated by the Pythagorean doctrine of transmigration. Here, again, the details are not to be taken as seriously as the main fact, and we can well imagine that the account of the soul condemned to return in the body of a fox or a wolf is introduced chiefly because it accentuates the doctrine of rewards and punishments, which is part of Plato's ethical system. Before passing to his ethical doctrines it is necessary to indicate one other point of his psychology. The soul, Plato teaches, consists of three parts: the rational soul, which resides in the head; the irascible soul, the seat of courage, which resides in the heart; and the appetitive soul, the seat of desire, which resides in the abdomen. These are not three faculties of one soul, but three parts really distinct.

(c) *Ethics and Theory of the State*.—Like all the Greeks, Plato took for granted that the highest good of man, subjectively considered, is happiness (*eudaimonia*). Objectively, the highest good of man

is the absolutely highest good in general, Goodness itself, or God. The means by which this highest good is to be attained is the practice of virtue and the acquisition of wisdom. So far as the body hinders these pursuits it should be brought into subjection. Here, however, asceticism should be moderated in the interests of harmony and symmetry—Plato never went the length of condemning matter and the human body in particular, as the source of all evil—for wealth, health, art, and innocent pleasures are means of attaining happiness, though not indispensable, as virtue is. Virtue is order, harmony, the health of the soul; vice is disorder, discord, disease. The State is, for Plato, the highest embodiment of the Idea. It should have for its aim the establishment and cultivation of virtue. The reason of this is that man, even in the savage condition, could, indeed, attain virtue. In order, however, that virtue may be established systematically and cease to be a matter of chance or haphazard, education is necessary, and without a social organization education is impossible. In his "Republic" he sketches an ideal state, a polity which should exist if rulers and subjects would devote themselves, as they ought, to the cultivation of wisdom. The ideal state is modelled on the individual soul. It consists of three orders: rulers (corresponding to the reasonable soul), producers (corresponding to desire), and warriors (corresponding to courage). The characteristic virtue of the producers is thrift, that of the soldiers bravery, and that of the rulers wisdom. Since philosophy is the love of wisdom, it is to be the dominant power in the state: "Unless philosophers become rulers or rulers become true and thorough students of philosophy, there shall be no end to the troubles of states and of humanity" (*Rep.*, V, 473), which is only another way of saying that those who govern should be distinguished by qualities which are distinctly intellectual. Plato is an advocate of State absolutism, such as existed in his time in Sparta. The State, he maintains, exercises unlimited power. Neither private property nor family institutions have any place in the Platonic state. The children belong to the State as soon as they are born, and should be taken in charge by the State from the beginning, for the purpose of education. They should be educated by officials appointed by the State, and, according to the measure of ability which they exhibit, they are to be assigned by the State to the order of producers, to that of warriors, or to the governing class. These impractical schemes reflect at once Plato's discontent with the demagogy then prevalent at Athens and his personal predilection for the aristocratic form of government. Indeed, his scheme is essentially aristocratic in the original meaning of the word; it advocates government by the (intellectually) best. The unreality of it all, and the remoteness of its chance to be tested by practice, must have been evident to Plato himself. For in his "Laws" he sketches a modified scheme which, though inferior, he thinks, to the plan outlined in the "Republic", is nearer to the level of what the average state can attain.

IV. *THE PLATONIC SCHOOL*.—Plato's School, like Aristotle's, was organized by Plato himself and handed over at the time of his death to his nephew Speusippus, the first scholarch, or ruler of the school. It was then known as the Academy, because it met in the groves of Acadamus. The Academy continued, with varying fortunes, to maintain its identity as a Platonic school, first at Athens, and later at Alexandria until the first century of the Christian era. It modified the Platonic system in the direction of mysticism and demonology, and underwent at least one period of scepticism. It ended in a loosely constructed eclecticism. With the advent of neo-Platonism (q. v.), founded by Ammonius and developed by Plotinus, Platonism definitively entered the cause of Paganism against Christianity. Neverthe-

ness, the great majority of the Christian philosophers down to St. Augustine were Platonists. They appreciated the uplifting influence of Plato's psychology and metaphysics, and recognized in that influence a powerful ally of Christianity in the warfare against materialism and naturalism. These Christian Platonists underestimated Aristotle, whom they generally referred to as an "acute" logician whose philosophy favoured the heretical opponents of orthodox Christianity. The Middle Ages completely reversed this verdict. The first scholastics knew only the logical treatises of Aristotle, and, so far as they were psychologists or metaphysicians at all, they drew on the Platonism of St. Augustine. Their successors, however, in the twelfth century came to a knowledge of the psychology, metaphysics, and ethics of Aristotle, and adopted the Aristotelean view so completely that before the end of the thirteenth century the Stagyrice occupied in the Christian schools the position occupied in the fifth century by the founder of the Academy. There were, however, episodes, so to speak, of Platonism in the history of Scholasticism—e. g., the School of Chartres in the twelfth century—and throughout the whole scholastic period some principles of Platonism, and especially of neo-Platonism, were incorporated in the Aristotelean system adopted by the schoolmen. The Renaissance brought a revival of Platonism, due to the influence of men like Bessarion, Plethon, Ficino, and the two Mirandolas. The Cambridge Platonists of the seventeenth century, such as Cudworth, Henry More, Cumberland, and Glanville, reacting against humanistic naturalism, "spiritualized Puritanism" by restoring the foundations of conduct to principles intuitively known and independent of self-interest. Outside the schools of philosophy which are described as Platonic there are many philosophers and groups of philosophers in modern times who owe much to the inspiration of Plato, and to the enthusiasm for the higher pursuits of the mind which they derived from the study of his works.

The standard printed edition of Plato's works is that of STEPHANUS (Paris, 1578). Among more recent editions are BEKKER (Berlin, 1816–23), FIRMIN-DIDOT (Paris, 1866—). The best English tr. is JOWETT, *The Dialogues of Plato* (Oxford, 1871; 3rd ed., New York, 1892). For exposition of Plato's system cf. ZELLER, *Plato and the Older Academy*, tr. ALLEYNE and GOODWIN (London, 1888); GROTE, *Plato and the Other Companions of Socrates* (London, 1885); PATER, *Plato and Platonism* (London, 1893); TURNER, *History of Philosophy* (Boston, 1903), 93 sq.; FOUILLÉE, *La philosophie de Platon* (Paris, 1892); HUIT, *La vie et l'œuvre de Platon* (Paris, 1893); WINDELBAND, *Platon* (Stuttgart, 1901); LUTOSLAWSKI, *Origin and Growth of Plato's Logic* (London, 1897). For history of Platonism cf. BUSSELL, *The School of Plato* (London, 1896); HUIT, *Le platonisme à Byzance et en Italie à la fin du moyen-âge* (Brussels, 1894); articles in *Annales de philosophie chrétienne*, new series, XX–XXII; TAROZZI, *La tradizione platonica nel medio evo* (Trani Vecchi, 1892).

WILLIAM TURNER.

Play, PIERRE-GUILLAUME-FRÉDÉRIC, LE, French economist, b. at La Rivière (Calvados), 11 April, 1806; d. at Paris, 5 April, 1882. His childhood was spent among Christian people, with a poor widowed mother. From the college of Havre he went (1824) to Paris, where he followed the scientific courses of the Collège St. Louis, the polytechnic school, and the school of mines. At the polytechnic school he had as fellow-pupils the economist Michel Chevalier, Père Gratry, and the philosopher Jean Reynaud. In 1829 with Reynaud he made a journey on foot through the Rhine provinces, Hanover, Brunswick, Prussia, and Belgium to study mining, customs, and social institutions. On his return an accident in the course of a chemical experiment caused him eighteen months of suffering and deformed his hands for life. He became secretary of the "Annales des mines" and of "Statistique de l'industrie minérale", and professor of metallurgy at the school of mines (1840). Each year he travelled six months, studying metallurgy and social problems, and questioning traders, workmen, owners, and peasants. He spoke five languages and understood eight.

His life may be divided into two periods: from 1833–55 he invented, applied, and perfected his method; from 1855–82 he explained, developed, and perfected his doctrine. In 1833 he visited Spain; in 1835 and 1846, Belgium; 1836 and 1842, Great Britain; 1837 and 1844, Russia; 1845, Denmark, Sweden, and Norway; 1844 and 1845, Germany; 1846, Austria, Hungary, and Northern Italy. Extracts from his correspondence with his wife and mother during his travels were published in 1899. During his sojourns in Russia he was consulted by Nicholas I on various projects of reform, and, having undertaken at the instance of Prince Anatol Demidoff a scientific expedition into the coal regions of Donetz, the prince entrusted him with the superintendence of his gold, silver, platinum, copper, and iron mines, which employed 45,000 men in the Ural region.

His conversations with Comte de Rayneval, French ambassador at Madrid, to whom he had been recommended by Boieldieu, convinced him that the forced division of inheritances established by the Code Napoléon had evil social consequences. His visit to the Baron de Tamm, who directed 2300 workmen at Osterby, near Upsala, showed him what might be done by resident owners anxious for the welfare of their people, and his theory of "social authorities" slowly took form in his mind. Among the peasants and blacksmiths of the Ural region he observed a social condition very similar to the ancient French feudal regime, and his statements regarding the comfort of these people coincided with those of Guérard and Leopold Delisle concerning the prosperous condition of the French agricultural classes during the early centuries of feudalism. He thus formed ideas quite at variance with the juridical and historical conceptions propagated by the men of the French Revolution. His "method of observation", the rules of which he gradually formulated, was in contradiction to the individualism of the French Revolution. It consisted in studying, not the individual, but the family (which is the real social unit), and in studying types of families among the stationary element of the population whose members lead uniform lives and faithfully preserve their local customs.

From 1848, during the months he spent in Paris, Le Play held weekly gatherings of persons of various opinions interested in the social question; among them were Jean Reynaud, Lamartine, François Arago, Carnot, Lanjuinais, Tocqueville, Montalembert, Sainte-Beuve, Agénor de Gasparin, Abbé Dupanloup, Thiers, Auguste Cochin, and Charles Dupin. During the social troubles which followed the Revolution of 1848 these men besought Le Play to abandon his teaching at the school of mines and to devote himself exclusively to the exposition of his social system. But Le Play, ever scrupulous, considered it necessary to make further journeys to Switzerland, the Danube provinces, and Central Turkey (1848), Auvergne (1850), England and Western Germany (1851), Austria and Russia (1853). However, in 1855 he published "Les ouvriers européens", describing the material and moral life of thirty-six families, among widely different races, which he had studied at close range. The School of Le Play continues this series of valuable monographs in a periodical entitled "Les ouvriers des deux mondes". The English economist Higgs declared that Le Play's monographs on four English families are the best available account of English popular life from the economic point of view. Taine, the French historian, after studying the origins of contemporary France for his great work, wrote: "By his methodical, exact, and profound researches, Le Play has done a great service to politics and, in consequence, to history." Luzzatti, a Jew who later became president of the Italian ministry, wrote to Le Play: "After drinking at all sources, I draw inspiration for my studies from your method alone." And it

was in conformity with Le Play's method that Carroll D. Wright, head of the Boston Bureau of Statistics and later Commissioner of Labour at Washington, had 6000 monographs dealing with labour problems compiled; in acknowledging the influence of the study of Le Play, he says, "I received from it a new inspiration which completely changed the trend of my thoughts." Le Play had intended to add to "*Les ouvriers européens*" a final chapter setting forth certain doctrinal conclusions, but at the last he held them back to let them mature, and simply wrote: "If required to point out the force which, operating at each extremity of the social scale, suffices, strictly speaking, to render a people prosperous, we should unhesitatingly answer: at the bottom, foresight; at the top, religion. In analysing facts and comparing figures, social science always leads real observers to the principles of the Divine law." In 1856 Le Play founded the *Société d'Economie Sociale* with the intention of preparing public opinion to accept his conclusions.

In 1855 (second period) Napoleon III appointed Le Play councillor of State and reposed in him a confidence which steadily increased. He also requested Le Play to write a book on the social principles which seemed to him requisite for the prosperity of society. Le Play consented and, in 1864, published his "*Réforme sociale en France, déduite de l'observation comparée des peuples européens*". In the first chapter, "*La religion*", he defends the religious idea against Darwinism and Scepticism, but at that date the various religions seemed to him but external forms, equally respectable and inspired by the same religious sentiment; he does not decide in favour of any. He defends God, respects Jesus Christ, but fails to appreciate the Church. From his observations he concluded that the doctrine of the original goodness of man is false, that the tendency to evil is ingrained in human nature, that, therefore, a law is needed to compel man to do good in order to attain happiness, and he hails this law in the Decalogue but makes little account of the Gospel. The work was a sort of social apologetic for the Decalogue: "the erring", he writes, "on whom the traditional truths have no longer any influence, are led back by the facts which the method of observation brings to light." The book met with great success. Sainte-Beuve proclaimed him "a rejuvenated Bonald, progressive and scientific". Montalembert wrote: "Le Play has produced the most original, most useful, most courageous, and, in every respect, the strongest book of the century. He not only possesses more eloquence than the illustrious Tocqueville, but much more practical perspicacity and above all greater moral courage. I repeat, what I admire most in him is the courage which impels him to fight with raised visor against most of the dominant prejudices of his time and country. In this, even more than in his prodigious knowledge of facts, will consist his true greatness in the intellectual history of the nineteenth century." Napoleon III entrusted the organization of the Exposition Universelle of 1867 to Le Play, whom he made commissary general; and, at his request, the emperor created a new order of reward in favour of "establishments and localities throughout the world which give the best examples of social peace". But despite public opinion and the sympathy of the emperor, the jurists opposed Le Play's ideas regarding testamentary liberty. As early as 1865 Baron de Véauce, a member of the *corps législatif*, proposed that the Government should study the modification of the laws of inheritance, but his proposal received the votes of only forty-one deputies. The emperor, however, on two occasions had investigations made with a view to the establishment of testamentary freedom in favour of small holdings, but the project was opposed by the jurists and failed. In November, 1869, he urged Le Play to make another

effort to win over five senators to this view, but this attempt, also, was unsuccessful.

It was at the emperor's suggestion that, in January, 1870, Le Play in his "*L'organisation du travail*" gave a résumé of the principles expounded in "*La Réforme sociale*". The emperor also asked him to present to two of his ministers the conclusions of this book as expressing the imperial opinion, but further action was prevented by the outbreak of war and the fall of the empire. In 1871, after the war and the Commune, Le Play published his book "*L'organisation de la famille*" and his pamphlet on "*La paix sociale après le désastre*", and to propagate his ideas he founded in France "*Unions de la paix sociale*". His ideas met with little political success; the project laid before the National Assembly, 25 June, 1871, for the modification of the laws of inheritance was without result. Le Play grouped about him eminent economists such as Focillon, Claudio Jannet, Cheysson, and Rostand. In 1875 he published "*La Constitution de l'Angleterre*"; in 1876, "*La réforme en Europe et le salut de la France*"; in 1877-79, the second edition of his "*Ouvriers européens*", which, enriched with new details, is a sort of compendium of the social history of Europe from 1855; and in 1881, "*La Constitution essentielle de l'humanité*". In 1881 also appeared the review, "*La réforme sociale*", which, even to-day, propagates Le Play's ideas.

The social doctrine elaborated in his works is as follows: In all prosperous nations there are certain institutions which accompany and explain this prosperity. These institutions are (1) the observance of the Decalogue; (2) public worship—on this point Le Play devotes some beautiful passages to the rôle of the Catholic clergy in the United States and in Canada (which he calls the model nation of our time), expresses his fear that the concordatory regime in France will produce a Church of bureaucrats, and dreams of a liberty such as exists in America for the Church of France; (3) testamentary freedom, which according to him distinguishes peoples of vigorous expansion while the compulsory division of inheritances is the system of conquered races and inferior classes. It is only, he asserts, under the former system that *familles-souches* can develop, which are established on the soil and are not afraid of being prolific; (4) legislation punishing seduction and permitting the investigation of paternity; (5) institutions founded by large land owners or industrial leaders to uplift the condition of the workman. Le Play feared the intervention of the State in the labour system and considered that the State should encourage the social authorities to exercise what he calls "patronage", and should reward the heads of industry who founded philanthropic institutions. The League for Social Service, organized at New York in 1898 by Mr. Tolman, applied these ideas of Le Play; (6) liberty of instruction, i. e. freedom from State control; (7) decentralization in the State. He greatly admired the English ideas of self-government. In his latest works the Catholic tendency becomes more and more clearly defined. Le Play desired to collaborate with the clergy in the work of social reform; he believed that fidelity to God's law, an essential need of societies, could not be better guaranteed than by the doctrines, sacraments, and worship of the Catholic Church. One of his last public acts was a proceeding in behalf of the Church's right to teach, which was threatened by the projects of M. Jules Ferry. He obtained from his friend St. George Mivart a statement, signed by Gladstone, Lord Rosebery, and numerous professors of Oxford, Cambridge, and London, regarding the English idea and practice of liberty of instruction.

Le Play was very influential in Catholic circles. In his Lenten pastoral for 1881, Cardinal de Bonnechose compared him to "those ancient sages of Greece who went to Egypt and the most remote countries of the

Orient, to glean from sanctuary to sanctuary the primitive traditions of the human race". The future Cardinal Lavigerie wrote to him, "You are one of the men whom I most respect and admire." Although the "Œuvre des cercles catholiques ouvriers", founded in 1870 by the Comte de Mun and the Marquis de la Tour du Pin, held on the subject of the State's intervention in the labour system very different ideas from those of Le Play, the marquis claimed Le Play as one of his masters, because of the latter's attacks on Rousseau's theory of the original goodness of man and on the juridical and social ideas of the men of the French Revolution.

GEORGES GOYAU.

Plegmund, Archbishop of Canterbury, d. 2 Aug., 914. He was a Mercian, and spent his early life near Chester as a hermit on an island called after him Plegmundham (the present Plemstall). His reputation for piety and learning caused King Alfred to summon him to court, where he helped the king in his literary work. In 890 he was chosen Archbishop of Canterbury and went to Rome to receive the pallium from Pope Formosus. When the acts and ordinations of Formosus were condemned in 897 and the condemnation was confirmed in 905, the position of Plegmund became questionable, and in 908 he paid a second visit to Rome, probably to obtain confirmation by Sergius III of his acts as archbishop, and to arrange a subdivision of the West Saxon episcopate. This was carried out the following year, when Plegmund consecrated seven bishops on one day, five for Wessex and two others. He died in extreme old age and was buried in his cathedral at Canterbury.

Anglo-Saxon Chronicle, ann. 890, 891 and 923, gives the last-named year as the date of his death, which is certainly wrong, and confounds him with Archbishop Æthelhelm in *Rolls Series* (1861); WILLIAM OF MALMESBURY, *Gesta Pontificum in R. S.* (1870); IDEM, *Gesta Regum in R. S.* (1887-89); GERVASE OF CANTEBURY, *Historical Works in R. S.* (1879-80); KEMBLE, *Codex Diplomaticus Ævi Saxonici* (London, 1839-48); STUBBS, *Registrum Sacrum Anglicanum* (Oxford, 1858); HARDY, *Descriptive Catalogue* (London, 1862-71); HOOK, *Lives of the Archbishops of Canterbury* (London, 1860-84); BIRCH, *Cartularium Saxonum* (London, 1885-93); SEARLE, *Anglo-Saxon Bishops, Nobles, and Kings* (Cambridge, 1899); HENFREY, *Guide to Study of English Coins* (London, 1885).

EDWIN BURTON.

Plenarium, a book of formulæ and texts. *Plenarium* or *Plenarius (Liber)* is any book that contains completely all matters pertaining to one subject otherwise found scattered in several books. Thus, in the life of Bishop Aldrich (Baluze, "Miscell.", I, iii, 29) we read of a *Plenarium*, or *Breviarium*, which seems to be a book of church rents (Binterim, "Denkwürdigkeiten", IV, i, 239). The entire mortuary office, Vespers, Matins, Lauds, and Mass, is called *Plenarium*. A complete copy of the four Gospels was called an "Evangeliarium plenarium". Under this heading we might class the "Book of Gospels" at Lichfield Cathedral, and the "Book of Gospels" given by Athelstan to Christ church in Canterbury, now in the library of Lambeth Palace (Rock, "Church of our Fathers", I, 122). Some *Plenaria* gave all the writings of the New Testament, others those parts of the Sacred Scriptures that were commonly read in the Divine service and bore the name "Lectionarium plenarium" (Becker, "Catal. bibl. ant.", 1885, 28, no. 237; 68, no. 650, 659). When priests in their missionary labours began to be scattered singly in different places, and when, in consequence, co-celebration of the Sacred Mysteries was rendered impossible, and private Masses became more frequent, the complete Missal or "Missale ple-

narium" came into use. Early vestiges of it may be found in the ninth century, and in the eleventh or twelfth century the "Missale plenarium" was found everywhere and contained all necessary prayers for the celebration of the Holy Sacrifice, which until then had to be taken from different books, the "Sacramentary", "Lectionary", "Evangelistary", "Antiphonary", and "Gradual" (Zaccaria, "Bibl. rit.", I [Rome, 1876], 50). In Germany the name *Plenarium* denoted a popular book, giving the German translation of the Epistles and Gospels for the Sundays and festivals of the entire year together with a short exposition and instruction. Later editions add also the Introit, Gradual etc., of the Masses. The last book of the kind bearing the title *Plenarium* was printed in 1522 at Basle.

ALZOO, *Die deutschen Plenarien im 15. und zu anfang des 16. jh.* (Freiburg, 1874), and the commentaries on the work in *Theol. Quartalschrift* (1874), 690, and *Hist.-polit. Blätter* (1876), 17.

FRANCIS MERSHMAN.

Plenary Council, a canonical term applied to various kinds of ecclesiastical synods. The word itself, derived from the Latin *plenarium* (complete or full), indicates that the council to which the term is applied (*concilium plenarium*, *concilium plenum*) represents the whole number of bishops of some given territory. Whatever is complete in itself is plenary. The œcumenical councils or synods of the Universal Church are called plenary councils by St. Augustine (C. illa, xi, Dist. 12), as they form a complete representation of the entire Church. Thus also, in ecclesiastical documents, provincial councils are denominated plenary, because all the bishops of a certain ecclesiastical province were represented. Later usage has restricted the term plenary to those councils which are presided over by a delegate of the Apostolic See, who has received special power for that purpose, and which are attended by all the metropolitans and bishops of some commonwealth, empire, or kingdom, or by their duly accredited representatives. Such plenary synods are frequently called national councils, and this latter term has always been in common use among the English, Italian, French, and other peoples.

I. Plenary councils, in the sense of national synods, are included under the term particular councils as opposed to universal councils. They are of the same nature as provincial councils, with the accidental difference that several ecclesiastical provinces are represented in national or plenary synods. Provincial councils, strictly so-called, date from the fourth century, when the metropolitan authority had become fully developed. But synods, approaching nearer to the modern signification of a plenary council, are to be recognized in the synodical assemblies of bishops under primatial, exarchal, or patriarchal authority, recorded from the fourth and fifth centuries, and possibly earlier. Such were, apparently, the synods held in Asia Minor at Iconium and Synnada in the third century, concerning the re-baptism of heretics; such were, certainly, the councils held later in the northern part of Latin Africa, presided over by the Archbishop of Carthage, Primate of Africa. These latter councils were officially designated plenary councils (*Concilium Plenarium totius Africae*). Their beginnings are without doubt to be referred, at least, to the fourth, and possibly to the third century. Synods of a somewhat similar nature (though approaching nearer to the idea of a general council) were the Council of Arles in Gaul in 314 (at which were present the Bishops of London, York, and Caerleon), and the Council of Sardica in 343 (whose canons were frequently cited as Nicene canons). To these we might add the Greek Council in Trullo (692). The popes were accustomed in former ages to hold synods which were designated Councils of the Apostolic See. They might be denominated,

to a certain extent, emergency synods, and though they were generally composed of the bishops of Italy, yet bishops of other ecclesiastical provinces took part in them. Pope Martin I held such a council in 649, and Pope Agatho in 680. These synods were imitated by the patriarchs of Constantinople who convoked, on special occasions, a *synodus endemousa*, at which were present bishops from various provinces of the Greek world who happened to be sojourning in the imperial city, or were summoned to give counsel to the emperor or the patriarch concerning matters that required special episcopal consultation. Still further narrowed down to our present idea of plenary councils are the synods convoked in the Frankish and West-Gothic kingdoms from the end of the sixth century, and designated national councils. The bishops in these synods were not gathered together because they belonged to certain ecclesiastical provinces, but because they were under the same civil government, and consequently had common interests which concerned the kingdom in which they lived or the people over whom they ruled.

II. As ecclesiastical jurisdiction is necessary for the person who presides over a plenary or national synod, this name has been refused to the assemblies of the bishops of France, which met without papal authorization in the seventeenth and eighteenth centuries. These *comitia cleri Gallicani* were not really plenary councils. The more noted among them were those held at Paris in 1681 and 1682 (Collect. Lacens., I, 793 sq.). Convocations of ecclesiastics (*Assemblées du Clergé*) were frequent in France before the Revolution of 1789. They consisted of certain bishops deputed by the various ecclesiastical provinces of the kingdom, and of priests elected by their equals from the same provinces, to deliberate on the temporal affairs of the French churches, and more particularly on the assistance, generally monetary, to be accorded to the Government. After the establishment of the empire, Napoleon I held a great convention of bishops at Paris, and is said to have been much incensed because Pius VII did not designate it a national council (Coll. Lacens., VI, 1024). Similarly, mere congresses of bishops, even of a whole nation, who meet to discuss common ecclesiastical affairs, without adhering to synodal forms, are not to be called national or plenary Councils, because no one having the proper jurisdiction has formally summoned them to a canonical synod. Such episcopal conventions have been praised by the Holy See, because they showed unity among the bishops and zeal for asserting the rights of the Church and the progress of the Catholic cause in their midst, in accordance with the sacred canons (Coll. Lacens., V, 1336), but, as the requisite legal forms and proper hierarchical authority are wanting, these congresses of bishops do not constitute a plenary council, no matter how full the representation of episcopal dignitaries may be.

III. A plenary or national council may not be convoked or celebrated without the authority of the Apostolic See, as was solemnly and repeatedly declared by Pius IX (Coll. Lacens., V, 995, 1336). This has always been the practice in the Church, if not explicitly, at least from the fact that recourse could always be had to the Holy See against decisions of such councils. Now, however, express and special papal authorization is required. He who presides over the council must have the necessary jurisdiction, which is accorded by special Apostolic delegation. In the United States, the presidency of such synods has always been accorded by the Holy See to the archbishops of Baltimore. In their case, a papal delegation is necessary, for although they have a precedence of honour over all the other American metropolitans, yet they have no primatial or patriarchal jurisdiction. It is not uncommon for the pope to send from Rome a special delegate to preside over plenary councils.

IV. Summons to a national or plenary council is to be sent to all archbishops and bishops of the nation, and they are obliged to appear, unless prevented by a canonical hindrance; to all administrators of dioceses *sede plena* or *vacua*, and to vicars capitular *sede vacante*; to vicars Apostolic possessed of episcopal jurisdiction; to the representatives of cathedral chapters, to abbots having quasi-episcopal jurisdiction. In the United States, custom has sanctioned the summoning of auxiliary, coadjutor, and visiting bishops; provincials of religious orders; all mitred abbots; rectors of major seminaries, as well as priests to serve as theologians and canonists.

V. Only those who have a right to a summons have also a right to cast a decisive vote in councils. The others may give only a consultative vote. The fathers may, however, empower auxiliary, coadjutor, and visiting bishops, as well as procurators of absent bishops to cast a decisive vote. The Third Plenary Council of Baltimore allowed a decisive vote also to a general of a religious congregation, because this was done at the Vatican Council. At the latter council, however, such vote was granted only to generals of regular orders, but not to those of religious congregations (Nilles, part I, p. 127). At Baltimore, a decisive vote was refused to abbots of a single monastery, but conferred on arch-abbots.

VI. In particular councils, the subject-matter to be treated is what concerns discipline, the reformation of abuses, the repression of crimes, and the progress of the Catholic cause. In former times, such councils often condemned incipient heresies and opinions contrary to sound morals, but their decisions became dogmatic only after solemn confirmation by the Apostolic See. Thus, the Councils of Milevis and Carthage condemned Pelagianism, and the Council of Orange (Arausicanum) Semipelagianism. Such latitude is not allowed to modern synods, and the Fathers are warned, moreover, that they are not to restrict opinions which are tolerated by the Catholic Church.

VII. Decrees of plenary councils must be submitted, before promulgation, for the confirmation, or rather recognition and revision of the Holy See. Such recognition does not imply an approval of all the regulations submitted by the council, and still less of all the assertions contained in the synodal acts. Many things are merely tolerated by the Apostolic See for the time being. The submission to Rome is mainly for the correction of what is too severe or inaccurate in the decrees. Bishops have the power of relaxing decrees of a plenary council in particular cases in their own dioceses, unless the council was confirmed *in forma specifica* at Rome. In like manner, when no specific confirmation of the decrees has been accorded, it is lawful to appeal from these councils. In modern times, it is not usual for the Holy See to confirm councils *in forma specifica*, but only to accord them the necessary recognition. If, consequently, anything be found in their acts contrary to the common law of the Church, it would have no binding force unless a special apostolic derogation were made in its favour. Mere recognition and revision would not suffice.

WILLIAM H. W. FANNING.

Plessis, JOSEPH-OCTAVE, Bishop of Quebec, b. at Montreal, 3 March, 1763; d. at Quebec, 4 Dec., 1822. He studied classics at Montreal and philosophy at Quebec, was appointed in 1783 secretary to Bishop Briand, and was ordained priest in 1786. In 1797 he was named vicar-general and chosen for coadjutor. The bulls having been delayed by the imprisonment and death of Pius VII, Plessis was only consecrated in

1801. He assumed the greater part of the administration, his superior remaining at Longueuil; by the latter's death in 1806 he became Bishop of Quebec. The programme of the oligarchy then in power comprised the organization of an exclusively Protestant school system; and the subjection of ecclesiastical influence to the royal supremacy and the governor's good pleasure, in the erection of parishes and the nomination of pastors. Plessis's aim was to obtain the civil recognition of bishop and clergy, without forfeiting any right or privilege of the Church. His title of Bishop of Quebec, assumed by all his predecessors before and since the Conquest, was odious to the officials and to the Anglican bishop. Plessis, by his firm yet deferential attitude, his prudence and moderation, and his loyalty to the Crown, removed all opposition. He wisely resisted every offer of temporal betterment to maintain the fulness of his spiritual jurisdiction. When the American Congress in 1812 declared war with England, Plessis aroused the loyalty of the French Canadians, who by remarkable victories, notably at Châteauguay, saved Canada to Great Britain. The bishop was honoured with a seat in the Legislative Council, his title and dignity officially recognized, and the creation of vicariates Apostolic in Upper Canada, Nova Scotia, and Prince Edward Island approved of. He succeeded in preventing the application of the odious monopolizing educational law called the "Royal Institution". An energetic and enlightened patron of education, he redeemed Nicolet College, generously contributing to reorganize, enlarge, and endow it; he likewise favoured the foundation of St-Hyacinthe College, whose regulations he wrote, and established a Latin school at St-Roch to prepare students for seminary or college.

Three times after his consecration he visited every parish in Lower Canada; in 1811 and 1812 he travelled through the Maritime Provinces, and in 1816 to Upper Canada. Long since convinced of the necessity of dividing his immense diocese, he strove to create new sees. Nova Scotia was separated in 1817. To realize the formation of other dioceses in Upper Canada, in the North-West, in Prince Edward Island, and at Montreal, Plessis crossed the Atlantic in 1819 to negotiate with Rome and England. Anticipating the conclusion of the case pending before the British Government, Rome had made Quebec a metropolitan see, with two of the above-named for suffragans. The new archbishop successfully counteracted English susceptibilities, alarmed at his promotion, and obtained the other two dioceses he had in view. He likewise succeeded in preventing the Sulpicians from losing by expropriation their seigniorship of the Island of Montreal. Public opinion had improved since Briand's time. On his return voyage, Plessis, at the request of Propaganda, visited Philadelphia and Baltimore. When in 1822 the House of Commons proposed a bill for the legislative Union of the two Canadas, whereby the French Catholic province would have been the sufferer, Plessis, though stricken with the disease that was to end his life, undertook an active campaign by letter to avert the disaster. His advice and influence strengthened the delegates who had been sent to England to prevent the passing of the bill.

LIONEL LINDSAY.

Plessis d'Argentré, CHARLES DU. See ARGENTRÉ.

Plethon, GEORGIUS GEMISTUS, b. in Constantinople about 1355, d. in the Peloponnesus, 1450. Out of veneration for Plato he changed his name from Gemistos to Plethon. Although he wrote commentaries on Aristotle's logical treatises and on Porphyry's "Isagoge", he was a professed Platonist in philosophy. Owing, most probably, to the influence of Mohammedan teachers, he combined with Platonism, or rather with Neo-Platonism, the most extraordinary kind of Orien-

tal mysticism and magic which he designated as Zoroastrianism. It was due, no doubt, to these tendencies of thought that he openly abandoned Christianity and sought to substitute paganism for it as a standard of life. When he was about fifteen years old he visited Western Europe in the train of the Emperor John Palaeologus. After his return to Greece, he settled at Misithra in the Peloponnesus, the site of ancient Sparta, and there he spent the greater part of his life. In 1438, although he was then in his eighty-third year, he again accompanied the Emperor to Italy, where he was designated as one of the six champions of the Orthodox Church in the Council of Florence. His interest in ecclesiastical matters was, however, very slight. Instead of attending the Council, he spent his time discoursing on Platonism and Zoroastrianism to the Florentines. It was his enthusiasm for Platonism that influenced Cosimo de Medici to found a Platonic Academy at Florence. In 1441 Plethon had returned to the Peloponnesus, and there he died and was buried at Misithra in 1450. In 1465 his remains were carried to Rimini and placed in the church of St. Francis, where an inscription, curiously enough, styles him "Themistius Byzantinus". Among his disciples was the learned Cardinal Bessarion. Plethon's most important works are the "Laws" written in imitation of Plato's "Laws", which was condemned by Gennadios, Patriarch of Constantinople, and "On the Differences between Plato and Aristotle", in which he attacks the Aristotelian philosophy and asserts the superiority of Platonism. He also composed a work in defence of the Greek doctrine of the Procession of the Holy Ghost. In his philosophical system he borrows largely from the Neo-Platonist, Proclus, and mingles with the traditional Neo-Platonic mysticism many popular Oriental superstitions. His influence was chiefly negative. His attack on Aristotelianism was to some extent effective, although opposed to him were men of equal ability and power, such as Gennadios, Patriarch of Constantinople. He was honoured by the Italian Platonists as the restorer of the Academy, and as a martyr for the cause of Platonism.

The *Laws*, written about 1440, was printed at Paris, 1541 and (in Latin tr.) at Basle, 1574. The comparison of Plato and Aristotle was also printed at Basle, 1574. MIGNÉ, P. G., CLX, 773 sqq., reprints these and other Greek works of Plethon, with Latin tr. The best work on Plethon is a dissertation by FRITZ SCHULTZE, *Georgios Gemistos Plethon* (Jena, 1871). See also SANDYS, *Hist. of Classical Scholarship*, II (London, 1908), 60; SYMONDS, *Renaiss. in Italy*, Pt. ii (New York, 1888), 198 sqq.; CREIGHTON, *Hist. of Papacy*, IV (London, 1901), 41-46.

WILLIAM TURNER.

Plock, DIOCESE OF (PLOCENSIS), in Russian Poland, suffragan of Warsaw, includes the district of Plock and parts of the districts of Lomza and Warsaw. Apparently the diocese was founded about 1087, through the efforts of the legates sent to Poland by Gregory VII; the first certain notice of it is of the year 1102, when Duke Ladislaus Hermann was buried in the cathedral of Plock. The diocese included the region between the rivers, Vistula, Narew, and Bug, and extended as far as the northern and eastern boundaries of the Kingdom of Poland of that era. At a later date the strip of land north of the Drewenz River was added to it. It therefore included the greater part of the Duchy of Masovia and the northern part of Podlachia; but was much smaller than the two other dioceses—Gnesen and Posen—then existing in Poland. Its bishops were under the metropolitan authority of Gnesen. The endowment of the bishopric was very large; according to a charter of Duke Conrad of Masovia, in 1239 the episcopal landed property included 240 *villæ* and at a later date also 20 *prædia*. In the thirteenth century these estates were divided between the bishop and the cathedral chapter. The Partitions of Poland gave the greater part of the diocese to Russia, and a smaller portion to Prussia; since

the publication by Pius VII of the Bull "De salute animarum" of 1821, the Prussian section of the diocese has been incorporated in the Diocese of Kulm. In the readjustment of ecclesiastical conditions in Poland, Warsaw was raised to an archdiocese, by the Bull "Militantis ecclesiæ" of 12 March, 1817, and the other Russo-Polish dioceses were made suffragan to it by the Bull "Ex impensa nobis" of 30 June, 1818. Consequently Plock also was transferred from its metropolitan of Gnesen to Warsaw; at the same time five deaneries were taken from it, thereby reducing the diocese to its present size. Those estates of the bishopric that had not been secularized before this date were taken one after the other by the Russian Government. The Diocese of Plock shared in the sufferings of the Catholic Church of Russia. The episcopal see remained vacant during the years 1853-63 and 1885-90; of late years the sect of the Mariavites, with the aid of the Government, has spread in the diocese. Among the bishops of the present era, George Szembek (1901-03) and Apollinaris Wnukowski (1904-08) were elevated to the Archdiocese of Mohileff; the present bishop is Anthony Julian Nowowiejski, consecrated 6 December, 1908. The cathedral of Plock was rebuilt after a fire in the years 1136-44, and thoroughly restored in 1903.

The diocese is divided into 12 deaneries and at the end of 1909 included, besides the cathedral, 249 parish churches, 31 dependent churches, 275 secular priests, 5 regular priests, 794,100 Catholics. As early as 1207 the chapter consisted of 5 dignitaries and 10 canons; since the publication of the imperial decree of 1865 it has consisted of 4 prelates (provost, dean, archdeacon, and a "scholasticus") and 8 canons. There is also a collegiate chapter at Pultusk consisting of 3 prelates and 4 canons. The diocesan seminary for priests has been in existence since 1708; it has 10 professors and 72 clerics, and there are also 4 clerics in the Roman Catholic Academy at St. Petersburg. The only houses of the orders in the diocese are: a Carmelite monastery at Obory, with 5 fathers and 1 lay brother; a convent of the Clarisses at Przasnysz, with 9 sisters; 5 houses of the Sisters of Mercy with 25 sisters, who have charge of 4 hospitals and 1 orphanage.

JOSEPH LINS.

Plotinus. See NEO-PLATONISM.

Plowden, CHARLES, b. at Plowden Hall, Shropshire, 1743; d. at Jougue, Doubs, France, 13 June, 1821. He was lineally descended from Edmund Plowden, the celebrated lawyer. The family adhered steadily to the Catholic faith, contributed ten members to the Society of Jesus, and numerous subjects to various female orders (see Foley, "Records of the English Province". Plowden Pedigree, IV, 537). Educated at St. Omer's, he entered the Society of Jesus in 1759, and was ordained priest, at Rome, in 1770. At the suppression of the Society, in 1773, he was minister of the English College at Bruges: the Austro-Belgic government, in its execution of the decree of suppression, kept him imprisoned for some months after the closing of the college. He wrote an account of its destruction. After his release from confinement, he was for a time at the Academy of Liège, which the prince-bishop had offered to the English ex-Jesuits. Returning to England, he became a tutor in the family of Mr. Weld, and chaplain at Lulworth Castle, where he assisted at the consecration of Bishop Carroll, in 1790. He preached the sermon on the occasion, and published an account of the establishment of the new See of Baltimore. Father Plowden had a large share in the direction of Stonyhurst College, founded in 1794, and by his abil-

ity and virtue, "he promoted the credit and welfare of that institution" (Oliver). Richard Lalor Shiel, who had been his pupil, speaks of him as "a perfect Jesuit of the old school". After the restoration of the Society in England, he was the first master of novices, at Hodder. In 1817, he was declared Provincial, and, at the same time, Rector of Stonyhurst, holding the latter office till 1819. Summoned to Rome for the election of the general of the Society, he died suddenly on his journey homeward, and, through mistaken information as to his mission and identity, he was buried with full military honours. His attendant had gathered the information that he had been at Rome in connexion with business concerning a "general", and the town authorities, mixing things, concluded that he was a general of the British army,—hence the military funeral.

In addition to his many administrative activities and occupations, Father Plowden was a prolific writer. Sommervogel gives a list of twenty-two publications of which he was the author, besides several works in manuscript which have been preserved. He was a lifelong correspondent of Bishop Carroll and wrote a beautiful eulogy on the death of his friend in 1815. A large collection of the letters which they interchanged, originals or copies, exists at Stonyhurst and Georgetown Colleges, as also in the Baltimore diocesan archives. He was a protagonist in the polemics that distracted the Catholic body in England, in relation to the Oath proposed as a preliminary to the Catholic Relief Bill. It was "a desperate life and death struggle of Catholicism in England, during one of the most insidious and dangerous assaults upon its liberties to which it had ever been exposed". Writers on both sides, in the heat of controversy, employed language which subsequently necessitated explanation, apologies, and retractions. Plowden was too outspoken and perfervid in some of his utterances, but his spirit was that of loyalty to the vicars-Apostolic and to Catholic traditions.

E. I. DEVITT.

Plowden, EDMUND, b. 1517-8; d. in London, 6 Feb., 1584-5. Son of Humphrey Plowden of Plowden Hall, Shropshire, and Elizabeth his wife; educated at Cambridge, he took no degree. In 1538 he was called to the Middle Temple where he studied law so closely that he became the greatest lawyer of his age, as is testified by Camden, who says that "as he was singularly well learned in the common laws of England, whereof he deserved well by writing, so for integrity of life he was second to no man of his profession" (Annals, 1635, p. 270). He also studied at Oxford for a time, and besides his legal studies, qualified as a surgeon and physician in 1552. On Mary's accession he became one of the council of the Marches of Wales. In 1553 he was elected member of Parliament for Wallingford and in the following year was returned for two constituencies, Reading and Wootton-Bassett; but on 12 Jan., 1554-5, he withdrew from the House, dissatisfied with the proceedings there. Succeeding to the Plowden estates in 1557, he lectured on law at Middle Temple and New Inn; in 1561 he became treasurer of Middle Temple and during his trusteeship the fine hall of that inn was begun. His fidelity to the Catholic faith prevented any further promotion under Elizabeth, but it is a family tradition that the queen offered him the Lord Chancellorship on condition of his joining the Anglican Church. He successfully defended Bishop Bonner against the Anglican Bishop Horne, and helped Catholics by his legal knowledge. On one occasion he was defending a gen-

tleman charged with hearing Mass, and detected that the service had been performed by a layman for the purpose of informing against those who were present, whereon he exclaimed, "The case is altered; no priest, no Mass", and thus secured an acquittal. This incident gave rise to the common legal proverb, "The case is altered, quoth Plowden". He himself was required to give a bond in 1569 to be of good behaviour in religious matters for a year, and in 1580 he was delated to the Privy Council for refusing to attend the Anglican service, though no measures seem to have been taken against him. His works were: "Les commentaires ou les reportes de Edmunde Plowden" (London, 1571), often reprinted and translated into English; "Les Quares del Monsieur Plowden" (London, no date), included in some editions of the Reports; "A Treatise

EDMUND PLOWDEN

on Succession", MSS. preserved among the family papers. Its object was to prove that Mary, Queen of Scots, was not debarred from her right to the English throne by her foreign birth or the will of Henry VIII. Several MSS. legal opinions are preserved in the British Museum and the Cambridge University Libraries. He married Catherine Sheldon of Beoley and by her had three sons and three daughters. There is a portrait effigy on his tomb in the Temple Church, and a bust in the Middle Temple Hall copied from one at Plowden.

EDWIN BURTON.

Plowden, FRANCIS, son of William Plowden of Plowden Hall, b. at Shropshire, 8 June, 1749; d. at Paris, 4 Jan., 1819. He was educated at St. Omer's and entered the Jesuit novitiate at Watten in 1766. When the Society was suppressed, he was teaching at the College at Bruges. Not being in Holy Orders he was, by the terms of suppression, relieved of his first vows, and soon afterwards married Dorothea, daughter of George Phillips of Carnarvonshire. He entered the Middle Temple and practised as a conveyancer, the only department of the legal profession open to Catholics under the Penal Laws. After the Relief Act of 1791 he was called to the Bar. His first great work, "Jura Anglorum", appeared in 1792. It was attacked in a pamphlet by his brother Robert, a priest under the title of "A Roman Catholic Clergyman". The book was so highly thought of that the University of Oxford presented him with the honorary Degree of D.C.L., a unique distinction for a Catholic of those days. His improvidence, extreme views, and untractable disposition made his life a troubled one. Having fallen out with the Lord Chancellor, he ceased to practise at the bar and devoted himself to writing.

His "Historical Review of the state of Ireland" (1803) was written at the request of the Government; but it was too outspoken a condemnation to meet their views, and was attacked by Sir Richard Musgrave in

the "Historical Review" and also by the "British Critic". Plowden answered by a "Postliminious Preface", giving an account of his communications with Addington, and also by a "Historical Letter" to Sir Richard Musgrave. While in Dublin (1811), he published his work "Ireland since the Union", which led to a prosecution on the part of the Government for libel, resulting in a verdict of £5000 damages. Plowden considered that this had been awarded by a packed jury and was determined not to pay it. He escaped to Paris where he spent the remaining years of his life in comparative poverty. He continued to write at intervals, his "Historical Letters" to Sir John Cox Hippisley (1815) containing important matter connected with the question of Catholic emancipation. His other works are: "The Case Stated" (Cath. Relief Act, 1791); "Church and State" (London, 1795); "Treatise on Law of Usury" (London, 1796); "The Constitution of the United Kingdom" (London, 1802); "Historical Letter to Rev. C. O'Connor" (Dublin, 1812); "Human Subornation" (Paris, 1824).

BERNARD WARD.

Plowden, ROBERT, elder brother of CHARLES (*supra*), b. 27 Jan., 1740; d. at Wappenbury, 27 June, 1823. He entered the Society of Jesus in 1756, and was ordained in 1763. After some years spent at Hoogstraet in Belgium, as director of the Carmelite Nuns, he returned to England, and was stationed at Arlington, Devon, from 1777 to 1787. Appointed to Bristol, he had a wider field for his zeal and ability: at his coming, the Catholics had only one wretched room in a back alley for a chapel; Father Plowden's exertions resulted in the erection of St. Joseph's Church, together with a parochial residence and schools. His activity was extended to the mission of Swansea and the South Wales District, of which he may be considered the principal founder. He remained at Bristol for nearly thirty years, beloved by his flock, and esteemed by all for his frank character, disinterested labours, and bounty to the poor. Removed from Bristol in 1815, he became chaplain to the Fitzherbert family at Swynnerton until 1820, when he retired to Wappenbury, where he died. He was a keen theologian, "a more solid divine than his brother Charles", according to Bishop Carroll—an unflinching defender of Catholic principles and practices, and a firm supporter of Bishop Milner in trying circumstances. The inscription on his tomb commemorates his candour, zeal, and learning. He translated from the French: "The Elevation of the Soul to God", which passed through several editions in England; American editions, Philadelphia, 1817, and New York, 1852.

E. I. DEVITT.

Plowden (alias SALISBURY), THOMAS, b. in Oxfordshire, England, 1594; d. in London, 13 Feb., 1664; grandson of Edmund Plowden, the great lawyer; entered the Society of Jesus, 1617; sent on the English Mission about 1622. He was seized, with other fathers, by the pursuivants in 1628, at Clerkenwell, the London residence of the Jesuits. He filled various responsible offices of the order, and laboured on the perilous English Mission until his death. He translated from the Italian of D. Bartoli "The Learned Man Defended and Reformed" (London, 1660).

E. I. DEVITT.

Plowden, THOMAS PERCY, b. at Shiplake, Oxfordshire, England, 1672; d. at Watten, 21 Sept., 1745; joined the Society of Jesus in 1693. He was rector of

the English College, Rome, 1731-34; superior at Ghent, 1735-39; and rector of St. Omers, 1739-42. He translated Father Segneri's "Devout Client of the Blessed Virgin", and wrote the preface to it. He died at the novitiate of Watten.

E. I. DEVITT.

Plumier, CHARLES (botanical abbreviation, *Plum.*), French botanist, b. at Marseilles, 20 April, 1646; d. at Puerto de Sta Maria near Cadiz, 20 November, 1704. At the age of sixteen he entered the order of the Minims. He devoted himself to the study of mathematics and physics, made physical instruments, and was an excellent draughtsman, painter, and turner. On being sent to the French monastery of Trinità dei Monti at Rome, Plumier studied botany with great zeal under two members of the order, and especially under the well-known Cistercian botanist, Paolo Boccone. After his return to France he became a pupil of Tournefort, whom he accompanied on botanical excursions. He also explored the coasts of Provence and Languedoc. His work, of permanent value for the science of botany, began in 1689, when, by order of the government, he accompanied Surian to the French Antilles. As this first journey proved very successful, Plumier was appointed royal botanist; in 1693, by command of Louis XIV, he made his second journey, and in 1695 his third journey to the Antilles and Central America. While in the West Indies he was greatly aided in his work by the Dominican Labat. In 1704, when about to start on his fourth journey, intending to visit the home of the true cinchona tree in Peru, he was taken ill with pleurisy and died. He is the most important of the botanical explorers of his time. All natural scientists of the eighteenth century spoke of him with admiration. According to Cuvier he was "perhaps the most industrious investigator of nature", while Haller said, "vir ad incrementum rei herbariæ natus" (a man born to extend the knowledge of botany). Tournefort and Linnæus named in his honour the genus *Plumeria*, which belongs to the family of the *Apocynaceæ* and is indigenous in about forty species to Central America; it is now called *Plumiera*, with the name of *Plumieroides* for its first sub-family. Plumier accomplished all that he did in fifteen years (1689-1704); his labours resulted in collections, descriptions, and drawings.

His first work was, "Description des plantes de l'Amérique" (Paris, 1693); it contained 108 plates, half of which represented ferns. This was followed by "Nova plantarum americanarum genera" (Paris, 1703-04), with 40 plates; in this work about one hundred genera, with about seven hundred species, were redescribed. At a later date Linnæus adopted in his system, almost without change, these and other newly described genera arranged by Plumier. Plumier left a work in French and Latin ready to be printed entitled "Traité des fougères de l'Amérique" (Paris, 1705), which contained 172 excellent plates. The publication "Filicetum Americanum" (Paris, 1703), with 222 plates, was compiled from those already mentioned. Plumier also wrote another book of an entirely different character on turning, "L'Art de tourner" (Lyons, 1701; Paris, 1749); this was translated into Russian by Peter the Great; the manuscript of the translation is at St. Petersburg. At his death Plumier left thirty-one manuscript volumes containing descriptions, and about 6000 drawings, 4000 of which were of plants, while the remainder reproduced American animals of nearly all classes, especially birds and fish. The botanist Boerhave had 508 of these drawings copied at Paris; these were published later by Burmann, Professor of Botany at Amsterdam, under the title: "Plantarum americanarum, quas olim Carolus Plumierus detexit", fasc. I-X

(Amsterdam, 1755-60), containing 262 plates. Plumier also wrote treatises for the "Journal des Savants" and for the "Mémoires de Trévoux". By his observations in Martinique, Plumier proved that the cochineal belongs to the animal kingdom and should be classed among the insects.

JOSEPH ROMPEL.

Plunket, OLIVER, VENERABLE, Archbishop of Armagh and Primate of all Ireland, b. at Loughcrew near Oldcastle, County Meath, Ireland, 1629; d. 11 July, 1681. His is the brightest name in the Irish Church throughout the whole period of persecution. He was connected by birth with the families which had just then been ennobled, the Earls of Roscommon and Fingall, as well as with Lords Louth and Dunsany. Till his sixteenth year, his education was attended to by Patrick Plunket, Abbot of St. Mary's, Dublin, brother of the first Earl of Fingall, afterwards Bishop, successively, of Ardagh and Meath. He witnessed the first triumphs of the Irish Confederates, and, as an aspirant to the priesthood, set out for Rome in 1645, under the care of Father Scarampo, of the Roman Oratory. As a student of the Irish College of Rome, which some twenty years before had been founded by Cardinal Ludovisi, his record was particularly brilliant. The Rector, in after years, attested that he "devoted himself with such ardour to philosophy, theology, and mathematics, that in the Roman Collège of the Society of Jesus he was justly ranked amongst the foremost in talent, diligence, and progress in his studies, and he pursued with abundant fruit the course of civil and canon law at the Roman Sapienza, and everywhere, at all times, was a model of gentleness, integrity, and piety." Promoted to the priesthood in 1654, Dr. Plunket was deputed by the Irish bishops to act as their representative in Rome. Throughout the period of the Cromwellian usurpation and the first years of Charles II's reign he most effectually pleaded the cause of our suffering Church, whilst at the same time he discharged the duties of theological professor at the College of Propaganda. In the Congregation of Propaganda, 9 July, 1669, he was appointed to the primatial see of Armagh, and was consecrated, 30 Nov., at Ghent, in Belgium, by the Bishop of Ghent, assisted by the Bishop of Ferns and another bishop. The pallium was granted him in Consistory 28 July, 1670.

Dr. Plunket lingered for some time in London, using his influence to mitigate the rigour of the administration of the anti-Catholic laws in Ireland, and it was only in the middle of March, 1670, that he entered on his apostolate in Armagh. From the very outset he was most zealous in the exercise of the sacred ministry. Within three months he had administered the Sacrament of Confirmation to about 10,000 of the faithful, some of them being sixty years old, and, writing to Rome in December, 1673, he was able to announce that "during the past four years", he had confirmed no fewer than 48,655 people. To bring this Sacrament within the reach of the suffering faithful he had to undergo the severest hardships, often with no other food than a little oaten bread; he had to seek out their abodes on the mountains and in the woods, and, as a rule, it was under the broad canopy of heaven that the Sacrament was administered, both flock and pastor being exposed to the wind and rain. He made extraordinary efforts to bring the blessings of education within the reach of the Catholic youth. In effecting this during the short interval of peace that marked the beginning of his episcopate his efforts were most successful. He often refers in his letters to the high school which he opened at Drogheda, at this time the second city in the kingdom. He invited Jesuit Fathers from Rome to take charge of it, and

very soon it had one-hundred-and-fifty boys on the roll, of whom no fewer than forty were sons of the Protestant gentry. He held frequent ordinations, celebrated two Provincial Synods, and was untiring in rooting out abuses and promoting piety.

One incident of his episcopate merits special mention: There was a considerable number of so-called Tories scattered through the province of Ulster, most of whom had been despoiled of their property under the Act of Settlement. They banded themselves together in the shelter of the mountain fastnesses and, as outlaws, lived by the plunder of those around them. Anyone who sheltered them incurred the penalty of death from the Government, anyone who refused them such shelter met with death at their hands. Dr. Plunket, with the sanction of the Lord Lieutenant, went in search of them, not without great risk, and reasoning with them in a kind and paternal manner induced them to renounce their career of plundering. He moreover obtained pardons for them so that they were able to transfer themselves to other countries, and thus peace was restored throughout the whole province. The contemporary Archbishop of Cashel, Dr. Brennan, who was the constant companion of Dr. Plunket, in a few words sketches the fruitful zeal of the primate: "During the twelve years of his residence here he proved himself vigilant, zealous, and indefatigable, nor do we find, within the memory of those of the present century, that any primate or metropolitan visited his diocese and province with such solicitude and pastoral zeal as he did,—benefitting, as far as was in his power, the needy; wherefore he was applauded and honoured by both clergy and people."

The storm of persecution burst with renewed fury on the Irish Church in 1673; the schools were scattered, the chapels were closed. Dr. Plunket, however, would not forsake his flock. His palace thenceforward was some thatched hut in a remote part of his diocese. As a rule, in company with the Archbishop of Cashel, he lay concealed in the woods or on the mountains, and with such scanty shelter that through the roof they could at night count the stars of the sky. He tells their hardships in one of his letters: "The snow fell heavily, mixed with hailstones, which were very hard and large. A cutting north wind blew in our faces, and the snow and hail beat so dreadfully in our eyes that up to the present we have scarcely been able to see with them. Often we were in danger in the valleys of being lost and suffocated in the snow, till at length we arrived at the house of a reduced gentleman who had nothing to lose. But, for our misfortune, he had a stranger in his house by whom we did not wish to be recognized, hence we were placed in a garret without chimney, and without fire, where we have been for the past eight days. May it redound to the glory of God, the salvation of our souls, and of the flock entrusted to our charge."

Writs for the arrest of Dr. Plunket were repeatedly issued by the Government. At length he was seized and cast into prison in Dublin Castle, 6 Dec., 1679, and a whole host of perjured informers were at hand to swear his life away. In Ireland the character of those witnesses was well known and no jury would listen to their perjured tales, but in London it was not so,

and accordingly his trial was transferred to London. In fact, the Shaftesbury Conspiracy against the Catholics in England could not be sustained without the supposition that a rebellion was being organized in Ireland. The primate would, of course, be at the head of such a rebellion. His visits to the Tories of Ulster were now set forth as part and parcel of such a rebellion. A French or Spanish fleet was chartered by him to land an army at Carlingford Bay, and other such accusations were laid to his charge. But there was no secret as to the fact that his being a Catholic bishop was his real crime. Lord Brougham in "Lives of the Chief Justices of England" brands Chief Justice Pemberton, who presided at the trial of Dr. Plunket, as betraying the cause of justice and bringing disgrace on the English Bar. This Chief Justice set forth from the bench that there could be no greater crime than to endeavour to propagate the Catholic Faith, "than which (he declared) there is not any-

thing more displeasing to God or more pernicious to mankind in the world." Sentence of death was pronounced as a matter of course, to which the primate replied in a joyous and emphatic voice: "Deo Gratias".

On Friday, 11 July (old style the 1st), 1681, Dr. Plunket, surrounded by a numerous guard of military, was led to Tyburn for execution. Vast crowds assembled along the route and at Tyburn. As Dr. Brennan, Archbishop of Cashel, in an official letter to Propaganda, attests, all were edified and filled with admiration, "because he displayed such a serenity of countenance, such a tranquillity of mind and elevation of soul, that he seemed rather a spouse hastening to the nuptial feast, than a culprit led forth to the scaffold". From the scaffold he delivered a discourse worthy of an apostle and martyr. An eye-witness of the execution declared that by

From the original portrait (in crayons) taken during his confinement in Newgate

his discourse and by his heroism in death he gave more glory to religion than he could have won for it by many years of a fruitful apostolate. His remains were gathered with loving care and interred apart in St. Giles' churchyard. In the first months of 1684 they were transferred to the Benedictine monastery at Lambspring in Germany, whence after 200 years they were with due veneration translated and enshrined in St. Gregory's College, Downside, England. The head, in excellent preservation, was from the first enshrined apart, and since 1722 has been in the care of the Dominican Nuns at their Siena Convent at Drogheda, Ireland. Pilgrims come from all parts of Ireland and from distant countries to venerate this relic of the glorious martyr, and many miracles are recorded.

The name of Archbishop Plunket appears on the list of the 264 heroic servants of God who shed their blood for the Catholic Faith in England in the sixteenth and seventeenth centuries, which was officially submitted for approval to the Holy See, and for which the Decree was signed by Leo XIII 9 Dec., 1886, authorizing their Cause of Beatification to be submitted to the Congregation of Rites. The Venerable Oliver Plunket's martyrdom closed the long series of deaths for the Faith, at Tyburn. The very next day after his execution, the bubble of conspiracy burst. Lord Shaftesbury, the chief instigator of the persecution, was consigned to the Tower, and his chief perjured witness Titus Oates was thrown into gaol. For a few

years the blessings of comparative peace were restored to the Church in Ireland.

Writings.—The Martyr's discourse at Tyburn was repeatedly printed and translated into other languages. Dr. Plunket published in 1672 a small octavo of fifty-six pages with the title "Jus Primatiale"; or the Ancient Pre-eminence of the See of Armagh above all other archbishoprics in the kingdom of Ireland, asserted by "O. A. T. H. P.", which initials represent "Oliverus Armacanus Totius Hiberniæ Primas", i. e. "Oliver of Armagh, Primate of All Ireland".

PATRICK FRANCIS CARDINAL MORAN.

Pluscarden Priory was founded in 1230 by Alexander III, King of Scotland, six miles from Elgin, Morayshire, for monks of the Valliscaulian Order, whose mother-house was that of Val-des-Choux, Burgundy. Pluscarden was the first of the three Scottish monasteries of the order whose observance was a combination of the Carthusian and Cistercian rule. In 1454 Nicholas V transferred the two surviving monks of the Benedictine priory of Urquhart to form one community with the six monks of Pluscarden, the latter assuming the Benedictine rule and habit. Pluscarden thus became a dependency of Dunfermline Abbey, whose sacrist, William de Boyis, was appointed prior. Mr. Macphail, a non-Catholic, refutes the calumny that the union was due to the "very licentious" lives of the Valliscaulian monks. The last prior, Alexander Dunbar, died in 1560, and Alexander Seton, later Earl of Dunfermline, a secret Catholic, became *commendator*; in consequence, the monks were never dispersed. They numbered thirteen in 1524; in 1586 one still survived. After various vicissitudes the property was acquired by John, third Marquess of Bute, who partially restored the buildings. The nave of the church was never completed. The aisleless choir (56 feet long), and the transepts (measuring 92 feet), are roofless. In the north wall of the chancel is a "sacramental house"—the stone tabernacle occasionally met with in Scottish churches. Stone steps connect the transept with the dormitory. Consecration crosses and the remains of interesting frescoes are still visible. A northern chapel was added by Prior Dunbar; with this exception the architecture is chiefly Early English. East of the cloister garth—100 feet square—stands the calefactory, its vaulted roof upheld by two pillars; this long served for a Presbyterian kirk. The well-preserved chapter-house has stone benches round the walls, and a central pillar supports the groining. The dormitory above was formerly used as a tenants' ball-room. The buildings, standing in lovely surroundings, are full of charm. Some holly trees in the garden are probably relics of monastic days.

MICHAEL BARRETT.

Plymouth, DIOCESE OF (PLYMUTHENSIS, PLYMUTHÆ), consists of the County of Dorset, which formed a portion of the old Catholic Diocese of Salisbury, whose last ruler, Cardinal Peto, died in March, 1558; also of the Counties of Devon and Cornwall with the Scilly Isles, which formed the ancient Diocese of Exeter, whose last Catholic bishop, James Turberville, died on 1 November, 1570. Since the Reformation these counties have, with more or less of the rest of England, been governed by three arch-

priests and fourteen vicars Apostolic, the last of whom, called Vicar Apostolic of the Western District (1848), was William Hendren, Bishop of Uranopolis. In the Brief "Universalis Ecclesiæ" (29 September, 1850), Pius IX separated the three counties from the Western District and formed them into the new Diocese of Plymouth: the rest of the district to be the new Diocese of Clifton, to which Bishop Hendren was forthwith translated, and the Diocese of Plymouth was placed under his temporary administration.

Reverend George Errington (1804-86) of St. John's Church, Salford, was appointed by the Holy See first Bishop of Plymouth, and on 25 July, 1851, consecrated there, together with the first Bishop of Salford, by Cardinal Wiseman. On 7 August he was installed at St. Mary's church, East Stonehouse, Devon, which mission included its neighbour, Plymouth, wherein no Catholic place of worship existed. In this *Ultima thule* and poor district he found 17 secular and 6 regular priests, and 23 missions including three institutes of nuns. No railways had reached the diocese except the Great Western to Plymouth, and a short mining railway established between Truro and Penzance at the extreme of Cornwall. A goodly number of the clergy did not belong to the diocese but were temporarily accepted. On 26 November, 1853, the bishop established his cathedral chapter, consisting of a provost and, by permission from Rome under the above difficulties, seven instead of ten canons for the time. In February, 1854, he held a synod at Ugbrooke Park, the seat of Lord Clifford of Chudleigh, and, amongst his synodal acts, established a clerical conference with its dean for each county. By 30 March, 1855, he had traversed the whole diocese for purpose of visitation and conferring confirmation, when bulls from Rome of that date appointed him Archbishop of Trebizond and Coadjutor *cum jure successionis* to Cardinal Wiseman of Westminster. William Vaughan (1814-1902), Canon of the Clifton Diocese, was nominated second Bishop of Plymouth, and on 16 September, 1855, consecrated by Cardinal Wiseman in Clifton pro-cathedral. Encouraged by generous offers of assistance from Edmund Polifex Bastard of Kitley, Yealmpton, Devon, and from Miss Letitia Trelawny of Cornwall, Bishop Vaughan on 28 June, 1856, laid the foundation stone of the Cathedral of Our Immaculate Lady and St. Boniface, Apostle of Germany (b. at Crediton, Devon), solemnly opened it on 25 March, 1858, and on 22 September, 1880, in the twenty-fifth year of his episcopate, he consecrated the Cathedral. He attended the Vatican Council throughout, in 1869-70. Between 10-12 March, 1888, the diocese, by a triduum of prayer, celebrated the bishop's Golden Jubilee of fifty years' priesthood. By the end of 1891 the Diocese of Plymouth, through the bishop's energetic supervision, became well established. It had 49 secular and 48 regular clergy, 52 public churches, and 15 chapels of communities, as well as ten orders of men and sixteen of nuns. Early in 1891 Bishop Vaughan requested from Rome a coadjutor-bishop. Leo XIII elected, from the Plymouth Chapter's *terna*, Charles Graham (1834), canon of Plymouth, on 25 September, 1891. On 28 October following he was consecrated titular Bishop of Cisamos, with right of succession, by Bishop Clifford of Clifton, in the Plymouth cathedral. Bishop Vaughan retired to St. Augustine's Priory, Newton Abbot, Devon, where, on 24 October, 1902, he died in his eighty-ninth year, and was buried in the priory cemetery. In October, 1902, Dr. Graham became third Bishop of Plymouth. Between 19 and 21 December, 1907, the diocese celebrated with a triduum the fiftieth anniversary of his priesthood: on this occasion he added a fresh member to the cathedral chapter. After a severe illness in 1910, Bishop Graham tendered his resignation of the see, which was accepted 9 Feb., 1911.

The recent expulsion of religious from France has,

during 1910, raised the number of communities of nuns in this diocese to twenty-nine. The Catholic population is about one in a hundred, that is, 12,000, most of whom, being employed in the Government Army and Navy establishments, reside in Plymouth, Stonehouse, and Devonport. It is worthy of note that Bishop John Carroll of Baltimore, founder of the Hierarchy of the Church in the United States of America, was on 15 August, 1790, consecrated in Lulworth Church, Dorset, by Bishop Walmesley, Vicar Apostolic of the Western District. The Faith never failed during the Reformation at Lanherne, Cornwall, and at Chideock, Dorset, through the fidelity of the Lords Arundell. Blessed Cuthbert Mayne (q. v.), the protomartyr of pontifical seminarists, was a native of Devon.

C. M. GRAHAM.

Plymouth Brethren, the name given to a widespread Protestant sect originally called by its own members "The Brethren", which came into being by gradual development in the early part of the nineteenth century. The members themselves protest against the name:—"Who are these 'Plymouth Brethren'? I do not own the name. I am a brother of every believer in the Lord Jesus, and, if I lived in Plymouth, the Elder might call me a 'Plymouth Brother'; but I do not live there, hence I do not own the name" (Davis, "Help for Enquirers", p. 20). Several influences concurred towards the rise of the body, and it is not possible to point to any one name as that of the founder. Its first origin seem to have been in Dublin where, in 1828, an Englishman, Anthony Norris Groves, then a student of Trinity College, was a member of a small body of churchmen who met for prayer and conference on the Scriptures and spiritual subjects. The members were profoundly impressed by the necessity of a visible union of Christendom, the centre of which they conceived to be the death of Christ as set forth in the Rite of the Lord's Supper. At first the members did not withdraw from their respective communions, but the first step in that direction was suggested by Groves, who advanced the view "that believers meeting together as disciples of Christ were free to break bread together, as their Lord had admonished them; and that, in so far as the apostles served as a guide, every Lord's Day should be set apart for thus remembering the Lord's death and obeying His parting command." This view, that the ministration of the sacraments and the preaching of the Gospel was the common right of all Christians, became the distinguishing feature of the assemblies of The Brethren which now began to spring up in other places besides Dublin. An important development was soon brought about by one of the leaders of the Dublin Assembly, John Nelson Darby, an ex-barrister who had taken orders in the Episcopal Church of Ireland and then seceded therefrom. Having always advocated entire separation from all other communities as the only effective way of procuring true unity, he at length succeeded in attaining this purpose, and is accordingly by some considered as the founder of the Plymouth Brethren, a distinction which others claim for Groves.

The growth of the Brethren had been largely helped by the spread of Darby's first pamphlet, "The Nature and Unity of the Church of Christ", which he had published in 1828, and in 1830 a public assembly was opened in Aungier St., Dublin. Darby then started on a tour with the view of propagating his ideas, visiting Paris, Oxford, and Cambridge. At Oxford he met Benjamin Wills Newton, an English clergyman, who first invited him to Plymouth, where Newton was the chief member of an assembly of Brethren which

was very active in the neighbourhood. From this assembly came the name "Brethren from Plymouth" or more shortly "Plymouth Brethren", by which the body was subsequently known. From 1830 to 1838 the movement spread rapidly, and assemblies were opened in most of the large towns in England. In 1838 Darby went to Switzerland, where he spent seven years in propagating the views of the sect with considerable success. At the present day the canton of Vaud is the stronghold of the "Brethren" on the continent, and scattered assemblies are also found in France, Germany, and Italy. In 1845 the revolution in Vaud caused Darby to return to England, but he proved a very disturbing element, and from his reappearance must be dated the unending quarrels and dissensions which have ever since been a marked feature of Plymouth Brethrenism. In 1845 having quarrelled with Newton on the interpretation of certain prophecies, he accused him of denying the authority of the Holy Ghost by assuming even a limited presidency over the assembly. This resulted in the secession of Darby with a hundred followers. In 1848 there was another cleavage—into Neutrals and Exclusives. The Neutral Brethren, also known as Open Brethren, supported the action of the Bethesda congregation at Bristol which received Newton's followers into communion. The Exclusive Brethren or Darbyites, who included the majority of the members, held aloof. These have undergone further divisions since then, so that at the present time there are several different bodies of Plymouth Brethren. As these bodies differ among themselves on doctrinal as well as on disciplinary points, it is only possible here to outline their teaching in a very broad way, passing over the points of difference between the warring sections.

DOCTRINE.—The underlying principle of the teaching of the Plymouth Brethren, and one which explains their action in endeavouring to attract to themselves "the saints in the different systems and to teach them to own and act upon the true principles of the assembly of God" (Mackintosh, "Assembly of God", p. 24), is that the Church described in the New Testament has fallen into utter corruption, so that it is condemned by God to extinction. This corruption was due to the Church admitting good and evil alike within her pale, and admitting an ordained ministry to exist. They hold that the Church was intended to contain the righteous only, and that all official ministry is a denial of the spiritual priesthood which belongs to all believers and a rejection of the guidance of the Holy Ghost. From this it follows that entire separation from all other Christian churches and denominations is necessary as a first condition of salvation. But some principle is needed to unite those who have thus separated themselves from other believers. This principle is union with Christ effected by the power of the Holy Ghost. The Holy Ghost is said to preside in the assembly and to select from those present, who all have an equal right to minister, the person or persons who are to be His mouthpiece. The will of the Holy Ghost is recognized by the existence of His gifts, that is the power to exhort or to comfort or to teach. Whoever possesses these gifts is bound to use them for the common good, but the assembly selects from the gifted persons the particular one who is to be the minister for the time being. Such an election is considered as inspired by God. It is employed to ascertain both who is to lead the worship and who is to preach, but women are debarred from ministering in either way. The chief act of worship is the Lord's Supper, which is given precedence over all prayer and preaching: "Beware of thinking anything can be of equal moment with duly showing forth the Lord's death. The Supper of the Lord claims an unequivocal prominence in the worship of the Saints." (Kelly, op. cit. inf., lecture iii) The weekly celebration of the Lord's Supper is incumbent on all, and no member is allowed to

neglect this and remain in the society. Evil living or erroneous doctrine are also visited, first by remonstrance, then by judicial condemnation and expulsion. Infant baptism is an open question among them, but the majority of assemblies practise the baptism of believers by immersion without regard to previous baptism. They reject confirmation altogether. Though they disown an ordained ministry, yet they admit a distinction between those teachers whose ministry is to the church and those whose ministry is to outsiders. The latter are regarded by them as evangelists given to the world by Christ and qualified by the Holy Ghost. They may devote their lives to preaching the Gospel, and must not request, though they may accept, contributions. Their theology is Calvinistic, laying great stress on original sin and predestination, and with regard to morals exhibiting marked Antinomian tendencies.

In their doctrine of justification they attach great importance to establishing a close connexion between that gift of God and the resurrection of Christ. Darby in his treatise, "The Resurrection as the Fundamental Truth of the Gospel", writes: "The saints are regarded by God, as risen in Christ, and consequently as perfectly justified from all their sins; but how does the Saint actually now participate in blessings so great? It is by partaking of that life in the power of which Christ has risen." And a little later, "I share in the righteousness of God by being quickened with that life in the power of which Christ was raised from the dead coming up out of the grave, all our trespasses being forgiven." It has been stated that the general doctrine of the brethren on justification was influenced by the teaching of Newman (British Quarterly Review, Oct., 1873), but the resemblance is merely superficial and the differences are fundamental. The Brethren claim that once the gift of justification is received it can never be lost, and they carry this view to such lengths that some of their writers hold that a Christian ought not to pray for the forgiveness of sins, as to do so would imply doubt of the fullness of mercy already received. They also consider Justification as entirely independent from Baptism, which is regarded as an ordinance of Christ binding on believers but destitute of spiritual efficacy in itself.

The majority of Plymouth Brethren hold millenarian views respecting the Second Advent of Christ. From the beginning they attached great importance to the study of prophecy, and, though they are strong believers in the literal and verbal inspiration of Scripture, they have always made a point of mystical interpretation. The result has been that they have arrived at several strange conclusions, peculiar to their own party. Thus they distinguish two advents of Christ yet to come, the *παρουσία*, when He will receive the Church, and the *ἐπιφάνεια*, when He will finally come to take possession of the earth in glory. The former may be expected at any time and may even be secret, but the latter will be heralded by signs. When the former occurs all true believers, living and dead, will be carried to heaven, an event described as the "Rapture", and then the judgments of God as foretold in the Apocalypse will fall upon the earth. The Roman Empire (identified with the Beast) is to be revived as a special agency of Satan, and its head will ultimately claim divine honours and be received by the Jews, then restored to Palestine, as their Messiah. A faithful remnant of the chosen people alone will remain in the world as a witness to God, but this remnant looks forward only to earthly glory under Christ when He shall come to take possession of the earth. When this happens Christ's empire on earth will be established visibly with Jerusalem as its capital. The saints of the Rapture will reign above the earth, the Jewish remnant will rule on the earth and will enjoy great power and material prosperity. At the end of the millennium there will be a great rebellion

against Christ, headed by Satan, and then will come the final judgment as described in the Apocalypse, though it follows that this will be of a different nature from that which the Catholic Church teaches us to expect. For the saints will not be judged at all, their resurrection having taken place more than a thousand years before that of the wicked. When the wicked have been sent to their doom, the new Jerusalem including the saints of the Old Testament, the saints of the Rapture, and the martyrs of the Jewish Remnant, will descend out of heaven from God, and from that time forth the tabernacle of God shall be with men. This fantastic interpretation involves a break with all Christian tradition and necessitates a novel exegesis of much of the Scriptures, especially the Apocalypse and Isaiah.

One feature of Plymouth Brethrenism which calls for remark is the special aversion in which it is held by other Protestant sects. This is doubtless due primarily to its methods of proselytism, which are peculiar. An Anglican writer (Dictionary of Religion, cit. inf.) complains that "the body has in the main always directed its propagandist efforts far less towards the large residuum which unhappily lies outside of all churches than to those professing Christianity in Churches already existing. Some of them have gone so far as to openly avow that their mission is 'to the awakened in the Churches' and such efforts as they do make in mission work or city evangelization are as a rule singularly unsuccessful. It is this which has brought upon them the common reproach of being 'sheep-stealers rather than shepherds.'" In their proselytism they have made large use of the Press. In 1834 the Brethren established a quarterly periodical called "The Christian Witness", carried on after 1849 as the "The Present Testimony". This is now supplemented by several other periodicals and a large number of pamphlets and tracts which are offered for sale at the depots they have established in most large towns. Their chief writers, besides Darby himself, whose collected works fill thirty-two volumes, are C. H. McIntosh and William Kelly who have written a large number of commentaries on various parts of the Bible, and Charles Stanley who wrote on Justification in the Risen Christ, the Sabbath question and similar topics. One scripture scholar of distinction, Dr. Samuel Prideaux Tregelles, severed his connexion with them before his death. But their theological literature has not produced any work of value, and, though voluminous, has already passed into oblivion. It is chiefly remarkable for the virulence of the internecine controversies which they have carried on incessantly, for in separating themselves from other bodies the Plymouth Brethren have signally failed to find union in their midst, and the bitter quarrels which have marked the eighty years of their existence have become a distinctive feature of the sect. This their own writers have admitted, and it was one of Darby's followers, W. H. Dorman, who on separating from him wrote: "No religious movement, perhaps, ever so thoroughly succeeded in defeating its own ends; instead of union it has produced the most hopeless and heartless contentions and divisions that perhaps ever passed current under the specious pretence of zeal for Christ and care for the truth." It is difficult to ascertain particulars as to the present condition of the body as they do not publish anything in the nature of a year-book and refrain from collecting or furnishing returns.

EDWIN BURTON.

Pneumatomachi (MACEDONIANS), a heretical sect which flourished in the countries adjacent to the Hellespont during the latter half of the fourth, and the beginning of the fifth century. They denied the divinity of the Holy Ghost, hence the name *Pneumatomachi* (πνευματόμαχοι) or Combators against the Spirit. Macedonius, their founder, was intruded into the See of Constantinople by the Arians (342 A. D.), and enthroned by Constantius, who had for the second time expelled Paul, the Catholic bishop. He is known in history for his persecution of Novatians and Catholics; as both maintained the consubstantiality of the Son with the Father. He not only expelled those who refused to hold communion with him, but imprisoned some and brought others before the tribunals. In many cases he used torture to compel the unwilling to communicate, forced baptism on unbaptized women and children and destroyed many churches. At last his cruelty provoked a rebellion of the Novatians at Mantinium, in Paphlagonia, in which four imperial cohorts were defeated and nearly all slain. His disinterment of the body of Constantine was looked upon as an indignity to the Protector of the Council of Nicæa, and led to a conflict between Arians and anti-Arians, which filled the church and neighbourhood with carnage. As the disinterment had taken place without the emperor's sanction, Macedonius fell into disgrace, and Constantius caused him to be deposed by the Acacian party and succeeded by Eudoxius in 360. This deposition, however, was not for doctrinal reasons, but on the ground that he had caused much bloodshed and had admitted to communion a deacon guilty of fornication. Macedonius continued for some time to live near Constantinople and cause trouble. He died about 364. It is thought that during these last years he formulated his rejection of the Divinity of the Holy Ghost and founded his sect. His intimacy with Eleusius of Cysicus makes this probable. Some scholars, however, reject the identification of Macedonians and Pneumatomachians, apparently on insufficient grounds and against the authority of Socrates, a contemporary historian living at Constantinople. The Council of Nicæa had used all its energies in defending the Homousion of the Son and with regard to the Spirit had already added the words: "We believe in the Holy Ghost" without any qualification. The Macedonians took advantage of the vagueness and hesitancy of expression in some of the early Fathers to justify and propagate their error. The majority of this sect were clearly orthodox on the Consubstantiality of the Son; they had sent a deputation from the Semi-Arian council of Lampsacus (364 A. D.) to Pope Liberius, who after some hesitation acknowledged the soundness of their faith; but with regard to the Third Person, both pope and bishops were satisfied with the phrase: "We believe in the Holy Ghost." While hiding in the desert during his third exile, Athanasius learned from his friend Serapion of Thumis of a sect acknowledging Nicæa, and yet declaring the Holy Ghost a mere creature and a ministering angel (on the strength of Heb., i, 14). Athanasius wrote at once to Serapion in defence of the true Doctrine, and on his return from exile (362 A. D.) held a council at Alexandria which resulted in the first formal condemnation of the Pneumatomachi. A synodal letter was sent to the people of Antioch advising them to require of all converts from Arianism a condemnation against "those who say that the Holy Spirit is a creature and separate from the essence of Christ. For those who while pretending to cite the faith confessed at Nicæa, venture to blaspheme the Holy Spirit, deny Arianism in words only, while in thought they return to it." Nevertheless, during the following decade the heresy seems to have gone on almost unchecked except in the Patriarchate of Antioch where at a synod held in 363 Meletius had

proclaimed the orthodox faith. In the East the moving spirit for the repression of the error was Amphilochius of Iconium, who in 374 besought St. Basil of Cæsarea to write a treatise on the true doctrine concerning the Holy Ghost. This he did, and his treatise is the classical work on the subject (περί τοῦ ἁγίου Π. Μ. 32). It is possible that he influenced his brother Gregory of Nyssa to write his treatise against the Macedonians, of which only a part has come down to us and which appears to be based on the words: "Lord and life-giver who proceeds from the Father". These words, apparently taken from the Creed of Jerusalem, had been used by St. Epiphanius of Salamis in his "Ancoratus" when combating this error (374 A. D.). Amphilochius of Iconium, as Metropolitan of Lycæonia, wrote in concurrence with his bishops a synodal letter to the bishops of Lycia, which contains an excellent statement of the true doctrine (377 A. D.). In Constantinople (379) Gregory of Nazianzus pronounced his brilliant theological oration on this subject. The West likewise upheld the truth in a synod held in Illyria and mentioned by Theodoret (H. E., IV, 8) and by Pope Damasus in his letter to Paulinus of Antioch. The heresy was condemned in the First Council of Constantinople, and internal divisions soon led to its extinction. Socrates (H. E., V, 24) states that a certain Macedonian presbyter, Eutropius, held conventicles of his own while others followed Bishop Carterius. Eustathius of Sebaste, Sabinus, and Eleusius of Cyricus seem to have been leaders whom the sect repudiated (for Eustathius, see Basil, Ep., CCLXIII, 3). In June 383 Theodosius tried by means of a conference to bring the Arian factions to submission. Eleusius handed in his symbol of faith as representing the Macedonians, as he had represented them with Marcianus of Lampsacus at the Council of Constantinople. After this fruitless attempt at reconciliation the Macedonians with other heretics incurred all the severities of the Theodosian code and within a generation disappeared from history. Socrates and Sozomus mention a certain Marathonius, made Bishop of Nicomedia by Macedonius, who obtained such a leading position in the sect that they were often styled after him Marathonians. Through St. Jerome, St. Augustine, St. Damasus, and Rufinus, the name Macedonians became the customary designation in the West. No writings of Macedonius are extant, but Pneumatomachian writings are mentioned by Didymus the Blind, who wrote an excellent treatise on the Holy Ghost in thirty-six chapters (translated into Latin by St. Jerome at the command of Pope Damasus), and who refers in his later work (379) on the Trinity (II, 7, 8, 10) to some "Brief Expositions" of Macedonian doctrines which he possessed.

Podlachia. See LUBLIN DIOCESE OF.

Poetry, HEBREW, OF THE OLD TESTAMENT.—Since the Bible is divinely inspired, and thus becomes the "written word" of God, many devout souls are averse from handling it as literature. But such a view tends to lose sight of the second causes and human constituents without which, in fact, Holy Scripture has not been given to us. The Bible, as a concrete whole, is something definite in make, origin, time, and circumstances, all of which must be taken into account if we desire to reach its true meaning. It is history and it is literature; it lies open consequently to investigation under these lights, and if they are neglected misconceptions will follow. The fact that spiritual or supernatural influences have moulded phenomena does not withdraw from scientific inquiries anything which is

properly amenable to them. "God speaks to mankind", said medieval Jewish commentators, "in the language of the children of men." This observation, while it justifies verbal criticism, points out the way to it. Literature demands a special study; and Hebrew literature, because it is sacred, all the more, inasmuch as the outcome of misunderstandings in regard to it has ever been disaster. No one can read attentively the poorest version of the Old Testament without feeling how strong a vein of poetry runs through its pages. We need not venture on a definition of what poetry means; it is a peculiar form of imagination and expression which bears witness to itself. Verse has been called by Ernest Hello, "that rare splendour, born of music and the word"; now assuredly in writings such as many of the Psalms, in the Prophets, the Book of Job, and Proverbs we recognize its presence. On the other hand, from the great collection of documents which we term Chronicles (*Paralipomena*), Ezra, and Nehemias, this quality is almost entirely absent; matter and style announce that we are dealing with prose. We open the Hebrew Bible, and we find our judgment confirmed by the editors of the Massora—the received and vocalized text. Conspicuously, where the title indicates "songs" (*shirim*, Ex., xv, 1; Num., xxi, 17), the lines are parted into verse; for instance, Deut., xxxii, Judges, v, II Kings, xxii. But more. As Ginsburg tells us, "In the best M.S.S. the lines are poetically divided and arranged in hemistichs" throughout the Psalter, Proverbs, and Job. And this was enjoined by the Synagogue. Yet again, the punctuation by the period (*soph pasuk*), which marks a complete statement, coincides with a rhythmical pause in nearly all such passages, demonstrating that the ancient redactors between 200 and 600 A. D. agreed as to sense and sound with the moderns who take the same citations for poetry. So emphatic indeed is this impression that, however we print either text or rendering, the *disjecta membra poetæ* will be always visible. Hebrew forms of verse have been much disputed over; but the combination of a lively picturesque meaning with a definite measure is beyond denial in the places alleged. Such are the "Songs of Sion" (Ps. cxxxvii, 3). This was known and felt from the earliest times. Josephus describes the Hebrew poets as writing in "hexameter" (Antiq., II, xvi); St. Jerome speaks of their "hexameters and pentameters"; while in his own translations he has constantly succeeded in a happy rhythm, not, however, giving verse for verse. He is markedly solemn and musical in the Latin of the Book of Job. The English A. V. abounds in magnificent effects of a similar kind. Given, in short, the original structure, it would be almost impossible not in some degree to reproduce it, even in our Western versions.

But on what system was the poetry of the Old Testament composed? Rabbi Kimchi and Eben Ezra had caught sight of an arrangement which they termed *kaful*, or doubling of enunciation. But to bring this out as a principle was reserved for Bishop R. Lowth, whose lectures "De sacra poesi Hebræorum" (1741 begun, finally published 1753) became the starting point of all subsequent inquiries. In his Preface to Isaiah (1778, German 1779) he gave fresh illustrations, which led on to Herder's more philosophical handling of the subject (1782-3). Lowth convinced scholars that Hebrew verse moved on the scheme of parallelism, statement revolving upon statement, by antiphon or return, generally in double members, one of which repeated the other with variations of words or some deflection of meaning. Equal measures, more or less identical sense, these were its component parts. Degrees in likeness, and the contrast which attends on likeness, gave rise, said Lowth, to synonymous, antithetic, or synthetic arrangement of members. Modern rhetoric inclines to take the *marshal* or similitude as a primitive norm for Hebrew verse in general; and Prov., x, is quoted by way of showing the three varie-

ties indicated by Lowth. Evidently, given a double measure, it admits of combinations ever more subtle and involved. We will speak of other developments later. But the prevailing forms were exhibited in Lowth's "Prælections". Recent comparisons of this device with similar structures in Babylonian, Assyrian and Egyptian poetical remains discover its extreme antiquity (see for the first Schrader; for Egypt, W. Max Müller, 1899; and on the whole, C. A. Briggs, "Gen. Introd. to H. Script.", 1899). It might seem fanciful to call the type from which parallelism originates "echo-music", yet nothing is more likely than that the earliest rhythm was a kind of echo, whereby the object of expression became fixed and emphasized. See the remarkable instances in Deborah's chant (Judges, v, 26-30) etc. Here we must observe how the logic of feeling, as distinguished from the logic of reasoning, controls the poet's mind. That mind, until a late period, was not individual, but collective; it was the organ of a tribe, a public worship, a national belief; hence, it could shape its ideas only into concrete forms, real yet symbolical; it expressed emotions, not abstractions, and it was altogether concerned with persons, human or superhuman. Poetry, thus inspired, glances to and fro, is guided by changing moods, darts upon living objects, and describes them from its own centre. It is essentially subjective, and a lyrical outcry. It does not argue; it pleads, blames, praises, breaks into cursing or blessing, and is most effective when most excited. To such a temperament repetition becomes a potent weapon, a divine or deadly rhetoric of which the keynote is passion. Its tense is either the present (including the future perceived as though here and now), or a moving past seen while it moves.

Passion and vision—let us take these to be the motive and the method of all such primitive poetry. We may compare II Kings, xxiii, 2, David's last words, "The sweet Psalmist of Israel, said 'The spirit of the Lord spake by me, and His word was on my tongue'"; or Ps. xlv, 2, "My heart bursts out with a goodly matter, my tongue is the pen of a ready writer"; or Job, xxxii, 18, "I am full of words, the spirit within constraineth me"; but especially Num., xxiv, 4, "He hath said, the man who heard the words of God, who saw the vision of the Almighty, falling into a trance, but having his eyes open". These declarations lead up to impassioned metrical utterances, while they betoken the close relation which unites Hebrew poetry with prophecy. Both alike are a pouring forth of feelings too violent to be held in, aroused by contemplation not of the abstract or the general, but of persons and events, in their living power. To this belongs the idea of recurrence. Curtius observes acutely, "The gradual realization and repetition of an action are regarded by language as nearly akin." (Elucidations, 143, quoted by Driver, "Treatise on the Use of Tenses in Hebrew", xv.) The whole being moves as the object impresses it; speech, music, dancing, gesture leap out, as it were, to meet the friend or enemy who draws nigh. The Semites term their religious festivals a "hag", i. e. a dance (Ex., xii, 14; xxxii, 5, 19; Deut., xvi, 10, 12; and frequently), of which the reminiscence is vividly shown in the whirling motion and repeated acclamations practised by dervishes among Mohammedans to this day. We may thus connect the lyrical drama out of which in due course the Hebrews developed their temple-liturgies and the Psalms, with Greek dithyrambs, the chorus of the Athenian stage, and the anapaestic strophes danced thereon to a lively musical accompaniment. When past or future is caught up after this manner, made present as though seen, and flung into a series of actions, the singer prophesies. For what else is prophecy than the vision of things absent in space or time, or hidden from common eyes? The state of mind corresponding is "trance" ("deep sleep", Gen., xv, 12; Job, iv, 13; Ezech., viii, 1). The

literary form, then, in which primitive religion and law, custom and public life, were embodied, implies a poetic heightening of the ordinary mood, with effects in speech that may fall at length under deliberate rules; but as rules multiply, the spirit either evaporates or is diffused pretty equally over an eloquent prose. That all human language was once poetical appears everywhere probable from researches into folk-lore. That repetition of phrase, epithet, sentiment came earlier than more elaborate metres cannot well be denied. That religion should cleave to ancient forms while policy, law, and social intercourse move down into the "cool element of prose", we understand without difficulty. Why the mediating style belongs to the historian we can also perceive; and how the "epic of gods" is transformed by slow steps into the chronicle and the reasoned narrative.

It does not seem, indeed, that the Israelites ever possessed a true epic poetry, although their kinsfolk, the Babylonians, have left us well-known specimens, e. g., in the *Gilgamesh* tablets. But this extensive form of Assyrian legend has not been imitated in the Old Testament. G. d'Eichthal, a Catholic, first undertook in his "Texte prim. du premier récit de la Création" (1875) to show that Genesis, i, was a poem. The same contention was urged by Bishop Clifford ("Dublin Review", 1882), and C. A. Briggs ventures on resolving this narrative into a five-tone measure. Of late, other critics would perceive in the song of Lamech, in the story of the flood and of Babel, fragments of lost heroic poems. It is common knowledge that the so-called "creation-epic" of Assurbanipal is written in four-line stanzas with a caesura to each line. But of this no feature seems really discernible in the Hebrew Genesis (consult Gunkel, "Genesis", and "Schöpfung und Chaos"). There is no distinct metre except an occasional couplet or quatrain in Gen., i-x. But Ps. civ, on the wonders of God's works; Ps. cvi, on His dealings with Israel; Job, xxxviii-xlii, on the mysteries of nature and Providence; Prov., viii, 22-32, on creative wisdom, might have been wrought by genius of a different type into the narrative we define as epical. Why did Israel choose another way? Perhaps because it sought after religion and cared hardly at all for cosmogonies. The imagination of Hebrews looked forward, not into the abysses of past time. And mythology was condemned by their belief in monotheism. Psalms are comprehended under two heads,—"Tehillim", hymns of praise, and "Tephilloth", hymns of prayer, arranged for chanting in the Temple-services. They do not include any very ancient folk-songs; but neither can we look on them as private devotional exercises. Somewhat analogous are the historic blessings and cursings, of a very old tradition, attributed to Jacob (Gen., xlix) and Moses (Deut., xxviii, xxxii-iii). Popular poetry, not connecting itself with priestly ritual, touches life at moments of crisis and pours out its grief over death. Much of all this Holy Scripture has handed down to us. The Book of Lamentations is founded on the *Kinah*, the wailing chant improvised by women at funerals in a measure curiously broken, one full verse followed by one deficient, which reminded St. Jerome of the pentameter. It seems to be aboriginal among Semites (cf. Amos, v, 2; Jer., xlviii, 36; Ezech., xix, 1; Ps. xix, 8-10). Martial songs, of which Judges, v; Num., xxi; Jos., x; I Kings, xviii, are specimens, formed the lost "Book of the Wars of the Lord". From another lost roll, the "Book of Jashar", i. e., of the Upright or of Israel, we derive the lament of David over Saul and Jonathan, as well as in substance Solomon's prayer at the dedication of the Temple (II Kings, i, 3; III Kings, viii, 53). However we interpret Canticles, it is certainly a round of wedding-songs and is high poetry; Ps. xlv is an epithalamium of the same character. The song of the vineyard may be added to our list (Is., v, 1). Historically, at all events, the Book of

Psalms is late and supposes prophecy to have gone before it.

A second stage is attained, the nearest approach in the Hebrew Testament to philosophy, when we reach the gnomic or "wisdom" poetry. Proverbs with its two line antitheses gives us the standard, passing into larger descriptions marked by numerals and ending in the acrostic or alphabetical praise of the "valiant", i. e., the "virtuous" woman. Job takes its place among the great meditative poems of the world like "Hamlet" or "Faust", and is by no means of early date, as was once believed. In form it may be assigned to the same type as Prov., i-x; but it rises almost to the level of drama with its contrasted speakers and the interposition of Jahweh, which serves to it as a dénouement. Notwithstanding its often corrupt text and changes consequent on re-editing at later times, it remains unquestionably the highest achievement of inspired Hebrew verse. Ecclesiastes, with its mingled irony and sadness, falls into a purely didactic style; it has traces of an imperfect lyrical mood, but belongs to the prose of reflection quite as much as Seneca or Marcus Aurelius. The Hebrew text of *Ben Sira*, thus far recovered, is of a loftier kind, or even a prelude to the New Testament. As regards the Prophets, we can scarcely doubt that oracles were uttered in verse at Shiloh and other ancient shrines, just as at Delphi; or that inspired men and women threw their announcements commonly into that shape for repetition by their disciples, to whom they came as the "word of the Lord". To prophecy was to sing accompanied by an instrument (IV Kings, iii, 15). The prophetic records, as we now have them, were made up from comparatively brief poems, declaring the mind of Jahweh in messages, "burdens", to those whom the seer admonished. In Amos, Osee, Micheas, Isaias, the original chants may still be separated and the process of joining them together is comparatively slight. Prophecy at first was preaching; but as it became literature its forms passed out of verse (which it always handled somewhat freely) into prose. The Book of Ezechiel, though abounding in symbol and imagery, cannot be deemed a poem. Yet from the nature of their mission the Prophets appealed to that in man's composition which transcends the finite, and their works constantly lift us to the regions of poetic idealism, however fluctuating the style between a strict or a looser measure of time. Divine oracles given as such fall into verse; expanded or commented on, they flow over into a less regular movement and become a sort of rhythmical prose. Our Latin and English translations often render this effect admirably; but attentive readers will note in the English A. V. many unconscious blank verses, sometimes the five foot iambic, and occasionally classic hexameters, e. g., "How art thou fallen from heaven, O Lucifer, son of the morning!" (Is., xiv, 12). There is likewise in Hebrew a recognized poetical vocabulary, though some critics deny it, and the grammar keeps a few archaic forms. We can distinguish popular unwritten prophecy as lasting from unknown periods down to Amos. From Amos to Esdras the prophets all write, still under poetic influences, but their singing has declined into a metaphor. The rhapsodists (*moshelim*) give place more and more to the rabbim. We hear the last echoes of Hebrew sacred poetry in St. Luke's Gospel; for the "Benedictus", the "Magnificat", the "Nunc Dimittis", though in Greek, are songs of Israel, moulded on Old Testament reminiscences.

Now we come into a debatable land, where critics dispute endlessly over the essence and make of Biblical versification, beyond the lines drawn by Lowth. What metrical system does Hebrew follow? Take the single line; does it move by quantity, as Latin and Greek, or by accent, as English? If by accent, how is that managed? Should we reckon to each kind of verse a definite number of syllables, or allow an in-

definite? Since no Jewish "Poetics" have been preserved from any age of the Bible, we have only the text itself upon which to set up our theories. But if we consider how many fragments of divers periods enter into this literature, and how all alike have been passed through the mill of a late uncritical recension, —we mean the Massora—can we suppose that in every case, or even in general, we enjoy so much evidence as is required for a solid judgment on this matter? Infinite conjecture is not science. One result of which we may be certain is that Hebrew verse never proceeded by quantity; in this sense it has no metre. A second is that the poetical phrase, be it long or short, is governed by tone or stress, rising and falling naturally with the speaker's emotion. A third would grant in the more antique forms a freedom which the development of schools and the fixedness of liturgy could not but restrain as years went on. At all times, it has been well said by W. Max Müller, "the lost melody was the main thing"; but how little we do know of Hebrew music? Under these complicated difficulties to fix a scale for the lines of verse, beyond the rhythm of passionate utterance, can scarcely be attempted with success.

G. Bickell, from 1879 onwards, undertook in many volumes to reduce the anarchy of Old Testament scansion by applying to it the rules of Syriac, chiefly as found in St. Ephrem. He made the penultimate tonic for syllables, counted them regularly, and held all lines of even syllables to be trochaic, of uneven iambic. On such a Procrustean bed the text was tortured into uniformity, not without ever so many changes in word and sense, while the traditional readings were swept aside though supported by the versions (see his "Metricæ biblicæ regulæ exemplis illustratæ", 1879, "Carmina Vet. Test. metricæ", 1882; Job, Ecclesiastes, Proverbs). This dealing, at once arbitrary and fanciful, leaves us with so uncertain a text that our problem is utterly transformed, and the outcome is scepticism. Yet Bickell has indicated the true poetic measure by his theory of main accents, such as travellers note in the modern songs of Palestine. Julius Ley constructs a system on the tone-syllable which, preceded by unaccented syllables and followed by one that has "a dying fall", constitutes the metre. His unit is the versé formed by parallel lines; he admits the cœsura; with regard to text and vocalization he is conservative ("Grundzüge d. Rhythmus, d. Vers. u. Strophenbau in d. hebr. Poesie", 1875; "Leitfaden d. Metrik Der heb. Poesie", 1887). A third writer, Grimme, while not discarding the received vowel-signs, gives them a new value, and combines quantity with accent. Probably, our conclusion should be that none of these ingenious theories will explain all the facts; and that we had better let the text alone, marking only where it seems to be corrupt.

Another amusement of Hebrew scholars has been the discovery and delimitation of "strophes" (Köster, 1831), or of larger units embracing several verses. Bickell and many recent critics allow the four-line combination. Anything more is very doubtful. In Ps. xlii, and elsewhere, a sort of refrain occurs, which corresponds to the people's answer in Catholic litanies; but this does not enter into the verse-structure itself. C. A. Briggs, who clings resolutely to the idea of complex Hebrew metre, extravagates on the subject, by taking the "whole of sense" for a rhythmical whole. We must obey the plain law of parallelism, and allow a three-line arrangement where the words themselves demand it. But much of what is now written concerning the hidden links of Old Testament poetry is like the Cabbala, perversely and needlessly wrong. The lamentation verse lends itself to strophe; and beginnings of it may well exist, provided we do not assimilate this hard and severe language to the gracious flexures which were native in Hellenic

composition. There is a species of "canon" or fugue in the fifteen chants called "Songs of Ascent"—our "Gradual" Psalms—an ambiguous title referring perhaps to this feature as well as to the pilgrim journey they denoted. Various poems and especially the great Ps. cxviii (Hebrew cxix) are arranged alphabetically; so the Book of Lamentations; Prov. xxxi; Eccles., li, 13-29. In Talmudic and Rabbinical writings the Psalms cxiii-cxviii (Hebrew) are taken as one composition and known as the "Hallel of Egypt", intended to be sung on the feast of Hanukkah or of Machabees (I Mach., iv, 59). Ps. cxxxvi, Hebrew (Vulgate cxxxv) "Confitemini Domino", is the "Great Hallel", and Ps. cxlvi-cxlviii make up another collection of these "Alleluia" hymns. In Hebrew poetry when rhymes occur they are accidental; alliteration, assonance, word-play belong to it. We find in it everywhere vehemence of feeling, energetic and abrupt expression, sudden changes of tense, person, and figure, sometimes bordering on the grotesque from a Western point of view. It reveals a fine sense of landscape and abhors the personification familiar to Greeks, whereby things lower than man were deified. In sentiment it is by turns sublime, tender, and exceedingly bitter, full of a yearning after righteousness, which often puts on the garb of hatred and vengeance. "From Nature to God and from God to Nature" has been given by Hebrews themselves as the philosophy which underlies its manifestations. It glorifies the Lord of Israel in His counsels and His deeds. In prophecy it judges; in psalmody it prays; in lamentation it meditates on the sufferings which from of old the chosen people have undergone. Though it composes neither an epic nor a tragedy, it is the voice of a nation that has counted its heroes in every age, and that has lived through vicissitudes unequalled in pathos, in terror, in a never defeated hope. By all these elements Hebrew poetry is human; by something more mysterious, but no less real, breathed into its music from on high, it becomes divine.

WILLIAM BARRY.

Poggio Bracciolini, GIOVANNI FRANCESCO, Italian humanist and historian; b. at Terranuova, near Arezzo, in 1380; d. at Florence, 10 Oct., 1459. He studied at Florence and went to Rome about 1402. Boniface IX made him one of the Apostolic secretaries, which position he held under Innocent VII, Gregory XII, Alexander V, and John XXIII. The deposition of John XXIII and the delays of the Council of Constance afforded him leisure to search the libraries of the monasteries of Germany and France. In 1415 he discovered at Cluny a manuscript containing the following discourses of Cicero: "Pro Cluentio", "Pro S. Roscio", "Pro Murena", "Pro Milone", and "Pro Cælio". This manuscript was sent to Florence where Francesco Barbaro deciphered it with great difficulty. Later Poggio discovered at St. Gall's the first complete text of Quintilian's "Institutio Oratoria", of which Petrarch had known only fragments, a portion of Valerius Flaccus (I-IV, 317), commentaries on Cicero, among others that of Asconius, a commentary of Priscian on twelve verses of Virgil, and a manuscript of Vitruvius. During another search through the monasteries, probably Einsiedeln, Reichenau on Lake

Constance, and Weingarten, he discovered Vegetius, already known by Petrarch, Festus in the abridgment of Paul the Deacon, Lucretius, Manilius, Silius Italicus, Ammianus Marcellinus, the grammarians Caper, Eutyches, and Probus. It was during this journey or the next that Poggio discovered the "Silvæ" of Statius. In 1417 he went as far as Langres, France, where he recovered seven discourses of Cicero, three on the agrarian law, "Pro Rabirio", "Pro Roscio Comœdo", and "In Pisonem". This journey also resulted in the discovery of a manuscript of Columella. Unfortunately most of these manuscripts exist now only in copies. One in his own hand at Madrid (Bib. Nat., X, 81) contains Asconius and the first part of Valerius Flaccus. After the Council of Constance Poggio accompanied Martin V to Italy and stayed with him at Mantua (1418). In 1423 he became his secretary. On his return from a journey to England Poggio discovered an incomplete Petronius at Cologne and Nonius Marcellus at Paris. Niccoli admitted him to his confidence with regard to the "History" of Tacitus, of which he made a secret. He shared in the discovery of the lesser writings of Tacitus by Enoch of Ascoli, in that of Aulus Gellius, of Quintus Curtius and the last twelve works of Plautus by Nicholas of Cusa. In 1429 he made a copy of the "De aquæ ductibus" of Frontinus. In 1429 he published his dialogue on avarice, in which he attacked especially the professors of law and the Mendicant Friars.

Shortly after the death of Martin V (20 February, 431) he began to write the four books of his "De Varietate Fortunæ", in the first of which he describes the ruins of Rome. Indeed it may be said that he was the first to practise archæology systematically. He brought from Switzerland the valuable booklet of a ninth-century pilgrim, the Anonymous Einsiedlensis, and he preceded J. B. de Rossi in studying it. He compared the ruins which he saw with the texts of writers and endeavoured to decipher the inscriptions. He collected some of his letters and in 1440 issued a dialogue on nobility. In 1450 an outbreak of the pest sent Nicholas V to Fabriano and Poggio to his birthplace where he completed the compilation of the "Facetiæ". This is a collection of witty sayings, anecdotes, quidproquos, and insolence, mingled with obscenities and impertinent jesting with religious subjects. In 1451 Poggio dedicated to Cardinal Prospero Colonna his "Historia disceptativa convivalis", in three books, of which the third alone is interesting. Poggio maintains against Leonardo Bruni of Arezzo that there was only one language spoken at Rome by the people and the educated classes. This question had a practical bearing for the Italians upon whom it was incumbent to create their literary language, but Poggio's sole ideal was Latin literature. Poggio himself wrote only in Latin, into which tongue he translated the history of Diodorus Siculus and the "Cyræpædia" of Xenophon. In June, 1453, Poggio was summoned by the Medici to Florence where he was

given charge of the chancery of the republic. Here he composed his last works, the dialogue "De Miseriis humanæ condicionis", a translation of Lucian's "Golden Ass", and the ten books of his history of Florence from 1350 to 1455, a work much admired by contemporaries, but written in a diffuse style, and partial. No mention has been made of his occasional writings, eulogies, discourses, invectives, but reference must be made to his numerous quarrels with other humanists, Filelfo, George of Trebizond, Tommaso Rieti, Lorenzo Valla (author of "Antidotus in Poggium"). In all these disputes Poggio showed the same fecundity of low insults and calumnies as his opponents. Poggio's works were collected at Basle (in folio, 1513). His letters were issued in a special edition by Tonelli (3 vols., 1832-61).

PAUL LEJAY.

Poggio Mirteto, DIOCESE OF (MANDELENSIS), in the province of Perugia, central Italy. The city is situated on a pleasant height, by the River Sole, in a fertile region, where pot-herbs, cereals, grapes, and pastures are cultivated, and where ancient ruins of villas and of aqueducts are numerous; the villa of Terentius Varro was in this neighbourhood. Poggio Mirteto was under the jurisdiction of the Abbot of Farfa, and the present home of the bishop was the abbot's residence. The Abbey of Farfa, however, like that of San Salvatore Maggiore, passed to the Diocese of Sabina, from which the territory of the See of Poggio Mirteto was taken in 1841; the old collegiate church became the cathedral, and a seminary was established. The first bishop was Nicolo Crispigni. The diocese has 38 parishes, with 32,600 inhabitants, 2 religious houses of men, and 8 of sisters, under whose direction are the schools for girls in several communes (See FARFA, ABBEY OF.)

U. BENIGNI.

Pogla (τὰ Πῶγλα), titular see in Pamphylia secunda. Pogla is mentioned only by Ptolemy, V, 5, possibly by Hierocles, "Synecdemus", 680, 4, but the name is written Socla and it refers without doubt to another locality. Money was coined with the pagan Πρωγλέων (Head, "Historia numorum", 591). At present it is the town of Foughla, sandjak of Adalia, vilayet of Koniah. Le Quien (Oriens christianus, I, 1027) mentions two bishops Paul, present at the Council of Chalcedon (451) and Nicephorus at the Council of Nicæa (787). The "Notitiæ Episcopatum" continue to mention the see among the suffragans of Perge as late as the thirteenth century.

RADET, *The Cities of Pisidia*, extract from the *Revue Archéologique* (Paris, 1893), p. 13.

S. PÉTRIDÈS.

Poissy. RELIGIOUS CONFERENCE OF. See DISCUSSIONS, RELIGIOUS.

Poitiers, DIOCESE OF (PICTAVENSIS), includes the Departments of Vienne and Deux-Sèvres, and is suffragan of Bordeaux. The Concordat of 1802 added to the see besides the ancient Diocese of Poitiers a part of the Dioceses of La Rochelle and Saintes (see LA ROCHELLE). Mgr Duchesne holds that its earliest episcopal catalogue represents the ecclesiastical tradition of Poitiers in the twelfth century. The catalogue reckons twelve predecessors of St. Hilary, among them Nectarius, Liberius, and Agon, and among his successors Sts. Quintianus and Maxentius. Mgr Duchesne does not doubt the existence of these saints but questions whether they were bishops of Poitiers. According to him, St. Hilary (350-67 or 8) is the first bishop of whom we have historical evidence.

Among his successors were St. Pientius (c. 544-60); St. Fortunatus (c. 599); St. Peter (1087-1115), exiled by William IX, Count of Poitiers, whose divorce he refused to sanction; Gilbert de la Porrée (1142-54); Blessed William Tempier (1184-97), who, as Mgr Barbier de Montault has shown, was irregularly ven-

erated as a saint in certain parts of the diocese since he died subsequent to the declaration of Alexander III which reserved canonizations to the Holy See; Blessed Gauthier de Bruges (1278-1306); Arnould d'Aux (1306-12), made cardinal in 1312; Guy de Malsec (1371-5), who became cardinal in 1375; Simon de Cramaud (1385-91), indefatigable opponent of the anti-pope, Benedict XIII, and who again administered the diocese (1413-23) and became cardinal in 1413; Louis de Bar (1394-5), cardinal in 1397; Jean de la Trémouille (1505-7), cardinal in 1507; Gabriel de Gramont (1532-4), cardinal in 1507; Claude de Longwy, Cardinal de Givry (1538-52), became cardinal in 1533; Antonio Barberini (1652-7), cardinal in 1627; Abbé de Pradt (1805-9), afterwards Archbishop of Mechlin, Pie (1849-80), cardinal in 1879. St. Emmeram (q. v.) was a native of Poitiers, but according to the Bollandists and Mgr Duchesne the documents which make him Bishop of Poitiers (c. 650) are not trustworthy; on the other hand Bernard Sepp (*Analec. Boll.*, VIII) and Dom Chamard claim that he did hold the see, and succeeded Didon, bishop about 666 or 668 according to Dom Chamard.

As early as 312 the Bishop of Poitiers established a school near his cathedral; among its scholars were St. Hilary, St. Maxentius, Bishop Maximus of Trier, and his two brothers St. Maximinus of Chinon and St. Jouin of Marne, St. Paulinus, Bishop of Trier, and the poet Ausonius. In the sixth century Fortunatus taught there, and in the twelfth century intellectual Europe flocked to Poitiers to sit at the feet of Gilbert de la Porrée. Charles VII erected a university at Poitiers, in opposition to Paris, where the majority of the faculty had hailed Henry VI of England, and by Bull of 28 May, 1431, Eugene IV approved the new university. In the reign of Louis XII there were in Poitiers no less than four thousand students—French, Italians, Flemings, Scots, and Germans. There were ten

colleges attached to the university. In 1540, at the Collège Ste. Marthe, the famous Marc Antoine Muret, whom Gregory XIII called in later years the torch and the pillar of the Roman School, had a chair. The famous Jesuit Maldonatus and five of his confrères went in 1570 to Poitiers to establish a Jesuit

college at the request of some of the inhabitants. After two unsuccessful attempts, they were given the Collège Ste. Marthe in 1605. Père Garasse, well known for his violent polemics and who died of the plague at Poitiers in 1637, was professor there (1607-8), and had as a pupil the great French prose writer, Guez de Balzac. Among other students at Poitiers were Achille de Harlay, President de Thou, the poet Joachim du Bellay, the chronicler, Bran-

tome Descartes, Viète the mathematician, and Bacon, afterwards Chancellor of England. In the seventeenth century the Jesuits sought affiliation with the university and in spite of the lively opposition of the faculties of theology and arts their request was granted. Jesuit ascendancy grew; they united to

Ste. Marthe the Collège du Puygareau. Friction between them and the university was continuous, and in 1762 the general laws against them throughout France led to the Society leaving Poitiers. Moreover, from 1674 the Jesuits had conducted at Poitiers a college for clerical students from Ireland. In 1806 the State reopened the school of law at Poitiers and later the faculties of literature and science. These faculties were raised to the rank of a university in 1896. From 1872 to 1875 Cardinal Pie was engaged in re-

establishing the faculty of theology. As a provisional effort he called to teach in his Grand Séminaire three professors from the Collegio Romano, among them Père Schrader, the commentator of the Syllabus, who died at Poitiers in 1875.

At Ligugé in the diocese, St. Martin founded the first monastery in Gaul, to which were attached a catechetical school and a baptistery. This monastery, afterwards eclipsed by that of Marmoutiers founded by St. Martin near Tours, was destroyed by the Normans in 865, and was later a simple priory depending on the Abbey of Maillezais, and still later belonged to the Jesuits. In 1853 the Benedictines settled in Ligugé and in 1856 it became an abbey. The Bene-

(Merovingian, IV Century)

dictines of Ligugé, driven out in 1880, took refuge at Silos in Spain; the abbey in after years became once more a religious centre, but the Associations Law of 1901 again forced the monks into exile at Chevetogne in Belgium. Another important monastery was that of Anson, or St. Jouin of Marne, founded before 500, and subsequently placed under the Rule of St. Benedict. St. Generous, St. Paternus (Pair), afterwards Bishop of Avranches, his friend St. Scubilio, and St. Aichard, afterwards Abbot of Jumièges, were all monks of Anson. A Benedictine abbey founded in 785 by Roger, Count of Limoges, and his wife Euphrasia, was the origin of the town of Charroux, and was enriched with many gifts by Charlemagne. The

of a Roman Basilica, XII Century

Abbey of St. Savin-sur-Gartempe was founded by Charlemagne. Its church and crypt, studied in 1836 by Prosper Mérimée, dates from the eleventh century, and possesses a series of frescoes of the eleventh and twelfth centuries representing the history of the world from the creation until Moses, and the martyrdom of SS. Savinus and Cyprian, which are unique in the history of French mural painting. The church of St. Peter of Chauvigny (eleventh and twelfth centuries) has some admirable sculpture work; and the town of Poitiers is a veritable museum of religious art. Parts of the baptistery of St. John, recently studied with care by the Jesuit archæologist, P. de la Croix, date from the fourth century; and there is evidence that in the time of Constantine baptism by immersion was practised in Poitiers.

The church founded in the fourth century by St. Hilary in honour of SS. John and Paul, martyrs and where St. Hilary was buried, was afterwards dedicated to St. Hilary, and reconstructed in the eleventh century by Emma, Queen of England and mother of Edward the Confessor, and by her architect Gautier Coorland. The vaulting of the seven naves of this building, known to-day as St. Hilary the Great, reminds one of Byzantine cupolas, and is an imposing sight. The church of St. Radegunde, which has a Roman apse (eleventh century) and a Gothic nave (twelfth century), rises on the site of a church founded in the sixth century in honour of the virgin queen St. Radegunde, who retired to the monastery of Ste. Croix. In the crypt is her tomb, and facing it a statue of the saint, an "ex voto" of Anne of Austria in 1658, for the cure of her son Louis XIV. The church of Notre Dame la Grande has a twelfth-century façade, which, to a height of fifty-six and a breadth of forty-eight feet, is completely covered with Romanesque carvings at one time polychrome. The cathedral, St. Peter's, is a beautiful Gothic building begun in the second half of the twelfth century under

the reign of Henry II Plantagenet of England and Eleanor of Aquitaine and consecrated 18 October, 1379. The Hotel de Ville of Poitiers contains some frescoes, masterpieces of Puvis de Chavannes; they represent the victorious arrival of Charles Martel at Poitiers, and Fortunatus reading his poems to St. Radegunde. Among councils held at Poitiers are those of: 590, in which the Frankish princess and nun, Chrodielma, was excommunicated for revolt against her abbess; 1074, which dealt with the matrimonial affairs of William, Count of Poitiers, and to which the Bishop of Poitiers, Isambert, came with a troop of soldiers and dispersed the members; 1075, which dealt with the heresy of Berengarius, and at which Giraud was papal legate; 1078, in which the papal legate Hugues passed laws against simony; 1100, in which Bishop Norgaud of Autun was deposed for simony, Philip I of France and his concubine Bertrade were excommunicated, and the bishops narrowly escaped being stoned by the order of the Count of Poitiers, who was displeased with their decision; 1106, at which a crusade was proclaimed. The Synod of 1868, assembled to celebrate the fifteenth centenary of St. Hilary's death, was attended by representatives from every part of the ecclesiastical province of Bordeaux. Five councils were held at Charroux in the diocese; that of 1027 legislated against the spread of Manichæism, and was concerned with the "Pax Dei", or Truce of God.

Poitiers is rich in historical souvenirs. The neighbourhood of Poitiers was the scene of two famous battles, that of October, 732, in which Charles Martel defeated Abd-el-Raman and definitively saved France from Saracen invasion, and that of September, 1356, in which the King of France, John II, the Good, was made prisoner by the English. In the convent of the Cordeliers at Poitiers dwelt for sixteen months (June, 1307-8) Pope Clement V, while Philip IV, the Fair, of France dwelt with the Jacobins. Jacques Molay and seventy-two Templars were questioned by Clement V at Poitiers. In 1428 when the English held the country north of the Loire, Poitiers was more or less the headquarters of Charles VII, and thither in March, 1429, went Blessed Jeanne d'Arc to see Charles VII and be questioned concerning her mission. The convent of the Calvarians was founded in 1617 by Antoinette d'Orléans, under the inspiration of the Capuchin Francis Le Clerc du Tremblay. "Poitiers, a town full of priests and monks", wrote La Fontaine in 1633, during a journey through Poitou. The portion of the diocese which lies in the Department of Deux-Sèvres was greatly disturbed during the sixteenth century by the Wars of Religion and under the French Revolution by the Wars of La Vendée. Among natives of the diocese are: Cardinal Jean Balue; the Sainte-Marthes (see *GALLIA CHRISTIANA*); Filleau de la Bouchetterie (1600-82), who, in 1654, accused Saint-Cyran, Jansenius, and four other Jansenists, with having at a meeting in 1621, discussed the means of substituting Deism for Catholicism; Mme de Maintenon; the Protestant theologian, Isaac Beausobre (1659-1738), the historian of Manichæism. Urbain Grandier was curé of Loudun in the diocese and after a famous trial was burned to death there (18 August, 1634) on the charge of having bewitched the Ursulines of Loudun. Besides St. Radegunde, the great saint of the diocese, and the saints already named the diocese especially venerates: St. Abra, daughter of St. Hilary; St. Leonius (Liène), friend of St. Hilary; St. Justus, priest, who was designated as his successor by St. Hilary, but who refused the honour (fourth century); SS. Savinus and Cyprian, apostles of Poitou, martyred by the Huns in 438; St. Maxentius (d. 515), founder of a monastery between Niort and Poitiers, whence arose the town of St. Maixent; St. Fridolinus, an Irishman, abbot of St. Hilary's of Poitiers (d. c. 540); St. Lubin, Bishop of

Chartres, native of Poitou (d. 556); St. Junianus, director of St. Radegunde, founder and first abbot of the monastery of Mairè-l'Evescault (d. 587); St. Agnes (d. 588); St. Disciola (d. 583), abbess and nun of Ste. Croix; St. Léger, Abbot of St. Maxentius and afterwards Bishop of Autun (616-678); St. Adelelmus (Alléaume), Abbot of La Chaise-Dieu, Prior of Burgos (d. 1097), a native of Loudun; St. William of Aquitaine, Count of Poitiers (1099-1137), excommunicated as a partisan of the Schism of Anacletus, and converted by St. Bernard; and Blessed Francis d'Amboise (d. 1485), whose father was Viscount de Thouars; Blessed Théophane Vénard, missionary, martyred in Tonkin in 1861, born at St. Loup-sur-Thouet in the Diocese of Poitiers; Ven. Charles Cornay, missionary in China, martyred in 1839, a native of Loudun.

The chief shrines of the diocese are: Notre-Dame la Grande, or Notre-Dame des Clefs at Poitiers, a place of pilgrimage since the thirteenth century; Notre-Dame de l'Agenouillée at Azay-sur-Thouet, a place of pilgrimage since the middle of the sixteenth century; Notre-Dame de Pitié, near the Chapelle St. Laurent, a celebrated place of pilgrimage during the Middle Ages; Notre-Dame de Beauchêne, at Cerizay, a place of pilgrimage since the twelfth century. Many pilgrims are also drawn by the chapel built at Ligugé on the site of the cell of a catechumen whom St. Martin brought to life in order to baptize him, by the crypt of St. Radegunde at Poitiers, and by the church at Marçay, built in 1884, the first church to be dedicated to St. Benedict Labre. Before the application of the Associations Law of 1901 there were in the Diocese of Poitiers, Augustinians of the Assumption, Jesuits, Dominicans, Canons Regular of St. Augustine and many congregations of teaching brothers, a house of Picpus Fathers, who were founded at Poitiers early in the nineteenth century by the Venerable Père Coudrin, and who afterwards changed their parent-house to Paris. Many important congregations of women originated in the diocese: The Daughters of the Cross known as Sisters of St. Andrew (mother-house at La Puye), a nursing and teaching order, established in 1807 by Ven. André-Hubert Fournet, pastor of St. Pierre-de-Maillé, and his penitent, Elisabeth Bichier des Ages; this congregation has houses in Spain and Italy; the Sisters of the Immaculate Conception, a teaching order founded in 1854 by Père Pécot with mother-house at Niort; the Sisters of St. Philomena, a teaching order founded in the middle of the nineteenth century by Abbé Gaillard with mother-house at Salvart. At the beginning of the twentieth century the religious congregations in the diocese had charge of 44 nurseries, 1 school for the blind, 2 schools for deaf and dumb, 1 orphanage for boys, 7 orphanages for girls, 13 hospitals, 1 home for incurables, 1 lunatic asylum, 2 houses of retreat, and 6 district nursing homes. In 1905, at the breach of the Concordat, the Diocese of Poitiers had 684,808 inhabitants, 69 parishes, 574 auxiliary parishes, and 97 curacies maintained by the State.

GEORGES GOYAU.

Pola. See PARENZO AND POLA, DIOCESE OF.

Poland.—I. GEOGRAPHY.—The western part of the Sarmatian Plain together with the northern slopes of the Carpathians, i. e. the territory included between lat. 46° and 59° N., and between long. 32° and 53° E. of Ferro, with an area of about 435,200 square miles (twice as large as Germany), constituted the former Kingdom of Poland. Very likely Poland received its name on account of its extensive plains (in Polish the word for "field", or "plain", is *pole*), which are the characteristic feature of its topography. As an independent country (i. e., until the year 1772), Poland was bounded on the north by the Baltic Sea, on the east by the Russian Empire, on the south by the dominions of the Tatars and Hungary, on the west by Bohemia and Prussia. The rivers of Poland flow either to the north and west, and empty into the Baltic, or flow south into the Black Sea. The rivers that empty into the Baltic are the Oder, Vistula, Niemen, and the western Duna; those that empty into the Black Sea are the Dniester, Boh (Bug), and Dnieper. The climate is universally temperate, and the four seasons are sharply defined. The chief industry has always been agriculture, and little account has ever been made of either commerce or manufactures, although the country was situated on the direct line of communication between Europe and Asia.

The various divisions, by the union of which the Kingdom of Poland was formed, still bear their original names. They are: (1) Great Poland, in the basin of the Warthe. Cities: Gnesen, Posen on the Warthe; (2) Kujavia, north of Great Poland, at the foot of the Baltic ridge to the left of the Vistula. City: Bromberg; (3) Little Poland, the basin of the upper and middle Vistula. Cities: Cracow, Sandomir, Czenstochowa, Radom; (4) Silesia, at the headwaters of the Vistula and on the upper Oder, belonged to Poland only until the year 1335. Capital: Breslau; (5) Masovia, in the basin of the middle Vistula. Capital: Warsaw; (6) Pomerania, between the Baltic Sea, the Vistula and Netze. Cities: Kolberg and Danzig; (7) Prussia, originally the country between the Baltic, the Vistula, the Niemen and the Drewenz. Cities: Thorn, Marienburg, and Königsberg; (8) Podlachia, on the rivers Narew, and Bug. City: Bjelsk; (9) Polesia, in the valley of the Pripet. City: Pinsk; (10) Volhynia, in the basin of the rivers Styr, Horyn, and Slucz. Cities: Vladimir and Kamenetz; (11) Red Russia, on the Dniester, San, Bug, and Prut. Cities: Sanok, Przemysl, Lemberg, and Kolomyia; (12) Podolia, in the basin of the Strypa, Seret, Sbrucz, and upper Boh. Cities: Kamenetz, on the Smotrycz, Mohileff, on the Dniester, Buczacz; (13) The Ukraine, east of the Dniester in the basin of the Bug and Dnieper. Cities: Kieff, Zhitomir, Poltava, Oczakow, and Cherson; (14) White Russia, on the upper Dnieper, Duna, and Niemen. Cities: Minsk, Vitebsk, and Polotsk; (15) Lithuania, on the middle Niemen, extending to the Duna. Cities: Vilna, Grodno, Kovno; (16) Samland, to the right of the lower Niemen. City: Worme; (17) Courland, on the Gulf of Riga, with the city of Mitau, belonged to Poland only indirectly; (18) Livonia, on the Gulf of Riga, and Esthonia, on the Gulf of Finland, belonged to Poland for a short time only.

Poland was, for the most part, populated by Poles; after the union of Lithuania with Poland were added Ruthenians and Tatars, and furthermore, though in no considerable numbers, Jews, Germans, Armenians, Gipsies, and Letts. As a matter of fact, the Poles inhabited the whole of Great Poland, Little Poland, and a part of Lithuania, as well as part of the Ruthenian territory. Moreover, the nobility, the urban population, and the upper and better edu-

cated classes in general throughout the whole country were either Poles or thoroughly Polonized. The total population was generally given as nine millions. The Ruthenians inhabited the eastern (White and Red Russia), and the south-eastern provinces (Red Russia and the Ukraine). The Lithuanians formed the bulk of the population in Samland and the waywodeships of Wilna and Troki. A political distinction was made between "Crown Poland" and Lithuania. These two divisions, which united after 1569, differed more particularly in that each country had its own officials. After 1569, also, the designation "Republic of Poland" became customary to denote not any definite polity, but a league of states (Lithuania and Crown Poland). Crown Poland was called a kingdom; Lithuania, a grand-duchy. In 1772, 1793, and 1795 the territory of Poland was divided among the three adjoining states: Lithuania and Little Russia were given to Russia; the purely Polish territories, to Prussia and Austria. The new boundary between these states was formed by the Pilica and the Bug. Thus Russia received 8500 square miles and 6,500,000 inhabitants; Prussia, 2700 square miles and 3,000,000 inhabitants; Austria, 2100 square miles and 4,275,000 inhabitants.

Napoleon took from Prussia the Polish territories annexed in 1793 and 1795 and out of them formed what he called the Duchy of Warsaw. New territorial changes were effected by the Congress of Vienna: Prussia received a part of the Duchy of Warsaw as the Grand duchy of Posen; Russia received the rest of the Duchy of Warsaw as a separate Kingdom of Poland (Congress Poland); Austria retained the territories previously acquired, under the name of the Kingdom of Galicia and Lodomeria. Galicia now has a population of more than seven millions, of whom somewhat less than four millions are Poles, and 3,074,000, Ruthenians. Grouped according to religion there are 3,350,000 Catholics of the Latin Rite, 3,104,000 Greek Uniates, and 811,000 Jews.

The San, a tributary of the Vistula, divides Galicia into an eastern and western part. The latter is occupied by the Poles, the former by the Ruthenians, though there are also many Poles. For administrative purposes Galicia is divided into seventy-nine districts. The intellectual centre of the country is Cracow (150,000 inhabitants), but the actual capital is Lemberg (250,000 inhabitants). There are two universities, one at Cracow and one at Lemberg, one polytechnic institute at Lemberg, and one commercial academy in each of these two cities. In the Polish provinces belonging to Prussia there are approximately four million Poles. In Silesia they constitute two-thirds of the population; they are also found on the Baltic and in the provinces of East and West Prussia, being most numerous (more than 1,500,000) in the Grand duchy of Posen. The capital, Posen, numbers about 150,000 inhabitants. Among the Poles the Catholic religion predominates. The Poles under Russian rule are found chiefly in Congress Poland; also, in small numbers, in Lithuania, Volhynia, Podolia, and the Ukraine. The total probably amounts to nine millions. The capital of Russian Poland is Warsaw, with 800,000 inhabitants. The Greek Uniat Bishopric of Chelm (Kholm), situated within the boundaries of the Kingdom of Poland, was compelled by force to accept the schism in 1875; however, since 1905, a large majority of the former Uniates have returned to the Catholic Church.

II. POLITICAL HISTORY.—At the period when the authentic history of Poland begins, the Germans had already become the most powerful nation of Europe, and their kings sought to extend their dominion to the Slavic tribes beyond the Elbe. The latter were very soon partly exterminated, partly subjugated. The eastern boundary of Germany was advanced as far as the Oder; beyond this was Polish territory.

But the German armies did not halt there; in the neighbourhood of where Frankfort now stands they crossed the Oder and attacked the Polish strongholds. Mieszko, the Polish ruler of Posen (962–92), acknowledged the German Emperor as his lord paramount, promising to pay a yearly tribute, and upon demand to aid him with an armed force. In 963 Mieszko bound himself and his people to embrace Christianity. Christian missionaries were at once sent to Poland; the first bishopric was that of Posen, which was placed under the supervision of the German archbishop at Magdeburg. This was the first contact of the Poles with European civilization. From Germany and Bohemia numerous missionaries entered the country to baptize the people, while from all the Western countries came immigrants and monks, and convents began to be built. The spread of Christianity was greatly furthered by the two wives of Prince Mieszko: first, Dabrowska, a sister of the King of Bohemia, and then Oda, formerly a nun whom Mieszko had married after the death of Dabrowska. Prince Mieszko considered himself a vassal of the pope, and as such paid him tribute. From this time on, the Church contributes so much to the national development that it will be impossible to trace intelligently the political history of Poland without at the same time following its ecclesiastical development.

Poland had hardly begun to play a part in history when it acquired extraordinary power. This was in the reign of the famous Boleslaw Chrobry (992–1025), the eldest son of the first Polish ruler. His dominions included all the lands from the Baltic to the country beyond the Carpathians, and from the River Oder to the provinces beyond the Vistula. He had at his command, ready for instant service, a well-equipped army of 20,000 men. In spite of his great power, Boleslaw continued to pay the customary tribute to Germany. By his discreet diplomacy he was successful in obtaining the consent of the pope, as well as of the German emperor, to the erection of an archiepiscopal see at Gnesen, and thus the Polish Church was relieved of its dependence upon German archbishops. To emphasize Poland's independence of Germany, Boleslaw assumed the title of king, being crowned by the newly created archbishop of Gnesen in 1024. The clergy in Poland were at that time exclusively of foreign birth; intimate relations between them and the people were therefore impossible. The latter did not become enthusiastic about the new religion, nor yet did they return to paganism, for severe penalties, such as knocking out the teeth for violating the precept of fasting, maintained obedience to the clergy among the people.

After the death of Chrobry disaster befell the Poles. Their neighbours attacked them on all sides. The son of Boleslaw, Mieczyslaw II (1025–34), unable to cope with his enemies, yielded allegiance to the emperor, and lost the title of king. After his death there was an interregnum (1034–40) marked by a series of violent revolutions. Hosts of rebellious peasants traversed the country from end to end, furiously attacked castles, churches, and convents, and murdered noblemen and ecclesiastics. In Masovia paganism was re-established. Casimir, a son of Mieczyslaw II, surnamed the Restorer, recovered the reins of government, with the aid of Henry VIII, restored law and order, and rooted out idolatry. At his death the sovereignty devolved upon his son, Boleslaw II, Smialy (1058–79). This ruler was favoured by fortune in his warlike undertakings. His success at last led him to enter upon a conflict with the emperor. Conditions at the time were favourable to his securing political independence. The Emperor Henry IV was engaged in a struggle for supremacy with Pope Gregory VII, who allied himself with the vassal princes hostile to the emperor, among them Boleslaw Smialy, to whom he sent the kingly crown. Poland

revolted from the empire, and the Polish Church began a reform in accordance with Gregory's decrees. By the leading nobles Boleslaw was thoroughly hated as a despot; the masses of the people murmured under the burden of incessant wars; the clergy opposed the energetic reformation of the Church, which the king was carrying on, their opposition being particularly directed against Gregory's decree enforcing the celibacy of the clergy. The dissatisfied elements rose and placed themselves under the protection of Bohemia, Bishop Stanislaw even placed the king under the ban of the Church, while the king declared the bishop guilty of high treason for allying himself with Bohemia and the emperor. The king's sentence was terribly executed at Cracow, where the bishop was done to death and hewn in pieces. In the civil war which ensued Boleslaw was worsted and compelled to take refuge in Hungary.

After his death Poland had to pass through severe and protracted struggles to maintain its independence. Towards the end of the eleventh century its power was broken by the Bohemians and Germans, and it was once more reduced to the condition of an insignificant principality, under the incompetent Wladislaw Herman (1081-1101). At this period the clergy constituted the only educated class of the entire population, but they were foreigners, and the natives joined their ranks but slowly. At all events they are entitled to extraordinary credit for the diffusion of learning in Poland. The convents were at that time the centres of learning; the monks taught the people improved methods of cultivating the soil, and built inns and hospitals. During the whole of the twelfth and thirteenth centuries Poland was in a most unfortunate condition. Boleslaw III, Krzywousty (1112-39), at his death divided the country into principalities, which were bequeathed to his sons as hereditary possessions. The eldest son was to receive the territory of Cracow, with his capital at Cracow, and to be the overlord of the whole country. In course of time the other sons again divided their lands among their children, and thus Poland was split up into smaller and smaller principalities—a process which proved fatal. The overlords were unable to effect permanent reforms; Wladislaw II (1139-46), Boleslaw the Curly-haired (1146-73), Mieczyslaw the Old (1173-77), Casimir II the Just (1177-94), Mieczyslaw the Old (supreme for the second time, 1194-1202), Wladislaw III (1202-06). The only spiritual bond that held the dismembered parts of Poland together was the Church. With this in mind Leszek the Wise (1206-27) increased popular respect for the clergy by giving them the right to elect their bishops, and territorial jurisdiction over church lands. His brother, Prince Conrad of Masovia, about this time summoned the knights of the Teutonic Order. The heathen tribes on the borders of Poland—Jazygians, Lithuanians, and Prussians—were constantly making predatory incursions into the country. The Prussians, who had settled east of the Vistula, were active in these raids.

To put an end to this state of things a knightly order established by Germans in Palestine was summoned by Conrad for the conquest and Christianization of Prussia. These Knights of the Cross, so called from the black cross upon their white cloaks, established themselves on the Vistula in 1228. They were also known as the Teutonic Knights (*Deutschen Ritter*). In a short time they exterminated the Prussians, to replace whom German colonists were brought into the land, forming a powerful state controlled by the order, a state of strictly German character, which soon directed its attacks against Poland. The condition of Poland, meanwhile, was disastrously affected by another cause: it was subdivided into about thirty small states, and the supreme princes, Henry I the Bearded (1232-38), Henry II the Pious (1238-41), Boleslaw (1243-79), Leszek the Black

(1279-88), Henry Probus (1288-90), Przemyslaw II (1290-95), and Wacław II (1290-1305), could find no remedy for the evil. Moreover, in the years 1241 and 1259 the Tatars invaded the country, completely devastated it, and carried off vast multitudes into captivity. The territories thus depopulated were then occupied by well organized colonies from Germany. In the early thirteenth and late fourteenth centuries these colonists became possessed with a desire to seize the sovereign power in the State, weakened as it was by sub-division. But the magnates of Poland decided to oppose this scheme resolutely. The clergy issued instructions at synods against the admission of Germans to church benefices, the church being the only power that could supply any means of

firm national organization. The Archbishop of Gnesen was the supreme religious head of all the Polish principalities. The clergy of the time, having been for fully a century native Poles, cultivated the Polish language in the churches and schools. It was among the clergy that the opposition to the German influence first took form. Above all, it was the clergy who took active measures to bring about the union of the various divisions of Poland into one great kingdom.

Circumstances favoured this plan. For during this period of incessant civil wars, Tatar invasions, famine, contagious diseases, conflagrations, and floods, the piety of the common people was remarkable. Never before or after was the number of hermits and pilgrims so large, never was the building of convents carried on so extensively. Princes, princesses, nobles, and knights entered the various orders; large sums of money were given for religious foundations. To this period belong the Polish saints whom the Church has recognized. The clergy gained extraordinary influence. In the convent-schools singing and preaching was henceforth carried on in the Polish language. Germans were not admitted to the higher dignities of the Church. At the same time the Polish clergy prepared to bring about a union of the several states into which the country was divided. This was accomplished after many years of war by the energetic prince Wladislaw, surnamed the Short (1305-33). He determined, furthermore, to have himself crowned king. After receiving the kingly crown from the pope, he crowned himself in the city of Cracow (1320). His whole reign was spent in warfare; in a way, he restored Poland and preserved it from foreign domination. His son and successor, Casimir the Great (1333-70), undertook to restore order in the internal affairs of the realm, demoralized by a century of almost uninterrupted warfare. He promoted agriculture, the trades, and commerce; he built fortresses and cities, constructed highways, drained marshes, founded villages, extended popular education, defended the laws, made them known to the people by collecting them into a code (1347), established a supreme court at Cracow (1366), and offered a refuge in Poland to the Jews, who were then everywhere persecuted. He also founded a university at Cracow

TOMB OF CASIMIR THE GREAT
By Veit Stoss, in the Cathedral, Cracow

(1364) and organized a militia. When he inherited the Principality of Halicz (Galicia), a part of Little Russia, he brought this district to a high degree of prosperity by his policies. Casimir died without issue, and with him the Piast dynasty became extinct.

During Casimir's reign the clergy, on account of their services in bringing about the unification of the kingdom, gained extraordinary popularity, all the more because they were the only educated element of the nation. There were seven religious orders: Benedictines, Templars, Cistercians, Dominicans, Franciscans, Lateran Canons, and Præmonstratensians. Libraries and schools were to be found only in the convents, where, also, the poor, the sick, and the crippled received comfort and help. Besides promoting religion, some of the convents, especially those of the Cistercians, sought to promote agriculture by clearing forests, laying out gardens, and introducing new varieties of fruits, etc. The Cistercians employed the lay members attached to their order in manual labour, under strict regulations, in their fields, gardens and workshops. The Norbertine, Cistercian, Dominican, Franciscan, and Benedictine nuns devoted themselves more particularly to the education of girls. Laymen despised learning as something unworthy of them. On the other hand, the clergy only unwillingly admitted laymen into their schools, which they regarded as preparatory institutions for those intending to take orders. The first schools were established by the Benedictines at Tyniec, but as early as the thirteenth century this order, composed for the most part of foreign-born members, ceased teaching. The secular clergy established schools in the cathedral, collegiate, and parish churches.

While Casimir still lived the nobility elected as his successor Louis, King of Hungary (1370-82), who assumed the regency without opposition immediately after Casimir's death. Under him the relations existing between the people and the Crown underwent substantial changes. Louis had no sons, only daughters, and he was anxious that one of these should occupy the Throne of Poland. With this object in view he began to treat with the Polish nobles. The nobles assented to his plan and in return received numerous privileges. Thereafter there was bargaining and haggling with each new king, a course which finally resulted in the complete limitation of the royal power. On the other hand, the despotism of the aristocracy increased in proportion as the power of the kings declined, greatly to the detriment of the other estates of the realm. Louis was succeeded, after much hesitation on her part, by Queen Hedwig (Jadwiga), in the year 1384. The Poles urged her marriage to Jagiello, or Jagellon, the Prince of Lithuania, but on condition that he and all his people should embrace Christianity. As soon as Jagiello had accepted this proposal and had been baptized, he was crowned King of Poland (1386-1434)—on the strength of being the consort of Queen Hedwig. Soon after the close of the coronation festivities at Cracow a large body of ecclesiastics crossed into Lithuania, where, after a short resistance on the part of the heathen priests, the people were baptized in vast multitudes. One of the most important tasks of the united kingdom of Poland and Lithuania was the final reckoning with the Teutonic Knights, whose power still threatened both countries. In 1409 began a war which was signalized by the crushing defeat of the order at Tannenberg-Grünfelde. The battle of Tannenberg broke for all time the power of the order, and placed Poland among the great powers of Europe. Until then Poland had been looked upon as a semi-civilized country, where the natives were little better than savages, and culture was represented by the German clergy and colonists. With the battle at Tannenberg this period of disrepute was at an end.

The influence of the Polish clergy was still further

increased after the union of Poland and Lithuania. The royal chancery was administered by clerics. The clergy now (1413-16) caused the adoption of a whole series of enactments against heresy with especially severe provisions against apostates. In the general synods, in which the Polish clergy had formerly been classed as German, its representatives in the course of time received even greater attention, and the candidacy of Polish church dignitaries for the papal Throne was considered in all seriousness. Polish ecclesiastics brought it about that the adherents of the Eastern Schism in the Province of Halicz (Galicia) made their submission to the Holy See at Florence in 1439. Jagiello's son, Wladislaw (1434-44) in the year 1440 accepted the Hungarian Crown also, in order that, with the united forces of the two kingdoms, he might successfully resist the power of the Turks. He gained a brilliant victory over the Turks (1443), but, continuing the war at the pope's instance, in spite of the treaty of peace, met with disaster, and fell in the battle of Varna. His successors, Casimir the Jagellon (1447-92), John Albert (1492-1501), and Alexander (1501-06), wrought for the welfare of the State with varying success. The son of Alexander, Sigismund I (1506-48), sought to consolidate his military power and replenish his treasury. He succeeded in redeeming the mortgaged estates of the Crown, but could not obtain the consent of the nobility to the formation of a standing army and the payment of regular taxes. Sigismund also carried on several wars—with the Russians, the Tatars, and the Wallachians. In his reign, too, the secularization of the domains of the Teutonic order took place. The grand master, Albert, with the whole chapter and a majority of the knights, abjured their allegiance to the emperor, and adopted Lutheranism, an example followed by a large part of the Prussian nobility and all the commonalty. At the same time the land which had heretofore belonged to the order was proclaimed as a secular Prussian principality. Poland, desirous of continuing its suzerainty over Prussia, sanctioned these changes (1525), on condition, however, that Albert should swear allegiance to the Polish king. Albert accepted these terms, and Prussia accordingly became a fief of the Jagellons.

Towards the end of Sigismund's reign, between 1530 and 1540, a powerful tendency towards reform in religious matters manifested itself throughout Poland. This reform was indeed necessary. At the close of the fifteenth and beginning of the sixteenth century the clergy were thoroughly depraved. As a memorial, presented to the papal nuncio by the better elements, proves, the bishops were concerned only about the attainment of new dignities and the collection of their revenues; they oppressed the labourers on church lands, keeping them at work even on Sundays and holy days; the priests were uneducated and in many cases were only half-grown youths; the clergy were venal; monks dressed in silken robes often shared in the carousals of the nobility. The nobles envied the flourishing estates of the clergy. Thus a fruitful soil was provided for the spread of heresies in Poland. The spread of Hussite doctrines was not arrested until as late as 1500. The aristocracy, especially the younger members, who had attended foreign universities, now began to turn more and more to Calvinism, because this religion gave laymen a voice in matters affecting the church. Complete freedom of speech and belief was introduced. From all sides the Reformers, driven from other countries on account of their teachings, migrated to Poland, bringing with them a multiplicity of sects. The depraved clergy were unable to maintain their supremacy. Zebrzydowski, Bishop of Cracow, was wont to say openly: "You may believe in what you will, provided you pay me the tithe". Moreover, many of the clergy married. The aristocracy regarded the new doctrines as an advance upon the old, drove the Catholic

priests from the villages, substituted Protestant preachers, and ordered their dependents to attend the Calvinistic or Hussite devotions. But the common people opposed this propaganda.

The Reformation failed in Poland; but it stimulated the intellectual activity of the Poles and contributed very largely to the creation of a national Polish literature in place of the hitherto prevalent Latin literature. The sectarians were compelled to employ the vernacular in their addresses, if their teachings were to be effective with the masses. The Reformation gained momentum and growth especially after the death of Sigismund I, when his son Sigismund Augustus (1548-72) succeeded him. There was at the time much discussion as to convoking a national synod and establishing a national Church, independent of Rome. The representatives of various denominations in 1550 demanded the abolition of the ecclesiastical courts and complete religious liberty; they furthermore proposed the confiscation of church lands, the permission of marriage to the clergy, and communion in both kinds. But the king would not consent to these demands. The diet even passed stringent laws against the Protestant agitators, placing them on the footing of persons guilty of high treason. Nevertheless a decree was issued forbidding the payment of any and all tribute to the pope; at the same time the ecclesiastical courts were deprived of jurisdiction in cases of heresy, and the civil power was no longer obliged to execute their sentences. The heretics, however, did not gain complete equality of rights under the law. This curtailment of their liberty was because the sects were at variance with one another and because, furthermore, the Reformation was hardly more than a matter of fashion with the magnates, while the gentry and common people remained true to the Church; so that the heretics were unable to secure a majority in any part of Poland.

Still the number of Catholic churches converted to Protestant uses amounted to 240 in Great Poland and more than 400 in Little Poland, in addition to which the various sects had built 80 new churches, while in Lithuania, where Calvinism was particularly prevalent, there were 320 Reformed churches. As many as 2000 families of the nobility had abandoned the Faith. But the Protestants, although a very considerable portion of the population, were rendered incapable of successful effort by endless dissensions, while the Catholics, led by Hosius, Bishop of Ermland (see ERMLAND), sought to strengthen their position more and more. The latter took advantage of all the blunders committed by the sectarians, organized the better part of the Polish clergy, and with great energy carried into effect the reforming decrees of the Council of Trent. Furthermore, the Catholics adopted all that was good in the policy of the heretics. Polish works no longer appeared in Latin but in Polish, and it was even decided to translate the Holy Scriptures into Polish. In the field of science the Jesuits also developed great activity after the year 1595. As a result of these measures, the dissidents steadily lost ground; the Senate and the Diet were exclusively

Catholic. The plan of creating a national Church lost ground, and at last was entirely abandoned (1570).

Sigismund Augustus endeavoured to bring the nations under his sway into closer relations with one another, and he succeeded in effecting the union of Poland with Little Russia and Lithuania at the Diet of Lublin (1569), after which these three countries formed what was called the Republic (see above, under 1). With Sigismund the House of Jagiello came to an end. After his death the Archbishop of Gnesen, Primate of Poland, assumed the reins of government during the interregnum. As early as the reign of Sigismund the Old, the nobility had secured a fundamental law in virtue of which the king was to be elected not by the Senate but by the entire nobility. After the death of Sigismund the nobles elected Henry of Valois king (1574). But after five months, upon receiving news of his brother's death, he secretly left Poland to assume the Crown of France. Stephen Bathori, Prince of Transylvania, was next chosen king. His wise administration (1576-86) had many

good results, more particularly in extending the boundaries of the kingdom. After his death the Swedish prince, Sigismund III, of the House of Vasa (1587-1632), was elected. This king was one of the most zealous champions of Catholicism. His main object was, besides completely checking the propaganda of the Reformation, to give Poland a stable form of government. In the very first years of his reign Catholicism gained consid-

CRACOW
View of the Castle from the East

erably. At this time, also, the Jesuits came into Poland in larger numbers and very soon made their influence felt among the entire population. Their schools, founded at enormous expense of energy and capital, were soon more numerous than the schools of the heretics. Jesuit confessors and chaplains became indispensable in great families, with the result that the nobles gradually returned to Catholicism. Among the masses the Jesuits enjoyed great esteem as preachers and also because of their self-sacrifice in the time of the plague. Lastly, they pointed out to the nobility the exalted mission of Poland as a bulwark against the Turks and Muscovites. After the influence of the heretics in Poland had been destroyed, the Society of Jesus resolved to reclaim from the Greek schism the millions of inhabitants of Little Russia. To these efforts of the Jesuits must be ascribed the important reunion of the Ruthenian bishops with Rome in 1596. Ecclesiastically, the Polish dominions were at this time divided into two Latin archbishoprics with fifteen suffragan dioceses, while the Uniat Greeks had three archbishoprics with five bishoprics. The schismatical Greeks had the same number of archbishoprics (Metropolia), besides four bishoprics.

Under Sigismund III Poland waged wars of self-defence with Sweden, Russia, the Tatars, and the Turks. Poland's power at that time was so great that the Russian boyars requested a Polish prince, the son of Sigismund III, to be their ruler; but the king refused his consent. Sigismund transferred the royal residence from Cracow to Warsaw. After his death the

nobility elected Wladislaw IV king (1632-48). Towards the end of this reign the warlike Cossacks, a tribe of Little Russia on the River Dnieper in the Ukraine, who defended the southeastern frontier of Poland against the Turks and Tatars, revolted, joined forces with the Tatars, and with their combined armies inflicted a severe defeat upon the Poles. But even worse times were in store for Poland under the succeeding rulers, John Casimir (1648-68) and Michael Chorybut Wisniowiecki (1669-73). The Cossacks and Tatars made terrible ravages on the eastern frontiers of Poland. Then the Swedes, under Charles Gustavus, conquered (1665) almost the whole of Poland; King Casimir was compelled to flee to Silesia. After that the Russians invaded the country and occupied Kieff, Smolensk, Polotsk, and Vilna. In the autumn of 1655 the State, as such, ceased to exist. Lithuania and the Ukraine were under the power of the Czar; Poland had been conquered by the Swedes; Prussia was occupied by the Brandenburgers. No one dared offer any resistance. But when the Paulite monks of Czenstochau repelled an attack of 2000 Swedish troops, the spirit of the nobles and magnates revived. The clergy made this a religious war, the victory of Czenstochowa was ascribed to the intercession of the Blessed Virgin, whose gracious image was venerated in that convent; she was proclaimed "Queen of the Crown of Poland", and John Casimir, at Lemberg (1656), devoutly placed himself and the entire kingdom under her protection. In the event, the Swedes were soon routed. The wars almost simultaneously conducted against Lutheran Swedes, the schismatic Muscovites, and Mohammedan Tatars intimately associated Catholicism with patriotism in the minds of the Poles. "For Faith and Fatherland" became their watchword.

Overwhelmed by so many reverses, John Casimir abdicated in 1668. He was succeeded by Michael Wisniowiecki, during whose reign anarchy steadily increased. The Cossacks and Tatars again invaded Poland, as did a large army of Turks. The latter were defeated, however, by Sobieski, at Chotin, when barely 4000 out of 10,000 escaped death. In gratitude for this glorious achievement the nation, after the death of Wisniowiecki, elected John Sobieski king (1674-96). An excellent general and pious Christian knight, Sobieski, immediately after his accession to the throne, entered upon a struggle with the Turks. He aimed at the complete annihilation of the Turkish power, and for this purpose zealously endeavoured to combine the Christian Powers against the Turks; he also entered into a defensive and offensive alliance with the German Emperor. When the grand vizier, Kara Mustafa, at the head of about 200,000 men, had crossed the German frontier and was besieging Vienna, Sobieski with a Polish army hastened to its relief, united his forces with the emperor's, and utterly defeated the Turks (1683). This campaign was the beginning of a series of struggles between Poland and Turkey in which the latter was finally worsted. Under Augustus II, Elector of Saxony, Sobieski's immediate successor (1697-1733), Poland began to decline. Charles XII, King of Sweden, invaded Poland and occupied the most important cities. The Elector of Brandenburg, a former vassal of Poland, took advantage of the internal dissensions to make himself King of Prussia with the consent of Augustus II, thereby increasing the number of Poland's enemies by the addition of a powerful neighbour. Charles XII deposed Augustus II, and a new king, Stanislaus Leszczyński (1704-09), was elected by the nobility. Civil war followed, and the Swedes and Russians took advantage of it to plunder the country, pillaging churches and convents, and outraging the clergy. Augustus II resumed the throne under the protection of Russian troops, and Leszczyński fled to France.

From that time on Russia constantly interfered in

the internal affairs of Poland. The next king, Augustus III, of Saxony (1733-63), was chosen through the influence of Russia. The political parties of Poland endeavoured to introduce reforms, but Russia and Prussia were able to thwart them. The king promoted learning and popular education; he was inspired with the best intentions but was weak towards Russia. From the very beginning Russia had the partition of Poland in view, and for that reason fomented discord among the Poles, as did Prussia, especially by stirring up the magnates and the heretics. As early as 1733 the Diet deprived non-Catholics of political and civil rights, and Russia made use of this fact to stir up open revolt. The question of equal rights for dissidents was discussed, it is true, at one session of the Diet, but in 1766 the protest of the papal nuncio resulted in the rejection of the proposed change. At the same time a keen agitation was carried on against even the slightest concession in favour of non-Catholics. The latter, together with some of the aristocracy, who were dissatisfied with the abrogation of several aristocratic prerogatives, altogether 80,000 in number, placed themselves under the protection of Russia, with the express declaration that they regarded the Empress Catherine II as protectress of Poland, binding themselves to use their efforts towards securing equal rights for the dissidents, and not to change the Polish laws without the consent of Russia. But the patriotic elements could not submit to so disgraceful a dependence on Russia: they combined, in the Confederation of Bar (in Podolia), in defence of the Catholic Faith and the rights of independence under republican institutions. At the same time, through the efforts of the Carmelite monk Marcus, the religious brotherhood of the Knights of the Holy Cross was organized.

The confederation, therefore, was of a religious character: it desired, on the one hand, to free Poland from its dependence on Russia, on the other, to reject the demands of the dissidents. After it had declared an interregnum, the king's Polish regiments and the Russian forces took the field against it. The confederation had hardly been dispersed when Austria, Russia, and Prussia occupied the Polish frontier provinces (altogether about 3800 square miles with more than four million inhabitants). The manifesto of occupation set forth as reasons for the partition: the increasing anarchy in the republic; the necessity of protecting the neighbouring states against this lawlessness; the necessity of readjusting conditions in Poland in harmony with the views and interests of its neighbours. Prussia received West Prussia and Ermland; White Russia fell to Russia; Galicia was given to Austria. In the countries thus annexed each state began to pursue its own policies. In White Russia there were many Ruthenian Uniats: the Russian government at once took active measures to sever their union with Rome, and bring them into the schism. The parishes of the Uniats were suppressed, and their property confiscated. A systematic course of oppression compelled them to adopt the schism. Austria and Prussia, in their turn, sought to repress the Polish national spirit; in particular, colonization of Polish territory with German colonists was begun systematically, and on a vast scale. The Poles were excluded from all official positions, which were now filled by Germans imported for that purpose in large numbers. The state schools became wholly German.

Such treatment by the neighbouring states roused all Poland to energetic action, so as to prevent a second partition. The Poles now learned the value of popular education, and their ablest men zealously applied themselves to improve the schools. The Four Years Diet (so called because its deliberations lasted four years without interruption) busied itself with reform, on 3 May, 1791, the Constitution was proclaimed. According to this fundamental law the

Catholic remained the dominant religion, but the dissidents were granted complete civil equality and the protection of the law. The new ordinances curbed licentiousness, and thus caused dissatisfaction, especially among the higher nobility, who formed the Confederation of Targowitz for the purpose of annulling the Constitution which had just been granted, and called Russian troops to their assistance. The king sided with this deluded faction. Thus Russia and Prussia had another opportunity of making annexations; once more they both seized large tracts of Polish territory and thus was consummated the second partition of Poland (1793). The Poles, resolved to defend their independence, rose, under the leadership of Tadeusz Kosciuszko, against Russia and Prussia. Victorious over the Russians at Racławice (4 April, 1794), he occupied Warsaw, but was defeated and taken prisoner at Maciejowice (10 October, 1794). The revolt had miscarried: Russia, Prussia, and Austria divided among them the rest of the Polish kingdom. The king abdicated. And thus the third and last partition of Poland was effected (1795). The occupation by hostile armies of the territory thus divided proceeded without resistance on the part of the inhabitants. The Polish people were exhausted by wars and so humbled by numerous defeats that they seemed to look on with unconcern.

After Poland had disappeared from the political map of Europe, each of the three states which had absorbed it began to carry out its own policy in the annexed territory. In Prussia all church lands were confiscated, just as after the first partition, and the clergy as a body were made answerable for the political crimes of individuals. In Austria, likewise, the policy of germanization prevailed. Under Russian rule official hostility to the Polish national spirit was not entirely open, but the persecution of the Uniat continued. In 1796 all the Uniat dioceses, except Plotsk and Chelm, were suppressed. Poland had lost its independence, but liberty-loving patriots did not lose courage, for they counted on foreign aid. Dabrowski and Kniaziewicz organized in Italy a force composed of Polish emigrants, the "Polish Legions", which served Napoleon in the hope that, out of gratitude, he would re-establish the Polish Kingdom. These expectations came to nought. Napoleon did not re-establish the Kingdom of Poland, but, after the defeat of Prussia, he created the independent "Grand-duchy of Warsaw" which continued in existence from 1807 to 1815 out of the Polish territories that were affected by the second and third partitions. This small state had an area of 1860 square miles, with 2,400,000 inhabitants. Frederick Augustus, King of Saxony, became grand-duke. After the war with Austria in 1809, the Grand-duchy of Warsaw became a factor which the European diplomats could not afford to overlook in their calculations.

After the fall of Napoleon, the Czar Alexander, in the Congress of Vienna, claimed the grand duchy for himself. At first there was some opposition to this demand, but an agreement was finally reached, with the result that the grand-duchy was divided: the

westerly part, with Posen, fell to Prussia; Cracow, with the territory under its jurisdiction, became a free state, and the rest of the grand-duchy, with Warsaw, as the autonomous Kingdom of Poland, came under Russian dominion. The new Kingdom of Poland (or Congress Poland) was taken by the Czar Alexander I, who had himself crowned as its king in the year 1815. In the territory annexed to Prussia the Poles received complete equality of rights, and Polish was recognized as the official language. But from the very beginning a difference was apparent in the treatment accorded to districts whose inhabitants were Poles and those in which the population was mixed. In the latter regions German officials were appointed; schools and courts were conducted in German, and the process of germanizing the Polish minority was begun. A policy similar to that of Prussia was adopted by the Russian Government in Congress Poland, where Polish culture was in a particularly flourishing condition. The new Kingdom of Poland was connected with Russia only through its rulers, who belonged to the reigning dynasty of the latter state. The governor was the king's

brother, the Grand-duke Constantine. His government of Poland was despotic in the extreme; he paid not the slightest regard to the Constitution, which had been confirmed by the king, but ruled as in a barbarian country. This despotism growing still worse after the death of Alexander I, when Nicholas I succeeded him upon the Russian throne, provoked, on 29 November, 1830, an insurrection in Congress Poland, which was put down, however, by the overwhelming mili-

CRACOW
View of the Castle from the River

tary force of Russia (end of October, 1831). Thereupon the Czar Nicholas abolished the Diet and the Polish army, and assigned the government of Poland to Russia, whose administration was characterized by harsh persecution of the Catholic faith and the Polish nationality. While the Russian Government preserved at least the semblance of justice in Congress Poland, it did not deem it necessary to restrict itself in this respect in Lithuania and Little Russia. All the Polish schools were closed, and Russian schools founded in their stead. Even the clergy were subjected to manifold restraints: the church lands were confiscated, admittance to the seminaries for the training of priests was made more difficult, and communication with Rome forbidden.

The suppression of the revolt in Congress Poland involved a severe defeat of Polish nationality in all the three neighbouring states. In Galicia the system of germanization grew more and more oppressive. In the Grand-duchy of Posen the use of the Polish language was restricted, German teachers were appointed in the schools, and the prerogatives of the Poles were curtailed. In 1833 provision was made for the purchase of Polish lands, the money for this purpose being supplied from a special public fund. At this time also the last of the surviving convents were suppressed, and their revenues applied to the support of religious schools. The Prussian Government ventured even to lay violent hands upon the clergy. In the year 1838 the government engaged in a dispute with Archbishop Dunin concern-

ing mixed marriages, and the archbishop, fearlessly defending the position of the Church, was imprisoned. In Congress Poland Russian became the official language; a large number of schools were closed. At the same time an attempt was made to introduce Russian settlers into Poland, but proved a complete failure. In Lithuania the persecution of the Uniat had indeed the desired effect, but it brought discredit upon the Russian Government: in 1839, at the instance of Bishop Siemiaszko, 1300 Uniat priests signed a document announcing their desertion to the schism. The Polish nation, unable to accomplish anything by fair means, had recourse to conspiracies. A national uprising in all the territories that had been Polish was planned for February, 1846, but the insurrection was not general, and wherever it made its appearance it was promptly crushed. Cracow, where the manifesto of the insurrection was published, was permanently occupied by the Austrians; the Austrian Government incited the peasants against the insurgents, and, as a bounty was furthermore offered for every corpse, the peasants attacked the residences of the nobility, set them on fire, and inhumanly massacred "the lords" (altogether 2000 nobles).

In the year 1848, when the long-expected revolution broke out in almost the whole of Western Europe, the Poles under Prussian rule also revolted, but without success. In April, 1848, serfdom was abolished in Galicia (in Prussia as early as 1823), and suitable compensation out of the public treasury was granted to the nobility. After 1848 the Polish districts in Prussia and Austria received the Constitution, as did the other districts subject to those Governments. In Galicia conditions began to improve, especially after the year 1860, when it was granted a certain degree of autonomy and its own diet. In Prussia, too, the Constitution gave the Polish inhabitants opportunity to develop their national resources independently. The educated clergy devoted themselves with wholehearted zeal to elevating the morals of the people, and in this way helped to form a middle class that was both well-to-do and, from a national point of view, well instructed. The most unfortunately situated Poles were those under the Russian Government. Russian was the language heard in all the public offices, to fill which natives of Russia were introduced into the country in ever-increasing numbers. Under these adverse conditions Congress Poland steadily declined; in ten years (1846-56), the number of inhabitants was diminished by one million. The Government, during the long-continued state of war (not suspended until 1856), was of a despotic character. The clergy, however, constituted a force not to be neglected, for it amounted to 2218 priests, 1808 monks, and 521 nuns, in 191 convents, while the teachers and professors of every sort numbered 1800. The clergy exercised a vast influence over the people, and all the more so because the long struggle between the Government and the Catholic Church had given the clergy the character of an opposition party.

Conditions in Poland generally improved after the year 1856, after Russia had been defeated in the Crimean War. The Government of Congress Poland was entrusted to the Pole Wielopolski, who, with the best intentions, attempted to check the revolutionary activity of the Polish youth by too severe measures. It was the purpose of the younger Poles to awaken the national spirit by means of pageants in commemoration of national events and by great parades of the people to give utterance to their protests. These manifestations acquired a religious character from their association with practices of piety, an association permitted by the clergy, who were hostile to the Government. Prayers were continually offered in the churches "for the welfare of the fatherland". The clergy, with Archbishop Fijatkowski at their head, favoured these manifestations, upon the repetition of

which Russian troops entered the churches and arrested, not without violence, several thousands of the participants. By the bishops' orders, the churches were closed. In January, 1863, an insurrection broke out which was doomed to pitiful failure. About 10,000 men were involved, scattered in very small bands throughout the whole country, and wretchedly armed. Opposed to them was an army of 30,000 regular troops with 108 field-pieces. In March, 1864, to keep the peasants from joining the insurrection, the Russian Government abolished serfdom, and the uprising collapsed in May of the same year.

The Government now exerted all its energy to blot out Polish nationality, especially in Lithuania and Little Russia: Russian became the official language in all schools and public offices; Poles were deprived of their employments, and all societies were suppressed. Confiscated lands were distributed among Russians, and every pretext was seized to expropriate the Poles. A decree was even issued forbidding the use of the Polish language in public places. Peculiarly energetic measures were taken against the Catholic Church in Lithuania. Obstacles raised by the Government to hinder vocations were so effective that in the seven years immediately following 1863 not more than ten priests were ordained in Lithuania. Public devotions, processions, the erection of wayside crosses, and the repair of places of worship were forbidden; convents were suppressed; large numbers of the people forced to accept the schism. An attempt was even made, though unsuccessful, to introduce the use of Russian in some of the popular devotions. To remove all traces of Polish nationality in Lithuania and the Ukraine, the Polish place-names were changed to Russian; in the cities, inscriptions and notices in the Polish language were forbidden; the cabmen were obliged to wear Russian clothing and drive Great-Russian teams. In the Kingdom of Poland conditions were the same. Pupils were forbidden to speak even a single Polish word in school. In addition, Congress Poland was completely stripped of its administrative independence.

In 1865 diplomatic relations were interrupted between Russia and Pius IX, who was favourably disposed towards the Poles. The Uniat Church was attacked, and then the Government sought to organize a national Polish Church independent of Rome. The bishops were strictly forbidden to entertain relations of any kind with Rome. A college of canons of the most various dioceses was formed at St. Petersburg, to be the chief governing body of the Polish Church, in all Russia, but the bishops as well as the deans and chapters in Lithuania and Poland opposed this measure. Recourse was then had to violence and some of the high dignitaries of the Church were deported to Russia. The clergy, however, courageously held their ground and refused to yield. After the last defeat of 1863-64, a strong reaction set in among the Poles of all of the three neighbouring states. The clergy were active in inspiring the people with new courage. In Prussia the Polish clergy worked diligently to establish and maintain social and agricultural organizations, as well as societies and loan offices for artisans and labourers, industrial associations, etc.

The oppression of the Poles continued, especially after Bismarck became chancellor. The schools had to serve as instruments in the process of germanization; the Polish towns and villages received German names. Bismarck also began his conflict with the Catholic Church (see KULTURKAMPF). On the motion of Bismarck, the Prussian Diet, in the year 1886, granted the Government one hundred million marks for the purpose of buying up Polish lands and colonizing them with German peasants and labourers. In 1905 Congress Poland was again the scene of an insurrection, which was set on foot largely by workingmen,

and the Government, compelled by necessity, somewhat mitigated the existing hardships.

III. ECCLESIASTICAL HISTORY.—Even before Poland became Christian under Prince Mieczyslaw I (962–92), there were Christians in Polish territory. This explains the comparatively peaceful acceptance by the people of a new faith and a new code of morals. It may be assumed that the Faith reached Poland from the neighbouring country of Moravia when, after the Hungarian invasion, numerous Christians found a refuge in Poland, so that there must have been a certain number of Christians among the heathen Poles, though no organized Church existed. Definite conclusions, however, as to the progress of Christianity before the accession of Mieczyslaw I are impossible. This prince, having married the Catholic Dabrowka, a daughter of the King of Bohemia, embraced Christianity, with all his subjects, in 966. He did this partly because he wished to protect himself against the Germans. Priests for the new Christian parishes were obtained from Bohemia and Germany. As early as 970 a Polish bishopric was established at Posen, under the jurisdiction of the Archbishop of Magdeburg. In 1000 the Emperor Otto III and Pope Sylvester II erected the metropolis of Gnesen for the bishoprics of Posen, Plotsk, Cracow, Lebus, Breslau, and Kolberg.

The formation of this ecclesiastical hierarchy for Poland was effected by a clever political move on the part of Boleslaw the Great (992–1025), and had important results. For since that time the Church of Poland has ceased to be dependent on Germany, and has been under the protection and patronage of the Polish princes, with whose history its own is most intimately connected. The Polish ruler thus obtained the right to found and endow churches, to take the same important part in the establishment of dioceses and the appointment of bishops as the emperor took in Germany. Poland did not cease to be a German fief, but in ecclesiastical matters it became absolutely independent. Henceforth Boleslaw the Great assumed the supervision of the Polish church, and the Church, founded and organized with the co-operation of the rulers, was placed in the service of the State. Although Boleslaw exercised his right of supervision rather arbitrarily, he nevertheless always entertained a great respect for the clergy. The first bishops were appointed by the pope; canons regular were appointed to assist them. The Camaldolese Order also came (997) and settled in Great Poland, but being attacked by robbers, who expected to obtain a large amount of booty from them, they came to a terrible end in 1005. In 1006 the Benedictines came to Poland and settled in three places. They cleared forests and spread religion and civilization. Boleslaw granted the churches tithes, which the nobility were unwilling to pay; the resulting disturbances (1022) were soon suppressed. The king also procured for the churches valuable gifts, such as vessels of silver and gold. After the death of his son Mieczyslaw II (1025–34), a strong feeling against Christianity and its teachers manifested itself among the people; many even relapsed into paganism. The nobility discontinued the pay-

ment of tithes, and the masses attacked the churches and the estates of the aristocracy. Bishops and priests were massacred, and the cathedrals of Gnesen and Posen were destroyed.

After six years of such disturbances Casimir I (1040–58), having ascended the throne, restored Christianity and respect for the clergy; he also built churches and convents. His activity was continued by Boleslaw II the Bold (1058–80), so persistently that the number of Polish bishoprics had risen to fifteen by the year 1079. As early as this reign native Poles attained the episcopal dignity. The question of heathen marriages, which were condemned by Bishop Stanislaus of Cracow, gave rise to a quarrel between the king and the bishop. The latter, having formed a conspiracy with the magnates, who were incensed at the despotic rule of the king, was slain by the king himself. A revolt, caused by this act, drove Boleslaw to seek an asylum in Hungary. The church thereupon gained in esteem and influence even in political matters. Bishops were elected by the chapters, and consecrated by the archbishops of Gnesen as metropolitans. Under the next

ruler, Wladislaw Herman (1080–1102), the clergy took a lively interest in public affairs. Boleslaw Krzywousty (1102–39) showed his great concern for the welfare of Church and clergy by various benefactions, founding new convents and embellishing those already in existence. At this period, too, Count Piotr Wlast Dunin (d. 1153) is said to have built forty places of worship. All of these works perished when Boleslaw's will stirred up

CATHEDRAL OF ST. GEORGE, LEMBERG
Greek (Ruthenian) Uniat

a series of terrible wars that raged for almost two hundred years throughout Poland. (See above: II.) During these struggles the Church alone preserved the national homogeneity, and this circumstance, more than any other, increased the influence of the clergy in political matters. It was at this time that Henry, Duke of Sandomir, with a numerous retinue of Polish nobles undertook a crusade to the Holy Land and spent an entire year there. Upon their return to Poland these pilgrims introduced the knightly orders of the Templars, of St. John, and of the Holy Sepulchre. The clergy, now more numerous, held synods in which, among other matters, education was dealt with. At the instance of the bishops, schools were established in connexion with the churches and convents. The first provincial synod of this kind, at Leczyca (1180), decreed excommunication as the punishment for the robbery of church property.

The clergy now began more and more to carry into effect the plans of the murdered Bishop Stanislaus by their efforts to secure the supremacy of the Church. The Church succeeded in freeing itself from the fetters with which the temporal rulers had bound her. For the reform for which Gregory had striven had not been carried out in Poland. While it had long been customary in the West for cathedral chapters to elect the bishops, so that the Church was in this respect no longer dependent on the temporal power, in Poland the bishops were still appointed by the sovereign, who furthermore claimed for the state treasury certain fees from the lands held by the clergy. The pope's de-

mand for the celibacy of the clergy had also been disregarded. Pope Innocent III first undertook to free the Polish clergy from dependence upon the temporal sovereign; he found an active supporter in the Archbishop of Gnesen, Henry Kieticz. The latter enforced the celibacy of the clergy under him and obtained for the decrees of the ecclesiastical courts both force and validity; he also excommunicated the senior prince, Wladislaw Laskonogi (1202-03), for trying to keep the Church in its condition of dependence and refusing to give up the old royal prerogatives of appointment of bishops, jurisdiction over the church lands, and the exaction of fees and other payments from them. From that time a growing movement for the deliverance of the Church from oppression by the State is manifest, a relief which had already been secured in the neighbouring kingdoms to the west. The Church, now freed from the guardianship of the State, made an energetic stand against the encroachments of the princes and the immorality of the people. At the synods held at this time severe penalties were imposed, by the direction of the papal legates, upon those laymen who claimed for themselves the right of granting benefices. From that time bishop and prince were considered titles of equal rank in Poland.

In 1210 two Polish princes jointly conferred privileges upon the clergy, thereby recognizing the independence of the Church, not only within its own organization, but also (within the confines of church lands) over all its own subjects, together with exemption from taxation. The Church of Poland was now organized in conformity with the canon law; its jurisdiction covered, not only the clergy, but also the inhabitants domiciled on the church lands and, in many matters, the whole Catholic community as such. The Church wielded the powerful weapons of interdict and excommunication. Church and clergy together formed an independent political division of the population, endowed with complete power of self-government. Not only had the dependence of the bishops on the princes ceased, but the lesser clergy, too, no longer sought the favour of the prince: it was well known to them that, if they preserved the spirit of the Church and guarded its interests, distinction and honours awaited them within its domain. Thanks to their really enormous financial resources and their influence in the domain of morals, the clergy represented a power with which temporal rulers had to reckon. The highest legislative bodies of the Catholic Church in Poland, the synods, provided for the independence of the Church, and occupied themselves in strengthening its influence over the laity. Literature and all that pertained to education were wholly in the hands of the clergy, the members of the various religious orders, in particular, rendering great service in this direction.

In this period, also, religious life developed to a high degree among the people, as a result of the severe afflictions caused by the wars and invasions of the Tatars (1241, 1260, 1287). The horrors of the time acted as a powerful stimulant upon the general piety, which revealed itself in religious endowments and privileges conferred upon the clergy. In the next period (from the beginning of the fourteenth to the end of the fifteenth century) churches and convents were especially numerous. The clergy added to its popularity by striving for the union of the Polish principalities into a great kingdom. Archbishop Pelka, for instance, in 1257 ordered that the people should learn the Lord's Prayer in Polish, and the synod under Archbishop Swinka (1285) forbade the granting of benefices to foreigners or the appointment as teacher of any person who was not master of the national tongue. The consolidation of Poland having been effected under Lokietek (1306-33), the clergy were dissatisfied with him because he would not exempt them from taxation. This grievance gave

rise to a quarrel between the clergy and Lokietek's successor, Casimir the Great (1333-79). Casimir's life was far from faultless, and Bodzanta, Bishop of Cracow, after admonishing him without effect, placed him under excommunication. The cathedral vicar, Martin Baryczka, notified Casimir of this censure, and the king had him drowned in the Vistula (1349). Casimir sought to make amends for the murder by lavish alms giving, pious bequests, and privileges granted to the clergy. At Cracow he founded, under the patronage of the bishop, a more advanced school or university—the first in Northern Europe (1364)—which was approved by Pope Urban V. He also brought order into ecclesiastical affairs in Little Russia by establishing the archiepiscopal See of Halicz, in 1367, with Chelm, Turów, Przemyśl and Włodzimierz for its suffragans. The Archbishopric of Halicz was afterwards transferred to Lemberg. The archbishops of Gnesen became the foremost princes of the realm, and the clergy were hereafter relieved of all taxes. This displeased the nobility, who, moreover, had to pay the tithes to the clergy, with the alternative of exclusion from the Church.

Under Louis of Hungary (1370-82) the clergy received new privileges, but in the same reign the bishops of Poland began to be nominated by the State: the kings, having established the bishoprics, believed that they had the right of patronage. Beginning with the reign of Jagiello (1386-1434), the Church of Poland worked in a new field, spreading religion among the neighbouring heathen peoples. The Lithuanians accepted Christianity, and Jagiello caused many churches to be built. But the morals of the clergy were declining. The Church of Poland took part, it is true, in the Synod of Constance, at which Hus was burnt, but had not the strength to oppose effectively the reactionary tendency of the nobility, which sought to use heresy as a counterpoise to the influence of the Church. That influence, attaining its maximum when the Cardinal Bishop of Cracow, Zbigniew Olesnicki, wielded political power at Court, roused the emulation of the secular lords. With the appearance of Hus in Bohemia there arose in Poland an anti-church party composed of Hussites. The ecclesiastical synods issued severe decrees against these heretics, whom Jagiello, in 1424, also adjudged guilty of high treason. The Inquisition became active against them.

It was clerical influence, too, that led King Wladislaw III (1434-44) to take the field against the Turks in defence of Christendom. During the reign of his brother, Casimir the Jagellon (1446-92), the Church of Poland produced a number of saintly men, and was so highly esteemed, even in Bohemia, that it was the general wish there that the Pole Dlugosz should be made their archbishop. Nevertheless, the temporal power sought to free itself from the domination of the spiritual. The nobility insisted more and more on the taxation of the clergy. With the death of Cardinal Olesnicki the political power of the Church in Poland was at an end. During the succeeding periods the Reformation made ominous progress. It found a soil prepared for it by the moral decline of the clergy and the indifference of the bishops. In 1520 a Dominican named Samuel rose against the Roman Church at Posen; in 1530 Latalski, Bishop of Posen, appointed a Lutheran preacher; in 1540 John Laski, a priest of Gnesen, renounced the Catholic faith and openly married, as did many others; under Modrzewski efforts were made to establish an independent state church. King Sigismund I the Old (1506-48), a zealous Catholic, was opposed to a reformation of that nature; he issued rigorous edicts against the preaching of the new doctrines, and the introduction of heretical writings (1523, 1526). The populace remained indifferent to the Reformation, only the nobility took part in it. The clergy adopted precautionary

measures: the primate put all sectarians under the ban of the Church, and it was decided to establish an ecclesiastical court of inquisition. Catholic congresses were also assembled. But all these means were ineffectual to check the Reformation, which was, in fact, favoured by some of the bishops.

In 1552, at the Diet of Piotrkow, it was proposed to summon a Polish national synod both for Catholics and for heretics, and in 1555 a resolution was adopted, by which heretics were not to be prosecuted on account of their belief until the holding of this synod. The Protestant preachers returned to Poland and the sectarians formed a union against Catholicism. Religious war first broke out in all its violence under Sigismund Augustus (1548-72), who did not defend Catholicism with the same conviction and firmness as his father. His vacillating conduct inspired the heretics with courage. In 1550 demands were made for the abolition of celibacy, celebration of Mass in the vernacular, and communion under both forms. Bishops were deprived of the right to sit in judgment on heresy. Monks were expelled; churches were seized. The confusion in the land grew steadily worse. The heretics, themselves of the most varied creeds, quarrelled with one another. Alarmed by the progress of the Reformation in Poland, Rome sent Luigi Lippomano thither as nuncio. At this time, too, the first Jesuits came to Poland. The papal legate, Commendone, carried out the reform of the Catholic Church, and in this way deprived the Reformers of their pretext. He was also able to secure from the king two decrees (1564): one against non-Catholic aliens, the other against native Poles who sought in any way to injure the Catholic Church.

The Jesuits, introduced into Poland in 1564 by Hosius, Bishop of Ermland, opened their schools in many places, successfully conducted debates with the heretics, and energetically contended against heresy both from the pulpit and in writing. Under their influence the families of the magnates began to return to the Catholic Church. In 1571—the year when the Conference of Warsaw secured freedom of belief for the dissidents—the Jesuit houses in Poland were organized into a separate province. The heretics still continued to cause disturbances, but fortune deserted them. After the short reign of Henry of Valois (1574-75) Stephen Báthori succeeded to the throne (1576-86). The latter openly supported the Jesuits in their endeavours, and under his protection they founded a very large number of new schools. The next king, also, Sigismund III Vasa (1588-1632), gave no support to the dissidents; on the contrary, he confirmed the rights of the Catholic Church (1588) and, as a good Catholic, so influenced many of his magnates by his pious life that they returned to the religion of their fathers. The reconciliation of the Ruthenian Church was effected in 1595; and the Armenians, who were domiciled here and there in Poland, also united with the Catholic Church. Wladislaw IV (1632-48) introduced into Poland the Piarists, who established numerous schools. In his dealings with the mutually hostile sects this king pursued a policy of duplicity, by which a horrible war was brought upon a later generation. At this time there were in Poland 750 convents, representing 20 male and 15 female orders. He was succeeded on the throne by John Casimir (1648-68), who had previously been a Jesuit (1643) and then a Cardinal (1645). To the general distress of this reign the dissidents contributed not a little. For this reason, the Socinians (1658), the Arians (1661), and other sects were driven out of Poland. In return the king received from the pope the title *Rex Orthodoxus*. Bowed down by his misfortunes, he resigned the crown and took up his residence in Paris, where he lived until 1672 as titular Abbot of St. Germain. Under his successors upon the Polish throne, Michael Wisniowiecki (1669-72) and John III Sobie-

ski, the solicitude of the people for the Faith and their efforts to repress heresy steadily increased.

When, after the death of John Sobieski, Frederick II, Elector of Saxony, assumed the Government (1697-1733), he affirmed in his coronation oath that he would not confer any high offices on the dissidents, although toleration was assured them. This king had abandoned Protestantism and become a Catholic; although a lukewarm Catholic, and leading a reprehensible life, he nevertheless restricted the liberties of the heretics (1716), and they were removed from public office (1743). At the same time violent disputes were carried on with the clergy over appointments to bishoprics, ecclesiastical courts, payment of taxes, etc. The endless wars during the reign of this king led to the oppression of the clergy, impoverishment and deterioration of the churches, and, among the nobility, to demoralization and lack of sympathy for the common people in their distress. The priests in their sermons defended the peasants against the tyranny of the nobility and finally succeeded in obtaining a legal decision (1764) which made noblemen liable to the death penalty for killing a peasant. Frederick Augustus III (1733-63) confirmed the decrees issued during the lifetime of his father against the dissidents, but beyond this he was wholly unconcerned about church and state.

The next ruler, Stanislaus Augustus Poniatowski (1764-95), was a man of culture and actively promoted popular education, but the evil conditions had grown beyond his control. During his reign the bonds of matrimony, the very basis of all society, became so loosened, and the number of divorces reached such an alarming total, that Benedict XIV was compelled to address the Polish bishops in three Bulls (1741, 1743, 1748) in reference to this evil. In addition to this the neighbouring states began to interfere in behalf of the non-Catholics in Poland, demanding that they should be given the same rights as Catholics (1766); this, however, was denied. Thereupon the dissidents formed a confederation at Radom (1767), and the Diet was compelled to grant them all the rights enjoyed by Catholics except the right to the Crown. Independently of this, the right to convoke synods was granted them; mixed courts, generally with a majority of non-Catholic members, were appointed to decide questions involving religion. In mixed marriages the sons were to follow the religion of the father, the daughters that of the mother. Unrestricted permission was also granted the dissidents to build places of worship. Meanwhile Rome reminded the Poles that, as knights in the service of Christ, it was their duty to break a lance for Catholicism. In defense of the Faith the Confederation of Bar was formed (1768-72), but it only added to the confusion and misfortune of the country. Coming from

CHURCH OF SAKRAMENTEK, LEMBERG
Latin Rite

France to Poland, freemasonry spread especially in the higher circles of society, where French literature had done its work of corruption. Atheism was preached openly and acknowledged. New palaces arose while the churches fell into decay; the Theatines left the country (1785); at this time too the Society of Jesus was suppressed (1773), and its possessions converted to the use of popular education; a commission on education was created. With the consent of Pius VI, several church holidays were abolished, the number of those retained being only seventeen, besides Sundays. Further attacks on the property of the bishops, and especially of the richly endowed orders, followed.

At the first Diet, after the coronation of King Stanislaus Augustus (1764), the Polish Church was represented by two archbishops and fifteen bishops. The external splendour of the Catholic Church in Poland had reached its zenith. But the political disturbances and wars, the repeated passage of armies, continued for perhaps a year without interruption, the conflict with the dissidents, were extremely disastrous to the Church. After the three partitions (1773, 1793, 1795), the Government of Russia strove to extirpate, not only Polish nationality, but also the Catholic Church. After the insurrection of 1831, the Uniats were forced into apostasy; convents were suppressed, churches closed. Even harsher measures were adopted after 1863: by a cabinet order of 1864, the property of the Church was confiscated, the convents still in existence suppressed; in 1867 the clergy were placed under the authority of a commission at St. Petersburg, without any regard to the wishes of the Apostolic See. The liturgical books and devotions of the schismatics were forcibly introduced into the churches of the Uniats. Peasants who tried to prevent the schismatical popes from entering the churches were simply shot down; the christening of children as Catholics and the solemnization of matrimony in Catholic churches were forbidden. Not until after the war with Japan was an edict of toleration proclaimed in Russia, making it permissible for schismatics to be reconciled with Rome. The Prussian Government treated the Catholic Poles no better than did the Russian. The Catholic clergy in Prussian Poland was subordinated to the temporal power. The election of bishops, prelates, and superiors of religious societies, in view of the extensive right of veto, was made to depend upon the decision of an administrative council, which receives the oath of allegiance from the clergy and gives them instructions for the celebration of German national anniversaries. In civil and criminal proceedings, too, the clergy is subject to the civil authorities. The ecclesiastical courts have jurisdiction only in matters of a purely religious character; but they have not the right to order temporary or permanent divorce in the case of mixed marriages. The properties of the Catholic clergy as such were confiscated; for the support of the clergy a part of the income of the confiscated estates and the interest on capital, which belongs to ecclesiastical corporations, but had been lent to private individuals, was set aside. In addition to this the Government granted the clergy permission to accept payment at a fixed rate for the performance of services attached to their office. In Galicia (Austrian Poland) the patent of toleration of Joseph II, granted in 1781, admitted Protestants, Calvinists and schismatics to official positions, secured for them freedom of religious belief, and even the permission, where there were about 100 Protestant families in a community, to build churches, etc. (but without steeples and bells, and with entrances at the side). Although Catholicism was recognized as the dominant religion, the Church was nevertheless subject to the control of the State. Without the *placel* of the State papal Bulls and pastoral letters were invalid. The Government assumed the supervision

and conduct of seminaries for the training of priests, and prescribed the character and method of instruction in theology. In 1782 the convents of the contemplative orders were suppressed, and their property converted to the fund for religious purposes. At present, however, the Church is free from state restrictions in the Polish provinces; and as a result Catholicism is here making progress.

IV. THE RELIGIOUS ORDERS IN POLAND.—The Augustinian Hermits were introduced into Poland in the second half of the thirteenth century, and at one time had more than thirty-five convents there. At present there remains but one Augustinian convent in all the territory that was Poland: that at the Church of St. Catherine, Cracow. A convent for nuns of the same order, connected with the same church since the seventeenth century, now serves for the training and education of girls.

The Basilians (see BASIL, RULE OF SAINT), persecuted by the Greek Iconoclasts, migrated in large numbers to the Slavic countries and founded convents and schools. In Poland, particularly, they rendered great services in the most varied fields of ecclesiastical activity. From them sprang excellent bishops, archbishops metropolitan, and their order was known as "the order of prelates". From them, too, teachers in the schools, seminaries, and universities were recruited. Many of them became famous in science as well as by their virtuous and self-sacrificing life. The common people held this order in high esteem and gladly frequented the devotions in their convents. The Basilians devoted themselves to the schools with a zeal that shrank from no sacrifice, especially after the reform of 1743. Every convent had its elementary school, but they also founded more advanced schools, particularly for students of divinity. Their schools were attended for the most part by the children of the wealthy. In the middle of the eighteenth century it had as many as two hundred convents in the Polish dominions. After the fall of Poland these convents were suppressed in Russia; only eleven of them survived in Galicia. The Basilian nuns were established in Eastern Poland. They were suppressed at the same time as the Basilian monks. At present only two convents are in existence in Galicia.

The Benedictines began their activity in Poland during the period of the reorganization of Cluny. They were the first missionaries of Poland; whence they came it is impossible to determine, no historical records of the earliest Benedictines in Poland having come down to us. The first historically authenticated houses of the order date from the reign of Boleslaw I Chrobry (eleventh century). This ruler, desiring to free the Church in Poland from German influence, introduced Benedictines from Italy. The order soon exercised an incalculable influence upon the education of the Poles, as well as strengthening the position taken by the Polish Church within its own organization. With the twelfth century, however, their beneficent influence began to decline. Their manifold activities ceased in the schools, and became confined to the immediate interests of the convents themselves. Among the causes of their decay were the enormous material wealth of the order, the consequent excesses of the lay abbots, and the discord between abbots and subordinates within the order. A contributing cause was the arbitrary exemption of abbots from the supervision of the abbots-general of Tyniec. Five of the largest abbeys became absolutely independent of one another, both in finance and in internal organization. Prosperity brought tepidity and relaxation of monastic discipline. The Benedictines allowed themselves to be outstripped in the social work of the Church by the other religious orders that had been introduced into Poland. Several attempts at reform, undertaken at the beginning of the eighteenth century, did not achieve the desired result. The Partition of Poland

undermined the existence of the Polish Benedictines. First the possessions of the abbots were confiscated and then the convents suppressed. The Benedictine nuns had convents in Poland in the Middle Ages. Their rules were strict: they were permitted to eat only two meals a day; the entire day was spent in prayer, meditation, spiritual reading, and hearing two Masses, the Divine Office, and work. They made beautiful church vestments and also occupied themselves with the copying of books. Strict discipline prevailed in the congregation.

The Bernardines, made famous by St. John Capistran (1386-1456), the pupil of St. Bernardine of Siena, were much sought everywhere. Convents were gladly built for them in Poland, where they were introduced by John Casimir and Sigmund Olesnizki. This order, the largest in Poland with members of Polish descent, rendered distinguished service to the fatherland. When the Franciscans established themselves in Poland about the year 1232, and later also, the Order of Tertiaries began to gain more and more members here. The Tertiary Sisters, members of the laity, formed themselves into religious organizations for prayer and good works. From these societies there arose in Poland in the year 1514 an order of women, the so-called Bernardine Nuns.

The Brothers of Mercy were introduced into Poland in the seventeenth century. Many of them died in the odour of sanctity. Whereas in other countries the care of the sick in general was entrusted to the religious, in Poland they devoted themselves to the care of the insane.

The Camaldolese came to Poland in the year 1605 from the congregation of Monte Corona near Perugia. They were dependent on the mother-house; not until after the partition of Poland did this dependence cease. Of the five convents established in Poland only the hermitage at Bielany, near Cracow, is still in existence.

The Canons Regular of St. John Lateran, one of the oldest congregations in Poland, were suppressed in 1782 by Joseph II; there are, however, six convents at present in Austria.

The Capuchins.—As early as 1596 King Sigismund had memorialized the Apostolic See to introduce this order into Poland, but permission to introduce it there was first granted to King John Sobieski. In 1681 some Capuchins came to Warsaw and Cracow. Gradually the number of foreigners in the convents grew smaller; the novices were mostly Poles, so that the Apostolic See, in 1738, transferred the supervision of the Polish Capuchins to the Bohemian provincials. When the order had as many as 9 convents, 129 fathers, 31 novices, and 73 brothers, Benedict XIV established a separate Polish province. The Capuchins in Poland, as elsewhere, won for themselves high esteem and exerted a wholesome influence upon the awakening of the religious sentiment among the people. In Galicia there are at present nine Capuchin convents. In Russian Poland all their convents but one have been suppressed.

The Carmelites (Calced) in Poland date from the

latter part of the fourteenth century. Here, as elsewhere, some of their convents observed the milder rule of Eugene IV, while others observed the more severe rule of John Soreth. Before the partition there were 58 Carmelite convents and 9 residences in Poland. After the partition those in the Polish provinces of Prussia were all suppressed; this happened in Russia also, some being suppressed in 1832, the rest somewhat later. Under Austrian rule Joseph II retained only six convents, which formed the Galician province of the order. There were also in Poland Calced Carmelite Nuns.

The Carmelites (Discalced) who, at the pope's request, went as missionaries to Persia, passed through Poland on their way. The Poles then for the first time saw members of this order, and it at once found general favour. In the next year it was introduced and in time became widespread. Several convents of the Discalced Carmelite nuns are still in existence.

The Carthusians.—The time of their first settlement in Poland is unknown. It is probable that the first superiors were foreigners, possibly also the majority of the monks.

Natives, however, were also received into their convents, and in this way they were gradually Polonized. They observed the general rule of the order, and devoted themselves to prayer and manual labor, especially to the copying of manuscripts.

The Cistercians, the most important offshoot of the Benedictines, were introduced into Poland about the year 1140, when the order had been sanctioned only about twenty years.

From the very beginning they proved

themselves a contemplative order, devoted to manual labor, rendering great service to agriculture by clearing forests, bringing the land under cultivation, and encouraging the various industries. For this reason the order received the hearty support of bishops and magnates. In the twelfth and thirteenth centuries it spread through Poland with extraordinary rapidity, and was richly endowed with landed property. The Cistercians having come to Poland from Germany, France, and Italy, their convents as late as the sixteenth century preserved the individualities corresponding to the various nationality of their first inmates respectively. The Germans even introduced German colonists into their convent villages. Sigismund I was the first to forbid this seclusion by the decrees of 1511 and 1538. To the final Polonization of the Cistercian convents Lutheranism was a contributing cause; for many German monks, infected by the teachings of Luther, left the convents, while the rest cared little for the rules of the order or for propriety. The places vacated by Germans were filled by Poles. The reform of the order, accomplished in the year 1580, purified and elevated the fraternal spirit of the Polish Cistercians. In the course of the eighteenth century they had to endure severe reverses of fortune; indeed, they lived in poverty and need, and at the time of the partition of Poland the Polish province of the order numbered 20 convents with more than 500 male or female inmates. At present there remain only two Cistercian convents

CHURCH OF ST. ALEXANDER, WARSAW-LATIN RITE

Erected by the Tsar Alexander I as a memorial of his first visit to Warsaw in 1835

in Galicia, while under Prussian and Russian rule they have all been suppressed.

The Dominicans were introduced into Poland by the Bishop of Cracow, Iwo Odrowasch (1223). They had no great successes to record until the fourteenth century, in the reign of Casimir the Great, when they gained a firm footing in Little Russia and to some extent also in Lithuania. As an order intended to combat heresy, however, they were of no great importance in Poland, for the reason that most of them were Germans who did not understand the Polish character. As a result their missionary work was not very successful. The sixteenth century, the period of the Reformation, was unfavourable to the further development of the Dominican houses, and later, when the counter-Reformation began, not Dominican but Jesuit houses were founded expressly to combat the Reformation. Not until the seventeenth century were any new Dominican convents founded. The Polish province of the order, in the year 1730, had 43 convents for men and 10 for women; the Russian province, 69 and 3, the province of Lithuania numbered 38 convents and 4 so-called residences. But one Dominican convent now remains, at Cracow.

The Felician nuns are an offshoot of the women's Society of St. Vincent de Paul, which is so highly esteemed to-day for its charitable work. In Warsaw there was formed in 1855 a purely Polish congregation, under the patronage of St. Felix and the rule of St. Francis. (See FELICIAN SISTERS, O. S. F.)

The Franciscans have left comparatively few traces of their activity in the Polish countries. The time of their introduction into Poland is uncertain; the year is probably 1231. Certain it is that the Franciscans were in Cracow in 1237. Kindly received, they soon obtained recognition from the Polish people, for most of them were Poles by birth. Conformably with the rule of their order, they developed great activity in the missionary field among the Lithuanians and Ruthenians. Thanks to their labours the subsequent organization of the Catholic Church in Lithuania and Little Russia was made possible. In 1832 twenty-nine Franciscan convents were suppressed in Lithuania; in 1864, all those in Congress Poland with the single exception of the convent at Kalisch.

The Jesuits were introduced into Poland by Cardinal Hosius, in 1564, to combat heresy. After their arrival, Poland, where 32 Protestant sects had been committing all sorts of excesses, witnessed a return to Catholicism. To root out heresy public debates were arranged, which opened the eyes of many of the heretics. The Jesuits began their labours in Lithuania, at Vilna, which was most seriously threatened by the heretical teachings. In a short time Jesuit communities arose throughout the land. Because of their extraordinary successes in the missionary field, schools were founded for them by every zealous bishop. The example of the bishops was followed by the kings and the magnates. After the suppression of the Society, its possessions were devoted to the support of public education. Of the Jesuit priests some retained their positions at the former Jesuit schools, the rest obtained employment in families of the higher nobility in the capacity of chaplains, secretaries or tutors. They were also employed in cathedral churches and in the parishes. In Poland, as everywhere, the Jesuits fought heresy with its own weapons—with sermons, disputations, education of the youth. They answered the polemical pamphlets of the dissidents with polemical pamphlets; they appeared in public with systematic courses of excellently prepared sermons of a politico-dogmatic character. They also furnished distinguished confessors. They attracted many by means of devotions conducted with great pomp and by the organization of religious brotherhoods. For the pupils in their schools they introduced the Sodality of the Blessed Virgin. They distinguished themselves

particularly as preachers in the parochial missions. But they were also not unmindful of the sick, the prisoners and the soldiers. The position of military chaplain was for the most part filled by a Jesuit. There was no field of church-activity or of science in which the Jesuits did not labour successfully for the benefit of mankind. At present the Jesuit Order does not exist in any of the Polish lands except Galicia, where it forms a separate province of the order, attached to the German Assistance. Part also of the Jesuits, expelled from White Russia, came to Galicia in 1820. When, as a result of the Revolution of 1848, they were banished thence also, they went to Silesia and the Grand duchy of Posen, whence a part of them, in 1852, returned to their former homes, when the order was rehabilitated throughout the Austrian dominions. When again, in 1862, the Jesuits were banished from Prussia, some went to Galicia, others undertook missions to Germany, Denmark, and America. Since 1852 there has been a continuous development of the province of the Society in Galicia; at the beginning of 1906 it numbered 473 members, among them 215 priests, 119 clerics, and 139 brothers.

The Priests of the Mission (Lazarists) were introduced into Poland by the wife of King John Casimir, Maria Ludwika Gonzaga, who had personally known and highly esteemed their founder, St. Vincent de Paul, in France. At her request he sent members of his congregation to Poland in 1651. Their introduction was at first resented by the Jesuits, whose confessors at the royal court were replaced by members of the new order. Queen Maria Ludwika wished the Priests of the Mission employed not only for the instruction of the common people in the villages and parishes, but particularly for the organization and supervision of the diocesan seminaries and for the spiritual improvement of the priesthood in the country. Devout Polish magnates were anxious to have them upon their estates. There is scarcely a spot anywhere in Poland where the Lazarists have not conducted a mission. For this reason their services in the care of souls are truly extraordinary. During the first twenty-seven years the Priests of the Mission came from France and native Poles entering the congregation had to go to France for probation and training, an arrangement which continued until the founding of a seminary at Warsaw. After the partition the convents suffered many hardships: under Russian rule the congregation was disbanded in 1842 and 1864, the Lazarist houses in Galicia were suppressed by Joseph II, and the same fate overtook the Priests of the Mission in Prussia at the beginning of the Kulturkampf in 1876.

The Paulites came to Poland from Hungary in 1382, sixteen in number. Undoubtedly these Hungarian monks were not unacquainted with the Polish nationality, for they were chosen from the Slovaks and Poles, who were at that time well represented in the convents of Hungary. The first convent was that of Czentochowa on the Klarenberg (Clarus Mons, Jasna Góra), and the picture of the Blessed Virgin there, said to be the work of the Evangelist St. Luke, at once became famous because of numerous miracles, so that Czentochowa surpassed all other places of pilgrimage in Poland. As a result, the convent became very wealthy. In 1430 it was attacked by the Hussites. In the part of Poland which fell to Austria after the first partition the Paulite convents were suppressed in 1783 by the Emperor Joseph. Only the Galician convents, which at the last partition came under the dominion of Austria, survived. In other parts of Poland one convent after another went out of existence, and since 1892 the Paulite Order has had only two convents: Czentochowa and Cracow. The Paulites in Poland devoted themselves for the most part to parochial work. Parishes were connected with all

their convents, and in these parishes all the pastoral work was done by members of the order.

The Piarists.—In 1642 the first thirteen Piarists came from Rome to Warsaw at the request of King Ladislaus IV. The Poles readily entered this order, and it soon spread through the whole country. The first monks were Bohemians, Moravians, and Germans by birth. The schools founded by them were organized in accordance with the constitutions of St. Joseph Calasanctius. In the first hundred years the schools of the Piarists, so far as excellence is concerned, were in no way different from the others. Not until the reform of Konarski was there an improvement in the instruction and training. This monk, during a journey through Italy, France, and Germany, studied the foreign educational systems and undertook the reform of the Piarist schools on a basis more in conformity with the requirements of the time. He carried out the reform not only by the living word in the schools, but by writing educational treatises. The method of instruction as systematized by him stimulated every faculty of the mind, it made demands on the reason rather than on the memory, it led the pupil to a consideration of the main points and to clearness of expression. A further aim of his schools was the education of the pupil's heart, in order that as men they might be useful members of society and be qualified to bring up others to a religious life. This reform of the Piarist schools had its successes in other schools as well, for the Jesuits adopted the new method of instruction, and other schools did the same. The beneficial efficacy of this school-reform at once became apparent in the general advance of culture. The Piarist convents were suppressed in Galicia after the partition of Poland, and in Russian Poland in 1864. Only one Polish convent of this congregation, that of Cracow, is still in existence.

The Order of the Reformed Franciscans was introduced into Poland at the time of the beatification of St. Peter of Alcántara (1622 under Gregory XV). The first members of this new order were recruited from the Bernardines and Franciscans; they were at first persecuted and even banished. But when the news of their piety reached the Court, King Sigismund III himself made an appeal to the pope for permission to introduce the order into Poland. The Holy Father did not refuse him, and the Bishop of Cracow had hardly issued the decree of their admission (29 May, 1622), when foundations of Reformati were at once begun, the number rising to fifty-seven. The Reformati in Poland lived entirely on alms; they gave themselves up exclusively to religious exercises. Their convents were suppressed at various times: in Austria, partly between 1796 and 1809, in Congress Poland in 1834 and 1864, lastly in Russian Poland in 1875.

The Templars are supposed to have been introduced into Poland as early as 1155, but this date is not absolutely certain. However, the account of a Templar foundation at Gnesen before 1229 is reliable. When the order was suppressed throughout Europe, in 1312, all their possessions in Poland were transferred to the Knights of St. John.

The Theatines were in Poland from 1696 to 1785; their place of residence was Warsaw. They had as pupils at their lectures the sons of the wealthiest families, but their instruction was inadequate, and ignored the Polish tongue. There was no fixed curriculum, no advanced method of instruction, no system of classes, arranged according to the degree of progress of the pupils. The main subjects of instruction were the Latin, Italian, and French languages, with architecture, painting, and music. There were no class rooms, the teacher giving instruction in his own dwelling to one or more pupils in his own specialty. The subjects taught followed one another in accordance with no uniform plan, but in accordance with the wishes and choice of the teacher or pupil. When

tired of teaching, the teachers not infrequently went visiting with their pupils to some acquaintance or relative. Not until later did they begin to pay any regard to the principles of pedagogy relative to joint instruction by classes. Failing in energy and in the ability to adapt themselves to the demands of their time, they were compelled to leave Poland in the year 1785.

The Trappists, driven out of France as the result of the French Revolution, stopped for a while in White Russia and Volhynia. The Russian Emperor Paul welcomed them within the boundaries of his empire and gave them refuge and support. The first eighteen Trappists came in 1798 and settled in White Russia. However, they did not remain there long, for as early as the beginning of the year 1800 they left their new homes and went to England and America.

The Trinitarians (*Ordo Coelestis SS. Trinitatis de Redemptione Captivorum*).—King John Sobieski, after the deliverance of Vienna (12 September, 1683), sent Bishop Denhof to Rome to Innocent XI with the captured Turkish flag, which the pope caused to be placed in the Lateran on 7 October of the same year. While in Rome, Denhof frequently visited the convent church of the Trinitarians, and this order pleased him so much that he decided to introduce it into Poland. He succeeded in doing this in April, 1685. The Trinitarians were installed at Lemberg, because this city, being near the Turkish frontier, was more favourably situated than Warsaw for the negotiations necessary for the ransom of prisoners. A second convent of the Trinitarians was at Cracow; the third, at Stanislaw, was suppressed by the Austrian government in 1783; the fourth, in Volhynia (Bereśczek), in 1832. The eighteen convents in Poland constituted a separate province. In Austria they were suppressed in 1783 by Joseph II, in Russian Poland, in 1832 and 1863. The discalced Trinitarians led a rigorous life; no member of the order was permitted to have any property, and as a result great poverty prevailed among them. In addition to the daily prayer of the Breviary, they had meditations and prayers lasting two hours and a half; they kept silence and fasted on all days of the week except Sunday; furthermore, there were frequent disciplines. The Trinitarians in Poland regarded it as their chief task to ransom prisoners from the Turks and Tatars, for which purpose they devoted, according to the rule of their order, one-third of all they received. They also collected alms for the deliverance of prisoners; ecclesiastical as well as secular lords contributed large sums of money for this purpose. Two years after their arrival in Poland (1688) the Trinitarians ransomed 8 prisoners; 13 in 1690; 43 in 1691; 45 in 1694; 25 in 1695; 43 in 1699; 55 in 1712; 49 in 1723; 70 in 1729; 33 in 1743. Among those ransomed were not only Poles but also members of other nationalities, particularly Hungarians.

The Ursulines entered Poland only in the nineteenth century, but they have rendered great service to the country by training and instructing the girls. Expelled by the Prussian Government, they found a refuge in Austria.

The Vincentian Sisters, or Sisters of Charity, observing the rule of St. Vincent de Paul, came to Poland during his lifetime (1660). Besides nursing the sick, they devoted themselves to the training of orphans and poor girls. They have survived in all the provinces of the former Kingdom of Poland, except Lithuania, where they were suppressed in 1842 and 1864.

V. PRESENT POSITION OF THE CHURCH.—At the present time the Polish people are closely bound to the heads of their Church by ties of love and confidence. In Russian Poland it is not probable that any enemy could alienate the Catholic part of the population from the bishops; in Austria the relations

between the Polish episcopate and the people under them in no way justify the hopes of the enemies of the Church that exceptional laws of any kind directed against the orders could be passed; in Prussian Poland the Polish archbishop has not yet exhausted all his resources in his struggle for the rights and the freedom of the Church.

There are at present in Poland four ecclesiastical provinces: at Gnesen, Lemberg, Mohileff, and Warsaw. In the year 1000 Poland had five bishoprics; this number increased to thirty-three in 1818. The head of the Catholic Church in Poland was the Archbishop of Gnesen, primate of the kingdom and *legatus natus*. In the ecclesiastical hierarchy the following order of precedence was established: after the primate came the Archbishop of Lemberg, then the Bishops of Cracow, Wladislaw (Lesslau), Posen, Vilna, Plock, Ermland, Lutzk, Przemysl, Samland, Kulm, Chelm, Kieff, Kamenets, Livonia, and Smolensk. The Uniates had two archbishops, at Kieff and Polotzk, besides the Bishoprics of Lutzk, Chelm, Lemberg-Kamenets and Przemysl-Pinsk. At present Austrian Poland has a Latin archbishop at Lemberg and the Bishops of Cracow, Tarnow, and Przemysl, with about 4,000,000 laity and about 2,000 priests, besides an archbishop of the Greek Rite at Lemberg and bishops at Przemysl and Stanislawow. In Prussian Poland the Archbishop of Gnesen has under him the suffragan Dioceses of Posen and Kulm, while the Bishops of Breslau and Ermland are immediately subject to the Apostolic See. Russian Poland has the following sees: Warsaw (archbishopric), Plock, Kielce, Lublin, Sandomir, Sejny and Augustowo, and Wladislaw (Lesslau); in the districts of Lithuania and Little Russia, Mohileff (archbishopric), Vilna, Samland, Minsk, and Lutzk-Zhitomir. These thirteen dioceses number about 4,500 priests and over 12,000,000 Catholics. The Polish clergy is working in the forefront in every field, setting a splendid example; it unites Polish patriotism with Catholicism. An infallible sign of its powers of development is undoubtedly seen in the growth of religious literature in the Polish language. This movement clearly shows that the Polish clergy is receiving a thorough education and contributing much to the advancement of culture and religion in Polish society. Every Polish province has at least one periodical of a religious-social character. (See PERIODICAL LITERATURE, CATHOLIC.—*Poland*.) The clergy everywhere enjoy an extraordinary esteem and large sections of the people are very religious.

One instance, however, must be recorded in which a defection from the true faith has taken place in the bosom of the Polish Church. In Russian Poland the sect of Mariavites, during the years 1905–08 attracted much attention. About 1884 Casimir Przyjemski, a priest, came to Plock, seeking to establish an association of priests in connexion with the Third Order of St. Francis, for mutual edification and the promotion of asceticism. After he had become acquainted with Felicya Kozłowska, a poor seamstress, and a tertiary, he informed her of his plan. On 2 August, 1893, Kozłowska claimed to have had a revelation from God, according to which she was to found an association of priests and pious women under the name of Mariavites, and thus to regenerate the world. The association, which took its name from the words "Hail Mary", gathered a large number of followers. Kozłowska, generally called "mateczka" (little mother), placed herself at the head of both the male and female branches of the association; she was regarded as a saint, and her followers even ascribed miracles to her. The Sacred Congregation of the Inquisition having decided that the alleged visions of Kozłowska were hallucinations, ordered the society to disband. The Mariavites refused to submit to this decision, and, moreover, continued to preach a

body of blasphemous doctrines tending to exalt the personality of Maria Kozłowska. They were, accordingly, placed under excommunication by Rome. In 1906 the number of Mariavite priests amounted to about 50 in some 20 odd parishes, claiming a following of 500,000 souls. By the spring of the following year their numbers had already fallen to 60,000. Public opinion in all parts of Poland almost unanimously condemned the new body, which had been recognized by the Russian Government as a religious sect. It now (1910) numbers among its adherents 40 priests and 22 parishes, with, it is said, 20,000 adherents. The Mariavites have recently adopted an entirely Polish liturgy. The sect appeared in Poland at a time when the country began to revive under the impulse of freedom, and when the hostility between Poles and Russians appeared to be on the point of dying out: a reconciliation of the two nations might possibly prepare the way for a religious union.

Emigration from Poland to the New World did not begin to assume any considerable proportions until the middle of the nineteenth century. The impulse which resulted in this movement may be traced to the unfavourable conditions, not only economic, but also political and religious, which prevailed in Poland. The United States, Brazil, Canada, Uruguay, and Australia have received an accession of population amounting to more than 3,000,000, chiefly from the labouring classes of the population. (See POLES IN THE UNITED STATES.)

EDMUND KOŁODZIEJCZYK.

POLISH LITERATURE.—The subject will be divided, for convenience of treatment, into historical periods.

First Period.—Of the literature of Poland before the advent of Christianity (965) very few traces indeed are extant. Even when converted, the country long remained uncivilized. The laity were engaged in perpetual wars; and a few schools founded by the clergy were wrecked when (1138–1306) the country, after suffering from a divided sovereignty, was again and again invaded by the Tatars. The schools, however, were restored, and Casimir the Great founded, in 1364, the academy which was destined to become the University of Cracow in 1400. Chroniclers, writing in medieval Latin, appeared: Gallus, Kadlubek, and Martinus Polonus, in the thirteenth century; John of Czarankow, in the fourteenth. In the fifteenth century the University of Cracow was famous and attracted many students; Poles began to study abroad, and came back Humanists and men of the Renaissance. But though both Długosz (Longinus), the first great historian of Poland, and John Ostrorog, an excellent political writer, flourished at this time, they wrote in Latin. The national language, though it

was being gradually formed by sermons and translations, was not mature for such work until the second half of the sixteenth century, circumstances favourable to its development having arisen only in the beginning of that century. Books printed in Polish—translations or paraphrases—date from 1520; from this time, too, the influence of Italian culture, fostered by Queen Bona, increased notably. Latin versification became fashionable, books on historical and political subjects appeared, as well as the early attempts of some writers (Rey, Orzechowski, and Modrzewski) who afterwards became famous.

Second Period (1548-1600).—More political treatises, together with books of religious controversy, followed in and after the days of Sigismund Augustus (1550-70). Catholic literature—represented by the Jesuit Wujek, who translated the Bible into Polish, by Hosius, the great theologian who wrote "Confessio fidei Christianæ" and presided at the Council of Trent, by Krömer, and others, increased in volume and importance. Nor was there less activity in the opposite camp, where Budny, Krowicki, and the preacher Gregory of Zarnowiec were distinguished. Poetry in the vernacular now first appeared: Rey and Bielski produced didactic poems and satires; John Kochanowski, in 1557, wrote the first of his poems, the beauty of which has not been surpassed by any save those of Mickiewicz. Towards the close of the century the political tractates of Cornicki and of Warszewicki were written, also many works of history, notably Heidenstein's "Rerum polonicarum libri XII". At this period, too, the Jesuit Skarga, the purest embodiment of Polish patriotism in literature, preached and wrote, calling upon all Poles to save their country, though that country was then so powerful that his cry of alarm was like the voice of a prophet. Rey and Kochanowski, and many another, had the like misgivings, but none felt them so deeply, or could express them with such eloquence.—This was the Golden Age of Polish literature. Kochanowski, indeed, can scarcely be called versatile, though as a lyric poet he excels, and did much for his country's literature, adding beauty to its poetry, which, until then, had been only mediocre. Historical and political writing flourished, and the Polish controversial writers were excellent on both sides.

Third Period (1600-48).—A decided falling-off took place after the beginning of the seventeenth century. Poets merely imitated John Kochanowski, badly-set phrases often taking the place of inspiration. Those who aspired to bring about a new departure (if we except Peter Kochanowski, the translator of Tasso and Ariosto) were not sufficiently talented, while most writers were careless, though often brilliant, amateurs who felt no such need. Szymonowicz, indeed, was a humanist of the old school and a true artist; so were his disciples, the brothers Zimorowicz; but of these two, the one died young, having produced very little, while the other, though he maintained the good traditions for a long time, was unable to raise the level of Polish poetry. Szymonowicz's idyls, perfect as they are, show the poverty of a period that can boast of nothing else. Sarbiewski, a contemporary poet of great talent, unfortunately wrote only in Latin. The prose writers of this period are also inferior to their predecessors, the historians being the best, and the best among the historians, Lubieniski and Biasecki, were perhaps worthy successors to those of former times. Memoirs began to abound, curious and important as sources of history, the best of them being those of Stanislaus Olbracht Radziwill and Zolkiewski. As a political essayist similar to those of the former period, but less eminent because not so original, Starowolski deserves mention; nor must we forget Birkowski's sermons, which, though often in bad taste and full of literary shortcomings, are strikingly representative of the ideal of religious

chivalry admired in Poland when patriotism and piety vied with each other.

Fourth Period (1648-96).—The writers of this period lack originality and interest; they merely tread in the beaten track. Morsztyn and Twardowski translated some mediæval romances and Italian tales, which might have proved mines of fresh interest, but were not adequately worked. One form of literature then becoming effete while no other was developed, decay set in. French and Italian authors were studied to the detriment of the ancients, badly exploited, and imitated amiss; conceits were sought after, bad taste became fashionable, the Baroque style obtained vogue everywhere, the pest of "macaronics" raged. Never had there been so many writers, never so few earnest literary artists; most wrote merely to divert themselves and friends, and did not even care to print their own slovenly work. Much of it was lost, or was only recovered generations later, in manuscript—like Pasek's "Memoirs", found in 1836, and Potocki's "War of Chocim", in 1849, and many other works invaluable to the historian. Translations from French and Italian writers appeared, some original novels, some good poems—e. g. those of Kochowski, instinct with patriotic feeling, of Wenceslaus Potocki, whose epics have the true heroic ring, the pleasant idyls of Gawinski, Opalinski's satires, which, though very inferior in style, were extremely bitter and often hit their mark, Andrew Morsztyn's "Psyche", also his "Cid", translated from Corneille. In prose, eloquence, both religious and secular, was blighted by the same affectation and bad taste. History remained what it had been, a mere chronicle of facts; the political essays were woefully inferior to those of former times. In short, at the end of the seventeenth century, Polish literature was in full decay, the only worthy representative of the national spirit being Kochowski, in a few of his lyrical productions, and W. Potocki.

Fifth Period (1696-1763).—It was fated to fall still lower—so low, indeed, that it scarce deserved the name of literature. Among the writers of this time, Jablonowski, Druzbacka (the first Polish authoress), Rzewuski, Zaluski, and Minasowicz were the least wretched; history was represented only by the "Memoirs" of Otwinowski. Yet even at this lowest ebb we find everywhere a spirit of sincere, unaffected piety, untouched as yet by French flippancy and unbelief, together with a feeling of discontent with existing conditions and a desire for reform. Karwicki, Leszczynski (King Stanislaus), and Konarski were thinkers who did noble work in the sense of political regeneration. The tide was now at its lowest, and about to turn.

Sixth Period (1763-95).—As to the necessity of reform, the nation was divided into two parties. The reforming party was considerably strengthened after the first partition of Poland, and the Four Years' Diet followed with a most liberal constitution, to which Russia and Prussia replied by dividing Poland a second time. Kosciuszko took up arms for his country, but failed; the third partition took place, and Poland, as a separate polity, existed no more. Meanwhile, though the nation itself was tottering to its fall, its literature had already begun to revive. New tendencies, new forms, new talents to realize them, were appearing, the very humiliation of belonging to a people barren of literary creations stirred up patriots to write. The influence of French letters, which had originated with Marie Louise Gonzaga, queen of John Casimir, continued and increased, not indeed without injury to faith and morals; Voltaire's Deism, Rousseau's false sentimentality, the materialism of Diderot and his followers, had their echoes in Poland. Every form of Liberalism too, from its first parliamentary shape to the sanguinary terrorism of later times, was in turn adopted from French patterns. But during all this time public opinion was ripening. Konarski's

labours had already doomed the "*liberum veto*" (the right of any one member of the Diet to prevent a bill from becoming law); Stazic, followed by Kollataj, attacked the system of elected kings. A lively discussion followed, and many pamphlets were published on either side; but at last the reformers' ideas triumphed in the Four Years' Diet. At the same time poetry was making great strides forward, though as yet inadequate to the utterance of Poland's sorrow.

The contemporary poets, Krasicki and Tremlicki especially, were men of their time, sober, sensible, humorous, witty, aiming at perfection of language and clearness of style; what they produced was not unworthy of an enlightened nation, but in no wise truly great work. Kniaznin, however, and Karpinski have left us productions more lyrical in tone, in which scenes of peasant life, together with religious sentiments, are often to be found. About this time, too, a multitude of songs without any claim to style began to express the sorrows of the nation; these were the seeds which later produced fruit in the poems of Mickiewicz and his contemporaries. The drama had hitherto been barren in Poland; it now showed signs of fruitfulness in the comedies of Bohomolec, of Czar-toryski, and especially of Zablocki, a comic writer of no mean powers. Science, too, law, philosophy, art-criticism, geography, grammar, and philology now found exponents in Sniadecki, Poczubut, Czacki, Nagurczewski, Dmochowski, Wyrwicz, and Kopeczynski. History was completely transformed by Naruszewicz, less great indeed than Dlugosz, but the only historian at all comparable to him until after the fall of Poland. If the former laid the foundations of her history, the latter rebuilt it with his critical studies and strict investigation of sources. In the same field, Albertrandi, Loyko, and Czacki were also able workers; nor should we omit to notice many memoirs, not all equally valuable, but for the most part very important and instructive. During this period then there was rapid progress. The direction of studies was completely changed. The literature run wild of the former era was succeeded by good, sensible, carefully written work; the unruly nobility of former Diets was replaced by men like Niemcewicz, Wybicki, Andrew Zamoyski, Ignatius Potocki, and Bishop Krasinski. No wonder that their achievement, the Constitution of the Third of May, was proclaimed by Burke and Siëyès the best in Europe. In a word, this period may be judged by its results—the realization of Poland as a true political organization, the notion of equality before the law, a culture higher than any since the sixteenth century, a literature both serious and worthy of respect, great examples of strenuous work, and an intense sentiment of patriotic duty.

Seventh Period (1796–1822).—The silent stupefaction of the first few years after Poland's downfall was followed by an awakening prompted by the instinct of self-preservation, which in the first place made for the preservation of the national language and literature. This sentiment became strong, ardent, universal. The Society of the Friends of Learning was then founded in Warsaw. Of its members, many have already been named as men of note in the sixth period. It did admirable work, and was not dissolved until 1831. Prince Adam Czartoryski, having become minister to Alexander I, prevailed upon him to sanction a vast plan for public education in Lithuania and Ruthenia, embracing all studies from the most elementary to those of the University of Vilna, whence Mickiewicz was one day to come forth and endow the national poetry with new life. And as Vilna University was inadequate to the needs of so vast a country, the Volhynian Lyceum was founded in 1805. During this period, the general course of literature was very like that of the preceding epoch, but more strongly marked with patriotic sadness as became a generation imbued with the constitutional ideas of the Four

Years' Diet, but grown up under the shadow of a great catastrophe. To keep the memories of the past and the love of the fatherland was now the aim evidently pursued by Niemcewicz in his "songs", by Woronicz in his "Sybil" (an anticipation of the poetry that was soon to come), by Kozmian in his "Odes", by Wezyk and Felinski in their tragedies; but the form was still French. Poles had come to be ignorant of any other literature, and the pseudo-classic taste of the time, together with the glamour of Napoleon's victories, had an excessive influence upon both literature and politics, upon language and social life.

It was through the French themselves that the Poles came to know the existence of other sources of inspiration. But this revelation once made, though Kozmian and Osinski still held exclusively to Latin models and the ideas of Laharpe, Wezyk began to study German æsthetic writers, Niemcewicz imitated Scott and pre-Byronic English poets, and Morawski translated Byron. The drama especially, though still following French models, was making great and much needed progress. Felinski's "Barbara" deserves mention as a successful play, and the actors who played it were better than had ever been seen in Poland. Romanticism was yet to come, but it had a forerunner in Brodzinski, who, though somewhat stereotyped in his diction, was nevertheless familiar with German poetry and tended to simplicity of thought, seeking his inspiration where the Romantics were wont to seek it. In the fields of science and scholarship, also, we meet with great names—Lelewel, Sniadecki, Bandtkie, Linde, Ossolinski, Betkowski, Surowiecki, Szaniawski, Goluchowski, and others already mentioned. In a word, this period presents a steady and continual upward trend in every direction.

Eighth Period (1822–50).—This period, though brief, is the most brilliant in Polish literature. It may be divided into two parts: before 1831, the search after new and independent paths; after 1831, the splendid efflorescence of poetical creations resulting from this search. What gave its tone to all the poetry of the time was the downfall of Poland, an influence that was patriotic, political, and at the same time mystical. But this factor alone, strong as it was, was not enough; other elements co-operated. There was the great Romantic movement of revolt (in England and Germany especially) against the French Classical school. In Poland the first efforts to cast off the yoke were feeble and timid, but little by little the new forms of beauty kindled interest, while the idea of a return to the poetry of the people proved particularly attractive. Both external influences and popular aspirations now tended in the same direction: there was needed only a man able to lead the movement. The needed pioneer appeared in Adam Mickiewicz, after whom the Romantic period of Polish literature should rightly be called. From the outset his verse marked the opening of a new poetical epoch. It was hailed with delight by the younger generation. New talents sprang up around him at once—the "Ukraine" school, whose most characteristic exponents were Zaleski, his friend Goszczynski, whose best poem was "The Castle of Kaniow", and Malczewski, whose one narrative poem, "Marya", made him famous. Hitherto the prevailing tone in Mickiewicz's poems had been purely literary and artistic; but he was exiled to Russia, and wrote there his celebrated "Sonnets" and his "Wallenrod". The latter work shows him for the first time inspired by the history and the actual political state of Poland. Patriotism apart, the characteristics of his school were the substitution of simpler methods of expression for the old conventional style and vivid delineation of individuals instead of abstract general types. National feeling, present from the first, predominated only after the calamitous insurrection of 1831. Among the pioneers of the movement were many men of talent, but only one of genius, and

two—Zaleski and Malczewski—whose talents were really eminent. For the drama in this period we must notice Fredro, most of whose excellent comedies were written between 1820 and 1830, and Joseph Korzeniowski's first dramatic attempts. Prose literature had changed but little as yet, though in one beautiful historical novel by Bernatowicz, "*Pojata*", Scott's influence is distinctly traceable. History continued to be represented by Lelewel.

Among the most important consequences of the insurrection of 1831 must be reckoned an emigration unparalleled in history for numbers, which continued until 1863 to be a factor of the highest importance in the destinies of the nation, both political and literary. Men of the highest talent emigrated to countries where literature was free and untrammelled, and where the national sorrows and aspirations might be uttered with impunity. Poetry was the only fitting outlet for the emotions which then stirred the spirit of the nation; poetry, therefore, played a part in the life of the people greater, perhaps, than has ever been the case elsewhere. There were few poems of that time but called to mind Poland's past, present, or impending woes. This patriotic element stamped its character upon the whole period. Poets endeavoured to answer two questions in particular: Why had this doom fallen on the nation?—What was its future to be?—Now essaying to treat the philosophy of history, now endeavouring to raise the veil of the future, however feebly a versifier might write, he was sure to attempt some answer to these questions.

And here writers were influenced by the two contrary currents of Catholicism and Messianism. The strong revival of religion in France could not but influence the men of the Polish emigration. Until 1831 Poland had been outside of that movement. Most Poles were traditionally Catholic, but not all Polish Catholics possessed deeply grounded convictions; some lived in eighteenth-century indifference; some were influenced by the opinion, as common as it is baseless, that Rationalism is the first condition of progress. Under the stress of conflicting tendencies in France, some Polish refugees entirely abandoned religion. Others learned that religiosity and practical religion are not the same thing; that Poland had in latter days, to a great degree, lost touch with the essentials of the Catholic Faith, through sheer ignorance, torpor, and thoughtlessness, and that ere its political regeneration could be thought of, the nation must be born again by a return to truly religious life. The men who thought thus—Zaleski, Witwicki, Stanislaus, John Kozmian, and others—rallied round Mickiewicz, whose idea that a new religious congregation, consisting of refugees, was necessary to set them all on the right path, became the germ of the Congregation of Our Lord's Resurrection. This congregation was founded by two priests who had been soldiers in the rising of 1831, Kajsiewicz and Semenenko. Their example did much for pulpit eloquence in Poland. Excepting Skarga, Father Jerome Kajsiewicz was the greatest of Polish pulpit orators; he was also a great writer. His inspired utterances, the truth and wisdom of his judgments in matters of learning, proceeded from his love for God, for the Church, and—though he well knew her faults and blamed them with much severity—for his country too. He was one of the greatest figures in the Church and in the literature of Poland.

In France, together with the revival of Catholicism, there were also movements in another direction; that of Saint-Simon, for example, and that of Lamennais, and these had affected the Poles of the emigration when the Lithuanian, Andrew Towianski, preached to them his new creed of Messianism. Readily explicable as a result of false conditions of existence, and the contrast between laws of conscience and facts of life, this outbreak was none the less deplorable on

account of those whom it misled. But Messianism never had much, if any, weight with the emigrants; unfortunately, Mickiewicz was entrapped by the sect, and the beauty of his utterances gave its errors some appearance of truth. The national literature had now reached its zenith; Mickiewicz now produced his great national epic, "*Pan Tadeusz*"; and it was now that Stowacki and Krasinski, lesser names indeed, yet of the first rank, wrote all their works. All three were intensely patriotic, and in some degree mystics. With them the idea of Poland as God's chosen nation, the martyr among nations largely, prevails and is strongly emphasized in the "*Dziady*" of Mickiewicz, though earlier poets were not without some traces of this doctrine. Of course Poles at the present day repudiate it as an exaggeration; but it was the first beginning of the error into which Mickiewicz fell later; and it was the only stain upon the immaculate splendour and high-souled patriotism of Polish poetry.

Mickiewicz, after "*Pan Tadeusz*" was published, gave up poetry as a vanity. But Stowacki wrote his magnificent "*Kordyan*", followed by many other poems of a still higher flight, as "*Anielli*", "*Cjciele Zadumionych*", "*W. Szwajcarij*", "*Lilla Weneda*", "*Beniowski*"; and his tragedies, though not perfect, are still the best in Polish literature. Zaleski produced his religious idyl, "*The Holy Family*", and an attempt towards the solution of many a problem in "*The Spirit of the Steppe*". Goszczynski, Garczynski, Witwicki, and Siemienski, not to mention a great number of other poets of less renown, surrounded Mickiewicz in his exile. Sigismund Krasinski published his "*Nieboska Komedia*" (*The Not-Divine Comedy*) and "*Iridyon*", both full of deep philosophical and Christian thought, showing the contradictions of European civilization, and the supremacy of God's law over nations as over individuals. His "*Przedswit*" (*The Dawn*) told Poland that her present condition was a trial to purify her, which lesson was repeated in his "*Psalms of the Future*", together with a warning against acts that might call down a yet greater calamity.

In Poland itself, the literary movement, though cramped, still existed. Vincent Pol wrote his pleasing "*Songs of Janusz*" and the "*Songs of Our Land*", marked by much originality of feeling and a faithful portraiture of the national character. There were also some poets who exaggerated Romanticism with all its defects; Magnuszewski, for instance, Zeglinski, Norwid, Zmorski, and Zielinski. Of another type were Lenartowicz, whose first poems now appeared, and Ujejski, who won fame by his "*Lamentations of Jeremias*", so well suited to the actual state of Poland. Prose, particularly prose fiction, now began to flourish. As early as 1829 Kraszewski had begun to pour forth the multitudinous and varied stream of works which was to continue for more than fifty years. His first novels were feeble, his best are open to much criticism; but there is a great deal of truth and of merit in his work, taken as a whole, with all its wonderful variety. Korzeniowski, a very different kind of talent, a serious artist and a correct writer, less satirical in tone and of a merrier turn of wit, was another good novelist; he also wrote some dramas, chiefly with a comic tendency, which were successfully produced at Warsaw during the darkest days of the century. His novels, fewer than Kraszewski's, were written with much care. In the historical novel Rzewuski was supreme, with his "*Memoirs of Soplica*" and "*Listopad*" (November). Chodzko, however, in his "*Lithuanian Pictures*", was not very far behind him.

Science and learning progressed, in spite of great difficulties. Of all the universities on Polish soil Cracow alone remained open and taught in Polish. Yet here the struggle for culture was successful. His-

tory broke with the last of the eighteenth century and took its stand upon the principle of severe research. The best historian then living, after Lelewel, was Bielowski. Mickiewicz, as a lecturer in the "College de France", sketched the history of Polish literature with a master hand, while Wiszniewski collected and studied vast stores of material of which he was able to exploit only a part. In science, both physical and medical, many names of distinguished men might be quoted. Philosophy was now more studied than ever; Gotuchowski, Libelt, Cieszkowski, Trentowski, and Kremer all tended towards the establishment of a Polish school of metaphysics, removed equally from German Transcendentalism and French Empiricism, and founded on the harmony of all our faculties (not on reason alone) and on a true reconciliation between science and religion. But all took the cue from German teachers, some from Schelling, others from Hegel, whom, however, they often contradicted; and they failed to produce any distinct system of philosophy.

Ninth Period (1850 to the present time).—A short interval of transition, following the brilliant outburst of the eighth period, lasted until 1863. Newspapers and periodicals began to be very widely read; they sowed broadcast the seeds of culture, but with the inevitable shortcomings of inadequate criticism and superficiality. Vincent Pol continued to write; "The Senatorial Agreement" and "Mohort" came from his pen during this period. Syrokomla, an author resembling Pol in simplicity and originality of tone, was decidedly his inferior in other respects. Lenartowicz, too, still wrote with much talent, but, like Pol and Zaleski, with a certain monotony of diction and ideas. Two women should be mentioned here: Narcyza Zmicowska (Gabryela) and Hedwige Luszczevska (Deotyma). The former had strong imagination and great audacity; the latter, while yet very young, astonished Warsaw with the brilliancy and facility of her poetical improvisations. In later years she set about writing seriously, and produced much good and scholarly work. The old classics, Cajetan Kozmian, Wezyk, and Morawski, still lived and wrote on, possibly even with more spirit than in their young days. Odyniec, another relic of expiring Romanticism, made his mark about this time; his translations of Scott, Moore, and Byron are excellent. Contemporary with these are Sieminski's translations of Homer and Horace, and Stanislaus Kozmian's of Shakespeare. Romanowski gave great promise as a poet, but he died in 1863; and Joseph Szujski, destined to be one of the great historians of the present time, had already come forward as a narrative, dramatic, and lyric poet. In prose literature Kraszewski and Korzennowski still held their places, and Kaczkowski now stood by their side. In history, besides the men already named, we find Maciejowski, Hube, and Helcel; these last, with Dzialynski and Bielowski, also did good work by editing ancient sources. Szajnocha, who with modern strictness of research united a most brilliant style, and Frederick Skarbek came to the front. Wojcicki's "History of Polish Literature" is a very good work; and Lukasiewicz Bartoszewicz, Mecherzynski, Przyborowski, Tyszynski, Malecki, Klaczko, and Kalinka wrote excellent treatises and essays on literary, political and æsthetic subjects.

A great change in political conditions supervened after 1863. While Austria granted autonomy to her Polish subjects, Russia attempted by a long and ferocious persecution to stamp out every vestige of national life, and in Prussian Poland, under Bismarck's rule, even the Catechism was taught in German. Thus Austrian Poland, having two universities (Cracow and Lemberg) besides an academy of sciences, became an important factor in Polish culture. The awful consequences of the rising of 1863 had taught the nation that, instead of fighting, it must employ peaceful

means, increasing the national wealth, raising the level of culture, manœuvring dexterously to get what political advantages could be got, and strengthening religious convictions among the people. The former mystical ideas of patriotism, together with all the hopes of a prompt restoration, now disappeared; in their place came truth—the knowledge of former, and of present, shortcomings and errors which had contributed to the national ruin—and the firm hope that Poland might live on, but at the cost of incessant and heroic struggles. No wonder that with such dispositions, prose had the upper hand. Poetry had had its day, though its stimulating effects still remained; its action upon the national imagination had been great; now was the turn of prose, with its appeal to the understanding and the will. History flourished: Szajnocha, Helcel, Bielowski, Szujski, Kalinka, Liske, Pawinski, Jarochofski, Wegner, Bobrzynski, Zakrzewski, Smolka, Kubala, Likowski, Korytkowski, Korzon, whose works are too numerous to be even noticed here, were all historians of great merit. In the history of Polish law, Piekosinski, Balzer, and Ulanowski must be named, besides others among those mentioned above. Estreicher published his extremely valuable and useful "Bibliografia Polska", in eighteen vols.; Malecki and Kallenbach respectively wrote the lives of Stowacki and of Krasinski; Nehring, Tretiak, and Kallenbach took Mickiewicz for their theme, and Spasowicz, Tarnowski, Chmielowski, and Bruckner all published histories of Polish literature in several volumes, whilst Klaczko wrote in French his "Causeries Florentines", a very beautiful and serious study on Dante.

In the philological field, particularly in the study of Polish and the other Slavonic languages, Malinowski, Baudoin de Courtenay, Karlowicz, Krynski, Kalina, and Hanusz did most distinguished work. Qepkowski, Luszkiewicz, Sokolowski, Mycielski, and many others laboured successfully for the advancement of archæology and the history of art, as also did Kolberg, for ethnography. Klaczko, already mentioned, wrote in French two political works, "Deux études de diplomatie contemporaine", and "Les deux chanceliers". Bishop Janiszewski's "The Church and the Christian State" is a remarkable work. In philosophy, Swigtochowski and Marburg represented the modern Positivist tendency, while the contrary attitude of thought was taken by Struve, and Fathers Pawlicki and Morawski, Straszewski, Raciborski, Twardowski, Wartenberg, and others. Pawlicki wrote his "History of Greek Philosophy", and Straszewski is the author of a work on Sniadecki and another on Indian philosophy. Poetry, as has been said, no longer occupies the same lofty position as formerly. A few dainty verses distinguished by nobility of thought and grace of diction have come from Falenski's pen. The late Adam Asnyk published many poems under the *nom de plume* of "El. .y". They were singularly melodious and graceful, melancholy and sad in tone. Marya Konopnicka is a poet of the younger generation and possesses a really fine talent. Lucyan Rydel has shown much lyrical and also dramatic talent: "Na Zawsze" (For ever) and "The Polish Bethlehem" are fine plays. Casimir Tetmajer has great command of language, a stormy, passionate lyricism; he is at war with the world and with himself.

Patriotism is, as a rule, differently manifested in the poets of our days: there being no hope of victory by insurrection, the life of the people, its fortunes and its sufferings have now the first place. Poets, too, write more willingly for the drama. Many have produced very successful plays—Anczyc, for instance, "Peasants and Aristocrats" and "Kosciuszko at Racławice". Balucki has made good hits in his *petite bourgeoisie* comedies; Fredo the younger, Blizinski and Gawalewicz are also good comedy-writers. In fiction, a great and unexpected step forward has been taken.

Kraszewski was still continuing to write with uncommon power (though at his age progress was out of the question) when Henryk Sienkiewicz came to the front. After a few short tales and sketches he took the field with his immortal trilogy: "With Fire and Sword", "The Flood", "Pan Wolodyjowski". To these he added "Without Principle", and "The Polaniecki Family", novels of contemporary life. He then published "Quo Vadis" and, reverting to national themes, brought out "The Teutonic Knights" and "On the Fields of Glory". Around him sprang up many another author of very considerable talent. There were Eliza Orzeszko (On the Niemen), Prus ("The Outpost", "The Doll"), Szymanski (Sketches), Rodziewicz (De-wajtys), Ladislaus Lozinski (The Madonna of Busowisk). Among the most recent are Zeromski ("The Homeless Ones", "Ashes", "The History of a Sin"), Rejmont (Peasants), and Przybyszewski (Homo Sapiens). At the end of the nineteenth century there came a decided change, especially in the drama, under the influence of Impressionists and Symbolists—of Maeterlinck, Ibsen, Hauptmann, and Sudermann: the prose drama, often coarsely realistic, endeavoured to solve problems of real life; the poetical and tragical drama tried to create new forms and a symbolic atmosphere. Stanislaus Wyspianski, who died lately, is the principal and most successful exponent of this latter school, but John Kasproicz has at the same time produced beautiful plays of his own and fine translations of Shakespeare and Æschylus.

Such is, in brief, the history of Polish literature—remarkable in that, during the last century, and in spite of the cruel disasters which overtook the nation, it not only maintained itself, but showed a most wonderful and consoling vitality of development; remarkable, too, for the high ideal of uprightness and nobility of mind which the nation, notwithstanding many shortcomings, constantly set up for itself from the time of Dlugosz down to our own. It has fully understood, even when it has failed to fulfil, the idea of Christian civilisation.

ST. TARNOWSKI.

Polding, JOHN BEDE, Archbishop of Sydney, b. at Liverpool, 18 Oct., 1794; d. at Sydney, 16 March, 1877. In 1805 he was sent to school at the Benedictine Monastery of St. Gregory at Acton Burnell near Shrewsbury (now Downside Abbey near Bath). In 1810 he received the Benedictine habit and made his vows the year following. He was ordained in 1819 and filled in turn the offices of parish priest, prefect, novice-master, and sub-prior in his monastery. In 1833 Propaganda selected Polding Vicar Apostolic of Madras, Bishop of Hiero-Cæsarea. It was pointed out, however, that his health could not stand the climate of Madras,

and the Holy See accepted this excuse as sufficient. About this time an appeal was made to the pope to send a bishop to New South Wales. Polding was appointed to this newly-created vicariate which, besides New South Wales, included the rest of New Holland and Van Dieman's Land (now Tasmania). The consecration took place in London, 29 June, 1834.

Bishop Polding reached Sydney in September, 1835, and at once set to work to organize his vast diocese. He found only three priests in New South Wales and one in Tasmania; these with the three or four Benedictine monks whom he had brought with him constituted the entire force at his disposal. Then, and for many years afterwards, he worked like one of his priests, saying Mass daily in various stations, often in the convict prisons, teaching the Catechism, hearing the confessions of multitudes, and attending the sick and dying. He obtained permission to give retreats in the prison establishments, and between 1836 and 1841 no less than 7000 convicts made at least ten days' retreat under his guidance. The authorities soon realized the good effect his influence was having, and arranged that, on the arrival of every ship-load of convicts, all the Catholics should be placed at his disposal for some days, during which the bishop and his assistants saw each prisoner personally and did all they could for them before they were drafted off to their various destinations. In 1841 Bishop Polding revisited England and thence went on to Rome to report on his vicariate and petition for the establishment of a hierarchy, which was granted in 1842, the vicar Apostolic becoming first Archbishop of Sydney and Primate of all Australia. During this visit he was sent on a special diplomatic mission to Malta, and in recognition of his success therein was made a Count of the Holy Roman Empire and an assistant at the pontifical throne. In 1843 he returned to Sydney, taking with him a band of Christian Brothers, four Passionists, and some Benedictines. His return as archbishop aroused a violent storm among the Church of England party in the colony, but his gentleness and tact disarmed all opponents.

Two provincial synods were held, at Sydney in 1844 and at Melbourne in 1859; he founded the University College of St. John at Sydney and the College of St. Mary, Lyndhurst. He visited Europe in 1846–48, in 1854–56, and in 1865–68, returning on each occasion with new helpers in his work. In 1870 he started for Rome to take part in the Vatican Council, but his health failed on the journey and he returned to Sydney. In 1873 the Holy See appointed Dom Roger Bede Vaughan, another Downside monk, as his coadjutor with right of succession, and from this time he gradually withdrew from active work.

G. ROGER HUDLESTON.

Pole, REGINALD, cardinal, b. at Stourton Castle, Staffordshire, England, in March, 1500; d. at Lambeth Palace, 17 Nov., 1558; third son of Sir Richard Pole, Knight of the Garter, and Margaret, daughter of George, Duke of Clarence, brother of Edward IV. From the beginning of his reign Henry VIII recognized him as a near kinsman and showed him special favour, while in 1513 he created his widowed mother Countess of Salisbury, an act of tardy reparation for the attainder and execution under Henry VII of her only brother Edward, Earl of Warwick. She was also made governess to the Princess Mary in 1516 and we may assume that Pole's intimacy with the royal mistress whom he was afterwards to serve so devotedly began before he left England. The boy received his early education in the Charterhouse at

Sheen, where he spent five years. He went to Oxford at the age of twelve or thirteen, and took his degree soon after he was fifteen. He was, it seems, intended for the Church, a choice to which he willingly assented, and though he had received no orders and was still hardly more than a lad, benefices were showered upon him, amongst others a prebend bearing with it the title of dean in the collegiate church of Wimborne (15 Feb., 1518).

Throughout all his career Pole's attraction for a studious life was most pronounced. At his own wish and with the approval and pecuniary help of Henry VIII he set out in Feb., 1521, for Padua, at that time a great centre of learning, and in the coterie of scholars which he found there the young kinsman of the King of England became a great favourite. Men like Longolius (de Longueil), who, dying shortly afterwards, left Pole his library, Leonicus, who taught him Greek, Bembo the humanist, and later Cardinal Contarini, also one day destined to adorn the Sacred College, and the English scholar Lupset, all sought his intimacy, while at a later period and under other circumstances he acquired the friendship and won the high esteem of Erasmus and More. All these were not only learned but large-minded men, and the mere fact of his choosing such associates would suffice to prove that Pole was not the bigot he has been sometimes represented. Pole remained in Italy until 1527. After a visit to Rome in 1526, and on his return he still pursued his studies, residing within the enclosure of the Carthusians at Sheen. Even at this date he had not yet received minor orders, but he was nevertheless elected Dean of Exeter (12 Aug., 1527).

Shortly after this the great matter of the king's divorce came to a head, and Pole, to avoid having to take sides in a complication in which conscience, friendship, and gratitude to his royal kinsman were inextricably entangled, obtained permission to continue his studies in Paris. But he did not thus escape from his embarrassment, for his aid was asked by the king to obtain from the university an opinion favourable to the divorce. When the young student pleaded inexperience, Fox was sent to assist him. The situation was a delicate one and Pole probably did little to forward a cause so distasteful to his own feeling (the effective pressure, as we know, was really applied by Francis I), but he had the credit of managing the business and was thanked for his exertions (see Calendar, IV, 6252, 6483, 6505). None the less, Henry required his kinsman to return to England, and when shortly afterwards Wolsey's disgrace was followed by his death, Pole was invited to succeed him as Archbishop of York, or to accept the See of Winchester. That this was merely a bribe to obtain Pole's support was not so obvious then as it must seem to us now in the light of subsequent developments. He hesitated and asked for a month to make up his mind. Finally he obtained an interview with the king and seems to have expressed his feelings on the divorce question so boldly that Henry in his fury laid his hand upon his dagger. To explain his position he subsequently submitted a memorial on the subject which, even according to the unfriendly testimony of Cranmer, was a masterly document (Strype, "Cranmer", Ap. 1), moderately and tactfully worded. "The king", so Pole pleaded—it was in the early part of 1531—"standeth even upon the brink of the water and he may yet save all his honour, but if he put forth his foot but one step forward, all his honour is drowned."

The course of subsequent history fully justified Pole's prescience, and indeed for a moment the king seems to have wavered, but evil counsels urged him forward on the road to destruction. Still, as Pole had not made his opposition public, Henry was magnanimous enough at this stage to give him permission in January, 1532, to withdraw to the continent, while continuing

as before to pay his allowances out of the royal exchequer. Resuming, eventually, his peaceful life in Padua, Pole renewed or established an intimacy with the leaders in the world of letters, men like Sadolet (then Bishop of Carpentras), Contarini, and Ludovico Priuli. The two or three years which followed were probably the happiest he was fated ever to know.

Meanwhile events were moving rapidly in England. The last strands which bound England to Rome had been severed by the king in 1534. The situation was desperate, but many seemed to think that it was in Pole's power to render aid. On the side of Princess Mary and her cousin Charles V advances were made to him in June, 1535, and after some demur he agreed to make an attempt at mediation. On the other hand Henry seemed still to cling to the idea of gaining him over to support the divorce, and through the intermediary of Pole's chaplain, Starkey, who happened to be in England at the close of 1534, Pole had been pressed by the king to write his opinion on the lawfulness *jure divino* of marriage with a deceased brother's widow, and also upon the Divine institution of the papal supremacy. Pole reluctantly consented, and his reply after long delay eventually took the form of a treatise, "Pro ecclesiasticæ Unitatis defensione". It was most uncompromising in language and argument, and we cannot doubt that events in England, especially the tragedy of the execution of Fisher and More and of his friends the Carthusians, had convinced Pole that it was his duty before God to speak plainly, whatever the cost might be to himself and his family. The book, however, was not made public until a later date. It was at first sent off privately to the king (27 May, 1536), and Henry on glancing through it at once dispatched the messenger, who had brought it, back to Pole, demanding his attendance in England to explain certain difficulties in what he had written. Pole, however, while using courteous and respectful language to the king, and craving his mother's pardon in another letter for the action he felt bound to take, decided to disobey the summons. At this juncture he was called to Rome by command of Paul III. To accept the papal invitation was clearly and before the eyes of all men to side with the pope against the king, his benefactor. For a while Pole, who was by turns coaxed and threatened in letters from his mother and relatives in England, seems to have been in doubt as to where his duty lay. But his advisers, men like Ghiberti, Bishop of Verona, and Caraffa, the founder of the Theatines, afterwards Paul IV, urged that God must be obeyed rather than man. So the papal invitation was accepted, and by the middle of November, 1536, Pole, though still without orders of any kind, found himself lodged in the Vatican.

The summons of Paul III had reference to the commission which he had convened under the presidency of Contarini to draw up a scheme for the internal reform of the Church. The pope wished Pole to take part in this commission, and shortly afterwards announced his intention of making him a cardinal. To this proposal Pole, influenced in part by the thought of the sinister construction likely to be put upon his conduct in England, made an energetic and, undoubtedly, sincere resistance, but his objections were overborne and, after receiving the tonsure, he was raised to the purple along with Sadolet, Caraffa, and nine others on 22 Dec., 1536. The commission must have finished its sittings by the middle of February (Pastor, "Geschichte der Päpste", V, 118), and Pole was despatched upon a mission to the north on 18 Feb., with the title of legate, as it was hoped that the rising known as the "Pilgrimage of Grace" might have created a favourable opportunity for intervention in England. But the rivalry between Charles V and Francis I robbed Pole's mission of any little

REGINALD CARDINAL POLE

SEBASTIANO DEL PIOMBO, THE HERMITAGE, ST. PETERSBURG

prospect of success. He met in fact with rebuffs from both French and Spaniards, and eventually had to take refuge with the Cardinal Bishop of Liège. After being recalled to Rome, he was present in the spring of 1538 at the meeting between Charles V and Francis I at Nice. Meanwhile Pole's brothers had been arrested in England, and there was good reason to believe that his own life was in danger even in Venetian territory from Henry's hired assassins (cf. Pastor, op. cit., V, 685). Pole then set himself with the pope's approval to organize a European league against Henry. He met Charles at Toledo in Feb., 1539, but he was politely excluded from French territory, and after learning the sad news of his mother's martyrdom, he was recalled to Rome, where he was appointed legate to govern from Viterbo the district known as the Patrimony of St. Peter. His rule was conspicuously mild, and when two Englishmen were arrested, who confessed that they had been sent to assassinate him, he remitted the death penalty and was content to send them for a very short term to the galleys.

In 1542 Pole was one of the three legates appointed to preside over the opening of the Council of Trent. Owing to unforeseen delays the Fathers did not actually assemble until Dec., 1545, and the English cardinal spent the interval in writing his treatise "De Concilio". At the second session of the Council, 7 Jan., 1546, the impressive "Admonitio Legatorum ad Patres Concilii" (see Eheses, "Conc. Trid.", IV, 548-53) was drafted by Pole. For reasons of health he was compelled to leave Trent on 28 June, but there seems to be good evidence that his malady was real enough, and not feigned, as some have pretended, on account of the divergence of his views from those of the majority upon the question of justification (Pastor, op. cit., V, 578, note 3). None the less before the Diet of Ratisbon he undoubtedly had shared certain opinions of his friend Contarini in this matter which were afterwards reprobated by the Council (ibid., V, 335-37). But at that period (1541) the Council had not spoken, and Pole's submission to dogmatic authority was throughout his life absolute and entire. It is possible that an exaggerated idea of those errors produced at a later date that bias in the mind of Caraffa (Paul IV) which led him so violently to suspect Pole as well as Morone (q. v.) of heretical opinions.

On the death of Henry VIII, Pole with the approval of Paul III made persistent efforts to induce the Protector Somerset and the Privy Council to treat with the Holy See, but, while these overtures were received with a certain amount of civility, no encouragement was given to them. Paul III died 10 Nov., 1549, and in the conclave which followed, the English cardinal was long regarded as the favourite candidate. Indeed it seems that if on a particular occasion Pole had been willing to present himself to the cardinals, when he had nearly two-thirds of the votes, he might have been made pope "by adoration". Later the majority in his favour began to decline, and he willingly agreed to a compromise which resulted in the election of Cardinal Del Monte (Julius III). On the votes given for Pole, see "The Tablet", 28 Aug., 1909, pp. 340-341.

The death of Edward VI, 6 July, 1553, once more restored Pole to a very active life. Though the cardinal was absent from Rome, Julius III at once appointed him legate in England, and Pole wrote to the queen to ask her advice as to his future procedure. Both Mary's advisers in England and the Emperor Charles V, who was from the first anxious to marry the new queen to his son Philip, considered that the country was not yet ready for the reception of a papal legate. Julius, by way of covering the credit of his envoy in the delays that might possibly ensue, entrusted Pole with a further commission to establish friendly relations between the Emperor Charles and Henry II of France. All this brought the cardinal a good many rebuffs, though he was courteously received in Paris.

Charles V, however, deliberately set himself to detain Pole on the continent until the marriage between Mary and Philip had been concluded (see MARY TUDOR). Eventually Pole was not allowed to reach Dover before 20 Nov., 1554, provision having previously been made that holders of church property should not be compelled to restore the lands that they had alienated. A great reception was given to the legate upon his arrival in London, and on 30 Nov. Pole, though not even yet a priest, formally absolved the two Houses of Parliament from the guilt of schism. Owing to Pole's royal descent and his friendship with the queen, he exercised a considerable indirect influence over affairs of state and received a special charge from Philip to watch over the kingdom during his absence. On the other hand, the cardinal does not seem to have been at all anxious to add to his responsibilities, and when Archbishop Cranmer was deprived, he showed no great eagerness to succeed him in his functions as archbishop. Still a synod of both convocations was held by him as legate in Nov., 1555, which passed many useful decrees of ecclesiastical reform, rendered necessary by the disturbed condition of the Church after twenty years of separation from Roman authority. On 20 March, 1557, Pole was ordained priest, and two days after he was consecrated archbishop, while he solemnly received the pallium on the feast of the Annunciation in the Church of St. Mary-le-Bow, delivering an address which is still preserved.

With the persecutions which have cast so regrettable a shadow over Mary's reign Pole seems to have had little to do (Dixon, "Hist. of the Ch. of Eng.", IV, 572). "Three condemned heretics from Bonner's diocese were pardoned on an appeal to him; he merely enjoined a penance and gave them absolution" (ibid., 582). The cardinal was now somewhat infirm, and his last days, like those of his royal mistress, were much saddened by fresh misunderstandings with Rome, due mainly to the impetuous temper and bitter anti-Spanish feeling of Paul IV. As a Neapolitan, Paul was bent upon driving the Spaniards out of Naples, and war broke out in Italy between the pope and King Philip. The pope made an alliance with France, and Philip set deliberately to work to implicate England in the quarrel, whereupon Paul withdrew his legates from the Spanish dominions and cancelled the legation of Pole. Although the tension of this state of affairs was in some measure remedied by concessions on the part of the pope, which were wrung from him by the success of Philip's arms, the cloud had by no means completely lifted, aggravated as it was by the pope's perverse conviction of Pole's doctrinal unsoundness, when the cardinal in Nov., 1558, contracted a mortal sickness and died a few hours after Queen Mary herself.

Throughout his life Pole's moral conduct was above reproach, his sincere piety and ascetical habits were the admiration of all. "Seldom", writes Dr. James Gairdner, than whom no one is more competent to pronounce judgment, "has any life been animated by a more single-minded purpose". As compared with the majority of his contemporaries, Pole was conspicuously gentle, both in his opinions and in his language. He had the gift of inspiring warm friendships and he was most generous and charitable in the administration of his revenues.

An early life of Pole was written by his secretary BECCATELLI. It may be found printed in QUIRINI's great collection, *Epistolæ Reginaldi Poli et aliorum ad se* (5 vols., Brescia, 1744-57); upon these materials was founded the *History of the Life of Reginald Pole* by PHILLIPS (Oxford, 1764), which still retains its value. A more modern biography is that of "MARTIN HAILE" (Miss Mary Hallé), *The Life of Reginald Pole* (London, 1910); compare also ZIMMERMANN, *Cardinal Pole* (Freiburg, 1893); ANTONY, *The Angelical Cardinal* (London, 1909); LEE, *Reginald Pole* (London, 1888); an admirable account of Pole by GAIRDNER is given in *Dict. Nat. Biog.*; on the other hand the *Life of Pole* in Hook's *Archbishops of Canterbury* (London, 1860-84) is disfigured by conspicuous anti-Catholic animus. Much useful supplementary information is furnished by the *Monumenta Concilii Tridentini*,

vols. I and IV (Freiburg, 1901-04), and in PASTOR, *Geschichte der Päpste* (Freiburg, 1908-10), IV, V. See also "The Tablet", 28 Aug., 1909, p. 340. The edition of the letters published by QUIRINI is far from complete, and many still remain in MS.

Polemical Theology. See THEOLOGY.

Polemonium, titular see in Pontus Polemoniacus, suffragan of Neocæsarea. At the mouth of the Sidene, on the coast of Pontus in the region called Sidene, was a town called Side, which, it is believed, took the name of Polemonium in honour of Polemion, made King of Pontus by Marcus Antonius about 36 B. C. Doubtless its harbour gave it a certain importance, since it gave its name to the Pontus Polemoniacus. It is now the village of Pouleman in the vilayet of Trebizond, on the right bank of the Pouleman Tchai; the ruins of the ancient town, octagonal church, and ramparts, are on the left bank. Six of its bishops are known: Aretius, present at the Council of Neocæsarea in 320 (he was perhaps Bishop of Laganina); John, at Chalcedon (451), signer of the letter from the bishops of the province to Emperor Leo (458); Anastasius, at the Council of Constantinople (680); Domitius, at the Council of Constantinople (692); Constantine, at Nicæa (787); John, at Constantinople (869 and 879). The "Notitiæ episcopatum" mentions the see until the thirteenth century.

SMITH, *Dict. of Greek and Roman Geog.*, s. v., gives bibliography of ancient authors; RAMSAY, *Asia Minor*, 325; LE QUIEN, *Oriens christ.*, I, 515. See also MUELLER's notes to Ptolemy, ed. Didot, I, 867.

S. PÉTRIDÈS.

Poleni, GIOVANNI, marquess, physicist, and antiquarian; b. at Venice, 23 Aug., 1683; d. at Padua, 14 Nov., 1761; son of Marquess Jacopo Poleni. He studied the classics, philosophy, theology, mathematics, and physics. He was appointed, at the age of twenty-five, professor of astronomy at Padua. In 1715 he was assigned to the chair of physics, and in 1719 he succeeded Nicholas Bernoulli as professor of mathematics. As an expert in hydraulic engineering he was charged by the Venetian Senate with the care of the waters of lower Lombardy and with the constructions necessary to prevent floods. He was also repeatedly called in to decide cases between sovereigns whose states were bordered by water-ways.

His knowledge of architecture caused Benedict XIV to call him to Rome in 1748 to examine the cupola of St. Peter's, which was rapidly disintegrating. He promptly indicated the repairs necessary. He also wrote a number of antiquarian dissertations. In 1739 the Academy of Sciences of Paris made him a member, and later the societies of London, Berlin, and St. Petersburg did the same. The city of Padua elected him as magistrate, and after his death erected his statue by Canova. Venice also honoured him by striking a medal.

The following are his principal works: "Miscellanea" (dissertations on physics), Venice, 1709; "De vorticibus cœlestibus", Padua, 1712; "De motu aquæ mixto", Padua, 1717; "De castellis per quæ derivantur fluviorum latera convergentia", Padua, 1720; "Exercitationes Vitruvianæ", Venice, 1739; "Il tiempo di Diana di Efeso", Venice, 1742.

Poles in the United States.—*Causes of Immigration.*—There is good foundation for the tradition that a Pole, John of Kolno (a town of Masovia), in the services of King Christian of Denmark, commanded a fleet which reached the coast of Labrador in 1476 ("American Pioneer", I, Cincinnati, 1844, 399). The well-known Zabriskie family of New York is descended from Albert Zborowski, who not later than 1662 settled on the Hackensack River, New Jersey. His signature is found affixed as interpreter to an Indian contract

of purchase in 1679 (New York General Records, XXIII, 26, 33, 139-47). One descendant, Abraham O. Zabriskie, was the eminent Chancellor of New Jersey. Other descendants intermarried with the most prominent colonial families, and were soon merged in the general population. In 1659 the Dutch on Manhattan Island hired a Polish school-master (Conway, "Cath. Educ. in U. S."). In 1770 Jacob Sadowski settled in New York, and his sons were among the first white men to penetrate as far as Kentucky. It is said that Sandusky, Ohio, was named after him (American Pioneer, I, 119; II, 325). Roosevelt, "Winning of the West", Vol. I, p. 164. Previous to this there were Polish settlers in Virginia (Kruszka, op. cit. infra, I, 54) and the southern states (Johns Hopkins Studies, XIII, p. 40). But among the European champions of American Independence few if any were more prominent than the noble Polish patriots, Thaddeus Kosciuszko and Casimir Count Pulaski, the brilliant cavalry officer. Several of the aides of Pulaski's famous Legion were Polish noblemen.

The Polish Revolution of 1830 brought to the United States a considerable and abiding contingent of Poles, mostly soldiers and members of the lower nobility. Part of Napoleon's Polish Legion had been dispatched to San Domingo, whence such as did not perish miserably or return to Europe came to the United States. A considerable number of Poles were in the American armies, fighting the Seminole Indians in the south. Among Americans of that time enthusiasm in Poland's cause ran high, and the tourist who visits the Polish National Museum in the ancient Hapsburg castle in Rapperschwyl, Switzerland, can see many tokens of sympathy sent to the struggling Poles by their American admirers. In 1835 there existed a "Polish National Committee in the United States", whose members were prominent Americans, and whose president, as we learn from a pamphlet printed in Philadelphia, 30 Sept., 1835, was M. Carey. The number of Poles in the United States must have run up to thousands, if we may judge from the frequent allusions to the various groups in the American Press of the time. American sympathy took concrete form when Congress made the Poles a grant of thirty-six sections of land, and surveyed two townships for them near Rock River, Illinois.

A number of veterans of the Revolution of 1830 organized the Stowarzyszenie Polaków w Ameryce (Association of Poles in America), in New York. An appeal dated New York, 20 March, 1842, calls upon all Poles in America to affiliate with an organization recently effected at the home of the Rev. Louis Jeżykiewicz, 235 Division Street, New York. "To die for Poland" was the watchword of the organization, which, according to a brochure printed in Paris, elaborately commemorated the Revolution of 1830, at the Stuyvesant Institute, New York. Poles from Boston, Baltimore, Utica, Philadelphia, and Niagara were present at the celebration, and many distinguished Americans and foreigners, as well as various Scandinavian, French, and German societies participated. In 1852 probably the second Polish organization in the United States was founded, Towarzystwo Demokratyczne Wygnańców Polskich w Ameryce (Democratic Society of Poles in America), an ardent anti-slavery organization. In 1854 it numbered over two hundred members, but there are no records of its activities later than 1858. The Poles coming throughout this period of political immigration were persons of culture, and were freely admitted into American society, which looked upon them as martyrs for liberty. Their Americanization was most frequently concomitant with the loss of their Faith. With a few noteworthy exceptions, they exercised no influence upon the

Polish immigrants of a succeeding generation. At the solicitation of Bishop Carroll a number of Polish priests, all former members of the disbanded Society of Jesus, came to America; one of the most prominent of these was Father Francis Dzierozynski. In the thirties several Polish Franciscan Fathers were labouring in the United States, among whom the most prominent was Father Anthony Rossadowski, chaplain in the Polish army in the Revolution of 1830. Father Gaspar Matoga, who came to the United States in 1848, and completed his studies at Fordham, was the first Polish priest to be ordained in the United States.

Broadly speaking, the causes of Polish immigration have been political, religious, and economic. While economic conditions have been the direct cause, it must be borne in mind that the indirect causes, political and religious, are quite as potent as the economic. Prussianizing, which lately has assumed a religious as well as a political aspect, renders the progress of Prussian Poland distasteful to the Poles, because whatever progress is made must be along Prussian lines. The *Kulturkampf* gave the American Poles many of their noblest priests, through whose influence thousands of Poles came to America. While Prussianizing by means of class legislation, expropriation, and colonization has not been very rapid, its methods have been attended with a certain measure of success. The economic prosperity of Western Germany has checked the emigration of Prussian Poles from the empire, and the Poles already form an important and growing part of the population of Westphalia and the Rhenish provinces.

Russian Poland experiences the full force of militarism, but still more important as a cause of emigration is the state of terrorism in the great manufacturing districts of Russian Poland, aggravated by the Russo-Japanese War. The mentally more alert are emigrating from Russian Poland, mostly young men who, under the constant strain of Government repression, are the first to be drawn into the revolutionary propaganda and have developed exaggerated notions concerning social wrongs. It is mostly from this class that Socialism in America draws its Polish recruits. A condition responsible for much of the emigration from Poland is the persecution of the Jews in Russia proper, and the Government's policy of concentrating its Jewish problem within "the Kingdom", which has been constituted a vast pale whither the Jews are being forced until they are overflowing into Galicia. By granting autonomy to communities in which the Jews are numerically strong, the Government is effectually expatriating the Poles by what amounts to disfranchisement, and thus Polish progress is blocked. The Poles were never a commercial people, and under present conditions they abandon all trade and commerce to the Jews. About 35 per cent of the population of Warsaw and about 31 per cent of that of Cracow are Jews. They have control of Poland's industry, commerce, and agriculture. Industry receives poor reward, taxation of the poor is oppressive, and education in Russian Poland is positively discouraged. Since the beginnings of Galician emigration land values in Galicia have advanced fourfold. The abandonment of the feudal system, whereby one child received the family holding intact, the decreasing death-rate, and the high birth-rate, have cut the peasant's acre into tiny patches, which under most careful cultivation are insufficient for a population of 241 to the square mile, especially in Western Galicia. Polish emigration is constantly stimulated by the steamship agencies, which form a network of newspapers, petty officials, and innkeepers; cheapness of transportation and the accounts from America of better

conditions add greatly to its tide. The annual emigration to the industrial regions of Germany tends to mitigate the extreme poverty of the peasants, which heretofore rendered emigration impossible. Poverty and not patriotism is at the bottom of all present-day Polish emigration. Memories of European conditions are an important factor in causing the Poles in the United States to forget any intention they may have had of returning to the mother country.

Distribution and Statistics.—The immigration of the Polish masses began in 1854. In 1851 Father Leopold Moczygamba, a Franciscan, came to America and soon after induced nearly one hundred families from Upper Silesia to come to Texas. They first came by sailing vessels to Galveston and brought with them all their possessions, their tools and ploughs; indeed, even the bell and great cross in the village church were brought to the New World, and still remain in the church in Panna Maria, Texas, lasting memorials of the faith of the early pioneers. In 1855 the church in Panna Maria was built, the first Polish church in America. Within a few years ten little colonies had been established in Texas, and during the same period colonies were founded in Parisville, Michigan, and Polonia, Wisconsin, and in 1862 a parish was being organized at Milwaukee. In 1870 there were twenty Polish settlements in ten parishes in the States of Texas, Michigan, Wisconsin, Illinois, Indiana, Missouri, and Pennsylvania. It was to the virgin lands of Michigan, Wisconsin, and southern Illinois, and to the coal-fields of Pennsylvania and Illinois that they went in greatest numbers. The number of Polish priests grew from 25 in 1870 to 79 in 1877. The total Polish population in the United States did not exceed 40,000 in 1870, of whom fully a fourth were in Chicago alone. While the immigration of the Polish masses had its distinct beginning in 1854, and the number of immigrants was increased by the disastrous Revolution of 1863, it was not until after the Franco-Prussian War, and until after the United States began to recover from the effects of the Civil War, that it became a mighty stream; and although Prussian Poland has long ceased to send more than a modicum, the stream is gaining volume with each passing month.

The financial panic of 1873 checked for a brief period the growing immigration. In 1875 the Poles in the United States numbered nearly 150,000, of which number nearly 20,000 were in Chicago, which as early as 1866 had become and still remains the metropolis of this the fourth division of Poland, as the Polish community in America is called by the Poles. In 1889 they had 132 churches, 126 priests, and 122 schools, nearly all conducted by the Felician Sisters and the School Sisters of Notre Dame. Buffalo, Detroit, Cleveland, Pittsburg, and Milwaukee, in addition to Chicago, had become important Polish centres as early as 1880. The vast majority, probably 80 per cent of all Polish immigration from 1854 to 1890, was from Prussian Poland. Among them were many Cassubians from West Prussia who, living in what was for centuries a borderland between Poland and the domains of the Teutonic Knights, were much affected by Prussian influence. While there is no small number of these Cassubians in parishes noted as German in the official directory, they have of late years, both in Poland and America, regained their national consciousness and have fully entered into the life of the Polish-American community. From the so-called *Mazurenland* (Masuria) in northern Prussia we have a few thousand Polish Lutherans who but for their jargon of Prussianized Polish are lost to Poland. Between them and the Poles no community of interests exists either in America or Poland. There are several isolated colonies of these Masurians in Wisconsin and Minnesota.

Within the past two decades a great change has come over the character of Polish immigration. The pioneers who came from Silesia, the Grand Duchy of Posen, and West Prussia came with their families, were mostly men of early middle age, and came with no thought of ever returning. The Prussian Poles took readily to farming. They were resourceful, disinclined to hazard health and life, and not intent upon making money in a very short time. The Prussian Poles and their children constitute much the greater part of the rural Polish population in the Middle West and North-west. Polish immigration from Russian Poland and Galicia has been so great that many of the older parishes founded by Prussian Poles in the industrial regions are made up almost wholly of their numbers. The Russian Poles constituted about 53 per cent, those from Galicia about 43 per cent, and the Prussian Poles about 4 per cent of the total Polish immigration from 1895 to 1911. The recent Polish immigrants are mostly young men. The vast majority are unskilled labourers from the villages; the few skilled labourers and mechanics are for the most part from Russian Poland, and these latter are employed in the textile industries and sugar refineries, with which work they are familiar. Those from Galicia come in many instances to earn enough money to clear their small plot of land of debt. They come to mill and mine, and seem utterly indifferent to hardship and danger. The percentage of illiterates among the immigrants from Prussian Poland, never very high, is now insignificant, while their knowledge of German is a valuable asset. The percentage of illiterates from Poland for the fiscal year, 1910, was 30.1 per cent. The small number of Poles becoming public charges would be much smaller but for the laws making little or no provision for the workmen and compelling them to undertake expensive litigation in case of accident. The records of our penal and eleemosynary institutions fail to show that the Poles constitute a lawless element. The very low death-rate among the Poles, in spite of abnormal conditions of living (high infant mortality, and the heavy death-rate in the mines and mills), is striking proof of their morality. It is not unusual to see Polish churches in the United States filled with congregations in which the men far outnumber the women. This is largely explained by the character of recent immigration, but it may nevertheless be asserted that no other class of American Catholics can boast of a greater percentage of church-going men.

Historically the Poles have been so circumstanced that their racial and religious sympathies completely coincide. So fused and intensified are these sentiments that it has been well said that the soul of Poland is *naturaliter Christiana*. Conditions leading to ruptures with ecclesiastical authorities have been many and it would be exceedingly unjust to place all blame upon the masses of the Polish people. The Poles are easily led by a fiery eloquence, and "independence" among them was the result of deliberate deception on the part of rebellious priests who to carry on their deception more successfully had some of their number consecrated bishops by the Old Catholic bishops in Europe. The "Independents" are possessed of no unity, and represent no heretical or schismatic movement in the real sense. The movement was strongest from 1895 to 1900, and spread with astonishing rapidity, becoming most destructive in Chicago, Detroit, Cleveland, and throughout Pennsylvania, in which state it still continues a demoralizing factor. It is impossible to estimate with any degree of accuracy the numerical strength of the movement at its height, but to-day the total number cannot exceed 30,000. Protestants, notably Baptists, Presbyterians, and Episcopalians, have fraternized with the "Independents" and given them ■ respectability. In recent years many of the immi-

grants have been drawn into the movement in good faith. The fact that the Poles from an aggregation of units, frequently lacking efficient spiritual leadership, torn by dissensions, led astray by a Liberal press, have slowly and painfully arisen to a position commanding respect is the most splendid tribute that can be paid them. The failure of certain classes of immigrants to come to the material support of the Church is most frequently explained by adducing the fact of a state-supported Church in the mother country. Since in most parts of Poland the Church is supported by indirect taxation, the generosity of the American Poles is brought out into stronger relief, and their willingness to build and maintain their magnificent churches and institutes is deserving of the unbounded praise accorded them. Coupled with their deep faith, their intense nationalism acts as an incentive to their generosity.

Unfortunately the immigrant tide pours into our great cities in spite of the fact that our Polish immigrants are almost solidly from the agricultural villages. What has been said concerning the necessity of intelligent colonization in the article on Italians in the United States holds with equal force when speaking of the Polish immigration. The settlement of the Poles in lower New England is evidence of the need of intelligent colonization. The movement to the farms, at first confined to the Prussian Poles, is now spreading and extending to the other classes, who are even entering Canada. The settlement of the Poles in the Connecticut Valley, whither more than 5000 went in 1910, dates from about 1895. The Poles saved their money and succeeded. In time they bought the land of their employers. Hundreds of abandoned farms in New England have passed into their hands, and they are now invading Long Island. Their industry and thrift are shown by their success on these abandoned farms, on which women and children share the toil of the father.

Customs.—The Poles in America cling tenaciously to their quaint customs, which are in nearly every instance quite as much religious as national in character. Poland was but little affected by the religious rebellion of the sixteenth century and hence the Catholic medieval spirit is still that of the Poles. The Christmas and Easter carols heard in the Polish churches are exact counterparts of those sung by the peasants of pre-Reformation England, and are the expression of the childlike faith of the people. The most beautiful custom and the one that bids to outlive all others among the American Poles is that of the *oplatki* (wafers). Shortly before Christmas the parish organist distributes wafers resembling those used for Holy Mass, and at this distribution each parishioner makes a slight offering to the organist or altar-boys who bring the wafers. These are sent to friends and relatives in Europe, and the latter do not forget those in America. On Christmas Eve the family gathers to partake first of all of the wafer in token of continued love, mended friendship, and goodwill to all men. During the Octave of the Epiphany the priests bless the homes of the people, and the doors are marked with the initials of the names of the Wise Men, with chalk blessed on the feast of the Epiphany. On Holy Saturday the priest blesses the baskets of food prepared for the morrow. Very early on Easter morning Holy Mass is celebrated and after the Mass the priest and the laity go in solemn procession thrice around the church, inside or outside, according to circumstances. This is called the *Resurekcya*.

During the Easter season the priests issue confession cards, on which are printed the words: *Signum Communionis Paschalis*. Each card is numbered, and a record is kept of the numbers and names of those to whom cards are issued. These

ards are returned by penitents in the confessional and the names are cancelled. Thus a record is kept of all those who have satisfied their Paschal obligation. While the custom is liable to misinterpretation and even abuse, the Polish clergy are loath to abolish it because of many excellent features. In no other way in the large city parishes where the population is constantly shifting can the clergy meet many of their people. On the feast of the Assumption the faithful bring flowers and greenery to the church to be blessed, and the day is called the feast of Our Lady of the Greenery. Polish women are careful in their observance of the custom of being churched after childbirth. It is not uncommon for the brides to come to church very soon after marriage to receive the blessing *novæ nuptæ*. Seldom does a Polish marriage take place except with a nuptial Mass.

Name-days, not birthdays, are celebrated, and sponsors are regarded as relatives by the interested families. On the death of a parishioner the church bell is tolled each day immediately after the Angelus until after the funeral, at which very frequently the Office of the Dead is chanted. The Poles love their own vernacular songs, and in most of their churches one may hear them chant the "Little Hours" before High Mass on Sunday mornings. Nor is Latin popular with Poles, who frequently sing all parts of the High Mass except the responses in Polish.

Hospitality ceases to be a virtue with the Poles. Generous to a fault, they turn a deaf ear to no petition for assistance, especially if the object appeals to national or religious sympathies. Poles are lovers of processions, flags, banners, uniforms, and marshals' batons. A Polish church on festal days resembles some national fane whither the battle-flags of nations have been brought from fields of glory. The Pole is not utilitarian, and all this to him is more than useful, serving as it does to bind him more closely to the Church, whose feasts are given added solemnity. The observance of national festivals is religiously kept. May recalls the adoption of Poland's famous Constitution; November, the Revolution of 1830; and January, Poland's last war for freedom, the Revolution of 1863. The various organizations vie with one another in preparing these celebrations, which serve the useful purpose of affording instruction in Poland's history to the younger generation and to the invited Americans.

Polish Charitable Institutions.—Besides contributing to the support of the various diocesan charities the Poles maintain a growing number of such institutions for those of their own nationality. Only the more important are noted: Felician Sisters, orphanages, 5, orphans, 585; Sisters of the Third Order of St. Francis, orphanages, 1, orphans, 105; Bernardine Sisters, orphanages, 1, orphans, 120; Sisters of the Holy Family of Nazareth, orphanages, 1, orphans, 160.

A very large orphan asylum is now building in Chicago, which will be supported by all the Polish parishes of the archdiocese and will be placed in charge of the Felician Sisters. There are three Polish homes for the aged in which 200 are provided for. In 1909 St. Felix's Home for Polish working girls, Detroit, conducted by the Felician Sisters, assisted 202 girls; another such institution in East Buffalo, New York, conducted by the same community, assisted 267 girls; in the Polish day nurseries of Chicago and Milwaukee nearly 20,000 children were cared for; St. Mary's Hospital, Chicago, conducted by the Sisters of the Holy Family of Nazareth, cared for 2,150 patients. The Immigrant Home, East Buffalo, New York, aided 8978 immigrants. St. Joseph's Home for Polish and Lithuanian Immigrants, New York, has since its foundation in 1896

given aid to 86,912 immigrants. Both homes are now in charge of the Felician Sisters.

One of the most notable of the early Polish emigrants was the patriot-poet, Julian Niemcewicz, who came to America in 1796. He had been Secretary to the Polish Senate, adjutant-general of Kosciuszko in the latter's struggles for Polish independence and his companion in captivity in St. Petersburg. He became an American citizen and remained in the United States until the formation by Bonaparte of the Grand Duchy of Warsaw, when he returned to Poland and was actively engaged in Poland's cause until his death in 1841. The leading spirit of all movements among the Poles in America throughout the period of political immigration was Henry Corvinus Kalusowski, the son of one of the chamberlains of Stanislaus Poniatowski, the last King of Poland. He came to America in 1834. Returning to Poland he represented a Polish constituency in the Prussian Parliament, and upon his expulsion by the Prussian Government again came to the United States. During the Civil War he organized the Thirty-first New York Regiment. Later held positions in the State Department in Washington, and translated all official Russian documents relating to the purchase of Alaska by the United States. He died in 1894.

Other political immigrants were: Tyssowski, the "Dictator of Cracow"; the learned Adam Gurowski, who in his "Diary of 1861-1865" betrayed a keen insight into the conditions of the Civil War period; Lieutenant Bielawski, Paul Sobolewski, translator of the Polish poets into English; Leopold Julian Boeck, soldier, statesman, scholar, who had been Professor of Higher Mathematics in the Sorbonne before coming to New York, where he founded the Polytechnic Institute, said to be the first of its kind in America. He later occupied chairs in the Universities of Virginia and Pennsylvania. He was appointed American Educational Commissioner at the Universal Exposition in Vienna by President Grant, and served in a similar capacity at the Centennial Exposition in Philadelphia. The quality of the Polish immigrants previous to 1870 was such as to give them a prominence out of proportion to their numbers, and the record of the Poles in the Civil War was a really brilliant one, although there were not more than a few hundred Poles in the various divisions of the Union Army. The most prominent of these was General Krzyzanowski, who gained his military title in this war serving under Carl Schurz, who in his memoirs speaks very favourably of his services. Others who served with distinction were Louis Zychlinski, Henry Kalusowski, Peter Kiolbassa, Joseph Smolinski, the youngest cavalry officer in the Union Army, and Edmund Louis Zalinski, who served on General Miles's staff, and after the war occupied the chairs of military science at the Massachusetts Institute of Technology and other institutions of a similar nature, and became an authority on military science and an inventor of military appliances. The most commanding figure among the American Poles was Father Vincent Barzynski, C.R. As a leader of men, whose vision extended far into the future, he stands unique. He was the central figure of the most dramatic chapters in the history of the Poles in America. He gave the Poles St. Stanislaus College, their first orphanage, their first Catholic paper (the "Gazeta Katolicka"), their first daily paper ("Dziennik Chicagoski"), he formed the first teaching corps of Polish nuns, and brought into being the Polish Roman Catholic Union. The most typical of the Polish American laymen to achieve distinction was Peter Kiolbassa, through whose efforts the Resurrectionist Fathers came to Chicago. He served as captain in the Union Army during the Civil War, and later served the State of Illinois and

the city of Chicago in various and very important positions.

The name of Father Joseph Dabrowski will long be held in grateful remembrance. Besides founding the Polish Seminary at Detroit he brought the first group of Felician Sisters to the United States, and later established them in Detroit, where in 1882 they established their first American mother-house. Of Polish American women one of the most prominent was Dr. Mary Zakrzewska, who came to America in 1853 and founded the New York Infirmary for Indigent Women and Children, and the New England Hospital for women and children. Poland's contribution to the development of musical, dramatic, and plastic art has been a notable one. In 1876 a little band of Polish intellectuals, among whom was Henry Sienkiewicz, attempted to found a sort of Brook-Farm community in California. The attempt failed but gave to America Helena Modjeska (Modrzejewska), who from the night of her American debut in San Francisco in 1877 until her retirement thirty years later was among the foremost artists on the American stage. Others who became more or less identified with American national life were the sculptors Henry Dmochowski, whose busts of Kosciuszko and Pulaski adorn the national capitol, and Casimir Chodzinski, creator of the Kosciuszko monument in Chicago and the Pulaski monument in Washington. Prominent in the Polish community of to-day are: Ralph Modjeski, one of the foremost engineers in the United States; John Smulski, ex-state treasurer of Illinois; Dr. F. Fronczak, health commissioner of Buffalo; Bishop Paul Peter Rhode, the first Pole to be raised to the episcopate in the United States; Felix Borowski, composer and critic.

Every Polish parish has its mutual aid societies, affiliated in nearly every instance with one of the major national organizations, all of which are conducted on a basis of fraternal insurance. These societies do a great amount of good among the poor, caring for such of their members as are visited by misfortune, giving the Poles desirable solidarity, and making for the social, religious, and economic advance of the Polish community. Most frequently they are parish organizations, and partake of the character of confraternities, whose public appearance at Divine services on national and religious festivals lends solemnity to the occasions and constitutes an open profession of the Faith of the Polish masses. In the larger Polish communities there are associations of physicians, dentists, druggists, journalists, merchants, and military, dramatic, and singing societies, nearly all of which are affiliated with the major organizations. The many building, loan, and savings associations among the Poles have received high praise from state officials.

From 1866 to 1870 various local organizations were forming in Philadelphia, Pittsburg, Chicago, New York, Milwaukee, and in San Francisco, where there had existed a Polish colony since the Civil War. The most important Polish Catholic organization, Zjednoczenie Polsko-Rzymsko Katolickie pod Opieką Boskiego Serca Jezusa (The Polish Roman Catholic Union under the Protection of the Sacred Heart of Jesus), was organized in 1873, but it was not until 1886 that it assumed its present character, although the spirit of the Union has always been staunchly Catholic. Its first organ was the "Gazeta Katolicka"; the present official organ is the "Naród Polski" (The Polish Nation). The Union has a membership of 52,000, in 550 councils, all of which are parish organizations; its assets are \$666,708. In 1910 the increase in membership was 13,000, and the increase in its assets \$175,815. In the same year it assisted fifty-six students, children of its members, by distributing among them \$4268. It has assisted

crippled members by voluntary gifts amounting to \$1455 in the same period. Its educational fund, the interest of which supports indigent students, is \$31,051.

The Związek Narodowy Polski (Polish National Alliance) was founded in Philadelphia in 1880, and in the same year the head-quarters of the organization were established in Chicago, where they have since remained. In its first constitution the Alliance professed "obedience to the Roman Catholic faith, since that is the faith of the vast majority of the Polish nation", but further committed itself to a programme of "toleration of all creeds in the spirit of Poland's ancient constitution". Socialists were barred. All official religious services were to be conducted according to Catholic rites. Succeeding conventions gradually eliminated all reference to religion, and the bar to admission of Socialists was removed. "Anarchists and criminals" are still excluded. Recently the Alliance is waging open war with the Socialistic element, with whose doctrine of internationalism the exaggerated nationalism of the Alliance is at variance. At first many of the clergy belonged to the Alliance, but with the development of the anti-clerical programme of the organization the number has become insignificant. The Alliance has a membership of 71,000 men and women, in 1118 councils. The Związek Spiewaków (Alliance of Singers), the Związek Wojsk Polskich (Alliance of Polish Military Societies), and the Związek Sokołów (Athletic Alliance), while maintaining autonomy, are federated with the Alliance, and their membership is included in the number given for the National Alliance, with slight exceptions. There is likewise an independent Turners' Alliance with a membership of 3000. The assets of the National Alliance are placed at \$1,150,000, but including as it does the Alliance Home, etc., are probably in excess of the actual assets. The organ of the Alliance is the "Zgoda" (Harmony). Except in its attitude towards the Church the Alliance closely resembles the Polish Roman Catholic Union. The Catholic Order of Foresters has 62 Polish courts, with a membership of 8166, and the number of Polish members in other courts exceeds 1000. The order furnishes the Polish courts with constitutions and rituals printed in Polish, and all business of these courts is transacted in Polish. Związek Polek (Alliance for Polish Women) has a membership of 8000. It closely resembles the Polish National Alliance, but since a society of Polish women cannot thrive except as a parish organization, much of the official indifference of the national body is counteracted by the priests who act as chaplains of the local branches.

Of Catholic organizations besides the Polish Roman Catholic Union the following are important: Stowarzyszenie Polaków w Ameryce (Association of Poles in America), Milwaukee, membership, 7332; Macierz Polska, Chicago, membership, 4500; more than any other Catholic organization it is concerned with the social welfare of the young. It is confined almost entirely to the parishes in charge of the Resurrectionist Fathers; Unia Polska (The Polish Union), Wilkes-Barre, Pennsylvania, membership, 9000. A schism occurred in the organization in 1908, and one faction, with head-quarters in Buffalo, has a membership slightly smaller than the first. A Catholic Union in Winona, Minnesota, has a membership of 1400.

Excepting the numerically insignificant Socialistic group none of the nationalistic organizations have dared to attack the Church as such, however much their organs may attack individual members of the clergy and certain religious congregations. The younger element does not take kindly to these attacks, and the indications are that the crisis has passed. The spread of the spirit of independence

occasioned the first Polish Congress, held in Buffalo in 1896. A second was held in the same city in 1901, and a third in Pittsburg in 1904. These congresses sought to find remedies for the sad conditions then prevailing, and the efforts of the promoters were largely confined to inducing the Holy See to give the American Poles bishops of their own nationality. A fourth congress, differing radically from the three preceding, inasmuch as its spirit was purely secular, was convened under the auspices of the Polish National Alliance on the occasion of the unveiling of the Pulaski and Kosciuszko monuments in Washington, 12 May, 1910. The congress, which was ignored by the clergy and the Catholic organizations, declared itself in favour of educational institutions for the Polish youth which would be utterly removed from "clerical" influence. Many attempts have been made to federate the various Polish organizations, but they have invariably failed. Bishop Rhode has fathered the last attempt at federation, which seems likely to succeed because unity is being sought along purely Catholic lines.

The growth in numbers and efficiency of the Polish parochial schools is a story of faith, patriotism, unparalleled generosity, and supreme endeavour on the part of Polish clergy, religious communities, and laity, who came with no asset but their willing hands and the faith of their fathers. The Poles take care of themselves. Where they have contributed to the building of non-Polish churches and schools, they are quick to establish schools for their own children as soon as their numbers warrant the attempt, which with them is much earlier than with those of any other nationality. The Poles realized very early that their children who attended schools other than Polish, however much they succeeded, ceased to be an asset to the Polish community in its endeavours to lift itself above its present condition. The Polish schools in America are a distinctly new world product. Considering the shortness of their American history the Poles have a larger proportion of native clergy and teaching nuns than any other class of American Catholics. Fully 95 per cent of the teachers in the Polish parochial schools are American by birth or training. The Poles cannot be satisfied with teachers other than Polish. Hence their Americanization is a development and not a veneer. This factor of a native clergy and teaching corps thoroughly American in thought and speech, and thoroughly Polish in their sympathies with the incoming thousands, makes for a healthy conservatism, and precludes violent ruptures with traditions of the past. The Polish parochial schools are performing a task which could not, because of a multitude of circumstances, be satisfactorily performed by any other, however superior from a purely scholastic standpoint. The most formidable obstacle to more rapid progress is the ever-increasing tide of immigrants. Clergy and teachers must contend with parents whose poverty and old-world viewpoint are factors in keeping the children at home upon every pretext, and withdrawing them for ever on the day of their First Communion. The constant increase in the number of children necessitates the erection of new schools, in spite of the parents' inability to contribute to their support, increases the shortage of teachers, makes for overcrowding and inefficiency, because the religious communities, to satisfy the demands made upon them, must send into the class-room the young nun to whom it has been impossible to give a thorough training. These hardships fall with double force upon the newly-organized parishes. The older religious communities, several of which have reached a high degree of efficiency, cannot supply the increasing demand in the schools already under their charge, and hence the new parishes must content themselves with teachers such as the more recently-

established communities can afford. The presence of lay teachers in the Polish schools is evidence of the inadequacy in the number of the Polish nuns. The necessity of teaching in two languages doubles the work of the teachers, and yet it is this very system which will most intelligently adjust the Poles to their American surroundings. The establishment of Polish schools, especially in the Middle West, nearly always coincides with the organization of the parishes. The first building erected is usually made to serve as school and church for some years until a church can be built, when the first building is used entirely for school purposes.

The first Polish school in the United States is that in Panna Maria, Texas, established by Father Bakanowski, C.R., in 1866. The first teacher was Peter Kiolbassa. The second school was that of St. Stanislaus's Parish, Milwaukee, which dates from 1867. St. Stanislaus's School in Chicago was placed in charge of the School Sisters of Notre Dame in 1873. The accompanying list of statistics affords striking evidence of the growth in numbers of the Polish schools since that time.

Besides the parochial schools the Poles maintain the following institutions of higher education: SS. Cyril and Methodius's Seminary, Orchard Grove, Michigan, founded by Fathers Leopold Moczygemba and Joseph Dabrowski. The seminary was established in Detroit in 1887, and was transferred to Orchard Grove in 1909. Professors, 17; students, 350. St. Stanislaus's College, Chicago, founded by the Resurrectionist Fathers in 1891, a day and boarding school, professors, 15; students, 210. St. Bonaventure's College, Pulaski, Wisconsin, founded by the Franciscan Fathers in 1889, professors, 7; students, 45. St. John Cantius's College, Brookland, Washington, D. C., founded in 1909, embraces scholasticate for the Missionaries of the Divine Love of Jesus, and is affiliated with the Catholic University of America. St. John Cantius's College, Erie, Pennsylvania, founded in 1909, maintained by the Society of St. John Cantius, which is composed of Polish priests and laymen. Pennsylvania Polish College of St. John, Philadelphia, founded in 1908 by Rev. John Godrycz, D.D., Ph.D., J.U.D. The Academy of the Holy Family of Nazareth, Chicago, founded in 1887 by the Sisters of the Holy Family of Nazareth. Twenty nuns form the teaching staff; students, 150. The number of Polish students at various other institutions is very considerable, especially in day-schools in our large cities. Nearly one-third of the student body at St. Francis's Seminary, St. Francis, Wisconsin, are Poles. Several of our non-Polish Catholic institutions, notably the University of Notre Dame and St. Francis's Seminary, have introduced the study of the Polish language, literature, and history into their curricula. The teaching of Polish has likewise been introduced in the public schools of several of our large cities in which there is a large Polish population.

One hundred of the Polish clergy are members of religious communities. Of this number 65 are members of Polish communities or provinces.—(a) Franciscan Fathers (O.F.M.), Commissariate of the Assumption of the Blessed Virgin Mary, Pulaski, Wisconsin: fathers, 8; professed clerics, 7; novice clerics, 4; professed brothers, 18; novice lay brothers, 1; brothers of the Third Order, 3. (b) Franciscan Fathers (O.M.C.), Province of St. Anthony of Padua, Buffalo, New York: fathers, 20; clerics and students, 44; lay brothers, 16. (c) Fathers of the Resurrection: priests, 33, of whom 27 are Poles; brothers, 21. (d) Missionaries of the Divine Love of Jesus, Washington, D. C., 1. (e) Vincentian Fathers (C.M.), Polish Province of the Congregation of the Mission, Chicago: fathers, 8.

Polish priests, members of other congregations and

orders:—Holy Ghost Fathers, 10; Benedictines, 2; Augustinian, 1; Jesuits, 5; Fathers of the Holy Cross, 10; Redemptorists, 2; Carmelite, 1; Servites, 2; Passionist, 1; Capuchin, 1; Society of the Divine Saviour, 1.

Communities of Women.—(a) Bernardine Sisters of St. Francis, Reading, Pennsylvania: sisters, 70. (b) Sisters of the Third Order of St. Francis, under the Patronage of St. Cunegunde, Chicago: professed sisters, 98; novices, 6; candidates, 26. (c) Polish Franciscan School Sisters, St. Louis, Missouri: professed sisters, 29; novices, 18; postulants, 4; aspirants, 2. (d) Felician Sisters, O.S.F. The Community is divided into three provinces, with mother-houses at Detroit, Buffalo, and Milwaukee. (1) Western Province of Presentation of the B. V. M., mother-house at Detroit, established 1882: professed sisters, 273; novices, 30; postulants, 55; in preparatory course, 65. (2) North-western Province of the Presentation of the B. V. M., Milwaukee: professed sisters, 170; novices, 17; postulants, 27. (3) Eastern Province, Buffalo: professed choir sisters, 278; novices, 32; postulants, 93; lay sisters, professed, 66; novices, 6; postulants, 21; candidates in preparatory course, 73. These were the statistics of the province just prior to the establishment of the new province, with mother-house in Milwaukee, to which 203 professed sisters and novices were transferred (August, 1910). Eastern Province, Buffalo, New York: professed sisters, 240; novices, 50; postulants, 87; professed lay sisters, 61; novices, 3; postulants, 14; candidates, 52. (e) Sisters of the Holy Family of Nazareth, Desplaines, Illinois: professed sisters, 350; novices, 90; postulants, 45. (f) Polish Sisters of St. Joseph, Stevens Point, Wisconsin: professed sisters, 191; novices, 60; candidates, 40. (g) Sisters of the Resurrection, Chicago: professed sisters, 50; novices, 13; candidates, 19. Total number in communities distinctively Polish, 2180. There are upwards of eight hundred Polish sisters in the various non-Polish communities. Of this number 412 are members of the Community of the School Sisters of Notre Dame (Milwaukee); 30 belong to the Holy Cross community (Notre Dame, Indiana); 73 to the Sisters of St. Francis (La Fayette, Indiana), 20 to the Sisters of St. Francis (St. Francis, Wisconsin).

Since 1900 the efficiency of the various census and immigration bureaux has been greatly improved, and statistics of Polish immigration are thoroughly reliable. Government Census Reports have hitherto been inadequate, partly because of the indifference of the Poles themselves, who frequently were satisfied to be enumerated as Germans, Russians, and Austrians; the classification "natives of Poland" embracing a large non-Polish element, and the migratory character of a large part of the Polish population all added to the confusion. The following tables from the "Report of the Twelfth Census", 1900, are not without interest:

YEAR	POLISH BORN FOREIGN POPULATION	PERCENTAGE OF TOTAL FOREIGN POPULATION
1860.....	7,298	0.2
1870.....	14,436	0.3
1880.....	48,557	0.7
1890.....	147,440	1.6
1900.....	383,510	3.7

Persons in the United States having both parents born in Poland, 668,536. Native white persons having one parent born in Poland, 290,912. Total white persons having fathers born in Poland, 704,405; having mothers born in Poland, 683,572. The

"natives of Poland" Census, 1900, are classified as follows:

From German Poland.....	150,237
From Russian Poland.....	154,424
From Austrian Poland.....	58,503
Poland, unknown.....	20,436

YEARS ENDING 30 JUNE	IMMIGRANTS	EMIGRANTS	NET GAIN
1899.....	28,446
1900.....	46,938
1901.....	43,617
1902.....	69,620
1903.....	82,343
1904.....	67,757
1905.....	102,437
1906.....	95,835
1907.....	138,033
1908.....	68,105	46,727	21,378
1909.....	77,565	19,290	58,275
1910.....	128,348	16,884	111,464
1910 (July-Dec.)	45,448

Since July, 1907, the Bureau of Immigration has recorded the number of departing aliens. The period embraces the financial depression of 1907-08, which sent so many of other nationalities to Europe as to cause a marked decrease in their American numbers. Basing an estimate upon the record of the year ending 30 June, 1910, during which year the United States had resumed an almost normal condition, we may safely assume that the net increase in the number of Poles in the United States was, for the period 1899 to 1 Jan., 1911, not less than 750,000. In the period 1900-07 the outward movement was very slight. The birth-rate in many of our parishes in which the Galician element predominates is almost 50 per cent of the number of families. Statistics given in the accompanying table are based upon the following sources, viz:—the "Official Catholic Directory" (1911); manuscript information received from Polish clergy and non-Polish priests labouring among the Poles; information received from officials of various Polish organizations; reports (several based upon special census taken for this article) sent by 46 archbishops and bishops, in whose diocese are more than 90 per cent of the Polish clergy; recent reports of the Bureau of Immigration, which give the intended destination of the immigrants. Where discrepancies occur in the various reports, averages have not been struck, but an effort was made to learn the method used in making an estimate in typical districts. Allowance should be made for the recent natural increase and enormous immigration, the vast floating population, the 800 small settlements neither constituting Polish parishes nor having Polish pastors, the "Independents", those indifferent to the Faith, the single men. A number of the reports were based upon a census taken in 1907. Taking all these factors into consideration it may be safely assumed that there are no fewer than 2,800,000 Poles in the United States.

The Polish Press in the United States.—Since the appearance of the first issue of the "Echo z Polski" (Echo from Poland), 1 June, 1863, in New York the Polish Press has been a faithful mirror of the conditions obtaining among the Poles in the United States. No fewer than one hundred and forty papers have been established since 1863, but of this number not more than seventy have survived, and the number is constantly fluctuating, although there is a steady average increase from year to year. The first paper was devoted entirely to agitation in favour of the mother country. Its publication was discontinued in 1865. Not until 1870 was another attempt made, when the "Orzeł Biały" (The White Eagle), made its appearance at Washington, Missouri, a promising Polish colony. The paper was issued at irregular intervals until 1875, and differed from the "Echo", inasmuch as it was devoted entirely to the affairs of the Poles in America. A third paper was established at Union, Missouri, by John Barzynski, for many years after a prominent figure among the American Poles. This third paper was the "Pielgrzym" (Pilgrim), which later became "Gazeta Polska Katolicka", published at Detroit until 1875, since when it has been published at Chicago and has borne the name "Gazeta Katolicka". For many years it was the organ of Father Vincent Barzynski and the Resurrectionist Fathers, and its strong militant spirit passed into the "Dziennik Chicagoski", established by them in 1890. Until 1880 the "Gazeta" was edited by John Barzynski, who was succeeded by Ladislaus Smulski. Both were men of no mean ability and sterling Catholicity. The "Gazeta Katolicka" passed into the control of Ladislaus Smulski, and is still published by the Smulski estate. It has always preserved its splendidly Catholic tone, and still ranks as the foremost among the Polish Catholic weeklies. The "Gazeta Polska" was founded by Ladislaus Dyniewicz at Chicago in 1873, and for many years the "Gazeta Katolicka" and the "Gazeta Polska" were avowed champions of two factions, the Catholic Conservatives and the Nationalists. The circulation of the two papers is about 20,000.

Of the seventy Polish papers now published, nineteen are published at Chicago. Not more than twenty are really as well as professedly Catholic. About twenty-five are "neutral", while the rest range from the merely neutral to the "yellow" anti-clerical daily papers published at Chicago and Milwaukee, and the two Socialistic papers. The latter are less harmful to the Polish masses than the sensational papers claiming to be Catholic but countenancing open opposition to ecclesiastical authority. It is remarkable testimony to the faith of the Polish masses that this campaign of vilification has not been fraught with greater harm, and that it must be carried on under the pretence of the reformation of the Polish clergy. With the exception of the avowedly Socialistic Press, which lays no claim to being Polish in spirit, none of the papers are professedly atheistic or irreligious. Of the nine Polish daily papers four are published at Chicago, two at Buffalo, two at Milwaukee, and one at Detroit. Their combined circulation is nearly 80,000; that of the "Dziennik Chicagoski" is over 16,000. Three of the daily papers, "Dziennik Chicagoski", "Nowiny Polskie" ("The Polish News", Milwaukee), and the "Polak

w Ameryce" ("The Pole in America", Buffalo), are thoroughly Catholic; one published at Chicago is Socialistic; one, the "Zgoda" (Harmony), published at Chicago, is "neutral" and openly anti-clerical. The sensational Press, daily and weekly, constitutes the most demoralizing factor among the American Poles, brazenly defying every law of journalistic ethics, publishing every scandal under heavy display lines, bitterly attacking clergy, religious communities, and parochial schools, comparable only to the lowest type of journalism of the Latin countries.

Of the Polish daily papers, the oldest is the "Dziennik Chicagoski", a valiant defender of the Faith throughout the twenty years of its publication. With but short interruption, its guiding spirit from the beginning has been Stanislaus Sz wajkart, one of the ablest Catholic journalists in the United States. Another daily, a tower of strength in the Catholic cause, is "Polak w Ameryce", for many years edited by Stanislaus Slisz, whose brilliant mind was equalled only by his uncompromising Catholicism. The circulation is 14,000.

FELIX THOMAS SEROCZYNSKI.

Policastro, DIOCESE OF (POLICASTRENSIS), in the province of Salerno, Southern Italy. The city is situated on a hill that overlooks that gulf of the Tyrrhenian Sea, to which Policastro gives its name. It is the ancient Pituntia, and may be regarded as the continuation of the Diocese of Buxentum, the first known bishop of which was Rusticus (501), while another, Sabbadius, is mentioned in 649. San Pietro Poppa Carbone (1079), a Benedictine of Cava, resigned after governing the diocese for a short while, and was succeeded by Arnaldo. In 1211 the Emperor Frederick II, disregarding the candidate of the chapter, wished to give this see to his physician, Jacopo, but Innocent III appointed the regularly elected bishop. Other bishops of Policastro were: Gabriele Atilio (1471), a Latin poet; Urbano Felicio (1630), who held a synod, and was the author of several excellent works; Filippo Jacobio (1652) remodelled the episcopal palace of Orsaca, where the bishops usually reside; Vincenzo de Sylva, O.P. (1672), remodelled the episcopal palace of Policastro; he was besieged in his palace of Orsaca by Count Fabrizio Carafa, on account of his firmness in maintaining the rights of his Church; Tommaso della Rosa (1679) restored the cathedral; Antonio della Rosa (1705) restored the seminary. In the Diocese of S. Giovanni a Piro there was a Basilian monastery. Policastro is a suffragan of Salerno; it has 38 parishes, with 64,000 inhabitants; 2 religious houses of men, and 3 of women; 207 sec-

ular, 9 regular priests; 234 churches or chapels. Mgr Vescia is the present bishop.

CAPPELLETTI, *Le Chiese d'Italia*, XXI.

U. BENIGNI.

Polignac, MELCHIOR DE, cardinal, diplomatist, and writer, b. of an ancient family of Auvergne, at Le Puy, France, 11 October, 1661; d. in Paris, 3 April, 1742. He studied with great distinction at the Collège de Clermont and the Sorbonne. While still a young man, he was present at the conclave which elected Pope Alexander VIII in 1689; and he took part in the negotiations at Rome concerning the Declaration of 1682. In 1691 he assisted at the election of Innocent XII, and in 1693 was appointed ambassador extraordinary to Poland. Here he won the favour of John Sobieski, and succeeded in having the Prince de Conti chosen as Sobieski's successor. Through Conti's dilatoriness, the election proved ineffectual, and Louis XIV, blaming Polignac, ordered him to return to his Abbey of Bon-Port. In 1702, however, he was granted two new abbeys and in 1706 sent to Rome, with Cardinal de la Trémoille, charged to settle the affairs of France with Clement XI. Between 1710 and 1713 he energetically supported French interests at the Conferences of Gertruydenberg and the Congress of Utrecht, and in 1713 was made cardinal. Compromised in Cellamare's conspiracy, he was banished, in 1718, to his abbey of Auchin, in Flanders. In 1724 he was again placed in charge of French interests at Rome and assisted at the conclave which elected Benedict XIII. For eight years he represented his country at the Court of Rome, occupied with the difficulties arising out of the Bull "Unigenitus", and returned to France in 1730, having been Archbishop of Auch since 1724.

Devoted to art and literature, and the collection of medals and antiques, Polignac became a member of the Academy in 1704, succeeding Bossuet. His addresses, sometimes delivered in Latin as correct and fluent as his French, were much admired. His great work, "Anti-Lucretius", a poem in nine books (Paris, 1745), offers a refutation of Lucretius and of Bayle, as well as an attempt to determine the nature of the Supreme Good, of the soul, of motion, and of space. His philosophical views—generally similar to those of Descartes—are questionable, but the poem is, in form, the best imitation of Lucretius and Virgil extant.

CHARLEVOIX in *Mémoires de Trévoux* (June, 1742); FAUCHER, *Vie du card. de Polignac* (Paris, 1777); DE BOZE, *Histoire de l'Académie des inscriptions*.

J. LATASTE.

Politi, LANCELOT, in religion AMBROSIOUS CATHARINUS, b. at Siena, 1483; d. at Naples, 1553. At sixteen he became Doctor of Civil and Canon Law (J.U.D.) in the academy of Siena. After visiting many academies in Italy and France he was appointed (1508) a professor at Siena, and had among his pupils Giovanni del Monte, afterwards Pope Julius III, and the celebrated Sixtus of Siena, a converted Jew who esteemed his master, yet severely criticized some of his writings. About 1513 he entered the Order of St. Dominic in the convent of St. Mark, at Florence. He studied Scripture and theology without a master. This may account for his independence, and his defence of opinions which were singular, especially in regard to predestination, the certitude of possessing grace, the residence of bishops in their dioceses, and the intention required in the minister of a sacrament. He was a strenuous defender of the Faith against Luther and his followers; and was prominent in the discussions of the Council of Trent, to which he was called by his former pupil, Cardinal del Monte, legate of Paul III. In the third public session (4 February, 1546), Catharinus pronounced a notable discourse, later published [*"Oratio ad Patres Conc.*

Trid." (Louvain, 1567; Paris, 1672)]. Notwithstanding attacks upon his teaching he was appointed Bishop of Minori in 1546, and, in 1552, Archbishop of Conza, Province of Naples. Pope Julius III, successor of Paul III, called Politi to Rome, intending, says Echard, to elevate him to the cardinalate, but he died before reaching Rome. Historians and theologians generally have regarded Catharinus as a brilliant, eccentric genius, who did much good, was frequently accused of teaching false doctrines, yet always kept within the bounds of orthodoxy. Pallavicini and other authorities declare positively that the Council of Trent did not condemn his singular opinions. His zeal and activity are universally praised; he defended the Immaculate Conception of the Blessed Virgin, and submitted all his writings to the judgment of the Church, regretting towards the end of his life the vehemence with which he had combatted Cardinal Cajetan and Father Dominic Soto (Echard). His principal works (for complete list see Echard) are: "Apologia pro veritate catholicæ et apostolicæ fidei ac doctrinæ, adversus impia ac pestifera Martini Lutheri dogmata" (Florence, 1520); "Speculum hæreticorum" (Lyons, 1541), with two opuscula on original sin and justification; "Annotationes in commentaria Cajetani super sacram Scripturam" (Lyons, 1542); "Tractatus quæstionis quo jure episcoporum residentia debeatur" (Venice, 1547); "Defensio catholicorum pro possibili certitudine gratiæ" (ibid., 1547); "Summa doctrinæ de prædestinatione" (Rome, 1550); "Commentaria in omnes D. Pauli epistolas et alias septem canonicas" (Venice, 1551); "Disputatio pro veritate immaculatæ conceptionis B. Virginis" (Rome, 1551). He also published numerous opuscula, e. g., on Providence and predestination, on the state of children dying without baptism; on giving communion to young children; on celibacy; on the Scriptures and their translation into the vernacular.

Trid.*: *De int. ministri, De Resid. epis.* (Antwerp, 1670; Cologne, 1717, 1727); SIXTUS SENENSIS, *Bibliotheca Sancta*, Bks. IV, V, VI (Venice, 1566).

D. J. KENNEDY.

Politian (ANGIOLO DE 'AMBROSINI DA MONTE PULCIANO), Italian Humanist, b. at Monte Pulciano in 1454; d. at Florence in 1494. At the age of ten he went to Florence, where he followed the courses of Landino, Argyropoulos, Andronicus Callistus, and Marsilio Ficino. In 1477 he was tutor to the children of Lorenzo the Magnificent, and became one of the Accademia which Lorenzo had grouped about him, in which, with Marsilio Ficino, were associated Landino, Pico della Mirandola, and Hermolaus Barbarus. Politian was professor of Greek and Latin literature at Florence from 1480; among his pupils were the Englishmen, Grocyn and Linacre, and the German Reuchlin. He was rather a master and interpreter of the ancient spirit than a philologist. His lessons on each author were preceded by an introduction, often in verse, with a poetic title: "Nutritia" for the general eulogy of poetry, "Rusticus" for Hesiod and the Georgics of Virgil, "Manto" for Virgil, "Ambra" for Homer. His discourses or preliminary poems form a collection called "Prælectiones". Politian was one of the first Italian Humanists who succeeded in rivaling the Greek scholarship of the native-born Hellenes. At eighteen he translated Books I to V of the "Iliad" and won the surname of *Homericus juvenis*. Subsequently he translated Callimachus, the historian Herodien, Epictetus, the "Charmides" of Plato, the "Eroticus" of Plutarch, treatises of Hippocrates and Galien, and selections from Moschus and the "Anthology". He read many other authors, which for a long time existed only in manuscript, e. g., the "Months" of John Lydus which Schow made known

only in 1794. His most important philological work is his collection of "Miscellanea" (1489), wherein he treats various scholarly subjects; the employment of breathings in Greek and Latin, the chronology of Cicero's familiar letters, the orthography of the name of Virgil, which he fixed under the form *Vergilius*, the discovery of purple, the difference between the aorist and the imperfect in the signature of Greek sculptors. He was a modern philologist in his efforts to recover the best manuscripts and to procure collations. He thus contributed towards improving the text or preserved intact the Latin elegiacs, the "Silvæ" of Statius, Terence, Lucretius, Ovid, Celsus, Quintilian, Festus, Ausonius, the agricultural treatises. The critical editions of these authors place his name in the history of manuscripts, but he made a special study of the "Pandecks" on the sixth century MSS.

ANGIOLO POLITIAN

brought from Pisa to Florence in 1411. As a Humanist, Politian is a Latin writer of poetry and prose, a poet of Latin sentiment in Italian. He does not share the Ciceronian purity of Valla, but endeavours to create a personal style. He had to defend these ideas against the Latin secretary of Florence, Bartolomeo Scala and against Paolo Cortesi. He was one of the earliest to attract attention to the Latin writers of the Silver Age. His Latin, like his Italian, verses are full of grace and sentiment. He wrote in Latin a history of the conspiracy of the Pazzi in which he took Sallust as a model. His letters together with those of Bembo were long considered as realizing the ideal of style.

PAUL LEJAY.

Political Economy, SCIENCE OF.—I. DEFINITIONS.—Political economy (Greek, *οικονομία*—the management of a household or family, *πολιτική*—pertaining to the state) or economics (*τὰ οἰκονομικά*—the art of household management) is the social science which treats of man's activities in providing the material means to satisfy his wants. Economy originally means the management and regulation of the resources of the household; that is, of the immediate family with its slaves and dependents. Political economy originally meant the management of the household of the State. It was so used as late as Adam Smith (*Wealth of Nations*, 1776), who defined it thus: "Political economy considered as a branch of the science of a statesman or legislator proposes two distinct objects, first, to supply a plentiful revenue or subsistence for the people, or more properly to enable them to provide such a revenue or subsistence for themselves; and secondly, to supply the state or commonwealth with a revenue sufficient for the public service. It proposes to enrich both the people and the sovereign." The sum of the efforts and activities of the members of the household in acquiring the means to satisfy their wants may be designated as the econ-

omy of the household. Where a household is not economically self-sufficing, that is, where households are economically interdependent, we have a broader economy. Where this interdependence is state- or nation-wide, there exists a national economy or political economy. The term political economy is used in yet a third sense. It is the name of the science which treats of this nation-wide complexus of economic activities.

II. METHOD AND SCOPE.—English economists in the early part of the nineteenth century, beginning with Malthus and Ricardo, hoped to establish a science of political economy independent of the art of the statesman, which would vie with the natural sciences in the exactness of its conclusions. They narrowed the field as conceived by Adam Smith by variously defining political economy as the science of wealth, the science of value, or the science of exchanges. But along with this narrowing of the field and the attainment of scientific precision in the use of terms went a divorce of their science from the economic realities of life. Their method was strictly deductive. Beginning with three or four principles for which they claimed universal validity, they proceeded to deduce a complete system without further appeal to the facts of life. These English writers, known as the Classical or Orthodox School, held that political economy must not concern itself with ethical or practical considerations. To do so, in their opinion, would degrade it to an art, for the science of political economy was concerned merely with the explanation of the causal relations existing among economic phenomena. It was their business as economists simply to explain the existing economic system, not to defend or condemn it, nor to show how it might be replaced by a better one. To them good and bad were concepts which concerned moralists and not economists.

In opposition to this narrow and non-ethical view of the Classical School, there arose in Germany in the middle of the nineteenth century, the Historical School, holding that political economy is an inductive and an ethical science. They derided the abstractions of the Orthodox School, some extremists even going so far as to contend that the time was not yet ripe for a science of political economy. The business of their generation, they held, was to gather from observation and history and to classify the economic facts upon which future economists might construct a science. After a bitter struggle of half a century the opposition between the schools has almost disappeared, and it is now generally recognized that the economist must use both the deductive and the inductive methods, using now one predominantly and now the other, according to the nature of the problem upon which he happens to be engaged. The best usage of the present time is to make political economy an ethical science, that is, to make it include a discussion of what ought to be in the economic world as well as what is. This has all along been the practice of Catholic writers. Some of them even go so far as to make political economy a branch of ethics and not an independent science. (See Devas, "Principles of Political Economy".) For a further discussion of the relationship between the two sciences, see ETHICS.

For purposes of exposition the field of political economy is often divided into four parts: production, consumption, distribution, and exchange. Some authors omit one or another of these divisions, treating its problems under the remaining heads. The department of production is concerned with the creation of wealth through the united efforts of land, labor, and capital. The creation of wealth involves the bringing into existence of utilities, that is, of capacities to satisfy wants. Utilities are created by changes in form of goods, or in their location, or by keeping them from a time of less demand to a time of greater demand. Consumption is concerned with the destruction of

utilities in goods. It is the utilization of wealth, the carrying out of the purpose for which wealth is produced. The department of distribution considers the manner in which the wealth which has been produced is divided among the agents which have produced it. The shares in distribution are: rent, which is paid to the landlord for the use of the land; wages, which is the return to the labourer; interest, which goes to the capitalist for the use of his capital; and profit, which is the reward of the entrepreneur or undertaker of the business. Finally, exchange has to do with the transfer of ownership of wealth. Under this head are discussed money and credit and international exchanges. Outside of these four divisions separate chapters are usually devoted to a consideration of taxation, monopolies, transportation, economic progress, and other problems. Adam Smith and his immediate followers were more closely concerned with the problems of production. Owing to the world's remarkable progress in that direction in the last century, the inequalities of distribution have come more and more into prominence, and this is now the favourite field of the economist.

III. HISTORY.—*Ancient*.—In ancient Greece and Rome there was little likelihood of the emergence of a science of political economy. Their industrial system was founded on slavery, the great estates were for the most part self-sufficient economic units, leaving comparatively little room for commerce, and labour was held in contempt by the thinking element. However, fragmentary discussions on economic subjects, mingled with ethical and political considerations, are to be found. Xenophon has a rather extensive treatment of household economy. Plato, in the "Republic", advocates an ideal communistic State. Aristotle presents a defense of private property, and writes against the taking of interest on the ground that money is barren. He defends warmly the institution of slavery. Among the Romans there was not much originality. We find frequent discussions of the relative merits of large and small farms. Cicero, Pliny the Elder, and other writers deplored the introduction of gold as a medium of exchange and preferred the age of barter. Seneca wrote upon the ethics of political economy and pleaded for the simple life.

Patristic Writers.—Under Christian influence labour, which had been held in contempt by the Pagans, came to be respected and honoured. The rigors of slavery were mitigated and the milder form of serfdom grew up, which later gave way to free labour. The Roman law had insisted on the rights of property; the early Fathers, on the other hand, insisted on the rights of man. Some even went to the extent of advocating a system of communism as the ideal state, merely tolerating private property. "The soil," says St. Ambrose, "was given to rich and poor in common." St. Gregory the Great, St. Augustine, St. Basil the Great, St. John Chrysostom, and St. Jerome write in similar vein. The taking of usury was universally condemned.

Middle Ages.—By the end of the Middle Ages there was developed a complete and systematic economic doctrine. This doctrine differed from modern political economy in two important aspects. In the first place it was made to fit the economic institutions of that day, and would be inadequate if applied to ours; and secondly, the emphasis was placed upon the ethically desirable rather than upon the actually existent. However, this latter distinction is now very much less marked than it was in the first half of the nineteenth century. Such questions as property, wealth, consumption, value, price, money, loans, monopoly, and taxation were treated in detail. To the medieval theologian, the "just price" of an article included enough to pay fair wages to the worker, that is, enough to enable him to maintain the standard of living of his class. In a like manner, a reasonable profit was de-

fended as the wages of the merchant. With certain limitations, the taking of interest for money loans was forbidden. On the other hand, there were certain classes of productive investments, such as the buying of rent-charges, where interest was allowed. Among the writers of the period on economic subjects, St. Thomas Aquinas takes first place. Other writers of importance were Henry of Ghent, Ægidius Colonna, Petrarch, Nicholas Oresme, Bishop of Lisieux, who wrote a work on money for his pupil Charles V, and finally St. Antoninus, Archbishop of Florence, and St. Bernardine of Siena.

Mercantile System.—In the sixteenth and seventeenth centuries a revolution in industrial activities was taking place which had a profound influence upon the economic literature. The great geographical discoveries, the invention of gunpowder and printing, the decay of feudalism and the rise of modern states, the increase in the supply of the precious metals, and the growing use of credit,—all these united to furnish problems for endless discussion. Statesmen, feeling the need of money to support war, adopted various restrictive measures to obtain it. The economic writers who defended these restrictions are usually classed together as the Mercantile School. Sometimes the attempt was made to keep money in the country by prohibiting its exportation or by debasing the coinage. Another way was to encourage the exportation of finished commodities and the importation of raw material in order to secure a balance of trade. Mercantilism reached its highest perfection under Colbert, the Minister of Finance under Louis XIV, and is sometimes referred to as Colbertism. Later imitators of Colbert were less successful, and Mercantilism often degenerated into a system of special privileges and exemptions, without any adequate advantage to the nation. Prominent among the Mercantilist writers were Jean Bodin (d. 1596), Giovanni Botero (d. 1617), Juan Mariana (d. 1623), Antonio Serra (published in 1613), Antoine de Montchrétien (*Traité d'économie politique*, 1615), who was the originator of the term political economy, and Thomas Mun (d. 1641), author of "England's Treasure by Foreign Trade".

System of Natural Liberty.—During the Mercantile period statesmen had interested themselves in industry principally for the purpose of carrying on war; in the following period wars were carried on in the interest of industry and commerce. Under Mercantile influence, the attitude of governments had been decidedly paternalistic. In the eighteenth century those who speak for commerce and industry demand that these be allowed to develop freely, unhampered by the guiding strings of government. In France there grew up a school of economic writers later known as the Physiocrats, who protested against the balance of trade doctrine of the Mercantile School and summed up the duties of the government towards industry and commerce in the famous phrase "*laissez faire et laissez passer*". They believed in a beneficent "order of nature" which should be allowed free play. To them, agriculture alone was productive. The Physiocrats had been strongly influenced by such English writers as Locke, Petty, and Hume, and they in turn were destined to further influence English political economy. Adam Smith (1723–90), "the father of political economy", was a result of the combination of both the English and the French currents. His work, "An Inquiry into the Nature and Causes of the Wealth of Nations" (1776), gained immediate popularity and exercised profound political influence in the next generation. Smith held that while the individual selfishly seeks his private gain, he is led by an invisible hand to promote the public good, and that since the individual and social interests are identical, the sphere of state action should be narrowed. He thus followed up the attack on the Mercantile system begun by the Physiocrats. He differed from the

Physiocrats in making labour as well as land productive. Among the followers of Smith are to be noted Malthus ("Essay on Population", 1798), author of the startling statement that population tends to increase in a geometrical ratio while subsistence tends to increase in an arithmetical ratio, and Ricardo ("Principles of Political Economy and Taxation", 1817), whose name is associated with the differential rent theory, the subsistence theory of wages, and the labour theory of value. Other writers of the English Classical School, who followed closely in the footsteps of Malthus and Ricardo, were James Mill, MacCulloch Senior, and John Stuart Mill. The last named in his later life renounced the individualism of the Orthodox School in favour of socialistic views.

Historical School.—About the middle of the nineteenth century there began in Germany under the leadership of Wilhelm Roscher, Karl Knies, and Bruno Hildebrand, a reaction against the Orthodox-English School. These writers insisted on the relativity of economic theory, that is, they did not believe that economic principles, good for all times and places, and all degrees of economic development, could be established. Moreover, they insisted strongly on the need of the study of economic history and upon the ethical and practical character of political economy. They were soon in complete control of the economic teaching of Germany. They differ radically from the Physiocrats and Adam Smith in their repudiation of the doctrine of natural liberty. In fact many of them have gone so far in the opposite direction as to be designated *Kathedersozialisten* (Professorial Socialists), because of their reliance on state help in accomplishing social reforms.

Austrian School.—Since 1871 there has grown up in Austria a group of writers who make of political economy a deductive and psychological science of value. They oppose to the cost-of-production explanation of value of the Classical School, a theory of value based upon marginal utility. It is a well known psychological fact that the utilities of additional units of a commodity to a consumer diminish as the supply increases. Now it is the utility of the last or marginal unit consumed, says the Austrian School, which determines value. Menger, Wieser, Boehm-Bawerk, in Austria, the late W. Stanley Jevons, in England, and J. B. Clark, in America, are the leading representatives of this school.

Socialism.—Socialism (q. v.) represents the extreme of reaction against *laissez faire* or the system of natural liberty of the Physiocrats and Adam Smith. *Laissez faire* professes to believe in the identity of the interests of the different industrial classes and hence decries the need of restrictive legislation, while socialism emphatically denies that this solidarity exists under our present system and seeks to develop a "class consciousness" among the workers that will overthrow the influence of the dominant class. Economic socialism borrowed the labour theory of value from Ricardo and gave it an ethical interpretation, holding that since labour is the sole producer of wealth, the labourer should receive the entire product. Accordingly, the socialists deny the right of the capitalist to interest and of the landlord to rent, and would make capital and land common property. According to Karl Marx ("Das Kapital", 1867), the founder of so-called scientific socialism, the labourer under the present system does not receive more than a bare subsistence. The "surplus value" which he produces above this amount is appropriated by landlords and capitalists. Another contribution of Marx to socialism is the materialistic conception of history, according to which such factors in history as religion, ethics, and the family, undergo changes corresponding to the changes in the underlying economic organization of which they are a product.

Christian Democracy.—The movement which has

been gaining ground for the last half century among Christian churches, both Catholic and non-Catholic, to emphasize the importance of religious and moral elements in a healthy economic life, and which protests more or less strongly against *laissez faire*, is usually designated as Christian Socialism. This name is, however, not well chosen, since none of the so-called Christian socialists hold to the fundamental principle of socialism, namely the abolishment of private ownership in the means of production. The Protestant writers in this field have naturally lacked an authority which would hold them together. In England their adoption of co-operative associations as a substitute for competition has given them a unity which they have not attained elsewhere. The Catholic School agrees with the socialists in much of their criticism of the competitive system, but parts company with them by insisting on the place of religion, the family, property, and the employer system in the social scheme. In the matter of state intervention, there are among Catholic writers two general tendencies. The more "liberal" wing, led by such economists as Le Play, Périn, and Victor Brants, would reduce state action to a minimum, while others, looking to Bishop Ketteler, Cardinal Manning, and Count de Mun, would invoke a considerable measure of so-called State socialism. A strong impulse towards unity of effort among Catholics was given by the publication of the encyclicals of Pope Leo XIII, "Rerum Novarum", of 15 May, 1891, and "Graves de Communi", of 18 January, 1901.

FRANK O'HARA.

Pollajuolo, ANTONIO AND PIERO BENCI, derived their surname, according to Florentine custom, from the trade of their father, who was a dealer in poultry. Both were born at Florence, Antonio about 1432, Piero in 1443; both died in Rome, the younger in 1496, the elder in 1498, and both were buried in the same tomb in San Pietro in Vincoli.

ANTONIO POLLAJUOLO

Antonio studied painting under Uccello, and was influenced by Baldovinetti. Among his individual paintings are: "David" (Berlin Museum); "Fight of Hercules with Antæus", "Fight of Hercules with the Hydra", two small panels (Uffizi); "Hercules and Nessus" (Jarves collection, New Haven, Conn.); "Communion of Mary Magdalen" (Pieve de Staggia, near Poggibonsi). The collaboration of the brothers began in 1465. Piero, brought up in his brother's studio, received lessons from Castagno, Uccello, and Baldovinetti. He painted the altar piece representing "Sts. James, Vincent, and Eustachius" (Uffizi); "Tobias and the Angel" (Museum of Turin); and the "Annunciation" (Museum of Berlin). Both brothers drew designs depicting the life of St. John Baptist, from which were made the embroideries for the San Giovanni baptistery (Museum of the Duomo, Florence). In 1475 they finished the altar piece representing the "Martyrdom of St. Sebastian" (National Gallery, London).

The Pollajuoli were likewise portrait painters of renown, but these works have nearly all perished. The portrait of the wife of Giovanni Bardi (Museum Poldi-Pezzoli, Milan) has been ascribed to Antonio. To Piero are credited: the "Galeazzo Sforza" (Uffizi),

six of the cardinal and theological "Virtues" (Mercanzia of Florence, 1469), sitting in marble niches, with mosaic ornamentation, and characterized by nobility and gravity, and the "Coronation of the Virgin" (Church of San Gimignano, 1483), a mediocre altar piece.

Antonio was chiefly a goldsmith and sculptor. As a goldsmith he worked in the studio of Ghiberti. His two masterpieces in the Baptistery are the bas-

TOMB OF SIXTUS IV
Antonio Pollajuolo, St. Peter's, Rome

relief of the "Nativity" (Museum of the Duomo), and the large silver cross which he executed in collaboration with Betto di Francesco Betti. As a sculptor he was the pupil of Donatello and excelled in the treatment of bronze. He executed the small group of "Hercules and Cacus", several busts, and (1493) the tomb of Sixtus IV, ordered by Innocent VIII. This magnificent bronze tomb is in St. Peter's, in the chapel of the Blessed Sacrament. The head is a remarkable portrait, made from a cast and crowned with the tiara, on which Antonio expended all the delicacy of his talent as a goldsmith. At the sides the liberal and prospective arts are represented ■ half-nude women,

refined and elegant, but pagan. The monument to Innocent VIII at St. Peter's was also executed by Pollajuolo. In the lower part the pope is represented as dead, while above he is depicted as in life, seated on his throne and giving his blessing. The ornamental female figures of Virtues are charming but profane. Antonio Pollajuolo also carried his passion for anatomy and the nude into painting, even in religious pictures such as the "Martyrdom of St. Sebastian", where it is quite offensive. He was "the first of those great pagan artists of the Italian Renaissance for whom the human form, living or dead, and the study of anatomy and the nude became the sole aim and irresistible passion" (A. Pératé).

GASTON SORTAIS.

Polo, MARCO, traveller; b. at Venice in 1251; d. there in 1324. His father Nicolo and his uncle Matteo, sons of the Venetian patrician, Andrea Polo, had established a house of business at Constantinople and another at Sudak on the shore of the Black Sea, in the southeast of the Crimea. About 1255 they left Constantinople with a consignment of jewels and after reaching Sudak went to the residence on the banks of the Volga of Barka (Bereke), Mongol Khan of Kiptchak, who welcomed them and paid them well for their wares. But war having broken out between Bereke and Hulagu, the Mongol conqueror of Persia, and Bereke having been defeated, the Venetians were at a loss how to return to their own country. Leaving Kiptchak they continued their journey towards the east, thus reaching Bokhara, where they stayed three years. Envoys from Hulagu to the Great Khan of Tatar passing through this town and finding these "Latins" who spoke the Tatar language induced them to accompany them to the residence of the great khan, which they reached only after a year's journey. Kublai, the great khan, was the most powerful of the descendants of Jenghiz Khan. While his brother Hulagu had received Iran, Armenia, and Egypt Kublai was master of Mongolia, Northern China, and Tibet, and was to conquer Southern China. This intelligent prince endeavoured to maintain intercourse with the West and favoured the Christians, whether Nestorians or Catholics. Hence Nicolo and Matteo Polo were well received by him, he questioned them with regard to the Christian states, the emperor, the pope, princes, knights, and their manner of fighting and confided to them letters to the pope in which he asked for Christian missionaries.

Accompanied by a Mongol "baron", the two brothers set out in 1266 and after three years of travel reached St-Jean d'Acre in 1269. There the papal legate, Teobaldo Visconti, informed them that Clement IV was dead and they returned to Venice to await the election of a new pope. The cardinals not having reached a decision at the end of two years the brothers Polo determined to return, but this time they brought with them the youthful Marco, son of Nicolo, then aged eighteen. All three went to Acre to see the legate and request of him letters for the great khan, but they had scarcely left Acre when they learned that this same legate had been elected pope under the name of Gregory X (1 Sept., 1271). Overjoyed, they returned to Acre and the new pope gave them letters and appointed two Friars Preachers to accompany them. But while going through Armenia,

they fell amid troops of the Mameluke Sultan Bibars the Arbelester, the monks refused to go further, and the Venetians continued their journey alone. It was only after three years and a half that, after having escaped all kinds of dangers, they reached the dwelling of Kublai, who received them probably at Yen King near the present Peking (1275). The great khan was delighted to see them once more; they presented him with the letters from the pope and some oil from the lamp at the Holy Sepulchre.

Kublai conceived a great affection for the youthful Marco Polo, who readily adopted the Tatar custom and soon learned the four languages as well as the four writings of which they made use (probably Mongolian, Chinese, Persian, and Uighur). The great khan sent him on a mission six months' journey from his residence (probably to Annam) and the information he brought back with regard to the countries he traversed confirmed him in the good will of the sovereign. For three years he was governor of the city of Yang-chow (Janguy), on which twenty-seven cities were dependent. The question of his share in the siege of Siang-yáng and the engines of war constructed under his supervision are much more doubtful. According to Chinese historians the reduction of this city took place in 1273, prior to Marco Polo's arrival in China; on the other hand the details which he gives concerning Kublai's expedition against the Kingdom of Mien (Burma, 1282) leave it to be supposed that he participated therein. He was also charged with several missions to the Indian seas, Ceylon, and Cochin China. At last after having journeyed through almost the whole of Western Asia the three Venetians obtained, but not without difficulty, the great khan's permission to return to their own country. They set sail with a fleet of fourteen four-masted ships and were charged with the escort of an imperial princess betrothed to Arghun, Khan of Persia. After a perilous voyage through the Sonda Strait and the Indian Ocean, they landed at Ormuz and after having delivered the princess to the son of the lately deceased Arghun they continued their journey by land as far as Trebizond, where they took ship for Constantinople, finally reaching Venice in 1295 after an absence of twenty-four years.

In costume and appearance they resembled Tatars; they had almost forgotten their native tongue and had much difficulty in making themselves recognized by their friends. Their wealth speedily aroused admiration, but their marvellous accounts were suspected of exaggeration. Marco, who was constantly talking of the great khan's millions, was nicknamed "Messer Million" and in the sixteenth century their dwelling was still called the "Corte dei milioni". War having broken out between Genoa and Venice, Marco Polo was placed in command of a galley (1296), but the Venetian fleet having been destroyed in the Gulf of Lajazzo he was taken prisoner to Genoa. There he became associated with Rusticiano of Pisa, an adaptor of French romances, who wrote down at his dictation the account of his travels. On his release from prison Marco Polo became a member of the Great Council of Venice and lived there till his death.

The "Book of Marco Polo" dictated to Rusticiano was compiled in French. A more correct version, revised by Marco Polo, was sent by him in 1307 to Thibaud of Cepoy, the agent of Charles of Valois at Venice, to be presented to that prince, who was a candidate for the Crown of Constantinople and the promoter of a crusading movement. The Latin, Venetian, and Tuscan versions are merely translations which are often faulty, or abridgments of the first two texts. The compilation of his book may be regarded as one of the most important events in the history of geographical discoveries. Hitherto

Occidentals knew almost nothing of Asia; in his "Tresor" Brunetto Latini (1230-94) merely reproduces in this respect the compilations of C. Julius Solinus, the abbreviator of Pliny. The "Book of Marco Polo", on the other hand, contains an exact description by an intelligent and well-informed witness of all the countries of the Far East. It is characterized by the exactness and veracity of Venetian statesmen, whose education accustomed them to secure information with regard to various nations and to estimate their resources. This Venetian character extends even to the tone, which modern taste finds almost too impersonal. The author rarely appears on the scene and it is regrettable that he did not give more ample details concerning the missions with which he was charged by the great khan. Otherwise nothing could be more life-like than the pictures and descriptions which adorn the account, and the naïveté of the old French enhances their literary charm.

In a prologue the author briefly relates the first journey of his father and uncle, their return to Venice, their second journey, their sojourn with the great khan, and their final return. The remainder of the work, which in the editions is divided into three books, comprises the description of all the countries through which Marco Polo travelled or concerning which he was able to secure information. The first book treats hither Asia, Armenia, Turcomania, Georgia, the Kingdom of Mossul, the Caliphate of Bagdad, Persia, Beluchistan, etc. Curious details are given concerning the City of Bagdad and the fate of the last

caliph, who died of hunger amid his treasures, and concerning the Old Man of the Mountain and his Assassins. He mentions the recollections in Bactria of Alexander the Great, whom the kings of the country regarded as their ancestor. Subsequently he describes Kashmir and the desert of the plateau of Hindu Kush and Chinese Turkestan, "Great Turkey" and its capital, Kashgar. He mentions the Nestorian communities of Samarkand and after crossing the desert of Gobi reaches Karakoram, the old Mongol capital, which affords him the opportunity for an important digression regarding the origin and customs of the Tatars. Book II introduces us to the Court of Kublai Khan and we are given most curious information with regard to his capital, Kambalik (Peking), his magnificence, and the organization of his Government. We are shown with what facility the Mongols adopted Chinese etiquette and civilization. Then follows a description of the provinces of China, first of China north of Hwang-ho or Cathay, where there were stones which burned like wood (coal), then Si-ngan-fu, the ancient capital of Thang (Shen-si), Tibet, into

which he penetrated a distance of five days' walk, Sunnan, the Kingdom of Mien (Burma), Bengal, Annam, and Southeast China.

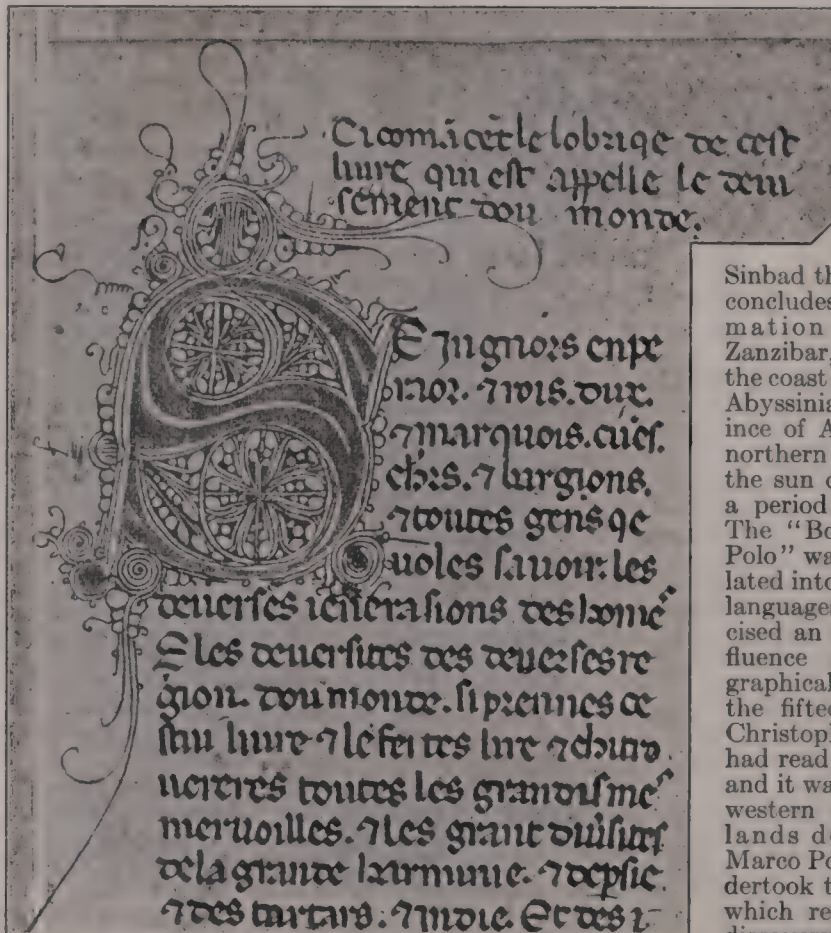

At the beginning of Book III he relates the great maritime expedition which Kublai Khan attempted against Zipangu (Japan) and which ended in defeat. Then he enters the Indian seas and describes the great island of Java and that of the lesser Java (Sumatra), Ceylon, in connexion with which he speaks of the Buddhists and their reformer "Sagamoni Boream" (Khakamouni). From here he goes to the coast of "Maabar" (Coromandel) and gives a full description of India. He mentions the existence of the island of Socotra and the large island of Madagascar, in connexion with which he speaks of

the regular currents of the Strait of Mozambique and relates the legend of the roc, the fabulous bird of the voyages of

Sinbad the Sailor. He concludes with information concerning Zanzibar, the people of the coast of Zanguebar, Abyssinia, the Province of Aden, and the northern regions where the sun disappears for a period of the year. The "Book of Marco Polo" was soon translated into all European languages and exercised an important influence on the geographical discoveries of the fifteenth century. Christopher Columbus had read it attentively and it was to reach the western route to the lands described by Marco Polo that he undertook the expedition which resulted in the discovery of America.

Eighty-five MSS. of the book showing rather

important differences are known. They may be ranged into four types: (1) Paris, Bib. Nat., MS. Tr. 1116, edited by the Société de Géographie in 1824; it is regarded as the original MS. of Rusticiano of Pisa, at least as its exact copy. (2) Bib. Nat., MS. Tr. 2810. Under the name of "Livre des merveilles du monde" it is a collection of accounts of the Orient compiled in 1351 by the Benedictine Jean Lelong of Ypres and copied at the end of the fourteenth century for Philip the Bold, Duke of Burgundy. It contains the text of Marco Polo according to the copy sent to Thibaud of Cepoy and is enriched with numerous miniatures. To the same family belong MSS. Tr. of the Bib. Nat. 5631, 5649 and the Berne MS. (Bib. canton. 125). (3) Latin version executed in the fourteenth century by Francesco Pipino, a Dominican of Bologna, according to an Italian copy. The Latin version published by Grynæus at Basle in 1532 in the "Novus orbis" is indirectly derived from this version. (4) Italian version prepared for printing by Giovanni Ramusio and published in the second volume of his "Navigazioni e viaggi" (3

Polyandry. See MARRIAGE, HISTORY OF.

Polybotus, titular see in Phrygia Salutaris, suffragan of Synnada. This town is mentioned only in the sixth century by Hierocles, "Synecdemus", 677, 10. It is now Boulvadin, capital of the caza of the vilayet of Brousse, with 8000 inhabitants, all Mussulmans; there are some ruins of no interest. Le Quien (Oriens christianus, I, 841) mentions two bishops: Strategius, present at the Council of Chalcedon (451); St. John, whose feast is celebrated 5 Dec. and who lived under Leo the Isaurian; at the Council of Nice (787), the see was represented by the priest Gregory. The earliest Greek "Notitia Episcopatum" of the seventh century places the see among the suffragans of Synnada, and it is still attached to this metropolis as a titular see by the Curia Romana. But from the ninth century until its disappearance as a residential see, it was a suffragan of Amorium. See the "Basilii Notitia" in Gelzer, "Georgii Cyprii descriptio orbis romani" (Leipzig, 1890), 26.

S. PÉTRIDÈS.

Polycarp, SAINT, martyr (A. D. 69–155).—Our chief sources of information concerning St. Polycarp are: (1) the Epistles of St. Ignatius; (2) St. Polycarp's own Epistle to the Philippians; (3) sundry passages in St. Irenæus; (4) the Letter of the Smyrnæans recounting the martyrdom of St. Polycarp.

(1) Four out of the seven genuine epistles of St. Ignatius were written from Smyrna. In two of these—Magnesians and Ephesians—he speaks of Polycarp. The seventh Epistle was addressed to Polycarp. It contains little or nothing of historical interest in connexion with St. Polycarp. In the opening words St. Ignatius gives glory to God "that it hath been vouchsafed to me to see thy face". It seems hardly safe to infer, with Pearson and Lightfoot, from these words that the two had never met before.

(2) The Epistle of St. Polycarp was a reply to one from the Philippians, in which they had asked St. Polycarp to address them some words of exhortation; to forward by his own messenger a letter addressed by them to the Church of Antioch; and to send them any epistles of St. Ignatius which he might have. The second request should be noted. St. Ignatius had asked the Churches of Smyrna and Philadelphia to send a messenger to congratulate the Church of Antioch on the restoration of peace; presumably, therefore, when at Philippi, he gave similar instructions to the Philippians. This is one of the many respects in which there is such complete harmony between the situations revealed in the Epistles of St. Ignatius and the Epistle of St. Polycarp, that it is hardly possible to impugn the genuineness of the former without in some way trying to destroy the credit of the latter, which happens to be one of the best attested documents of antiquity. In consequence some extremists, anti-episcopalians in the seventeenth century, and members of the Tübingen School in the nineteenth, boldly rejected the Epistle of Polycarp. Others tried to make out that the passages which told most in favour of the Ignatian epistles were interpolations.

These theories possess no interest now that the genuineness of the Ignatian epistles has practically ceased to be questioned. The only point raised which

had any show of plausibility (it was sometimes used against the genuineness, and sometimes against the early date of St. Polycarp's Epistle) was based on a passage in which it might at first sight seem that Marcion was denounced: "For every one who doth not confess that Jesus Christ has come in the flesh is antichrist; and whosoever does not confess the testimony of the cross, is a devil, and whosoever perverteth the oracles of the Lord (to serve) his own lusts, and saith there is neither resurrection nor judgment, this man is a first-born of Satan." St. Polycarp wrote his epistle before he had heard of St. Ignatius's martyrdom. Now, supposing the passage just quoted to have been aimed at Marcion (whom, on one occasion, as we shall presently see, St. Polycarp called to his face "the first born of Satan"), the choice lies between rejecting the epistle as spurious on account of the anachronism, or bringing down its date, and the date of St. Ignatius's martyrdom to A. D. 130–140 when Marcion became prominent. Harnack seems at one time to have adopted the latter alternative; but he now admits that there need be no reference to Marcion at all in the passage in question (Chronologie, I, 387–8). Lightfoot thought a negative could be proved. Marcion, according to him, cannot be referred to because nothing is said about his characteristic errors, e. g., the distinction between the God of the Old and the God of the New Testament; and because the antinomianism ascribed to "the first-born of Satan" is inapplicable to the austere Marcion (Lightfoot, St. Ignatius and St. Polycarp, I, 585; all references to Lightfoot (L), unless otherwise stated, will be to this work).

When Lightfoot wrote it was necessary to vindicate the authenticity of the Ignatian epistles and that of St. Polycarp. If the former were forgeries, the latter, which supports—it might almost be said presupposes—them, must be a forgery from the same hand. But a comparison between Ignatius and Polycarp shows that this is an impossible hypothesis. The former lays every stress upon episcopacy, the latter does not even mention it. The former is full of emphatic declarations of the doctrine of the Incarnation, the two natures in Christ, etc. In the latter these matters are hardly touched upon. "The divergence between the two writers as regards Scriptural quotations is equally remarkable. Though the seven Ignatian letters are many times longer than Polycarp's Epistle, the quotations in the latter are incomparably more numerous, as well as more precise, than in the former. The obligations to the New Testament are wholly different in character in the two cases. The Ignatian letters do, indeed, show a considerable knowledge of the writings included in our Canon of the New Testament; but this knowledge betrays itself in casual words and phrases, stray metaphors, epigrammatic adaptations, and isolated coincidences of thought. . . . On the other hand in Polycarp's Epistle sentence after sentence is frequently made up of passages from the Evangelical and Apostolic writings. . . . But this divergence forms only part of a broader and still more decisive contrast, affecting the whole style and character of the two writings. The profuseness of quotations in Polycarp's Epistle arises from a want of originality. . . . On the other hand the letters of Ignatius have a marked individuality. Of all early Christian writings they are pre-eminent in this respect" (op. cit., 595–97).

(3) In St. Irenæus, Polycarp comes before us pre-eminently as a link with the past. Irenæus mentions him four times: (a) in connection with Papias; (b) in his letter to Florinus; (c) in his letter to Pope Victor; (d) at the end of the celebrated appeal to the *potior principalitas* of the Roman Church.

(a) From "Adv. Hær.", V, xxxiii, we learn that Papias was "a hearer of John, and a companion of Polycarp".

(b) Florinus was a Roman presbyter who lapsed into heresy. St. Irenæus wrote him a letter of re-

monstrance (a long extract from which is preserved by Eusebius, H. E., V, xx), in which he recalled their common recollections of Polycarp: "These opinions . . . Florinus are not of sound judgment . . . I saw thee when I was still a boy in Lower Asia in company with Polycarp, while thou wast faring prosperously in the royal court, and endeavouring to stand well with him. For I distinctly remember the incidents of that time better than events of recent occurrence. . . . I can describe the very place in which the Blessed Polycarp used to sit when he discoursed . . . his personal appearance . . . and how he would describe his intercourse with John and with the rest who had seen the Lord, and how he would relate their words . . . I can testify in the sight of God, that if the blessed and apostolic elder had heard anything of this kind, he would have cried out, and stopped his ears, and said after his wont, 'O good God, for what times hast thou kept me that I should endure such things?' . . . This can be shown from the letters which he wrote to the neighbouring Churches for their confirmation etc." Lightfoot (op. cit., 448) will not fix the date of the time when St. Irenæus and Florinus were fellow-pupils of St. Polycarp more definitely than somewhere between 135 and 150. There are in fact no data to go upon.

(c) The visit of St. Polycarp to Rome is described by St. Irenæus in a letter to Pope Victor written under the following circumstances. The Asiatic Christians differed from the rest of the Church in their manner of observing Easter. While the other Churches kept the feast on a Sunday, the Asiatics celebrated it on the 14th of Nisan, whatever day of the week this might fall on. Pope Victor tried to establish uniformity, and when the Asiatic Churches refused to comply, excommunicated them. St. Irenæus remonstrated with him in a letter, part of which is preserved by Eusebius (H. E., V, xxiv), in which he particularly contrasted the moderation displayed in regard to Polycarp by Pope Anicetus with the conduct of Victor. "Among these (Victor's predecessors) were the presbyters before Soter. They neither observed it (14th Nisan) themselves, nor did they permit those after them to do so. And yet, though not observing it, they were none the less at peace with those who came to them from the parishes in which it was observed. . . . And when the blessed Polycarp was at Rome in the time of Anicetus, and they disagreed a little about certain other things, they immediately made peace with one another, not caring to quarrel over this matter. For neither could Anicetus persuade Polycarp . . . nor Polycarp Anicetus. . . . But though matters were in this shape, they communed together, and Anicetus conceded the administration of the Eucharist in the Church to Polycarp, manifestly as a mark of respect. And they parted from each other in peace", etc.

There is a chronological difficulty connected with this visit of Polycarp to Rome. According to the Chronicle of Eusebius in St. Jerome's version (the Armenian version is quite untrustworthy) the date of Anicetus's accession was A. D. 156-57. Now the probable date of St. Polycarp's martyrdom is February, 155. The fact of the visit to Rome is too well attested to be called into question. We must, therefore, either give up the date of the martyrdom, or suppose that Eusebius post-dated by a year or two the accession of Anicetus. There is nothing unreasonable in this latter hypothesis, in view of the uncertainty which so generally prevails in chronological matters (for the date of the accession of Anicetus see Lightfoot, "St. Clement I", 343).

(d) We now come to the passage in St. Irenæus (Adv. Hær., III, 3) which brings out in fullest relief St. Polycarp's position as a link with the past. Just as St. John's long life lengthened out the Apostolic Age, so did the four score and six years of Polycarp extend the sub-Apostolic Age, during which it was pos-

sible to learn by word of mouth what the Apostles taught from those who had been their hearers. In Rome the Apostolic Age ended about A. D. 67 with the martyrdom of St. Peter and St. Paul, and the sub-Apostolic Age about a quarter of a century later when St. Clement, "who had seen the blessed Apostles", died. In Asia the Apostolic Age lingered on till St. John died about A. D. 100; and the sub-Apostolic Age till 155, when St. Polycarp was martyred. In the third book of his treatise "Against Heresies" St. Irenæus makes his celebrated appeal to the "successions" of the bishops in all the churches. He is arguing against heretics who professed to have a kind of esoteric tradition derived from the Apostles. To whom, demands St. Irenæus, would the Apostles be more likely to commit hidden mysteries than to the bishops to whom they entrusted the churches? In order then to know what the Apostles taught, we must have recourse to the "successions" of bishops throughout the world. But as time and space would fail if we tried to enumerate them all one by one, let the Roman Church speak for the rest. Their agreement with her is a manifest fact by reason of the position which she holds among them ("for with this Church on account of its *potior principalitas* the whole Church, that is, the faithful from every quarter, must needs agree", etc.).

Then follows the list of the Roman bishops down to Eleutherius, the twelfth from the Apostles, the ninth from Clement, "who had both seen and conversed with the blessed Apostles". From the Roman Church, representing all the churches, the writer then passes on to two Churches, that of Smyrna, in which, in the person of Polycarp, the sub-Apostolic Age had been carried down to a time still within living memory, and the Church of Ephesus, where, in the person of St. John, the Apostolic Age had been prolonged till "the times of Trajan". Of Polycarp he says, "he was not only taught by the Apostles, and lived in familiar intercourse with many that had seen Christ, but also received his appointment in Asia from the Apostles as Bishop in the church of Smyrna". He then goes on to speak of his own personal acquaintance with Polycarp, his martyrdom, and his visit to Rome, where he converted many heretics. He then continues, "there are those who heard him tell how John, the disciple of the Lord, when he went to take a bath in Ephesus, and saw Cerinthus within, rushed away from the room without bathing, with the words 'Let us flee lest the room should fall in, for Cerinthus, the enemy of the truth, is within'. Yea, and Polycarp himself, also, when on one occasion Marcion confronted him and said 'Recognise us', replied, 'Ay, ay, I recognise the first-born of Satan'".

(4) Polycarp's martyrdom is described in a letter from the Church of Smyrna to the Church of Philomelium "and to all the brotherhoods of the holy and universal Church", etc. The letter begins with an account of the persecution and the heroism of the martyrs. Conspicuous among them was one Germanicus, who encouraged the rest, and when exposed to the wild beasts, incited them to slay him. His death stirred the fury of the multitude, and the cry was raised "Away with the atheists; let search be made for Polycarp". But there was one Quintus, who of his own accord had given himself up to the persecutors. When he saw the wild beasts he lost heart and apostatized. "Wherefore", comment the writers of the epistle, "we praise not those who deliver themselves up, since the Gospel does not so teach us". Polycarp was persuaded by his friends to leave the city and conceal himself in a farm-house. Here he spent his time in prayer, "and while praying he falleth into a trance three days before his apprehension; and he saw his pillow burning with fire. And he turned and said unto those that were with him, 'it must needs be that I shall be burned alive'." When his pursuers were on

his track he went to another farm-house. Finding him gone they put two slave boys to the torture, and one of them betrayed his place of concealment. Herod, head of the police, sent a body of men to arrest him on Friday evening. Escape was still possible, but the old man refused to fly, saying, "the will of God be done". He came down to meet his pursuers, conversed affably with them, and ordered food to be set before them. While they were eating he prayed, "remembering all, high and low, who at any time had come in his way, and the Catholic Church throughout the world". Then he was led away.

Herod and Herod's father, Nicetas, met him and took him into their carriage, where they tried to prevail upon him to save his life. Finding they could not persuade him, they pushed him out of the carriage with such haste that he bruised his shin. He followed on foot till they came to the Stadium, where a great crowd had assembled, having heard the news of his apprehension. "As Polycarp entered into the Stadium a voice came to him from heaven: 'Be strong, Polycarp, and play the man'. And no one saw the speaker, but those of our people who were present heard the voice." It was to the proconsul, when he urged him to curse Christ, that Polycarp made his celebrated reply: "Fourscore and six years have I served Him, and He has done me no harm. How then can I curse my King that saved me." When the proconsul had done with the prisoner it was too late to throw him to the beasts, for the sports were closed. It was decided, therefore, to burn him alive. The crowd took it upon itself to collect fuel, "the Jews more especially assisting in this with zeal, as is their wont" (cf. the Martyrdom of Pionius). The fire, "like the sail of a vessel filled by the wind, made a wall round the body" of the martyr, leaving it unscathed. The executioner was ordered to stab him, thereupon, "there came forth a quantity of blood so that it extinguished the fire". (The story of the dove issuing from the body probably arose out of a textual corruption. See Lightfoot, Funk, Zahn. It may also have been an interpolation by the pseudo-Pionius.)

The officials, urged thereto by the Jews, burned the body lest the Christians "should abandon the worship of the Crucified One, and begin to worship this man". The bones of the martyr were collected by the Christians, and interred in a suitable place. "Now the blessed Polycarp was martyred on the second day of the first part of the month of Xanthicus, on the seventh day before the Kalends of March, on a great Sabbath at the eighth hour. He was apprehended by Herodes . . . in the proconsulship of Statius Quadratus etc." This subscription gives the following facts: the martyrdom took place on a Saturday which fell on 23 February. Now there are two possible years for this, 155 and 166. The choice depends upon which of the two Quadratus was proconsul of Asia. By means of the chronological data supplied by the rhetorician Aelius Aristides in certain autobiographical details which he furnishes, Waddington, who is followed by Lightfoot ("St. Ignatius and St. Polycarp", I, 646 sq.), arrived at the conclusion that Quadratus was proconsul in 154-55 (the proconsul's year of office began in May). Schmid, a full account of whose system will be found in Harnack's "Chronologie", arguing from the same data, came to the conclusion that Quadratus's proconsulship fell in 165-66.

For some time it seemed as if Schmid's system was likely to prevail, but it has failed on two points: (1) Aristides tells us that he was born when Jupiter was in Leo. This happened both in 117 and 129. Schmid's system requires the later of these two dates, but the date has been found to be impossible. Aristides was fifty-three years and six months old when a certain Macrinus was governor of Asia. "Now Egger (in the Austrian 'Jahreshefte', Nov., 1906) has published an inscription recording the career of Macrinus, which

was erected to him while he was governing Asia, and he pointed out that as the birth of Aristides was either in 117 or 129, the government of Macrinus must have been either in 170-71, or 182-83, and he has shown that the later date is impossible". (Ramsay in "The Expository Times", Jan., 1907.)

(2) Aristides mentions a Julianus who was proconsul of Asia nine years before Quadratus. Now there was a Claudius Julianus, who is proved by epigraphic and numismatic evidence to have been Proconsul of Asia in 145. Schmid produced a Salvius Julianus who was consul in 148 and might, therefore, have been the Proconsul of Asia named by Aristides. But an inscription discovered in Africa giving the whole career of Salvius Julianus disposes of Schmid's hypothesis. The result of the new evidence is that Salvius Julianus never governed Asia, for he was Proconsul of Africa, and it was not permitted that the same person should hold both of these high offices. The rule is well known; and the objection is final and insurmountable (Ramsay, "Expos. Times", Feb., 1904. Ramsay refers to an article by Mommsen, "Savigny Zeitschrift für Rechtsgeschichte", xxiii, 54). Schmid's system, therefore, disappears, and Waddington's, in spite of some very real difficulties (Quadratus's proconsulship shows a tendency to slip a year out of place), is in possession. The possibility of course remains that the subscription was tampered with by a later hand. But 155 must be approximately correct if St. Polycarp was appointed bishop by St. John.

There is a life of St. Polycarp by a pseudo-Pionius, compiled probably in the middle of the fourth century. It is "altogether valueless as a contribution to our knowledge of Polycarp. It does not, so far as we know, rest on any tradition, early or late, and may probably be regarded as a fiction of the author's own brain" (Lightfoot, op. cit., iii, 431). The postscript to the letter to the Smyrnæans: "This account Gaius copied from the papers of Irenæus . . . and I, Socrates, wrote it down in Corinth . . . and I, Pionius again wrote it down", etc., probably came from the pseudo-Pionius. The very copious extracts from the Letter of the Smyrnæans given by Eusebius are a guarantee of the fidelity of the text in the MSS. that have come down.

The Letter to the Philippians was first published in the Latin version by FABER STAPULENSIS in his edition of the Ignatian Epistles (Paris, 1498). The Greek text first appeared in HALLOIX, *Illust. Ecclés. Orient. Script.* (Douai, 1633); BOLLANDUS in the *Acta SS.*, 26 Jan., published in 1643 a Latin translation of the Greek text of the Letter of the Smyrnæans, together with the old Latin version of the same epistle. Both Greek and Latin were published by USSHER in 1641. The substance of the pseudo-Pionius Life was given by HALLOIX in the work referred to above, and a Latin translation of it was published by BOLLANDUS, *Acta SS.*, Jan. 26. The Greek text was first published by DUCHESNE, *Vita S. Polycarpi . . . auctore Pionio* (Paris, 1881).

The best modern editions and commentaries are LIGHTFOOT'S *Apostolic Fathers*, part II, *Ignatius and Polycarp* (3 vols., 2nd ed., London, 1889); GEBHARDT, HARNACK, and ZAHN, *Patrum Apostolicorum opera*, fasc. III (Leipzig, 1876); FUNK, *Patres Apostolici*. A good account of St. Polycarp will be found in LIGHTFOOT, *Supernatural Religion* (London, 1889). For the date of the martyrdom the discussions found in LIGHTFOOT and HARNACK, *Chronologie*, I, 324 sq. should be supplemented by CORSEN, *Das Todesjahr Polykarpus in Zeitschrift f. d. N. T. Wissenschaft*, III, 62, and the articles of RAMSAY referred to above.

F. J. BACCHUS.

Polycarpus, title of a canonical collection in eight books composed in Italy by Cardinal Gregorius. It is borrowed chiefly from the collections of Anselm and from the "Anselmo Dedicata". Writers generally date it about 1124, because it includes a decretal of Callistus II (d. 1124), but some place it prior to 1120 or 1118, date of the death of Bishop Didacus, to whom the collection is dedicated, and regard the Callistus decretal as an addition. The dedicatory epistle and the titles were published by the Ballerini ("De antiquis collectionibus et collectoribus canonum", part IV, c. xvii in "P. L.", LVI, 346, Paris, 1865), and the rubrics by Theiner ("Disquisitiones criticæ in præcipuas can-

onum et decretalium collectiones", Rome, 1836, 356 sqq.). Extracts from Book IV were published by Mai, "Nova bibliotheca patrum", VII, iii, 1-76 (Rome, 1852-88).

PHILLIPS, *Kirchenrecht*, IV (Ratisbon, 1851), 135-6; SCHERER, *Kirchenrecht*, IV (Gratz, 1886), 240; WERNZ, *Jus Decretalium*, I (2nd ed., Rome, 1905), 331, 333.

Polygamy. See MARRIAGE, HISTORY OF.

Polyglot Bibles.—The first Bible which may be considered a Polyglot is that edited at Alcalá (in Latin *Complutum*, hence the name Complutensian Bible), Spain, in 1502-17, under the supervision and at the expense of Cardinal Ximenes, by scholars of the university founded in that city by the same great Cardinal. It was published in 1520, with the sanction of Leo X. Ximenes wished, he writes, "to revive the languishing study of the Sacred Scriptures"; and to achieve this

printed edition of the Greek Old Testament, the one which was commonly used and reproduced before the appearance of the edition of Sixtus V, in 1587. It is followed, on the whole, in the Septuagint columns of the four great Polyglots edited by Montanus (Antwerp, 1569-72); Bertram (Heidelberg, 1586-1616); Wolder (Hamburg, 1596); and Le Jay (Paris, 1645). Ximenes' Greek New Testament, printed in 1614, was not published until six years after the hastily edited Greek New Testament of Erasmus, which was published before it in 1516; but in the fourth edition of Erasmus' work (1527), which forms the basis of the "Textus Receptus", a strong influence of Ximenes' text is generally recognized.

The "Antwerp Bible", just mentioned, sometimes called the "Biblia Regia", because it was issued under the auspices of Philip II, depends largely on the "Complutensian" for the texts which the latter had

CAP. II.

QUUM autem natus esset Ieschna in Beth-lechē quae est Jihouda in diebus Heroudis regis, aduenerūt Magi ab Oriente ad Ourischlē. Et inquirunt. Ubi natus est ille rex Jihoudeorum? vidimus enim stellam eius in Oriente, venimúsque ut adoremus eum. Quae quum audisset rex Heroudes perterritus est, totaque Ourischlem cum eo. Et congregatis omnibus principibus sacerdotum, et scribis populi, percontatus est ab eis ubi Meschicho nasceretur.

POLYGLOT BIBLE OF MONTANUS (BIBLIA REGIA)

Reduced facsimile of the opening

The columns, from left to right, present: the Peshito (Syriac) Text; a literal Latin translation of the

object he undertook to furnish students with accurate printed texts of the Old Testament in the Hebrew, Greek, and Latin languages, and of the New Testament in the Greek and Latin. His Bible contains also the Chaldaic Targum of the Pentateuch and an interlinear Latin translation of the Greek Old Testament. The work is in six large volumes, the last of which is made up of a Hebrew and Chaldaic dictionary, a Hebrew grammar, and Greek dictionary. It is said that only six hundred copies were issued; but they found their way into the principal libraries of Europe and had considerable influence on subsequent editions of the Bible. Vigouroux made use of it in the very latest of the Polyglots. Cardinal Ximenes was, he assures us, eager to secure the best manuscripts accessible to serve as a basis of his texts; he thanks Leo X for lending him Vatican MSS. Traces of such MSS. are, indeed, discernible, particularly in the Greek text; and there is still a copy at Madrid of a Venetian MS. which he is thought to have used. He did not, however, use any of what are now considered the best; appreciation of the worth of the MSS., and of their variant readings, had still much progress to make; but the active work of many years produced texts sufficiently pure for most purposes.

The "Complutensian Bible" published the first

published. It adds to them an interlinear translation of the Hebrew, the Chaldaic Targums (with Latin translation) of the books of the Hebrew Bible which follow the Pentateuch, excepting Daniel, Esdras, Nehemias, and Paralipomenon, and the Peshito text of the Syriac New Testament with its Latin translation. This work was not based on MSS. of very great value; but it was carefully printed by Christophe Plantin, in eight magnificent volumes. The last two contain an *apparatus criticus*, lexicons and grammatical notes.

The "Paris Polyglot" in ten volumes, more magnificent than its Antwerp predecessor, was edited with less accuracy, and it lacks a critical apparatus. Its notable additions to the texts of the "Antwerp Bible", which it reproduces without much change, are the Samaritan Pentateuch and its Samaritan version edited with Latin translation by the Oratorian, Jean Morin, the Syriac Old Testament and New Testament Antilegomena, and the Arabic version of the Old Testament.

The "London Polyglot" in six volumes, edited by Brian Walton (1654-7), improved considerably on the texts of its predecessors. Besides them, it has the Ethiopic Psalter, Canticle of Canticles, and New Testament, the Arabic New Testament, and the Gospels in Persian. All the texts not Latin are accom-

panied by Latin translations, and all, sometimes nine in number, are arranged side by side or one over another on the two pages open before the reader. Two companion volumes, the "Lexicon Heptaglotton" of Edmund Cassel, appeared in 1669. The Bible was also published in several languages by Elias Hutter (Nuremberg, 1599-1602), and by Christianus Reineccius (Leipsic, 1713-51).

Modern Polyglots are much less imposing in appearance than those of the sixteenth and seventeenth centuries; and there is none which gives the latest results of scientific textual criticism as fully as did Brian Walton's in its day. We may cite, however, as good and quite accessible:—Bagster, "Polyglot Bible in eight languages" (2 vols., London, 2nd ed. 1874). The languages are Hebrew, Greek, English, Latin, German, Italian, French, and Spanish. It gives in appendix the

MASCH-LELONG, *Bibliotheca Sacra*, I (Halle, 1778), 331-424. In each Polyglot is found some historical information about itself and its predecessors. VIGOUROUX, *Manuel biblique* (Paris, 1905), 260 sqq. Individual texts of the Polyglots are dealt with in Biblical introductions. SWETE, *Introd. to the O. T. in Greek* is particularly useful. PICK, *History of printed editions . . . and Polyglot Bibles in Hebraica*, IX (1892-3), 47-116.

W. S. REILLY.

Polystylum, titular see of Macedonia Secunda, suffragan of Philippi. When Philippi was made a metropolitan see Polystylum was one of its suffragans (Le Quien, "Oriens christ.", II, 65). It figures as such in the "Notitiæ episcopatum" of Leo the Wise about 901-7 (Gelzer, "Ungedruckte und ungenügend veröffentlichte Texte der Notit. episcopat.", Munich, 1900, 558); the "Nova Tactica" about 940 (Gelzer, "Georgii Cyprii descr. orbis romani", Leipzig, 1890, 80); "Notices" 3 and 10 of Parthey, which belong to the

verses of Matt., ii, in vol. V

Peshito; the Vulgate; the Greek Text. The Hebrew Version occupies the lower part of both pages

Syriac New Testament, the Samaritan Pentateuch, and many variants of the Greek text. This Bible is printed in very small type. It is a new edition, on a reduced scale, of Bagster's "Biblia Sacra Polyglotta" (6 vols., London, 1831). "Polyglotta-Bibel zum praktischen Handgebrauch", by Stier and Theile, in four quarto volumes (5th ed., Bielefeld, 1890). This Polyglot contains the Hebrew, Greek, Latin, and German texts. "Biblia Triglotta", 2 vols., being, with the omission of modern languages, a reissue of the "Biblia Hexaglotta", edited by de Levante (London, 1874-6). It contains the Hebrew, Greek, and Latin texts of the Old Testament, and the Greek, Latin, and Syriac texts of the New Testament. Published by Dickenson, London, 1890. "La Sainte Bible Polyglotte" (Paris, 1890-98), by F. Vigouroux, S.S., first secretary of the Biblical Commission, is the only modern Polyglot which contains the deuterocanonical books, and the only one issued under Catholic auspices. Vigouroux has secured the correct printing, in convenient quarto volumes, of the ordinary Massoretic text, the Sixtine Septuagint, the Latin Vulgate, and a French translation of the Vulgate by Glaire. Each book of the Bible is preceded by a brief introduction; important variant readings, textual and exegetical notes, and illustrations are given at the foot of the pages.

thirteenth century. In 1212 Innocent III mentions it among the suffragans of the Latin Archdiocese of Philippi (P. L., CCXVI, 585). In 1363 the Greek bishop Peter became Metropolitan of Christopolis and the see was united to the Archdiocese of Maronia (Miklosich and Müller, "Acta patriarchatus Constantinopolitani", I, 474, 475, 559; Petit, "Actes du Patriarchat", Petersburg, 1903, p. x and vii). About the same time the city was restored and fortified by the Emperor Cantacuzenus (Cantacuz, III, 37, 46; Niceph. Gregoras, XII, 161). Cantacuzenus says that Polystylum was the ancient Abdera; this statement also occurs in a Byzantine list of names of cities published by Parthey (Hierocles, "Synecdemus", Berlin, 1866, 314). This is not absolutely correct. Polystylum is the modern village of Bouloustra in the villayet of Salonica, situated in the interior of the country north of Kara Aghatch where the ruins of Abdera are found, but it is doubtless because of this approximate identification that the see of Abdera is placed among the titular sees, although such a residential see never existed.

PAULY-MISSOWA, *Realencyk.*, s. v. Abdera.

Polytheism, the belief in, and consequent worship of, many gods. See the various articles on national

religions such as the Assyrian, Babylonian, Hindu, and the ancient religions of Egypt, Greece, and Rome; see also ANIMISM, FETISHISM, TOTEMISM, GOD, MONOTHEISM, PANTHEISM, THEISM etc.

Pomaria, titular see in Mauretania Cæsarea. It is north of Tlemcen (capital of an arrondissement in the department of Oran, Algeria) and in view of the ruins of Agadir, which was built itself on the ruins of Pomaria. Named after its orchards, Pomaria was formed under the shadow of the Roman camp. At Agadir and in the outskirts may be found numerous Latin inscriptions principally from the Christian epoch, the most recent from the seventh century, and many with the abbreviation DMS, which had evidently lost all pagan meaning. We know of but one bishop, Longinus, mentioned in the list of bishops of Mauretania Cæsarea, who was summoned by King Huneric, returned to Carthage in 484 and was condemned to exile. He was praised by Victor of Vita, Gregory of Tours, and Fredegarius; the martyrology of Usuard inserts his name on 1 Feb. At the end of the eighth century Idris I founded Agadir on the site of Pomaria; on the fall of the Idrisid dynasty, Agadir was the capital of the Beni-Khazer and Beni-Yala, emirs of a Berber tribe, vassals of the Ommiads of Spain. Tlemcen, founded at the end of the eleventh century by Yussef ben Tashfin, was reunited to Agadir and finally supplanted it.

Pombâl, SEBASTIÃO JOSÉ DE CARVALHO E MELLO, MARQUIS DE, the son of a country gentleman of modest means, b. in Lisbon, 13 May, 1699; d. 8 August, 1782. He was said

to have been educated at the University of Coimbra and served for a time in the army. After a turbulent life in the capital, he carried off and married the niece of the Conde dos Arcos, and his aversion for the nobility originated perhaps with the opposition offered by her family to what they deemed a *mésalliance*. Pombal then retired to a country estate near Soure, and in his thirtieth year received

his first public appointment, being sent as minister to London in 1738. In 1745 he was transferred to Vienna, where his work was to effect a reconciliation between the pope and the empress; there in the same year he married as his second wife the daughter of Field Marshal Daun, a union brought about by the influence of John V's Austrian wife, who befriended him more than once, though the king disliked him and recalled him in 1749. John died 31 July, 1750, and on 3 August, 1750, the new monarch, Joseph, named Pombal Minister of Foreign Affairs. The distinguished diplomat, D. Luiz da Cunha, had recommended Pombal to Joseph when the latter was only prince, but it was the favour of the queen-mother and perhaps also of a Jesuit, Father Moreira, that secured him the coveted post. His superior intelligence and masterful will enabled him in a short time to dominate

his colleagues, who were dismissed or made insignificant, and with the acquiescence of his royal master he became the first power in the State. Some years later the English ambassador said of him, "with all his faults, he is the sole man in this kingdom capable of being at the head of affairs". His energy after the earthquake, 1 Nov., 1755, confirmed his ascendancy over the king, and he became successively first Minister, Count of Oceras in 1759, and Marquis of Pombal in 1770. The mysterious attempt, 3 Sept., 1758, on the king's life gave him a pretext to crush the independence of the nobility. He magnified an act of private vengeance on the part of the Duke of Aveiro into a widespread conspiracy, and after a trial which was a mockery, the duke, members of the Tavora family and their servants were publicly put to death with horrible cruelties at Belem, 13 Jan., 1759. No penalty was considered too severe for *lèse majesté* and there is some evidence that Joseph himself ordered the prosecution, indicated the Tavoras for punishment, and charged Pombal to show no mercy. If true, this explains in part the leniency shown him after his fall by Joseph's daughter and successor, Queen Maria. The so-called Pombaline terror dates from these executions. The people were effectively cowed when they saw that perpetual imprisonment, exile, and death rewarded the enemies or even the critics of the dictator.

He was bound to come into conflict with the Jesuits, who exercised no small influence at Court and in the country. They appear to have blocked his projects to marry the heiress presumptive to the Protestant Duke of Cumberland and to grant privileges to the Jews in return for aid in rebuilding Lisbon, but the first open dispute arose over the execution of the Treaty of Limits (13 Jan., 1750), regulating Spanish and Portuguese jurisdiction in the River Plate. When the Indians declined to leave their houses in compliance with its provisions and had to be coerced, Pombal attributed their refusal to Jesuit machinations. Various other difficulties of the Government were laid to their charge and by the cumulative effect of these accusations, the minister prepared king and public for a campaign against the Society in which he was inspired by the Jansenist and Regalist ideas then current in Europe. He had begun his open attack by having the Jesuit confessors dismissed from Court, 20 Sept., 1757, but it was the Tavora plot in which he implicated the Jesuits on the ground of their friendship with some of the supposed conspirators that enabled him to take decisive action. On 19 Jan., 1759, he issued a decree sequestering the property of the Society in the Portuguese dominions and the following September deported the Portuguese fathers, about one thousand in number, to the Pontifical States, keeping the foreigners in prison. The previous year he had obtained from Benedict XIV the appointment of a creature of his, Cardinal Saldanha, as visitor, with power to reform the Society, but events proved that his real intention was to end it. Still not content with his victory, he determined to humiliate it in the person of a conspicuous member, and himself denounced Father Gabriel Malagrida to the Inquisition for crimes against the Faith. He caused the old missionary, who had lost his wits through suffering, to be strangled and then burnt. He entered into negotiations with the Courts of Spain, France, and Naples to win from the pope by joint action the suppression of the Society, and having no success with Clement XIII, he expelled the Nuncio 17 June, 1760, and broke off relations with Rome. The bishops were compelled to exercise functions reserved to the Holy See and the Portuguese Church came to have Pombal as its effective head. The religious autonomy of the nation being thus complete, he sought to justify his action by issuing the "*Dedução Chronologica*", in which the Jesuits were made responsible for all the calamities of Portugal. In 1773

LE MARQUIS DE POMBAL.

Clement XIV, to prevent a schism, yielded to the pressure brought to bear on him and suppressed the Society. As soon as he was sure of success, Pombal made peace with Rome and in June, 1770, admitted a nuncio, but the ecclesiastical system of Portugal remained henceforth a sort of disguised Anglicanism, and many of the evils from which the Church now suffers are a legacy from him.

In the political sphere Pombal's administration was marked by boldness of conception and tenacity of purpose. It differed from the preceding in these particulars: (1) he levelled all classes before the royal authority; (2) he imposed absolute obedience to the law, which was largely decided by himself, because the Cortes had long ceased to meet; (3) he transformed the Inquisition into a mere department of the State. In the economic sphere, impressed by British commercial supremacy, he sought and with success to improve the material condition of Portugal. Nearly all the privileged companies and monopolies he founded ended in financial failure and helped the few rather than the many, yet when the populace of Oporto rose in protest against the Alto Douro Wine Company, they were punished with ruthless severity, as was the fishing village of Trafaria, which was burnt by the minister's orders when it sheltered some unwilling recruits. His methods were the same with all classes. Justice went by the board in face of the reason of state; nevertheless he corrected many abuses in the administration. His activity penetrated every department. His most notable legislative work included the abolition of Indian slavery and of the odious distinction between old and new Christians, a radical reorganization of the finances, the reform of the University of Coimbra, the army and navy, and the foundation of the College of Nobles, the School of Commerce, and the Royal Press. He started various manufactures to render Portugal less dependent on Great Britain and his Chartered Companies had the same object, but he maintained the old political alliance between the two nations, though he took a bolder attitude than previous ministers had dared to do, both as regards England and other countries, and left a full treasury when the death of King Joseph, on 24 Feb., 1777, caused his downfall. He died in retirement, having for years suffered from leprosy and the fear of the punishment he had meted out to others. The Bishop of Coimbra presided at his funeral, while a well-known Benedictine delivered the panegyric. Even to the end Pombal had many admirers among the clergy, and he is regarded by the Portuguese as one of their greatest statesmen and called the great Marquis.

EDGAR PRESTAGE.

Pomerania, a Prussian province on the Baltic Sea situated on both banks of the River Oder, divided into Hither Pomerania (*Vorpommern*), the western part of the province, and Farther Pomerania (*Hinterpommern*), the eastern part. Its area is 11,628 square miles, and it contains 1,684,345 inhabitants. In the south-east Pomerania is traversed by a range of low hills (highest point fourteen miles), otherwise it is a low plain. Farming and market-gardening take 55.2 per cent of the soil, grass-land 10.2 per cent, pasturage 6.5 per cent, and woodland 20.2 per cent. The chief occupations are farming, cattle-raising, the shipping trade, and fishing. There is no manufacturing of any importance except in and near Stettin. The earliest

inhabitants were German tribes, among them Goths, Scirri, Rugians, Lemovier, Burgundians, Semnonians (Tacitus, "Germania"). About the middle of the second century these tribes began to migrate towards the south-east; they were replaced by others who also soon left, and Slavs (Wends), entering from the east, gradually gained possession of the province. Consequently the name *Pommern* is Slavonic, *Po more, Po moran* signifying "along the sea". Charlemagne compelled the acknowledgment of his suzerainty as far as the Oder, but his successors limited themselves to the defensive. In the reigns of Henry I and Otto the Great, the Wends were again obliged to pay tribute. However, German supremacy remained uncertain and the Danish influence was greater, until the Poles conquered Pomerania about 995. As suffragan of their new Archdiocese of Gnesen, established in 1000, the Poles founded the Diocese of Kolberg, which, however, existed apparently only in the parchment deed. It is doubtful whether the bishop Reinbern ever stayed at Kolberg; he died about 1015 while on an embassy to Kiev.

In the following era there were wars with varying results between the Poles, Danes, and Germans for the possession of Pomerania. Finally after a long and bloody struggle the Poles were victorious (1122), and Duke Boleslaw earnestly endeavoured to convert the inhabitants to Christianity. The task was given to Bishop Otto of Bamberg who accomplished it during two missionary journeys. At this period appears the name of the first well known Duke of Pomerania, Wratislaw. Otto had the supervision of the Pomeranian Church until his death, but could not found a diocese to which to appoint the chaplain Adalbert. After Otto's death, Innocent II by a Bull of 14 Oct., 1140, made the church of St. Adalbert at Julin on the Island of Wollin the see of the diocese, and Adalbert was consecrated bishop at Rome. The difficulty as to which archdiocese was to be the metropolitan of the new bishopric was evaded by placing it directly under the papal see. Duke Ratibor of Pomerania founded the first monasteries: in 1153 a Benedictine abbey at Stolp, and later a Premonstratensian abbey at Grobe on the island of Usedom. Before 1176 the see was transferred to Kammin, where a cathedral chapter was founded for the Cathedral of St. John. The western part of the country belonged to the Diocese of Schwerin. The founding of the Cistercian monasteries at Dargun (1172) and at Kolbatz east of the Oder (1173) were events of much importance. The Cistercians greatly promoted the development of religion and civilization by engaging in agricultural undertakings of all kinds. About 1179 the Premonstratensians obtained a new monastery at Gramzow near Prenzlau, and in 1180 at Belbuk in Farther Pomerania. In 1181 Duke Bogislaw received his lands in fief from Emperor Frederick I, and thus became a prince of the German Empire. This was followed by a large immigration of Germans.

The ecclesiastical organization also progressed. Cistercian monasteries were established at: Eldena (c. 1207); Neuenkamp (c. 1231); of the latter a branch on the Island of Hiddensee (1296); Bukow (c. 1253); Bergen on the island of Rügen (1193); near Stettin (1243); at Marienfließ (1248); near Kolberg (1277); near Köslin (1277); at Wollin (1288). A Premonstratensian convent was founded near Treptow on the Rega (1224). The Augustinians had monasteries at: Uckermünde (1260), later transferred to Jasenitz; Pyritz (c. 1255); Anklam (1304); Stargard (1306); Gartz (1308). The Franciscans had foundations at: Stettin (1240); Greifswald (1242); Prenzlau (before 1253); Stralsund (1254); Pyritz (before 1286); Greifenberg (before 1290); Dramburg (after 1350); the Dominicans at: Kammin (about 1228); Stralsund (1251); Greifswald (1254); Stolp (1278); Pasewalk (1272); Prenzlau (1275); Soldin (about 1289);

Nörenberg (fourteenth century). Finally the Duchess Adelheid founded the Carthusian convent of Marienkron near Köslin in 1394; it was first transferred to Schlawe, then in 1407 to Rügenwalde; in 1421 the Brigittine convent of Marienkron was established at Stralsund. All these establishments contributed greatly to the extension of Christian and German civilization, as did also the orders of knights, e. g., the Knights of St. John. Foundations for canons were made about 1200 at Kolberg, and in 1261 at Stettin.

In 1295 Dukes Otto and Bogislaw divided the country into the two Duchies of Stettin and Wolgast; at later dates there were further divisions. The victory of German civilization in Pomerania was assured in the fourteenth century, and the diocese became dependent upon the dukes. The bishop was merely the first in the social order of prelates; and there were constant quarrels over the possession of the diocese and of the episcopal castles. In the fifteenth century conditions were in great disorder. During the years 1437-43 the University of Rostock, founded in 1419, withdrew from Rostock on account of quarrels between the council and the citizens, and settled at Greifswald. The mayor, Heinrich Rubenow, urged Duke Wratisslaw IX to establish a university at Greifswald, to which the duke agreed, gave some of his revenues for its support, and, aided by the abbots of the monasteries in Hither Pomerania, obtained from Callistus III a Bull of foundation, 29 May, 1456. In the first semester 173 students matriculated. At the same time a foundation for twenty canons, intended to furnish maintenance for new teachers, was united with the church of St. Nicholas. The university continued with increasing prosperity.

About 1400, heresy, caused by the Waldensians, developed in the province; Peter the Celestine came to Stettin to investigate the matter, and scattered the heretics in 1393. The sect of the "Putzkeller", concerning which there are only confused reports, appears also to be traceable to the Waldensians. Diocesan synods were held in 1433, 1448 (at Stettin), 1454 (at Gülzow and Kammin), 1492, and 1500. The statutes show a disorderly condition of morals, but earnest attempts to improve conditions. The first traces of Lutheranism appeared at Stralsund, and in the monastery of Belbuk, where Johannes Bugenhagen (Pomeranus), rector of the town-school and teacher of the monks, became acquainted with Luther's writing "De captivitate Babylonica"; he won over many priests to the new doctrine and in 1521 went to Wittenberg. Preachers from other regions, and monks who had left their monasteries, found ready attention throughout the country, on account of the great social and economic discontent, and especially the freedom from taxes of the clergy and the ecclesiastical jurisdiction. In 1525 Stralsund adopted Lutheranism, while Greifswald and Stargard remained true to the Faith, and other towns were divided between passionately contending parties. When Duke Barnim XI of Stettin, who had been a student at Wittenberg, and his nephew, Philip of Wolgast, joined the Lutheran party, its victory was assured.

A basis for the Lutheran Church of Pomerania was prepared by the Diet at Treptow on the Rega in 1534 with the aid of the rules drawn up by Bugenhagen. The prelates and some of the nobility protested and left the diet; the towns gradually abandoned their opposition and accepted Bugenhagen's propositions, and Bishop Erasmus Manteuffel, who maintained his protest, died in 1544. The monasteries were suppressed (1535-6) and in 1539 the nobility gave up; the dukes joined the Smalkaldic League but maintained an ambiguous position. The later church ordinance of 1563 established the strictest form of Lutheranism, and the first bishop was Bartholomäus Suawe (1546). In 1548 Emperor Charles V claimed the diocese, as it belonged to the estates of

the empire. The dukes were obliged to accept the Interim, and after Suawe resigned, Martin Weiher became bishop in 1549, was recognized by Julius III, 5 Oct., 1551, and took his place as a prince of the empire. In 1555 the Peace of Augsburg gave the final victory to the evangelical party in Pomerania. After Weiher's death in 1556 the diocese came under the control of the ruling princes, who filled the see with members of their family. The Evangelical cathedral chapter with thirteen positions for worthy officials of the province and the Church continued to exist until 1810. The last duke, Bogislaw XIV, who from 1625 had ruled over the united Duchies of Stettin and Wolgast, died childless 10 March, 1637; the country then passed to Brandenburg, which by old treaties had the right of succession, but by the Treaty of Westphalia (1648) had to be content with Farther Pomerania; Hither Pomerania and Rügen were given to Sweden. The Lutheran bishop, Duke Ernest Bogislaw of Croy, gave the Diocese of Kammin to Brandenburg in 1650. By the Treaty of Stockholm of 1720, Hither Pomerania as far as the Peene was given to Brandenburg-Prussia; the rest of the province and the island of Rügen were obtained by Prussia in the treaty of 4 June, 1815.

In 1824 the seven hundredth anniversary of Pomerania's conversion to Christianity was celebrated, and a monument was erected to Bishop Otto of Bamberg at Pyritz. Catholic parishes have developed since the end of the eighteenth century from the military chaplaincies in the larger garrison towns. At the beginning these parishes were under the care of the Vicariate of the North German Missions. In 1821 they were placed under the Prince Bishop of Breslau, who gave their administration to the provost of St. Hedwig's at Berlin as episcopal delegate. At present (1911) there are two arch-presbyteries, Köslin and Stettin-Stralsund. Köslin has nine parishes: Arnsvalde, Grünhof, Köslin, Kolberg, Neustettin, Pollnow, Schivelbein, Stargard, Stolp. Stettin-Stralsund has eleven: Anklam, Bergen, Demmin, Greifswald, Hopenwalde, Louisental, Pasewalk, Stettin, Stralsund, Swinemünde, Viereck. The religious orders are represented only by the Sisters of St. Charles Borromeo at Grünhof, Misdroy, Stettin, and Stralsund. The Catholics of the government district of Lauenburg-Bütow, that formerly belonged to the Kingdom of Poland, form five parishes of the Diocese of Kulm; the provostship of Tempelburg in the government district of Köslin belongs to the Archdiocese of Posen. At the last census (1905) the Catholics of Pomerania numbered 50,206. The largest Catholic parishes are Stettin (8635 souls), Lauenburg (1475), Stargard (1387), Kolberg (1054), Greifswald (951), and Stolp (951).

KLEMENS LÖFFLER.

Pompeïopolis, titular see in Paphlagonia. The ancient name of the town is unknown; it may have been Eupatoria which Pliny (VI, ii, 3), followed by Le Quien and Battandier, wrongly identifies with the Eupatoria of Mithridates. The latter was called Magnopolis by Pompey. Pompeïopolis was, with Andrapa-Neapolis, in 64 B. C. included by Pompey in the Province of Pontus, but the annexation was premature, as the town (which ranked as a metropolis) was restored to vassal princes of eastern Paphlagonia and definitively annexed to the Roman Empire in 6 B. C. Strabo (XIII, iii, 48) says that in the neighbourhood was a mine of realgar or sulphuret of arsenic, which was worked by criminals. As early as the middle of the seventh century the "Ecthesis" of Pseudo-

Epiphanius (ed. Gelzer, 535) ranks it as an autocephalous archdiocese, which title it probably received when Justinian (Novellæ, xxix) reorganized the province of Paphlagonia. In the eleventh century Pompeiopolis became a metropolitan see (Parthey, "Hieroclis Synecdemus", 97) and it was still such in the fourteenth century (Gelzer, "Ungedruckte-Texte der Notitiæ episcopatum", 608). Shortly afterwards the diocese was suppressed. Le Quien (Oriens christ., I, 557-60) mentions fourteen titulars of this diocese, the last of whom, Gregory, lived about 1350. Among them were Philadelphus, at the Council of Nicæa (325); Sophronius, at that of Seleucia; Arginus, at Ephesus (431); Ætherius, at Chalcedon (451); Severus, Constantinople (553); Theodore, Constantinople (680-1); Maurianus, Nicæa (787); and John, Constantinople (869). Pompeiopolis is now called Tach-Keupru (bridge of stone), because of an ancient bridge over the Tatai-Tchai or Gueul-Irmak, the ancient Ammias, and is in the sandjak and vilayet of Kastamouni twenty-five miles north-east of that town. It has about 7000 inhabitants, of whom 700 are Christians, the majority Armenian schismatics.

S. VAILHÉ.

Pomponazzi (POMPONATIUS), PIETRO (also known as PERETTO on account of his small stature), philosopher and founder of the Aristotelean-Averroistic School, b. at Mantua, 1462; d. at Bologna, 1525. He taught philosophy at Padua, Ferrara, and Bologna. His pupils included eminent laymen and ecclesiastics, many of whom afterwards opposed him. At Padua, since 1300, the chairs of philosophy were dominated by Averroism, introduced there especially by the physician Pietro d'Albanio and represented then by Nicoletto Vernias and Alessandro Achillini. Pomponazzi opposed that system, relying on the commentaries of Alexander Aphrodisias for the defence of the Aristotelean doctrines on the soul and Providence. His chief works are: "Tractatus de immortalitate animæ" (Bologna, 1516), in defence of which he wrote "Apologia" (1517) and "Defensorium" (1519) against Contarini and Agostino Nifo; "De fato, libero arbitrio, de prædestinatione et de providentia libri quinque" (1523), where he upholds the traditional opinion about fate; "De naturalium effectuum admirandorum causis, sive de incantationibus" (1520), to prove that in Aristotle's philosophy miracles are impossible. In opposition to the Averroists, Pomponazzi denied that the *intellectus possibilis* is one and the same in all men; but, with Alexander, he asserted that the *intellectus agens* is one and the same, being God Himself, and consequently immortal, while the intellectual soul is identical with the sensitive and consequently mortal, so that, when separated from the body and deprived of the imagination which supplies its object, it can no longer act and hence must perish with the body; furthermore, the soul without its vegetative and sensitive elements would be imperfect; apparitions of departed souls are fables and hallucinations. If religion and human law presuppose the immortality of the soul, it is because this deception enables men more easily to refrain from evil. Sometimes, however, Pomponazzi proposes this thesis as doubtful or problematic, or only contends that immortality cannot be demonstrated philosophically, faith alone affording us certainty; and even on this point he expresses his willingness to submit to the Holy See. In controversy with Contarini he expressly declares that reason apodictically proves the mortality of the soul, and that faith alone assures us of the contrary, immortality being, therefore, undue and gratuitous, or supernatural. Pomponazzi's book was publicly consigned to the flames at Venice by order of the doge; hence in book III of his "Apologia" he defends himself against the

stigma of heresy. The refutation by Nifo, already an Averroist, was written by order of Leo X. In the Fifth Lateran Council (1513; Sess. VIII, Const. "Apost. Regiminis") when the doctrine was condemned, Pomponazzi's name was not mentioned, his book having not yet been published. He was defended by Cardinal Bembo, but was obliged by Leo X in 1518 to retract. Nevertheless, he published his "Defensorium" against Nifo, which, like his second and third apologies, contains the most bitter invective against his opponents, whereas Nifo and Contarini refrained from personalities. The philosophy of Pomponazzi has its roots in ancient and medieval ideas. Notable among his disciples and defenders are the Neapolitan Simone Porta and Jul. Cæsar Scaliger; the latter is best known as an erudite philosopher.

U. BENIGNI.

Ponce, JOHN, philosopher and theologian, b. at Cork, 1603, d. at Paris, 1670. At an early age he went to Belgium and entered the novitiate of the Irish Franciscans in St. Antony's College, Louvain. He studied philosophy at Cologne, began the study of

theology in Louvain, under Hugh Ward and John Colgan, was called by Luke Wadding to Rome, and admitted 7 Sept., 1625, into the College of St. Isidore which had just been founded for the education of Irish Franciscans. After receiving his degrees he was appointed to teach philosophy and, later, theology in St. Isidore's. He lectured afterwards at Lyons and Paris, where he was held in great repute for his learning. In 1643 he published in Rome his "Cursus philosophiæ". Some of his opinions were opposed by Mastrius, and Ponce replied in "Appendix apologætica" (Rome, 1645), in which he says that although he accepts all the conclusions of Duns Scotus, he does not feel called upon to adopt all Scotus's proofs. Mastrius acknowledged the force of Ponce's reasoning and admitted that he had shed light on many philosophical problems. In 1652, Ponce published "Integer cursus theologiæ" (Paris). These two works explain with great clearness and precision the teaching of the Scotistic school. In 1661, he published at Paris his great work, "Commentarii theologici in quatuor libros sententiarum", called by Hurter *opus rarissimum*. Ponce also assisted Luke Wadding in editing the works of Scotus. Wadding says that he was endowed with a powerful and subtle intellect, a great facility of communicating knowledge, a graceful style, and that though immersed in the severer studies of philosophy and theology he was an ardent student of the classics. Ponce succeeded Father Martin Walsh in the government of the Ludovician College at Rome for the education of Irish secular priests; and for some time he filled the position of superior of St.

FATHER JOHN PONCE
Fresco in the College of St. Isidore, Rome

Isidore's. He had a passionate love of his country and was an active agent in Rome of the Irish Confederate Catholics. When dissensions arose among the Confederates, and when Richard Bellings, secretary to the Supreme Council, published his "Vindiciæ" (Paris, 1652), attacking the Irish Catholics who remained faithful to the nuncio, Father Ponce promptly answered with his "Vindiciæ Eversæ" (Paris, 1652). He had already warned the Confederates not to trust the Royalists. In a letter (2nd July, 1644) to the agent of the Catholics, Hugo de Burgo, he says: "the English report that the king will not give satisfaction to our commissioners (from the Confederates) though he keeps them in expectation and to delay them for his own interest". His works besides those mentioned are "Judicium doctrinæ SS. Augustini et Thomæ", Paris, 1657; "Scotus Hiberniae restitutus" [in answer to Father Angelus a S. Francisco (Mason), who claimed Scotus as an Englishman]; "Deplorabilis populi Hibernici pro religione, rege et libertate status" (Paris, 1651).

GREGORY CLEARY.

Ponce de León, JUAN, explorer, b. at San Servas in the province of Campos, 1460; d. in Cuba, 1521. He was descended from an ancient and noble family; the surname of León was acquired through the marriage of one of the Ponces to Doña Aldonza de León, a daughter of Alfonso IX. As a lad Ponce de León served as page to Pedro Nuñez de Guzmán, later the tutor of the brother of Charles V, the Infante Don Fernando. In 1493, Ponce sailed to Hispaniola (San Domingo) with Columbus on his second voyage, an expedition which included many aristocratic young men, and adventurous noblemen who had been left without occupation after the fall of Granada. When Nicolás Ovando came to Hispaniola in 1502 as governor, he found the natives in a state of revolt, and in the war which followed, Ponce rendered such valuable services that he was appointed Ovando's lieutenant with headquarters in a town in the eastern part of the island. While here, he heard from the Indians that there was much wealth in the neighbouring Island of Boriquien (Porto Rico), and he asked and obtained permission to visit it in 1508, where he discovered many rich treasures; for his work in this expedition he was appointed *Adelantado* or Governor of Boriquien. Having reduced the natives, he was soon afterward removed from office, but not until he had amassed a considerable fortune. At this time stories of Eastern Asia were prevalent which told of a famous spring the waters of which had the marvellous virtue of restoring to youth and vigour those who drank them. Probably the Spaniards heard from the Indians tales that reminded them of this *Fons Juventutis*, and they got the idea that this fountain was situated on an island called Bimini which lay to the north of Hispaniola.

Ponce obtained from Charles V, 23 February, 1512, a patent authorizing him to discover and people the Island of Bimini, giving him jurisdiction over the island for life, and bestowing upon him the title of *Adelantado*. On 3 March, 1513, Ponce set out from San German (Porto Rico) with three ships, fitted out at his own expense. Setting his course in a northwesterly direction, eleven days later he reached Guanahani, where Columbus first saw land. Continu-

ing his way, on Easter Sunday (*Pascua de Flores*), 27 March, he came within sight of the coast which he named Florida in honour of the day and on account of the luxuriant vegetation. On 2 April he landed at a spot a little to the north of the present site of St. Augustine and formally took possession in the name of the Crown. He now turned back, following the coast to its southern extremity and up the west coast to latitude 27° 30', and then returned to Porto Rico. During this trip he had several encounters with the natives, who showed great courage and determination in their attacks, which probably accounts for the fact that Ponce did not attempt to found a settlement or penetrate into the interior in search of the treasure which was believed to be hidden there. Although his first voyage had been without result as far as the acquisition of gold and slaves, and the discovery of the "fountain of youth" were concerned, Ponce determined to secure possession of his new discovery. Through his friend, Pedro Nuñez de Guzmán, he secured a second grant dated 27 September, 1514, which gave him power to settle the Island of Bimini and the Island of Florida, for such he thought Florida to be. In 1521 he set out with two ships and landing upon the Florida coast, just where, it is not known, he was furiously attacked by the natives while he was building houses for his settlers. Finally driven to re-embark, he set sail for Cuba, where he died of the wound which he had received.

VENTURA FUENTES.

Poncet, JOSEPH ANTHONY DE LA RIVIÈRE, missionary, b. at Paris, 7 May, 1610; d. at Martinique, 18 June, 1675. He entered the Jesuit novitiate in Paris at nineteen, was a brilliant student in rhetoric and philosophy, pursued his studies at Clermont, Rome, and Rouen, and taught at Orléans (1631-4). In 1638 he met Madame de la Pettrie and accompanied her and Marie de l'Incarnation to Canada in the following year. He was sent immediately to the Huron mission and had no further relations with Marie de l'Incarnation. In 1645 he founded an Algonquin mission on the Island of St. Mary. After returning to Quebec he was seized by the Iroquois; he was being tortured when a rescue party arrived in time to save his life. His companion, Mathurin Franchetot, was burned at the stake. In 1657, as he became involved in ecclesiastical disputes, he was sent back to France. He held the position of French penitentiary at Loreto and later was sent to the Island of Martinique, where he died.

J. ZEVELY.

Pondicherry, ARCHDIOCESE OF (PONDICHERIANA OR PUDICHERIANA), in India, is bounded on the east by the Bay of Bengal, divided on the north from the Dioceses of Madras and San Thomé (Mylapore) by the River Palar, on the west from the Diocese of Mysore by the River Chunar and the Mysore civil boundaries, and from the Diocese of Coimbatore by the River Cauvery; on the south by the River Vellar from the Diocese of Kumbakonam. Besides Pondicherry itself, and the portion of British India contiguous to it, the archdiocese includes all the smaller outlying French possessions, namely Karikal and Yanam on the east coast, Mahe on the west coast, and Chandernagore in Bengal. The total Catholic population in French territory is 25,859, the rest, out of a total of 143,125, belonging to the North and South Arcot, Chingleput and Salem districts, all in British confines. There are

78 churches and 210 chapels, served by 102 priests (78 European and 24 native). The diocese is under the charge of the Society of Foreign Missions, Paris. The archbishop's residence, cathedral and diocesan seminaries are at Pondicherry. The Fathers are assisted by four congregations of women, viz., of the Carmelite Order, of the Sacred Heart of Mary, of St. Joseph, and of St. Aloysius Gonzaga.

The districts covered by the Pondicherry Archdiocese were originally comprised within the *padroado* jurisdiction of San Thomé, but mission-work did not extend beyond the north-west corner near San Thomé, and a small portion in the south which lay within the limits of the Madura mission. Pondicherry itself was only a village till some shipwrecked Frenchmen under Francis Martin settled there in 1674 and afterwards purchased it from the Raja of Vijayapur. About this time some French Capuchins arrived to take care of the Europeans in the new settlement, and a few years later (in 1690) some French Jesuits followed and began to work among the natives—both under Propaganda jurisdiction. From Pondicherry the Jesuits gradually proceeded inland and founded what was called the Carnatic mission about 1700. On the suppression of the Jesuits in 1773 the whole field was entrusted to the Paris Seminary for Foreign Missions, including the Madura districts, where the disbanded Jesuits continued to work under the new regime till they gradually died out. In 1836 (Brief of Gregory XVI, 8 July) the mission of Pondicherry was made into the Vicariate Apostolic of the Coromandel coast. At the same time the Jesuits (who had been restored in 1814) were placed once more in charge of the Madura mission, excepting the portion north of the Cauvery River, which was retained by Pondicherry. In 1850 the Vicariate of the Coromandel coast was divided and two new vicariates erected—those of Mysore and Coimbatore. On the establishment of the hierarchy in 1886, Pondicherry was elevated into an archbishopric with Mysore and Coimbatore as suffragan bishoprics as well as the Diocese of Malacca outside India. Finally in 1899 the southern portion of the archdiocese was separated and made into the (suffragan) Diocese of Kumbakonam—the whole province remaining under the same missionary Society.

Among its prelates were: Pierre Brigot, 1776–91 (superior with episcopal orders); Nicholas Champenois, 1791–1810; Louis Charles Auguste Herbert, 1811–36; Clement Bonnard, 1836–61 (first vicar Apostolic); Joseph Isidore Godelle, 1861–67; Francis Jean Laouenan, 1868–92 (became first archbishop in 1886); Joseph Adolphus Gandy, 1892–1909; Elias Jean Joseph Morel, present archbishop from 1909. Its educational institutions consist of the Theological Seminary at Pondicherry with 40 students and *Petit Séminaire* with 1102 pupils; St. Joseph's High School, Cuddalore, founded 1868, with 819 students, including 250 boarders, with branch school at Tirupapuliyur (founded 1883), with 289 pupils; at Tindavanam, St. Joseph's Industrial School, under the Brothers of St. Gabriel, with 50 pupils. Eighty other schools, mostly elementary, in various parts. Congregation of Sisters of St. Joseph (80 European and 48 native sisters) have for girls, boarding- and day-schools, orphanages, and asylums at Pondicherry, Karikal, Mahe, Chander-nagore, Yercaud, Tindivanam, Arni, Cheyur, and Alladhy. Native Carmelite nuns have convents at Pondicherry and Karikal with 45 sisters. Native nuns of the Sacred Heart of Mary, established 1844 under the rules of the Third Order of St. Francis of Assisi, with 23 professed nuns, have schools at Pondicherry, Cuddalore, Karikal, Salem, and eleven other places, with total of 1626 pupils. The Native Nuns of St. Louis or Aloysius Gonzaga, 40 sisters, have a school and orphanage at Pondicherry and orphanage at Vellore. Its charitable institutions include altogether 20 orphanages for boys and girls with 534

orphans, besides 100 orphans in care of Christian families; 4 asylums for Eurasians, etc. 2 hospitals (Pondicherry and Karikal), besides homes for the aged.

Pontecorvo. See AQUINO, SORA AND PONTECORVO, DIOCESE OF.

Pontefract Priory, Yorkshire, England, a Cluniac monastery dedicated to St. John the Evangelist, founded about 1090 by Robert de Lacy, as a dependency of the Abbey of la Charité-sur-Loire, which supplied the first monks. Two charters of the founder are given in Dugdale. In a charter of Henry de Lacy, son of Robert, the church is spoken of as dedicated to St. Mary and St. John. These donations were finally confirmed to the monastery by a Bull of Pope Celestine (whether II or III is uncertain), which also conferred certain ecclesiastical privileges on the priory. In the Visitation Records it had sixteen monks in 1262, and twenty-seven in 1279. At the latter date a prior of exceptional ability was in charge of the house, and he is commended for his zeal during the twelve years of his rule, which had resulted in a reduction of the monastery's debts from 3200 marks to 350. A later, undated, visitation return gives the average number of monks at twenty. Duckett prints a letter from Stephen, Prior of Pontefract in 1323, to Pierre, Abbot of Cluny, explaining that he had been prevented from making a visitation of the English Cluniac houses, owing to the presence of the king and court at Pontefract, which prevented his leaving home. In the previous year (1322) Thomas, Earl of Lancaster, had been beheaded at Pontefract, and his body buried in the priory church "on the right hand of the high altar". Rumour declared that miracles had been wrought at the tomb. This attempt to regard the earl as a martyr aroused the anger of Edward II, who impounded the offerings (Rymer, Foedera, II, ii, 726). However, not long after, a chantry dedicated to St. Thomas was built on the site of the execution and, in 1343, license was given to the prior and Convent of Pontefract "to allow Masses and other Divine Services" to be celebrated there.

In the *valor ecclesiasticus* of 26 Henry VIII, the yearly revenue of the priory is entered as £472 16s. 10½d. gross, and £337 14s. 8½d. clear value. The last prior, James Thwayts, with seven brethren and one novice surrendered the monastery to the king, 23 November, 1540, the prior being assigned a pension of fifty pounds per annum. The Church and buildings have been completely destroyed, but the site is still indicated by the name of Monk-hill.

G. ROGER HUDLESTON.

Pontian, SAINT, pope, dates of birth and death unknown. The "Liber Pontificalis" (ed. Duchesne, I, 145) gives Rome as his native city and calls his father Calpurnius. With him begins the brief chronicle of the Roman bishops of the third century, of which the author of the Liberian Catalogue of the popes made use in the fourth century and which gives more exact data for the lives of the popes. According to this account Pontian was made pope 21 July, 230, and reigned until 235. The schism of Hippolytus continued during his episcopate; towards the end of his pontificate there was a reconciliation between the schismatic party and its leader with the Roman bishop. After the condemnation of Origen at Alexandria (231–2), a synod was held at Rome, according

to Jerome (Epist. XXXII, iv) and Rufinus (Apol. contra Hieron., II, xx), which concurred in the decisions of the Alexandrian synod against Origen; without doubt this synod was held by Pontian (Hefele, *Konziliengeschichte*, 2nd ed., I, 106 sq.). In 235 in the reign of Maximinus the Thracian began a persecution directed chiefly against the heads of the Church. One of its first victims was Pontian, who with Hippolytus was banished to the unhealthy island of Sardinia. To make the election of a new pope possible, Pontian resigned 28 Sept., 235, the *Liberian Catalogue* says "discinctus est". Consequently Anteros was elected in his stead. Shortly before this or soon afterwards Hippolytus, who had been banished with Pontian, became reconciled to the Roman Church, and with this the schism he had caused came to an end. How much longer Pontian endured the sufferings of exile and harsh treatment in the Sardinian mines is unknown. According to old and no longer existing Acts of martyrs, used by the author of the "*Liber Pontificalis*", he died in consequence of the privations and inhuman treatment he had to bear. Pope Fabian (236-50) had the remains of Pontian and Hippolytus brought to Rome at a later date and Pontian was buried on 13 August in the papal crypt of the Catacomb of Callistus. In 1909 the original epitaph was found in the crypt of St. Cecilia, near the papal crypt. The epitaph, agreeing with the other known epitaphs of the papal crypt, reads: ΠONTIANOC. ΕΠΙΣΚ. ΜΑΡΤΥΡ (Pontianus, Bishop, Martyr). The word *μαρτυρ* was added later and is written in ligature [cf. Wilpert, "Die Papstgräber und die Cäciliengruft in der Katakomben des hl. Kalixtus" (Freiburg, 1909), I sq., 17 sq., Plate II]. He is placed under 13 Aug. in the list of the "Depositiones martyrum" in the *chronographia* of 354. The Roman Martyrology gives his feast on 19 Nov.

Pontianus, CATACOMB OF. See CEMETERY, sub-title, EARLY ROMAN CHRISTIAN CEMETERIES.

Pontifical Colleges.—In earlier times there existed in Europe outside of the city of Rome a large number of colleges, seminaries, and houses of the regular orders which, in one form or other, were placed under the Holy See or under the Sacred Congregation *de propaganda fide*. Of these only a few remain. A list of these institutions is given, with emphasis on the fact that their object was to maintain the Faith in England, Ireland, and Scotland: The English College of St. Albans at Valladolid (1589); the English College, Lisbon (1622); the Scotch College, Valladolid (1627); the Irish College, Paris (1592); the English colleges at Douai (1568-1795), Madrid-Seville (1592-1767), San Lucar (1517), Saint-Omer (1594-1795), Esquerchin (1750-93), Paris (1611); the Benedictine institutions at Douai (1605-1791), Saint-Malo (1611-61), Paris (1615-1793), Lambsprug (1643-1791); the house of the Discalced Carmelites at Tongres (1770-93); the convent of the Carthusians at Nieuport (1559 at Bruges, 1626-1783 at Nieuport); the Dominican monasteries at Bornheim (1658-1794) and at Louvain (1680-1794); the monastery of the Franciscan Recollets at Douai (1614-1793); the Jesuit houses at Saint-Omer (1583-1773), Watten (1570, or perhaps 1600, to 1773), Liège (1616-1773), Ghent (1622-1773). Two of the Jesuit institutions, Saint-Omer and Liège, existed as secular colleges up to 1793. Most of the other monastic foundations emigrated later to England, where several still exist.

At the present time the matter is essentially different. In speaking of *pontifical* colleges the distinction must be made between those which have

explicitly received the honorary title *Pontifical* and those which can be included in such only in a general sense, because they are directly dependent upon a central authority at Rome. It is a matter of indifference whether the institutions are called seminaries or colleges, as no material difference exists. There are only three institutions with the title *pontifical*: (1) The Pontifical Seminary of Kandy, Ceylon; (2) The Pontifical Seminary of Scutari (Collegium Albanense); (3) The Pontifical College Josephinum at Columbus, Ohio, U. S. A. The remaining sixteen colleges at present under consideration do not possess this designation, which is a merely honorary title. The clergy are trained for the regular cure of souls at: the American colleges at Columbus (Ohio) and Louvain; the English, Irish, and Scotch institutions at Lisbon, Valladolid, and Paris; the seminary at Athens; and the college at Scutari; the remaining eleven institutions are employed in training missionaries. There are in Europe the Leonine Seminary of Athens; the Albanian College of Scutari; the English colleges at Valladolid and Lisbon; the Scotch College, Valladolid; the Irish College, Paris; the Seminary for Foreign Missions, Paris; the seminary at Lyons; All Hallows College, Dublin; St. Joseph's Seminary, Mill Hill, London; St. Joseph's Rozendaal, Holland; the American College at Louvain; St. Joseph's at Brixen, in the Tyrol; the missionary institute at Verona; the Seminary for Foreign Missions at Milan; and the Brignole-Sale College at Genoa. In America there is the Josephinum College at Columbus, Ohio, and in Asia the seminary at Kandy, Ceylon, and the General College at Pulo-Pinang. Formerly all these institutions were under the supreme direction of the Propaganda even when, by an agreement or by the terms of foundation, the appointment of the rectors of some institutions belonged to some other authority. Since the publication of the Constitution "*Sapienti consilio*" (29 June, 1908), which considerably limited the powers of the Propaganda, it still has under its charge, according to the letter of the under-secretary of the Propaganda of 11 January, 1911, *ipso jure* the institutions at Kandy, Athens, Genoa, and Pulo-Pinang; later decisions of the Consistorial Congregation have added to these the seminary for foreign missions at Paris, as well as the seminaries at Milan and Lyons. All other houses, seminaries, and colleges are, therefore, placed under the regular jurisdiction either of the bishops of the country, or of a committee of these bishops, or of the diplomatic representative of the Holy See in the respective country, when the cardinal secretary of state has not reserved to himself the immediate supervision of certain institutions. Some of the institutions mentioned no longer belong, strictly speaking, in the present category; but it seems advisable not to exclude them, because the transfer is of recent date and they are generally regarded as papal institutions in a broader sense. Their former dependence upon the Propaganda is best shown by the detailed mention of them in the last handbook of this congregation, "*Missiones Catholicae cura S. Congregationis de Propaganda Fide descriptae anno 1907*" (Rome, 1907), pp. 831-49. This is also explicitly stated in the letter referred to above. Ten of these institutions are in charge of secular priests. The general seminary at Pulo-Pinang is under the care of a congregation of secular priests located at Paris, the Paris Society for Foreign Missions. The Congregation of the Mission (Lazarists) conduct the Irish College at Paris, All Hallows at Dublin, and the Brignole-Sale College at Genoa; the Society of St. Joseph has charge of the institutions at Mill Hill, Rozendaal, and Brixen; the Pontifical Seminary of Kandy and the Pontifical College of Scutari were transferred to the Society of Jesus; the Veronese Institute is

under the care of the Sons of the Sacred Heart of Jesus, for African Missions.

Pontifical College Josephinum at Columbus, Ohio, founded at Pommery (1875) by Joseph Jessing as an orphan asylum, was transferred to Columbus in 1877. In 1888 a high-school, in which the sons of poor parents of German descent could be prepared for philosophical and theological studies, was added. The philosophical faculty was established the following year, and later the theological faculty. In 1892 Jessing transferred his college to the Holy See, and it became a pontifical institution on 12 December, 1892. The college has developed rapidly and its financial basis is substantial and steadily increasing. The priests educated there are under obligation to engage in diocesan parish work in the United States. The entire training of the students is at the expense of the institution and is bilingual, German and English. The number of scholarships is now one hundred and eighteen, but it is not complete. By a decree of the Congregation of the Consistory (29 July, 1909), the institution was to remain under the jurisdiction of the Propaganda only for matters relating to property, etc. otherwise being dependent upon the Congregation of the Consistory. By a decree of the same congregation, 18 June, 1910, all priests ordained in future in the Josephinum are to be assigned to the various dioceses by the Apostolic Delegate in Washington, D. C. For the American College of the Immaculate Conception, see AMERICAN COLLEGE, THE, AT LOUVAIN. For the Irish College at Paris see IRISH COLLEGES ON THE CONTINENT. The English College at Valladolid (St. Albans) was founded through the co-operation of the celebrated Jesuit Robert Persons with Philip II. Its purpose was to aid in saving the Catholic Church in England. Clement VIII confirmed the foundation by a Bull of 25 April, 1592. In 1767 the English colleges at Madrid and Seville were united with this institution. The English College at Lisbon was established by a Portuguese nobleman Pedro do Continho before 1622 and was confirmed on 22 September, 1622, by Gregory XV, and on 14 October, 1627, by Urban VIII. The Scotch College at Valladolid was first established in 1627 at Madrid, where the Scotch founder, William Semple, and his Spanish wife Maria de Ledesma lived. In 1767 the property of the college fell to the Irish College at Alcales de Henares, but in 1771 was restored to the Scotch College, which got a new lease of life by its transfer to Valladolid.

For the College of All Hallows at Dublin, see ALL HALLOWS COLLEGE. St. Joseph's Seminary at Mill Hill, London, founded by Cardinal Vaughan in 1886, belongs to the Society of St. Joseph; it prepares missionaries for the foreign field. Connected with it are the two institutions at Rozendaal in Holland and at Brixen in the Tyrol. The Papal Seminary at Kandy, Ceylon, a general seminary for training native Indian priests, was founded and endowed by Leo XIII in 1893, and is under the immediate supervision of the delegate Apostolic for Eastern India. The Papal Albanian College at Scutari was founded in 1858 with money given by the Austrian Government, which had inherited from the Venetian Republic the duty of protecting the Christians in Albania. Soon after its erection it was destroyed by the Turks. The new building (ready for use in 1862) serves also for training Servian and Macedonian candidates for the priesthood. The Austrian Government has endowed twenty-four scholarships and the Propaganda ten. The Leonine Seminary of Athens was founded by Leo XIII on 20 November, 1901, to train Greeks for the Latin priesthood. The Seminary at Milan for Foreign Missions was founded in 1850. The Seminary at Lyons for African Missions, founded in 1856, is connected with four Apostolic schools; it has laboured

with great success in Africa. The Brignole-Sale College, founded in 1855 by the Marquis Antonio Brignole-Sale and his wife Arthemisia, was confirmed by Pius IX. It has eight free scholarships for students from the dioceses of Liguria, and is conducted by the Lazarist Fathers for the training of missionaries. The Seminary of Paris, founded in 1663, for training men for the foreign mission field, is carried on by an organization of secular priests. It is the largest institution of this kind, and at the present time (1911) nearly 1500 of its graduates are missionaries. The General College at Pulo-Pinang for training a native clergy for Eastern Asia was founded by the seminary at Paris. The Veronese Institute at Verona founded in 1867 for missions among the negroes is at present, after many misfortunes and disappointments, in a fairly flourishing condition. For the sake of completeness there might be added to this list the seminary of the Fathers of the Immaculate Heart of Mary at Scheut near Brussels, the Maison-Carrée of the White Fathers, in Algiers, and the institutions of the Missionaries of Steyl at Steyl, Heiligkreuz, St. Wendel, St. Gabriel (and Rome). These, however, are to be regarded rather as monastic novitiates than as seminaries. The seminaries established in earlier times at Naples, Marseilles, and other places for the Asiatic peoples have either disappeared or the foundations have been diverted to other purposes.

Of the large bibliography for the English, Irish, and Scotch institutions we may cite the important work by PETRE, *Notices of the English Colleges and Convents, Established on the Continent, after the Dissolution of Religious Houses in England*, ed. HUSBETH (Norwich, 1849), issued for private circulation only. For most of the other institutions there are only scattered notes, annual reports, the *Missiones Catholicae* already mentioned, and articles in works of a general character. *Catalogus omnium cœnobiorum pertinentium ad subditos Regis Angliæ in Belgio* in BOJANUS, Innocent XI. *Sa correspondance avec ses nonces 1676-9, I, 221-2*, gives the most complete details concerning names and personnel of the English colleges. CAPPELLO, *De Curia Romana juxta Reformationem a Pio X sapientissimo inductam*, I (Rome, 1911), 248-53, where all the new rules are discussed at length.

PAUL MARIA BAUMGARTEN.

Pontificale (*Pontificale Romanum*), a liturgical book which contains the rites for the performance of episcopal functions (e. g. conferring of confirmation and Holy orders), with the exception of Mass and Divine Office. It is practically an episcopal ritual, containing formularies and rubrics which existed in the old Sacramentaries and "Ordines Romani", and were gradually collected together to form one volume for the greater convenience of the officiating bishop. Such collections were known under the names of "Liber Sacramentorum", "Liber Officialis", "Liber Pontificalis", "Ordinarium Episcopale", "Benedictionale", etc. Among these medieval manuscript volumes perhaps the most ancient and most important for liturgical study is the *Pontificale* of Egbert, Archbishop of York (732-6), which in many respects resembles the present Pontifical. The first printed edition, prepared by John Burchard and Augustine Patrizi Piccolomini, papal masters of ceremonies, was published (1485) in the pontificate of Innocent VIII. Clement VIII published a corrected and official edition in 1596. In his constitution "Ex quo in Ecclesia Dei" he declared this Pontifical obligatory, forbade the use of any other, and prohibited any modification or addition to it without papal permission. Urban VIII and Benedict XIV had it revised and made some additions to it, and finally Leo XIII caused a new typical edition to be published in 1888. (See LITURGICAL BOOKS.)

CATALANUS, *Pontificale Romanum* (Paris, 1850), an important commentary; ZACCARIA, *Bibliotheca Ritualis* (Rome, 1781).

J. F. GOGGIN.

Pontificalia (PONTIFICALS), the collective name given for convenience sake to those insignia of the episcopal order which of right are worn by bishops

alone. In its broader sense the term may be taken to include all the items of attire proper to bishops, even those belonging to their civil or choir dress, for example the *cappa magna*, or the hat with its green cord and lining. But more strictly and accurately, rubricians limit the pontificals to those ornaments which a prelate wears in celebrating pontifically. The pontificals common to all are enumerated by Pius VII in his constitution "Decret Romanos" (4 July, 1823), and are eight in number: buskins, sandals, gloves, dalmatic, tunicle, ring, pectoral cross, and mitre. When abbots, prothonotaries apostolic, and in some cases canons, receive by indult from the Holy See the privilege of celebrating *cum pontificalibus*, these eight ornaments are meant. The use of them is ordinarily restricted—for abbots to their own monastery or places within their jurisdiction, for canons to their own church, and for prothonotaries to those places for which the ordinary gives his consent. Moreover, while bishops and cardinals may wear most of these things in all solemn ecclesiastical functions, those who enjoy them by papal indult may only exercise this privilege in the celebration of Mass. Several other restrictions distinguish the pontifical Mass of such inferior prelates from that of bishops or cardinals. The former are not allowed to bless the people as they pass through the church; they have no right to a seventh candle on the altar; they vest in the sacristy and not in the sanctuary; they do not use fald-stool, or *bugia*, or *gremiale*, or crosier, or Canon, and they are attended by no assistant priest; they do not say "Pax vobis", and they only wash their hands once, i. e. at the offertory. The legislation upon this subject is to be found in the above-mentioned constitution of Pius VII, supplemented by the "Apostolicæ Sedis officium" of Pius IX (26 Aug., 1872) and the *Motu Proprio* of Pius X, "Inter multiplices" (21 Feb., 1905). With regard to the ornaments just mentioned and other such pontificals or quasi-pontificals as the manteletta, mozzetta, *rationale*, rochet, etc. nearly all will be found separately treated in their alphabetical order. The buskins (*caligæ*) are large silk leg-coverings put on over the ordinary stockings and gaiters and tied with a ribbon. The *gremiale* is simply an apron of silk or linen which is spread over a bishop's lap when he is seated or using the holy oils. The "Canon" is a liturgical book containing nothing but the Canon of the Mass, which is used instead of the altar cards when a bishop pontificates. The pallium and the archiepiscopal cross may also be mentioned, but they form ordinarily the special insignia of an archbishop.

The practice of conceding the use of certain of the pontificals to prelates of inferior rank is one of ancient date. A grant of dalmatic and sandals to the Abbot of Metz is recorded in the year 970 (Jaffé, "Regesta", 374). In the eleventh century Pope Leo IX granted the use of the mitre to the Canons of Besançon and of Bamberg (Jaffé, 4249 and 4293). The earliest known concession of the mitre to the ruler of a monastic house is that made to Abbot Egelsinus of St. Augustine's, Canterbury, in 1603. At a somewhat later date the grants of pontifical insignia to monastic superiors and other prelates are of constant occurrence in the papal "Regesta". To obtain such distinctions became a point of rivalry among all the greater abbeys, the more so that such concessions were by no means always made in the same form or with the same amplitude, while subsequent indults often extended the terms of previous grants. Thus while, as noticed above, the concession of the mitre to St. Augustine's, Canterbury, is one of the earliest instances on record, the use of the tunicle and dalmatic at High Mass was only granted to the same abbey by Gregory IX in 1238 (Bliss, "Papal Registers", I, 170). In 1251 Innocent IV conceded to the Prior of Coventry and his successor the use of the ring only. It might be worn at all times and in all places except in celebrating

Mass (*ibid.*, 268). To the Prior of Winchester, on the other hand, only three years later, the same pope, Innocent IV, granted a much more ample concession in virtue of which he might use mitre, ring, tunic, dalmatic, gloves, and sandals, might bless chalices, altar cloths, etc., might confer the first tonsure as well as the minor orders of ostiarius and lector, and bestow the episcopal benediction at High Mass and at table (*ibid.*, 395). It will be noticed that the crosier is not here included. But it was included in a grant to the Abbot of Selby by Alexander IV in 1256 (*ibid.*, 331). In many of these indults a restriction was imposed that pontifical ornaments were not to be worn in the presence of the bishop of the diocese, but even here distinctions were made. For example Urban V, in 1365, allowed the Prior of Worcester to wear the plain mitre and ring in presence of the bishop, and in his absence to wear the precious mitre and ring and episcopal vestments, and to give his solemn benediction. (Bliss, IV, 48.) Not unfrequently it was specified that such pontificals might be worn in parliaments and councils "whenever any prelates below bishops wear their mitres". One most extraordinary series of concessions, to which attention has recently been called in the English Historical Review (Jan., 1911, p. 124), where the documents are printed, first bestows upon the Abbot of St. Osyth the right to use the mitre and other pontificals (Bliss, V, 334), and then gives power to confer not only the minor orders and subdiaconate but the diaconate and priesthood. This grant made by Boniface IX, in 1397, during the great Schism, was cancelled by the same pope six years afterwards at the request of the Bishop of London.

HERBERT THURSTON.

Pontifical Mass.—Pontifical Mass is the solemn Mass celebrated by a bishop with the ceremonies prescribed in the "Cæremoniale Episcoporum", I and II. The full ceremonial is carried out when the bishop celebrates the Mass at the throne in his own cathedral church, or with permission at the throne in another diocese. The "Cæremoniale" supposes that the canons are vested in the vestments of their order, the dignitaries, of whom the first acts as assistant priest, in copes, those of the sacerdotal order in chasubles, those of the diaconal order, of whom the first two act as assistant deacons, in dalmatics, and the subdeacons in tunics over the amice and the surplice or the rochet. In addition a deacon and subdeacon in their regular vestments and a master of ceremonies assist the bishop. Nine acolytes or clerics minister the book, *bugia*, mitre, crosier, censer, two acolyte candles, *gremiale*, and cruets, and four minister in turn at the washing of the bishop's hands. Mention is also made of a train-bearer and of at least four and at most eight torch-bearers at the time of the Elevation. All these clerics should wear surplices except the four who attend to the washing of the bishop's hands; the first four may also wear copes. The ornaments worn or used by the bishop, besides those ordinarily required for Mass, are the buskins and sandals, pectoral cross, tunic, dalmatic, gloves, pallium (if he has a right to use it), mitre, ring, crosier, *gremiale*, basin and ewer, canon, and *bugia*. A seventh candle is also placed on the altar besides the usual six.

The bishop vested in the *cappa magna* enters the cathedral, visits the Blessed Sacrament, and then goes to the chapel, called the *secretarium*, where he assists at terce. During the singing of the psalms he reads the prayers of preparation for Mass and puts on the vestments for Mass as far as the stole, then vested in the cope he sings the prayer of terce, after which the cope is removed, and he puts on the rest of the vestments. The procession headed by the censer-

bearer, cross-bearer, and acolytes then goes to the main altar. The bishop recites the prayers at the foot of the altar, puts on the maniple, and after kissing the altar and the book of gospels and incensing the altar, goes to the throne, where he officiates until the Offertory. His gloves are then removed; having washed his hands, he goes to the altar, and continues the Mass. The ceremonies are practically the same as for a solemn Mass; however, the bishop sings Pax vobis instead of Dominus vobiscum after the Gloria; he reads the Epistle, Gradual, and Gospel seated on the throne; gives the kiss of peace to each of his five chief ministers; washes his hands after the ablutions; sings a special formula of the episcopal blessing, making three signs of the cross in giving it, and begins the last Gospel of St. John at the altar and finishes it while returning to the throne or to the vesting-place. In pontifical Requiem Mass the buskins and sandals, gloves, crosier, and seventh candle are not used. The bishop does not read the preparation for Mass and vest during terce, and he puts on the maniple before Mass begins.

A titular bishop usually officiates at the faldstool. He has no assistant deacons, their duties being performed by the deacon, subdeacon, and master of ceremonies; there is no seventh candle on the altar, and ordinarily the crosier is not used; he vests in the sacristy or at the faldstool; he recites the entire Gospel of St. John at the altar. The same parts of the Mass are said at the faldstool as at the throne. Sometimes the ordinary celebrates pontifical Mass at the faldstool, without assistant deacons. Solemn Mass celebrated with some of the pontifical ornaments and ceremonies by abbots and prothonotaries is also called pontifical. That of abbots is similar to a bishop's Mass celebrated at the throne. Certain points of difference are explained in the Decree of the Sacred Congregation of Rites of 27 September, 1659. The privileges and limitations in the use of the pontifical insignia by the different classes of prothonotaries are set forth in the Constitution of Pius X, "Inter multiplices curas" (21 February, 1905).

The solemn pontifical Mass celebrated by the pope in St. Peter's has some peculiar ceremonies. In the papal Mass a cardinal-bishop acts as assistant priest, cardinal-deacons are assistant deacons and deacon of the Mass, an auditor of the Rota is subdeacon, there is a Greek deacon and a subdeacon, and the other offices are filled by the assistants to the pontifical throne, the members of the prelatial colleges, etc. The procession of cardinals, bishops, prelates, and those who compose the *cappella pontificia* vested according to their rank and in the prescribed order precedes the Holy Father into St. Peter's. The pope, wearing the *falda*, *amice*, *alb*, *cincture*, *pectoral cross*, *stole*, *cope* (*mantum*), and *tiara* is carried into the basilica on the *sedia gestatoria* under the canopy and with the two *flabella* borne on either side. Seven acolytes accompany the cross-bearer. The pope is received at the door by the cardinal-priest and the chapter, visits the Blessed Sacrament, and goes to the small throne for terce, where he receives the obedience of the cardinals, bishops, and abbots. While the psalms are being chanted, he reads the prayers of the preparation for Mass, during which his buskins and sandals are put on, and then he sings the prayer of terce. After that the vestments are removed as far as the cincture, and the pope washes his hands, and puts on the *succinctorium*, *pectoral cross*, *fanon*, *stole*, *tunic*, *dalmatic*, *gloves*, *chasuble*, *pallium*, *mitre*, and *ring*. He does not use the crosier or the bugia. He then gives the kiss of peace to the last three of the cardinal-priests.

The Epistle is sung first in Latin by the Apostolic subdeacon and then in Greek by the Greek subdeacon, and likewise the Gospel first in Latin by the cardinal-deacon and then in Greek by the Greek deacon. While elevating the Host and the chalice

the pope turns in a half circle towards the Epistle and Gospel sides. After he has given the kiss of peace to the assistant priest and assistant deacons, he goes to the throne, and there standing receives Communion. The deacon elevates the paten containing the Host covered with the asterisk, and places it in the hands of the subdeacon, which are covered with the *linteum pectorale*, so that the subdeacon can bring it to the throne, then the deacon elevates the chalice and brings it to the pope at the throne. The pope consumes the smaller part of the Host, and communicates from the chalice through a little tube called the *fistula*. He then divides the other part of the Host, gives Communion to the deacon and subdeacon, and gives them the kiss of peace, after which he receives the wine of the purification from another chalice and purifies his fingers in a little cup. The deacon and subdeacon, having returned to the altar, partake of the chalice through the *fistula*, the subdeacon consumes the particle of the Host in the chalice, and both the deacon and the subdeacon consume the wine and the water used in the purification of the chalice. The pope returns to the altar to finish the Mass. After the blessing the assistant priest publishes the plenary indulgence. At the end of the last Gospel the pope goes to the *sedia gestatoria*, puts on the *tiara*, and returns in procession as he had entered.

J. F. GOGGIN.

Pontigny, ABBEY OF, second daughter of Cîteaux, was situated on the banks of the Serain, present Diocese of Sens, Department of Yonne. Hildebert (or Ansius), a canon of Auxerre, petitioned St. Stephen of Cîteaux to found a monastery in a place he had selected for this purpose. St. Stephen in 1114 sent twelve monks under the guidance of Hugh of Macon, a friend and kinsman of St. Bernard. The sanctity of their lives soon attracted so great a number of subjects that during the lifetime of the first two abbots, Hugh and Guichard, twenty-two monasteries were founded. So great an array of episcopal sees in France were filled by men taken from its members, and to such a number of renowned personages did it offer hospitality, that it was called the "cradle of bishops and the asylum for great men". Amongst the former must be mentioned particularly Blessed Hugh of Macon, Bishop of Auxerre (d. 1151); Gerard, Cardinal Bishop of Præneste (d. 1202); Robert, Cardinal Titular of St. Pudentiana (d. 1294); amongst the latter are mentioned especially three Archbishops of Canterbury, St. Thomas, Stephen Langton, and St. Edmund, who was interred there. Discipline gradually became relaxed, especially from 1456, when the abbey was given in *commendam*. In 1569 the monastery was pillaged and burnt by the Huguenots, nothing being saved, except the relics of St. Edmund. Partly restored, it continued in existence until suppressed at the French Revolution. It is now in charge of the Fathers of St. Edmund, established there by J.-B. Muard in 1843.

EDMOND M. OBRECHT.

Pontius Carbonell, b. at Barcelona, c. 1250; d. c. 1320. Pontius and Carbonell are names frequently met with in Spain, especially in Catalonia. Hence it is difficult to distinguish between the different persons bearing this name in the same century. Pontius entered the Franciscan Order and resided principally in the convent at Barcelona, where he was teacher and confessor to St. Louis, Bishop of Toulouse, during his seven years' captivity. He was also confessor to the Infant Juan of Aragon, Archbishop of Saragossa, to whom he dedicated some of his works. Probably Pontius was superior in 1314. On 25 Sept. of that year he was sent by King James II to his brother, Frederic II, King of Sicily, to entreat him not to give protection to the Fraticelli. On 12 Jan., 1316, and again on 25 Feb., Pontius wrote concerning the result of his mission. Finke has published several of these documents. In a calendar of Franciscan saints drawn up about 1335 at Assisi, Pontius is mentioned as "master and confessor of our holy brother Louis, Archbishop of Toulouse"; and Fr. Antony Vincente, O.P., registers him among the saints of Catalonia. He wrote commentaries on the Old and New Testament, and quotes largely from the Fathers and Doctors of the Church. Several writers hold that he composed the "Catena Aurea Evang.", usually published among the writings of St. Thomas. In defence of this opinion Fr. Martin Perez de Guevara wrote in 1663 a book entitled "Juizio de Salomon etc.", but which was placed on the Index two years later. Not all his works have been published. Nine large folio volumes in MS. are preserved in the library of S. Juan de los Reyes at Toledo.

GREGORY CLEARY.

Pontius Pilate. See PILATE.

Pontremoli, DIOCESE OF (APUAN), in Tuscany, central Italy. The city rises on the skirts of the Appennino della Cisa, at the confluence of the Macra and the Torrente Verde. It has a beautiful cathedral and a notable tower, Torre del Comune, erected in 1322 by Castruccio Castracane. The earliest historical mention of Pontremoli is of 1077. In 1110 it was taken by Henry V. In 1167 it opposed the progress of Frederick Barbarossa. As a Ghibelline commune, it acclaimed the former Lord of Lucca, Castruccio degli Antelminelli, its lord, in 1316. Thereafter, it was successively under the rule of the Rossi of Parma, of Mastino della Scala (1336), of the Visconti (1339); and from the latter date, with the exception of a few intervals, it belonged to the Duchy of Milan. In 1650 the Spaniards sold it to the Grand Duke of Tuscany, and in 1847 it was united to the Duchy of Parma. Charles VIII burned the city. In 1799 there was a battle there between the French and the Austro-Russian armies, and in 1814 the Austrians drove the French from the town. Pontremoli was the birthplace of the soldier Girolamo Reghini, who distinguished himself in the service of Spain in the fifteenth and sixteenth centuries; also of the painter Pedroni (eighteenth century), director of the Accademia di Belle Arti of Florence. The episcopal see, suffragan of Pisa, was erected in 1797, its first prelate being Girolamo Pavesi. Mgr Fiorini is the present bishop. It has 126 parishes, with 60,000 inhabitants; 204 secular, 9 regular priests; 361 churches or chapels; 3 religious houses of men, and 6 of women; 2 educational institutes for boys and 3 for girls.

U. BENIGNI.

Pontus, in ancient times, was the name of the north-eastern province of Asia Minor, a long and narrow strip of land on the southern coast of the Black Sea (*Pontus Euxinus*), from which the designation was later transferred to the country. Before this the province was called Cappadocia on the Pontus. The country was shut in by high and wild mountain ranges, but was exceedingly fertile in the lower parts on the coast, in the interior, and on the plateaux. It yielded fruit of all kinds, especially cherries, which Lucullus is said to have brought into Europe from Pontus 72 B. C.; also wine, grain, wood, honey, wax, etc., besides iron, steel, and salt. It was inhabited by a number of petty tribes; among these were the Chalybes or Chaldæans, held in high repute by the Greeks as the first smiths. All belonged to the Persian empire, but in Xenophon's day (about 400 B. C.) were to a considerable degree independent of the Persians. At this date, however, these different countries had no common name. Greeks settled early on the coast, and founded flourishing commercial cities, as Trapezus (Trebizond), Cerasus, Side, later called Polemonium, Cotyora, Amisus, and Apsarus. The founder of the Kingdom of Pontus was Mithradates I, son of Prince Mithradates of Cius on the Propontis, who was murdered 302 B. C. Mithradates I, taking advantage of the confusion caused by the Diadochian Wars, came to Pontus with only six horsemen and was able to assume the title of king 296 B. C.; he died in 266 after a reign of thirty-six years. He was followed by Ariobarzanes (d. about 258 B. C.), Mithradates II (to about 210 B. C.), Mithradates III (to about 190 B. C.), Pharnaces (to 170 B. C.), Mithradates IV (to about 150 B. C.), Mithradates V (to 121 B. C.), and then Mithradates VI Eupator, or the Great. The kings, Persian by descent, formed relations early with Greece and from the beginning Hellenistic culture found an entrance into Pontus. The religion was a mixture of Greek worships with the old native cults. From the time of Pharnaces the kings were allied with the Romans. Mithradates VI became involved in three wars with the Romans (88-84, 83-81, 74-64), and finally his kingdom, which he had increased by the conquest of Colchis, the Crimea, Paphlagonia, and Cappadocia, was lost to the Romans (63). The territory west of the River Halys, the coast of Paphlagonia, and the valley of the Amnias became a part of Roman territory and with Bithynia were united into the double Province of Bithynia and Pontus. The other parts were made into principalities and free cities, and it was not until 7 B. C., A. D. 18, and A. D. 63 that they were gradually absorbed by Rome. Under Diocletian (284-305) Pontus became a diocese of the empire. The Pontus mentioned in the Old Testament of the Vulgate in Gen., xiv, 1, 9, is a mistaken translation, according to Symmachus, for the district of Ellasar (Larsa in southern Babylonia).

In Apostolic times Christianity found an entrance into Pontus. The First Epistle of Peter is addressed to the Christians in Pontus among others, showing that Christianity had spread to some extent in this province. The author in his exhortations presupposes relations between the faithful and the non-Christian population. For the years 111-13 we have the important testimony of Pliny, then Governor of Bithynia and Pontus (Ep. xvi). Pliny did not mention the cities or villages, and it is uncertain whether Amastris, or Amasia, or Comana, was the place where Christians were tried by him. As concerns Amisus, Ramsay has proved from Christian sources that it contained Christians about the year 100. Later Amastris was the chief Christian community. Eusebius mentions (IV, xxiii) a letter written by Bishop Dionysius of Corinth (about 170) to Amastris, "and the other churches in Pontus". There was, therefore, at this era a metropolitan with several churches. About 240 Gregory Thaumaturgus was consecrated

Bishop of Neo-Cæsarea by Phædimus, Bishop of Amasia. It is said that at that time there were only seventeen Christians in the city and its vicinity, and that at his death, shortly before 270, only the same number of heathens could be found in the city. The able bishop converted the people by opposing Christian to heathen miracles and by changing the old feasts into Christian festivals. In the Decian persecution he made concessions to human weakness, advised the faithful to be less aggressive, and fled himself. Comana received a bishop from Gregory. Christianity obtained a foothold also in the Greek cities of the coast of eastern Pontus before 325. In or about the year 315 a great synod was held at Neo-Cæsarea by Bishop Longinus. At the Council of Nicæa there were present among others the Bishops of Amastris, Pompejopolis, Jonopolis, Amasia, Comana, Zela, Trebizond, and Pityus. Towards the end of the fourth century Neo-Cæsarea became itself a Church-province, having as suffragans Trebizond, Cerasus, Polemonium, Comana, Rhizæum, and Pityus.

KLEMENS LÖFFLER.

Pools in Scripture.—In the English Bibles, the word "pool" stands for three Hebrew words: (1) *'agam* means properly a pond of stagnant water; in Ex., vii, 19; viii, 5, it designates probably sheets of water left in low places by the Nile from the inundation; (2) *miqueh* signifies originally "the gathering together" of the waters (Gen., i, 10), hence a place where waters flowing from different directions are collected together, a reservoir being usually formed by damming up the valley; (3) *berekah* (comp. Arab. *birket*) is an entirely artificial reservoir generally excavated in the rock and covered inside with a lining of masonry to prevent leaking. These three words convey a fair idea of the way the natives of Palestine and neighbouring regions have at all times secured a sufficient supply of water, a precaution by no means unimportant in countries where dry weather prevails for the greater part of the year. Natural pools of the kind described in Scripture by the name *'agam* are practically unknown in Palestine. If importance be attached to the vocabulary of the sacred writers, we might be justified in supposing that most pools were wholly artificial, for all are indiscriminately styled *berekah* in the Hebrew Bible. Yet there can be no doubt that some were reservoirs obtained by building a dam across valleys; such was, at any rate, the Lower, or Old, Pool (*Birket el-Hamra*, south of Jerusalem), which, before the Upper Pool (*Ain Silwan*) was constructed, was filled from the Gihon (the Virgin's Fountain) by a surface conduit, along the eastern slope of the spur of Ophel, and later was fed from the surplus water overflowing from the Upper Pool.

The other pools in or about the Holy City were all entirely artificial, being excavated in the rock. Those mentioned in Scripture are: (1) the Pool of Siloe (A. V. Siloah; II Esd., iii, 15; John, ix, 7), or Upper Pool (IV Kings, xviii, 17; Is., vii, 3; xxxvi, 2), or the King's Pool (II Esd., ii, 14), built by Ezechias "between the two walls" (Is., xxii, 11), to bring into the city through an underground conduit, the Siloe tunnel, the water of Gihon; (2) the Pool of Bethesda (A. V. Bethesda; John, v, 2); the exact location of this pool is to this day an object of dispute; commonly but quite groundlessly it is identified with the Birket Israil, north of the Temple and south-west of St. Stephen's Gate (*Bab Sitti Maryam*); others (Conder, Paton etc.) see it in the pool at the Fountain of Gihon (*Ain Sitti Maryam*), south-east of the Haram—the *berekah 'asuyah* (i. e. "well

made") of Neh. (II Esd.), iii, 16; others finally think it should be sought some distance north of the Birket Israil and west of St. Ann's Church and recognized there in old constructions still suggesting the form of porticoes; (3) the *Berekah 'asuyah* of II Esd. has just been mentioned; it was the reservoir of the intermittent spring of Gihon; (4) we should perhaps cite also the Dragon Fountain of II Esd., ii, 13, which lay between the Valley Gate (practically the modern Jaffa Gate) and the Dung Gate (about due west of the southern end of the *Birket es-Sultan*); probably connected with the Dragon Fountain was the Serpent's Pool mentioned by Josephus (Bell. Jud., V, iii, 2), but the site of both is now a mere matter of conjecture. Despite the historical interest attached to them, it is needless

THE POOLS OF SOLOMON
Now known as El Burák

to recall here the various pools of the Holy Land more or less incidentally mentioned in Scripture: the Pool of Gabaon, which witnessed the bloody encounter of the servants of David with the defenders of Saul's dynasty; the Pools of Hesebon, and finally the pools alluded to in Eccl., ii, 6 as being the work of Solomon. These are supposed by some to be the famous Pools of Solomon (about eight miles south of Jerusalem) from which several winding aqueducts, one forty-seven miles long, brought the water into the city.

CHARLES L. SOUVAY.

Poona, DIOCESE OF (PUNENSIS), in India, comprises that portion of the Bombay Presidency which lies on the Deccan plateau as far north as the Tapti River, that is to say the collectorates of Poona, Ahmednagar, Nasik, Kandeish, Sholapur, Bijapur, Satara, Dharwar, a portion of Belgaum, and the Native States of Kolhapur, Miraj, Sangli, and others of less note, but excluding Savantwadi, a portion of the collectorate of Belgaum and the whole of North Canara, which belong to the Archdiocese of Goa. It is bounded on the east by the Dioceses of Nagpur, Hyderabad, and Madras; on the north it touches the Prefecture Apostolic of Rajputana; on the west the line of the Western ghauts divides it from the Diocese of Damaun and the Archdiocese of Goa; and on the south it is contiguous to the Diocese of Mysore. It includes one detached portion of territory at Barsi Town surrounded by the Diocese of Hyderabad, while at Poona there is one exempted church belonging to the Archdiocese of Goa. The Catholic population is numbered at 15,487 under the jurisdiction of the bishop, omitting those who are

attached to the "padroado" church at Poona. There are twenty-two churches and twenty chapels served by twenty-one Fathers of the German province of the Society of Jesus and twelve secular priests assisted by the Nuns of Jesus and Mary and the Daughters of the Cross. Besides military stations (Poona, Kirkee, Ahmednagar, Deolali) and churches for railway people (Lanowli, Igatpuri, Bhusaval, Sholapur, Hubli, Dharwar) there are three mission fields: the Ahmednagar group founded in 1878 with a total of 5880 Christians; the Gadag group founded in 1868 with 300 recent converts besides other Christians of old standing; the newly established mission at Kuna near Khandalla. The bishop's residence and cathedral are at Poona. There is no diocesan seminary, candidates for the priesthood being sent to the papal seminary at Kandy, Ceylon.

From 1637 to 1854 the districts comprised in the diocese formed part of the Vicariate Apostolic of the Great Mogul, which in 1720 became the Vicariate Apostolic of Bombay. But except for occasional attendance on the followers of the Sultan's Court at Bijapur, no missionary work seems to have been attempted in these parts—the only Christian stations known to exist in the eighteenth century being those of Tumarcop in the south (ministered to by Carmelite tertiaries from Goa); Poona (where a chaplain from Goa was paid by the peshwa), and it is said Bagalhot, once visited by the Jesuits of Pondicherry(?). There was also a Goan chapel at Satara in the early part of the nineteenth century, and perhaps one or two besides, but none of them worked by the Vicar Apostolic of Bombay. The gradual growth of stations for British troops in the first half of the nineteenth century, and the laying of railways later chiefly caused the growth of stations within this district. When in 1854 the Carmelites resigned the Vicariate of Bombay, the mission was divided into two halves (Bombay and Poona), and the Poona portion was taken over by the German Jesuits. In 1858 the Capuchins, who had received the Bombay portion, also resigned, and thus the whole of the Bombay-Poona district was taken over by the Jesuits and re-united into one mission. Although the two vicariates remained nominally distinct, no Vicar Apostolic of Poona was ever appointed, the administration being in the hands of the Vicar Apostolic of Bombay. In 1886, when the hierarchy was established, Poona became a diocese, suffragan to Bombay. The boundaries between the two vicariates were then readjusted, and afterwards those of Poona were curtailed by the transfer of part of the Belgaum collectorate to Goa, since when the arrangement has been stable.

For administrators from 1854 to 1886, see BOMBAY. The first bishop was Bernard Beider-Linden, S.J., 1886–1907; the present bishop, Henry Doering, S.J., from 1907. Among its educational institutions are: St. Vincent's High School, Poona (matriculation, Bombay), with 296 day-scholars; St. Joseph's convent school, Poona, under eleven nuns of Jesus and Mary, with 192 pupils, also European orphanage and St. Anne's school with 16 boarders and 36 day-scholars; convent school at Igatpuri with 76 pupils and a poor school with 47 children; also a convent school at Panchgani with 40 pupils, both under the Daughters of the Cross; English-speaking schools at Bhusaval, Igatpuri, Lanowli, Sholapur, Ahmednagar, Dharwar, and Hubli, with a total of 483 pupils. In the Ahmednagar mission districts 80 village schools attended by 2400 children; in the Gadag mission districts 5 elementary schools with 110 children.

Madras Catholic Directory (1910); *Church History of the Bombay-Poona Mission in The Examiner* (1905 sq.).

ERNEST R. HULL.

Poor, CARE OF, BY THE CHURCH.—I. OBJECTS, HISTORY, AND ORGANIZATION.—A. The care of the

poor is a branch of charity. In the narrow sense charity means any exercise of mercy towards one's fellowman rooted in the love of God. While numerous classes of persons are fit objects for charity, the chief class is constituted by the poor. By the poor are meant persons who do not possess and cannot acquire the means of supporting life, and are thus dependent on the assistance of others. In accordance with Christ's command (Matt., xxv, 40), the care of the poor is the duty of all the members of the Christian body, so that by the works of each the welfare of the whole community may be promoted. As, however, success is most readily attained by the systematic co-operation of many, we find, since the earliest days of Christianity, side by side with the private exercise of charity, strictly concerted measures taken by the Church for the care of the poor. The Church's care of the poor is by no means a substitute for private efforts; on the contrary, it is intended to supplement, extend, and complete the work of individuals. Modern moralists distinguish, according to the degree of need, three kinds of poverty: (1) ordinary, such as that of the hired labourer, who lives from hand to mouth, has no property, but whose wages suffices to afford him a livelihood becoming his station; as applied to this class, the care of the poor is confined to preventive measures to keep them from falling into real poverty; (2) real want, or beggary, is the condition of those who do not possess and cannot earn sufficient means to support life, and depend on charity for what is lacking; (3) extreme want, or destitution, is a state in which the means of support are lacking to such a degree that, without extraneous aid, existence is impossible. The latter two classes are the object first of curative, and then of preventive remedies.

The object of ecclesiastical provision for the poor is, first the removal of their immediate need, then the nullification of the demoralizing effects of poverty, encouragement, the fostering of a desire for work and independence, and thus the exercise of an educative influence on the soul: "the care of souls is the soul of the care of the poor". There is in addition the social object of promoting the public welfare and of procuring for the greatest possible number of persons a share in the goods of material and intellectual civilization. From this object arise the general duties of ecclesiastical relief of the poor: to prevent those able to earn their living from falling into poverty, to assist with alms the sick and the poor, to raise the religious and moral condition of the poor, and to render social life a blessing for needy mankind. The relief of the poor includes also to-day a number of important tasks arising from the injurious influences of capitalistic forms of production, the modern system of interest and usury in general, and the neglect of the moral foundations of social life based on Christianity. The Church seeks to fulfil the objects and duties of poor-relief by means of the corporal and spiritual works of mercy usually included under the name of alms.

B. The object of ecclesiastical poor-relief determines its relations to social politics and state provision for the poor. Social politics and ecclesiastical relief of the poor have both for their object the removal of the material, intellectual, and moral needs of the poorer classes of the community. They are essentially distinct in three points: (1) the chief motive of social politics is justice, the chief motive of ecclesiastical relief is Christian charity; (2) social politics considers whole groups or great classes of the people; ecclesiastical relief concerns itself essentially with the needs of the individual; the object of the former is to abolish pauperism, while the latter aims at removing individual poverty; (3) social politics aims rather at prophylactic measures, seeking to prevent the continuation and increase of poverty,

while ecclesiastical relief, although also prophylactic, is mainly curative, since it relieves and, as far as possible, removes existing need. Both ecclesiastical relief-work and social politics are indispensable for society; they act and react on each other. Justice without charity would lead to rigidity, and leave the bitterest cases of need uncared for; charity without justice would allow thousands to suffer destitution, and save but a few. The man who is capable of earning his own livelihood needs not alms, but work and just wages.

Between State provision for the poor and ecclesiastical relief the relation is as follows: the State should by its social politics prepare the way for the development of voluntary poor-relief, and should put these politics into practice against lazy individuals; on the other hand, the provision for the really poor is in the first place the business of the private person and the Church, in the second place of the community, and in the last place also of the State. Liberal economics as represented by Adam Smith, Richard Malthus, and David Ricardo, is based on the ancient Roman view of life, and claims exclusively for the State the task of relieving the poor, since this relief does not lessen but rather increases the amount of poverty, imposes huge expenditure on the State, and inclines the lower classes to laziness. On the other hand, it must be remembered that the State should support the unalienable human rights of the helpless, and promote the common weal by uplifting the needy classes. It is therefore bound not only to interest itself in the politics of pauperism (i. e. to wage war on professional beggars and all malevolent exploitation of charity), but also in the private care of the poor, especially to-day, when the voluntary ecclesiastical and private relief of the poor cannot possibly satisfy all the demands made upon it. The Church has indeed at all times emphasized the duties of the State in promoting the welfare of the people. Leo XIII's Encyclical on the question of the working man (1891) assigns to the State tasks which come under the programme of poor-relief. The part played by the State should however be only subsidiary; the chief rôle should be regularly filled by voluntary relief and neighbourly charity, since thus alone will the principle of spontaneous generosity and individuality be retained, inasmuch as State relief rests on compulsory taxation and always remains bureaucratic. The Church therefore asserts her innate right to care for the poor together and in conjunction with the State, and condemns the agitation for a state monopoly of poor-relief as a violation of a principle of justice. The political side of pauperism does indeed pertain to the State; in the actual relief of the poor, however, Church and community should co-operate. While the institutions founded by the Church are to be administered by the ecclesiastical authorities the Church must be allowed to exercise also in State institutions her educative and moral influence. Close co-operation between ecclesiastical, public, and private poor-relief effectually prevents its exploitation by unworthy individuals.

C. Ecclesiastical relief of the poor is condemned by Protestants (e. g. in recent times by Dr. Uhlhorn), who assert that it is unmethodical, uncritical, and without organization, and consequently fosters begging and exercises a harmful influence. To this we may reply: Christianity disapproves of everything irrational, and therefore also *a priori* of disorganized and uncritical care of the poor. But the surveillance must not be injurious or degrading to the poor. Without transgressing the boundaries of charity and respect for the dignity of man, the New Testament distinctly demands discretion in the giving of alms, and condemns professional begging (I Thess., iv, 11; I Tim., v. 13 sqq.). The whole range of ecclesiastical literature and even the greatest friends of

the poor among the teachers of the Church peremptorily insist upon order and distinction being employed in relieving the poor, warn against the encouragement of lazy beggars, and declare that one may as little support laziness as immorality; unjustly received poor-relief must be restored. Ecclesiastical relief of the poor has from the very beginning been very well organized, the organization being changed in every century to suit the changing conditions of the times. Not in those places where the Church has controlled poor-relief, but in those where the State or other powers have interfered with its administration, have disorder and a want of discrimination been apparent.

The latest opponents of ecclesiastical poor-relief are the extreme Individualists and Socialists. Denying a future existence, professing an extreme Evolutionism and Relativism, upholding in the moral sphere the autonomy of the individual, and proclaiming war on rank (i. e. a class war), they condemn all benefactions as prejudicial to the dignity of man and to the welfare of the community. Friedrich Nietzsche, as an extreme Individualist, sees in boundless competition—a battle of all against all, which necessarily means the downfall of the weak and the poor—the means of securing the greatest possible personal welfare. Socialism, as represented by Carl Marx and Carl Kautsky, proclaims a war of the propertyless against the propertied classes, a war whose energy is paralyzed and impaired (they assert) by charitable activity. In a criticism of Nietzsche's teaching, it must be emphasized that the superman is a mere phantasy without any philosophical or historical foundation whatever. Even the strongest man is dependent on the civilization of the past and present, and on the social organization. Against the forces of nature, against the accumulated treasures of civilization, against the combination of adverse circumstances, he is powerless. Even the strongest-willed man may be in the next moment the most piteous mortal in extreme need of charity. If a man make himself the centre of all his objects, he challenges all men to battle. The theory of the rights of the strong has as its final consequence the reduction of mankind to a horde of warring barbarians. Christian morality, on the other hand, distinguishes between just love of self, which includes love of neighbour, and the self-love which it combats and condemns. In appraising the value of the socialistic theory which declares poor-relief a disgrace alike to society and the receiver of alms, we may observe: Even if we were disposed to grant that in the socialistic state of the future all moral defects and their consequences will be removed (for which there is not the least proof), the physical causes of poverty would be still present. Even in the future there will be orphans, invalids, and the helpless aged; to these no bureaucratic central authority, but sympathetic charity can afford a sufficient help. The acceptance of alms on the part of the guiltless poor is indeed for these a certain mortification, but in no way a disgrace. Otherwise it would be a disgrace to accept the gifts of nature and civilization, which we ourselves have not earned, and which form the greater part of our material and spiritual possessions. It is however a shame and bitter injustice to replace just wages by alms. This is so far from being the object of Christian relief of the poor, that Christian morality expressly condemns it as a sin against distributive justice. But all objections against ecclesiastical poor-relief will be most easily met by a glance at its history.

D. The history of ecclesiastical poor-relief is difficult, because, in accordance with the command of Christ (Matt., vi, 3), it for the most part avoids publicity, deals with individuals, and is to a great extent influenced by social institutions. We will con-

fine ourselves to brief notices of the most important historical phenomena.

(1) As a natural characteristic of man, human sympathy was active even among the pagans, who, however, recognized no moral obligation to render assistance, since the knowledge of a common origin and destiny and of the equality of men before God was wanting. Isolated suggestions of the Christian doctrine of neighbourly charity are found in the writings of Cicero, Seneca, Epictetus, and Marcus Aurelius, but these writers were powerless to convert wide circles to more humane sentiments. Consequently, a public and general care of the poor existed nowhere in antiquity, but only isolated suggestions thereof. In Athens Pisistratus made provision for needy war-invalids and citizens, and the application of this provision was later extended to all residents whom infirmity rendered unable to work. Special officials, the *sitarchs*, were also appointed to prevent a shortage of corn. Similar institutions existed in other Greek towns. In Rome the poor regulations from the time of Julius Cæsar, and the donations of corn especially after the time of Cæsar and Augustus must be regarded as simply political measures designed to soothe the Roman proletariat clamouring for bread and games. The same may be said of the children's *alimentaturia* founded by Nerva and Hadrian and perfected by Trajan, of the institutions for providing for orphans in numerous towns in Italy, supported from the imperial purse, and of the later private foundations of the same kind under State supervision to be found in Italy and in the different provinces. Under the Empire the colleges of artisans were bound to provide for their impoverished colleagues. The efforts of Julian the Apostate to plant Christian poor-relief on pagan soil with the assistance of the pagan high-priest, Arsatinus, met with scant success.

(2) The Mosaic Law established a preventive poor-relief, contained numerous provisions in favour of needy Jews, and expressly commands the giving of alms (Deut., xv, 11). These precepts of the Law were strongly inculcated by the prophets. The Divine command of charity towards one's neighbour is clearly expressed in the Law (Lev., xix, 18), but the Jews regarded as their neighbour only the members of their race and strangers living in their territories. The Pharisees further intensified this narrow interpretation into scorn for heathens and hatred for personal enemies (Matt., v, 37; Luke, x, 33). Measures of preventive poor-relief were the decisions of the Law concerning the division of the land among the tribes and families, the inalienableness of landed property, the Sabbath and Jubilee year, usury, the gathering of grapes and corn, the third tithe, etc.

(3) Jesus Christ compared love of neighbour with the love of God; proclaimed as its prototype the love of the Heavenly Father and His own reclaiming love for all mankind; and taught the duties of the propertied classes towards the poor. His own life of poverty and want and the principle, "As long as you did it to one of these my least brethren, you did it to me", conceded to works of mercy a claim to eternal reward, and to the needy of every description the hope of kindly relief. In the doctrine and example of Jesus Christ lie the germs of all the charitable activity of the Church, which has appeared ever in new forms throughout the Christian centuries.

(4) In Apostolic times poor-relief was closely connected with the Eucharist through the oblations and *agapæ* and through the activity of the bishops and deacons (Acts, vi, 11 sqq.). Among the Christians of Jerusalem there was voluntary community of the use of goods, though probably not community of property (Acts, iv, 37; xii, 12). The care of the poor was such that no one could be said to be in need (Acts, ii, 34, 44, 45; iv, 32 sqq.). By the institution of a common purse, administered first by the Apostles

and later by the deacons, poor-relief received a public character. The public relief of the poor was to be completed by private charity (I Tim., v, 14). Private individuals had to care first for members of their own families, the neglect of whom was likened with apostasy (I Tim., v, 4, 8, 16), then for needy members of their community, then for the Christians of other communities, and finally for non-Christians (Gal., vi, 10). The Apostles proclaimed the high moral dignity and the obligation of work: "If any man will not work, neither let him eat" (II Thess., iii, 10); forbade intercourse with the lazy (loc. cit., 11), who are unworthy of the Christian community (6 sqq.); and forbade the support of lazy beggars (I Thess., ii, 9; iv, 11; Ephes., iv, 28; I Tim., v, 3, 13). Almsgiving is for the propertied persons an obligation of merciful charity; the poor, however, have no claim thereto; they should be modest and thankful (I Tim., vi, 6, 8, 10, 17).

(5) In sub-Apostolic times, especially during the persecutions, the bishop continues to be the administrator of the church property and the director of poor-relief. His assistants were the deacons and deaconesses (q. v.). To the office of deaconess at first only widows, but later also elderly spinsters were admitted (Rom., xvi, 1; I Cor., ix, 5; I Tim., v, 9). In addition to assisting at the Divine services and at giving instruction, they had to visit the sick and prisoners, to care for poor widows, etc. Individual provision for the poor and visitation of the poor in their houses in accordance with a special list (*matricula*) were strictly practised in every Christian community. Alms were given only after close examination into the conditions, and the abuse of charity by strangers was prevented by obliging newcomers to work and demanding letters of recommendation. No lazy beggar might be supported (Didache, XI, xii; Constit. Apost., II, iv; III, vii, 6). It was sought to make the poor independent by assigning them work, procuring them positions, giving them tools etc. Orphans and foundlings were entrusted to Christian families for adoption and education (Const. Apost., IV, i); poor boys were entrusted to master artisans for instruction (loc. cit., ii). The sources from which the Church derived its receipts for poor-relief were: the surplus of the oblations at the Offertory of the Mass, the offerings of alms (*Collecta*) at the beginning of the service, the alms-box, the firstlings for the support of the clergy, the tithes (Const. Apost., VIII, xxx), the yield of the money collections made regularly on fast days and also in times of special need, and finally the free contributions.

(6) After the time of Constantine, who granted the Church the right to acquire property, the ecclesiastical possessions grew, thanks to the numerous gifts of land, foundations, and the tithes which gradually became established (from the sixth century) also in the West. The defects of Roman legislation in this respect, the incessant wars, the crowding of the poor into the Church, made the task of relieving the poor ever more difficult. The bishop administered the church property, being assisted in the superintendence of poor-relief by the deacons and deaconesses, and in many places by special *œconomi* or by the archpresbyters or archdeacons. In the West the division of the ecclesiastical income into four parts (for the bishop, the other clergy, church building, and poor-relief) began in the fourth century. In addition to the provision for the poor in their homes, the increasing mass of poverty demanded a new institution—the hospital. It was to serve for a special class of the needy, and was the regular completion of the general charitable activity of the district. Such institutions for the collective care of the poor were: the *diaconie*, great store-houses near the church, where the poor daily enjoyed meals in

common; the *henodochiæ*, for strangers; the *noso-comiæ* for the sick; the *orphanotrophîæ* and *brephotrophîæ* for orphans and foundlings; the *gerontocomiæ* for the aged. Of special importance was the hospital *Βασιλίας* erected by St. Basil in Casarea about 369 for all classes of the needy. At the end of the sixth century hospitals and poorhouses existed in great numbers in all the divisions of the ecclesiastical territories. They were all under the bishop, and managed by a special spiritual director. The sick were nursed by deaconesses, widows, and attendants under them (see HOSPITALS).

(7) After Gregory the Great (d. 604), who organized poor-relief on a model basis in Rome and urged bishops and secular rulers to rational works of provision for the needy, the spread of Christianity to the country parts and to the Germanic and Anglo-Saxon nomadic tribes led to the gradual extension of the parish system, which dates from the fourth century; this movement was accompanied by the decentralization of poor-relief. The bishop retained the direction of the poor-relief of his city, and the dealing with special crises of need in his diocese; on the other hand, first in Gaul and afterwards in wider circles, the parishes were, in accordance with the decrees of the Council of Tours (567), to maintain their poor at their own cost, in order that these might not wander into other communities. Since the early Middle Ages new centres of ecclesiastical poor-relief were found in the monasteries, first those of the Benedictines, later those of the Cistercians, Præmonstratensians etc. These constituted the main factor in the preventive and curative poor-relief; gave an example of work; taught the uncivilized peoples agriculture, handicrafts, and the arts; trained the youth; erected and maintained hospices for strangers and hospitals for the sick. A mighty spur to ecclesiastical and private poor-relief was supplied by the replacing of canonical penances by prayer, fasting, and the devoting of whole or part of one's fortune to the poor, pious legacies for one's own soul or for that of another.

(8) From the days of Constantine civil legislation supported ecclesiastical poor-relief by granting privileges in favour of pious foundations, legacies, hospitals etc. The State also adopted from the time of Emperors Gratian, Valentinian II, and Justinian, measures against lazy beggars. The later Merovingians diverted to some extent church property from its proper objects and disorganized poor-relief. In his capitularies Charlemagne created a state-ecclesiastical organization for providing for the poor, and strictly forbade vagabondage (806). His organization was revived by King St. Louis (d. 1270), who sought to make the communities responsible for the support of parochial poor-relief.

(9) During the Middle Ages properly so-called there is an important distinction between poor-relief in the city and in the country. The feudal system, which had become established in the tenth century, threw the care of impoverished servants and serfs, and thus of the greater number of the poor of the country districts, on the lord of the manor. In addition the parish priest worked for the poor of his flock, and the monasteries and foundations for strangers and the sick.

(10) Provision for the poor was splendidly developed in the cities of the Middle Ages. Its administrators were—in addition to the parish clergy, the monasteries, and the hospitals—the guilds (q. v.), corporations, and confraternities. The Hospitallers cared for the sick, the poor in their houses, and travellers; the guilds, for sick and impoverished members and their families; the distress guilds, for pilgrims and travellers. Special religious congregations cared for the sick and prepared medicines—e. g. the Humiliati, the Jesuati, the Brothers of the Holy Ghost, the

Beguines and Beghards, and, since the thirteenth century, the mendicant orders, especially the Franciscans. The pawn-offices (*montes pietatis*) established in Italy, and the loan societies founded by Bishop Giberti of Verona (1528), served as repressive poor-relief.

It is false to assert that municipal regulations in aid of the poor were a fruit of the Reformation; the medieval municipal magistrates, in conjunction with the clergy, already made extensive provision for the poor, endeavoured to stop begging by ordinances and police-regulations, supported the real poor and municipal institutions, and fostered the education of orphans, in so far as this was not provided for by relations and the guilds. In general, medieval poor-relief was in no way lacking in organization; in the country districts the organization was indeed perfect; in the towns the clergy, monasteries, magistrates, guilds, confraternities, and private individuals vied with one another in providing for the poor with such discrimination and practical adaptability that in normal times the provision satisfied all demands, extraordinary calamities alone overtaxing it. The frightful growth of beggary at the close of the Middle Ages arose, not from the failure of ecclesiastical poor-relief, but from the relative over-population of the European civilized countries and other economical conditions of the time. The lack of a central administration exercised by the bishop, after the model of the early Christian relief, constituted indeed a defect in organization.

(11) The Reformation destroyed the monasteries and ecclesiastical foundations, which were for the most part applied to secular objects. The terrible wars of the sixteenth and seventeenth centuries aggravated the misery caused by the secularization of the property which had maintained poor-relief to such an extent that poverty, begging, crime, want, and public insecurity grew unchecked. The poor-regulations of the towns were almost entirely ineffectual, and the State governments entered on a warfare with poverty and vagabondage by inflicting severe punishments, and, in England and France, the penalty of death. In opposition to the Christian tradition, the Reformers championed public relief of the poor, administered by the secular community and the State, and substituted for the principle of charitable institutions the home principle. In Germany the secularization of poor-relief began with the imperial police regulations of 1530; in France Francis II extended the compulsory obligation of the community to give and the right of the poor to claim support, decreed by Francis I for Paris, to all his territories. It was but to be expected that poor-relief should be secularized also in England (1536); this provision was followed in 1575 by the legal institution of poorhouses, and in 1601 by the celebrated Poor Law of Queen Elizabeth. This state continued until 1834, when the reform which had been found absolutely indispensable was effected.

(12) The Council of Trent renewed the ancient precepts concerning the obligations of the bishops to provide for the poor, especially to supervise the hospitals (Sess. VII de Ref., cap. xv; Sess. XXV de Ref., cap. viii) and the employment of the income from ecclesiastical prebends (Sess. XXV de Ref., cap. i). In accordance with these decrees, numerous provincial synods laboured to improve ecclesiastical poor-relief. St. Charles Borromeo, Archbishop of Milan (d. 1584), worked with special zeal and great ability. Simultaneously there arose especially for the care of the poor and the sick and for the training of poor children a number of new orders and congregations—e. g.: the Order of Brothers of Mercy, the Clerics Regular of St. Camillus of Lellis, the Somaschans, the Order of St. Hippolytus in Mexico, the Bethlehemites, the Hospitaller Sisters, the Piarista.

Fundamental and exemplary was the activity of St. Vincent de Paul (d. 1660). In 1617 he founded the *Confrérie de la Charité*, a women's association which, under the guidance of the parish priest, was to provide for the poor and the sick; in 1634 he founded the Congregation of the Sisters of Mercy, a visiting institute under religious discipline, which has for centuries proved its efficacy in caring for the sick and in making provision for the poor; it combines centralization and strict discipline in administration with decentralization and adaptability in the relief of the poor.

(13) The secularization of church property during the French Revolution and the succeeding period (1804) dealt a severe blow to ecclesiastical poor-relief. Comprehensive poor-laws were passed by several European states, but in no case were they such as to make ecclesiastical poor-relief dispensable.

(14) Since the middle of the nineteenth century the development of industries, the growth of cities and freedom of emigration have reduced large numbers of the population to poverty, and necessitated gigantic expenditure on the part of the community and State. The States sought by the legal protection of labour in the form of workmen's insurance, factory laws, and commercial regulations, to prevent poverty and to render stricter and perfect the poor-regulations. Legislation is obliged to return to the old Christian principle of charitable institutions. In Germany and the neighbouring countries the "Elberfelder System" was adopted for the public care of the poor; this is based on personal contact between the almoner and the impoverished family, and combines the communal and private charitable activities. In South Germany, Austria, and Switzerland, the communities employ more than formerly private bodies in their poorhouses and orphanages, religious congregations—e. g., the Sisters of Mercy founded by Father Theodosius Florentini (1844, 1852)—being entrusted with the internal administration of such State institutions. Regulations concerning the communities and establishments for poor-relief have been inaugurated widely to-day in districts, provinces, countries, and states.

(15) In addition to this state provision for the poor, ecclesiastical poor-relief has developed in recent times not merely in the parishes and religious orders, but also in an incalculable number of charitable institutions. We shall name only the *crèches*, schools for young children, institutions for orphans, weaklings, the deaf and dumb, the blind, cripples, unprotected children, protectories, Sunday-schools, protectorates for apprentices, the International Association for the Protection of Girls, the Railway Mission, hospices for servants, workwomen, fallen women, and women exposed to danger, the provision for liberated criminals, for emigrants, and the aged; women's charitable associations (e. g., The *Elisabethen*—and *Ludwigsvereine*); the men's associations for poor-relief, including the Society of St. Vincent de Paul (founded 1833), the Charitable Students' Circles, the legal bureaux, the colonies of workmen, the temperance movement, and the inebriate asylums.

(16) While politico-religious Liberalism destroys ecclesiastical charitable institutions and persecutes the charitable congregations, the Christian love of neighbour continues to find new ways of providing for the poor. The necessity of securing unanimity of purpose among the various ecclesiastical institutions for the relief of the poor has called into life various diocesan and national unions for the organization of charity—e. g.: The *Caritasverband für Deutschland* (1897), the Austrian *Reichsverband der katholischen Wohltätigkeitsorganisation* (1900), the *Caritasfaktion der schweizerische Katholikenvereins* (1899). On the Protestant side, the ecclesiastical care of the poor is organized especially by the Home Missions.

E. The organization of ecclesiastical poor-relief is necessary to-day to bind together, after the fashion of the early Christian charitable activity for the repression and prevention of poverty, all religious, monastic, private, corporate, state, and communal forces aiming at this object; while the varying national and local conditions demand a great diversity in organization, in general the following must be the guiding principles:

(1) For ecclesiastical poor-relief the bishop must be the soul and centre of the diocesan organization. He directs undertakings affecting the entire or a great portion of the diocese, and regulates and supervizes the general charitable activity of the parishes;

(2) The local pastor is the immediate director of the ecclesiastical poor-relief of his parish. Monastic orders labouring in the parish, charitable lay associations, orphanages and institutes for the poor and sick are all under his direction. The parish-priest should endeavour to co-operate as far as possible with the secular and private poor-relief of his district, and also with the local authorities, so as to secure regular and uniform action;

(3) The local provision for the poor should be as far as possible confined to the home, promoting personal contact between the helper and the poor; the assistance should be as a rule given in goods, the abuse of gifts of money being guarded against as far as practical;

(4) Ecclesiastical poor-relief embraces all classes of the needy, consideration being shown for feelings of mortification and family pride. The keeping of a list of the poor is indispensable;

(5) The means are to be obtained from the income from foundations, from the regular and voluntary contributions of the parishioners, and, in case of necessity, from extraordinary collections. Sometimes local poor-relief is combined with the charitable organizations of the neighbourhood;

(6) Repressive provision for the poor concerns itself in the first place with those able to work, especially with: (a) children, who are placed for training either with relatives, with trustworthy families, or in orphanages. While maintenance in a family is preferable, no general rule can be laid down on this point. A new task is the charitable provision for children, who are uncared for by their parents, and who are morally unprotected (cf. The Prussian *Fürsorgeerziehungsgesetz* of 1897); (b) sick and decrepit persons, who are assisted either with gifts of goods, food, medicine etc. in their homes, or are placed in poor-houses or hospitals. Repressive provision for the poor is also directed towards persons able to work, who can earn their livelihood and do not do so. If this is the result of obstinate laziness, and an inclination to begging and vagabondage, the State should confine the offenders in institutions of compulsory labour, or engage them on useful works, paying them wages and supporting them. Should, however, it arise from inability to find employment, the State should interfere by inaugurating relief-works, comprehensive organization of information as to labour conditions, fostering private relief measures, workers' colonies etc.

(7) Preventive poor-relief seeks to prevent the fall into poverty. This is never entirely successful, but it may become partially so by the combination of the Church, State, trade organizations, and private charitable agencies along the following lines: (a) by educating the youth to thrift, establishment of school savings banks and especially fostering economy among the working classes; (b) by state and voluntary insurance against illness; (c) by making the employer responsible for accidents befalling his employees; (d) insurance against old age and incapacitation, organized on trades union or State principles; (e) by the express inculcation of the mutual obliga-

tions of members of the same family and relatives according to the precepts of Christianity; (f) war against the passion for pleasure and a social legislation guided by Christian principles.

T. J. BECK.

II. IN CANADA.—The Church of Canada has numerous charitable institutions. As early as 1638 the Duchesse d'Aiguillon founded, at the instance of the missionaries, the Hôtel-Dieu of Quebec, where the Hospitallers of the Mercy of Jesus have since devoted themselves to the care of the sick poor. They have also care of the General Hospital of Quebec (1693), the Sacred Heart Hospital (1873), and the Hôtel-Dieu of Chicoutimi (1884). In 1642 Jeanne Mance

founded the Hôtel-Dieu of Montreal, which in 1659 was confided to the Hospitallers of St. Joseph. Mgr de Saint-Vallier (who had already founded the General Hospital of Quebec, and whose will contained the words: "Forget me, but do not forget my poor") in 1697 requested the Ursulines to found a hospital at Three Rivers. This hospital was placed in charge of the Sisters of Providence in 1888. The General Hospital of Montreal (founded 1694) was entrusted in 1747 to Mme d'Youville, foundress of the Grey Nuns. This congregation, whose object is the care of foundlings, orphans, the sick, the aged, and the infirm, was the origin of other independent communities engaged in the same work, namely the Grey Nuns at St. Hyacinthe (1840), the Grey Nuns of the Cross at Ottawa (1845), the Grey Nuns of Charity at Quebec (1849), and the Grey Nuns at Nicolet (1886). These communities, which are spread throughout Canada, accomplish wonderful works of charity in behalf of the poor. More recent foundations are allied with them, among the most important being the Sisters of Providence (founded at Montreal in 1843 by Mme Gamelin), who devote themselves to the spiritual and temporal relief of the poor and sick, orphans and aged, the visitation and care of the sick in their homes, dispensaries, refuges, and workrooms. They have eighty-five establishments. At Montreal, Ottawa, and Quebec there is a society for the Protection of Young Girls, as also the Layette Society, an association of charitable women which assists poor families at the period of the birth of children. The above table, though necessarily incomplete, affords an idea of the number and variety of charitable activity in Canada.

The Church carries out these undertakings, at least in the Province of Quebec, almost entirely with the assistance of private charity. In 1902 the Hôtel-Dieu of Quebec received free 1052 sick poor, whose stay at the hospital represented 30,892 days of board and treatment. The sisters receive from the Government an annual allowance of \$448, but nothing from the city, and they pay the water tax. In 1910 the Sisters of Charity of Quebec had 538 old men and women and 1704 orphans; they received \$1498 from the Government and paid to the city \$1050 for water. In 1911 the Government of Quebec granted a subsidy of \$56,875.75 to charitable institutions, Protestant as well as Catholic. In Ontario the Government pays 20 cents a day for 120 days and 7 cents a day for subsequent days for each patient admitted to a hospital; the cities also pay their quota. In 1909 the subsidies paid by the provincial Government to hospitals, infirmaries, and orphanages amounted to \$257,813.53. The Society of St. Vincent de Paul was established at Quebec in 1846 by Dr. Joseph Painchaud. Conferences were formed at Montreal (1848), Toronto (1850), Ottawa (1860), and Hamilton (1866). The superior council for all Canada is located at Quebec. In 1896 it numbered 104 conferences; its receipts for the year equalled \$64,000 and its expenses \$53,000. During the past fifty years the Quebec conferences have expended \$577,069.98 on the poor. In 1909 the society numbered 97 French conferences with 4228 members and 59 English conferences with 1039 members. The receipts equalled \$162,199.46 and the expenditures \$126,316.12. Relief was given to 2900 families, composed of 11,524 individuals. Besides visiting the poor in their homes, the society has organized patronages for the instruction of poor children and night shelters for the homeless, and finds homes with families for orphaned apprentices. In recent years it has been assisted by the Guignolée collection made for the poor on Christmas Eve by the Association of Commercial Travellers. In 1910 this collection amounted to more than \$8000.

STANISLAS-A. LORTIE.

III. IN GREAT BRITAIN AND IRELAND.—In the British Isles two different types of organizations deal with the care of the poor: (a) public statutory bodies; (b) voluntary associations. Under the former may be included Parliament, which makes laws affecting the care of the poor, and local bodies, such as county, borough, town, and district councils, and more particularly the boards of guardians which administer them. The tendency of modern legislation has been to transfer certain sections of work affecting the poor from boards of guardians to other local bodies. As education, public health, pension, and asylum authorities, municipal bodies other than boards of guardians now deal with feeding necessitous school children, medical inspection and treatment of children attending the elementary schools, the after-care of school children, scholarships, schools for defective children, inspection of laundries, workshops, common lodging houses, and houses let in tenements, the allocation of old age pensions, and the provision and management of all forms of asylums for the insane and epileptic. All public statutory bodies dealing with the care of the poor obtain their funds from taxes or rates, to which Catholics as citizens contribute either directly or indirectly. In Great Britain until recently Catholics had few organizations for securing Catholic representation upon public bodies. Within the last few years, however, the Catholic Federation movement has spread in different parts of the country. This aims at encouraging Catholics to take their share in public affairs by becoming candidates for public office (not necessarily as Catholics, but as ordinary citizens), and to safeguard Catholic interests by putting test questions to all candidates on matters affecting Catholics in order to afford guidance to Catholic voters. By these efforts, and notably by the exertions of individuals, Catholics have secured some representation upon public bodies, though not in proportion to their numbers. In the House of Commons elected in January, 1910, there were 9 Catholic members out of 495 for constituencies in England and Wales, but none out of 72 in Scotland. No figures for municipal bodies are available, but in many of the larger towns in Great Britain Catholics have representation (for example, the London County Council has 5 Catholic members out of 137). Catholics have greatest representation upon boards of guardians which exist directly for the care of the poor. This is due mainly to the efforts of the Catholic Guardians Association (founded in 1894), which forms a centre for Catholic guardians, holds an annual conference, gives legal advice, conducts negotiations with Government departments, and assists in various ways. Out of 24,000 members of boards of guardians in England and Wales 540 are Catholics. In Ireland, of course, except in a few districts in the north, a large proportion of the members of all public bodies are Catholics: out of 103 members of Parliament, for example, 74 are Catholics.

In legislation affecting the poor, Catholic members of Parliament by their influence have safeguarded Catholic interests. In acts, for example, dealing with defective children, provisions have been inserted which secure to Catholic parents the right under certain conditions to have their children sent to Catholic schools: in the recent Children's Act similar restrictions have also been inserted. Catholic members of municipal councils have in many

cases secured the appointment of Catholic co-opted members upon the education committees, considerate treatment for Catholic children in the administration of the Provision of Meals (Education) Act, in the medical treatment and inspection of school children, in the work of the Children's Care Committees, and in the carrying out of the Industrial Schools Acts: they have also in many cases obtained satisfactory provision for religious observances for Catholic inmates of lunatic asylums, remand homes, inebriate homes, and the like. The efforts of the Catholic Guardians have gained great advantages for Catholic in many districts, such as the appointment of Catholic religious instructors in workhouses and infirmaries, facilities for Mass and the sacraments for the inmates of poor law institutions either within or without these establishments, arrangements for recognized Catholic visitors to workhouses and infirmaries, and the safeguarding of the faith of Catholic children by securing their transfer to Catholic poor law schools. Indeed, beyond the benefits to their own coreligionists, to the influence of Catholic guardians may be attributed in no small degree the improved administration of the Poor Law in recent years. A striking witness to the value of their efforts in this respect may be found in the anxiety shown by those interested in the reports of the recent Royal Commission on the Poor Law to secure the support of Catholics for their particular views.

Catholics influence the care of the poor through voluntary organizations, either by participating in the work of general agencies or by their own efforts on Catholic lines. The more important philanthropic bodies, such as the Charity Organization Society, the National Society for the Prevention of Cruelty to Children, the Children's Country Holiday Fund, or the public hospitals supported by voluntary funds, all include many Catholics amongst their members, with the result that these bodies usually willingly co-operate with recognized Catholic organizations, whenever Catholic applicants for relief have to be considered.

In the absence of official statistics, it is difficult to estimate accurately the extent of charitable work amongst the poor by Catholics themselves as Catholics. Every Catholic mission, with a resident priest, serves as a centre for such work. Poor Catholics in distress instinctively turn to the priest, who, if he has no suitable charitable organization attached to his church, usually acts as almoner himself. Some approximate idea of the extent of such work may be gathered from the fact that in England and Wales there are 1773 churches, chapels, and stations with 3747 priests, the corresponding figures for Scotland being 394 and 555, and for Ireland 2468 and 3645. Similarly, an extraordinary amount of charitable work is regularly carried out by the religious communities, especially by those of women who devote their lives to personal service amongst the poor, such as the Sisters of Charity, the Sisters of Mercy, the Sisters of Nazareth, the Little Sisters of the Poor, the Sisters of the Good Shepherd, the Little Company of Mary, and others. Almost every possible form of charitable assistance is undertaken by these communities in different parts of the three countries. Orphanages for boys and girls, poor law schools, industrial schools, homes for physically and mentally defective children, homes for the aged, night refuges for the destitute, reformatories, training homes for servants, homes for working boys and girls, hospitals, hospices for the dying, convalescent homes, holiday homes in the country and at the seaside, working girls' clubs, homes for penitents, refuges for fallen women, homes for inebriates, visiting the sick, nursing the sick poor, instructing the deaf and dumb in their religion, are all amongst the

charitable works under the care of religious. Some of these have deservedly gained a national reputation for the standard of excellence reached—for example, St. Vincent's Industrial School for boys; Dartford (under the Presentation Brothers); the Home for the Aged Poor; Nazareth House, Hammersmith (under Sisters of Nazareth); and the Blind Asylum, Merriam, Dublin (under the Irish Sisters of Charity), to mention only a few. The religious communities, whose work is not directly charitable, nevertheless, are, like the clergy, regularly called upon to act the part of almoners. The number of religious houses of women, including branch houses, in the three countries must exceed 1000, but this number does not afford any criterion of the extent of the work accomplished by them. A good example, admittedly well above the average, taken from one of the largest towns, will serve as an illustration. Situated in a very poor district, with twenty sisters in the community, a Convent of Mercy, besides supplying nine sisters as teachers in two elementary schools, has charge of a night refuge for nearly 300 men, women, and children, a servants' home, a home for young working women, and a soup kitchen, and its religious regularly visit the sick in a large hospital and the Catholic poor in the district.

The principal charitable voluntary organization for Catholic men is the Society of St. Vincent de Paul, which flourished both in Great Britain and Ireland: in England and Wales, it has 274 local conferences with 3523 active members; in Scotland, 95 conferences with 1316 active members; in Ireland, 200 conferences with 3134 active members. By personal service amongst the Catholic poor, the society unostentatiously carries on a considerable amount of charitable work. It practises many forms of assistance, including feeding the hungry, visiting the sick in their homes and in the public infirmaries and hospitals, visiting the imprisoned, attending the children's courts to watch Catholic cases, finding employment for those out of work, acting as catechists for poor boys in Sunday schools and bringing them to Mass and the sacraments, assisting in the formation and management of boys' clubs and brigades, and the like. The local conferences are grouped into councils which hold quarterly meetings of all members to discuss topics of general interest. No general society for Catholic women corresponding to the Society of St. Vincent de Paul flourishes throughout the three countries, but kindred organizations, whose objects are similar in scope, thrive in different parts, such as St. Elizabeth's Society, the Ladies of Charity, and Ladies' Settlements. All these resemble the Society of St. Vincent de Paul in aiming primarily at the personal edification of the worker, as well as at the spiritual and temporal benefit of those assisted. These organizations, however, do not confine their efforts to women and girls, but take a large part in work amongst boys. A ladies' settlement in London, for example, includes in its scheme of work visiting the sick and poor, instruction for the sacraments, mothers' meetings, a men's club, a girls' club, a clothing club, a sewing class, the provision of free meals for children, evening classes etc.

One of the most striking developments of Catholic work amongst the poor in recent years, especially in England, has been the organization of rescue societies to safeguard the faith of Catholic children in danger. Mixed marriages, poverty, misfortune, neglect, evil living, are amongst the many causes which, particularly in the larger towns, contribute towards placing in jeopardy the faith of little ones. The children of a mixed marriage, in which the father is a non-Catholic, who seek admission to a poor law institution, are held at law to be of the same religion as the father. The rescue societies save such children

by placing them in Catholic voluntary homes. Children of Catholic parents are sometimes by mistake entered in non-Catholic poor law schools. The rescue societies watch carefully all such cases, rectifying any mistakes made. The children of neglectful Catholic parents are not infrequently brought to the notice of non-Catholic organizations, which are willing to assist them, if Catholic societies fail to do so; in such cases the rescue societies are always too ready to proffer their aid. In Great Britain, eight dioceses have organized rescue societies, which deal with many hundreds of children each year, but every diocese has its poor law school, or its industrial school, in which Catholic children can be received. As an outcome of the work of the rescue societies, a Catholic Emigration Association has been in existence in England for some years past, which arranges for the emigration of Catholic children to Canada after leaving the rescue institutions in order to remove them completely from any danger of falling back into their early evil surroundings. This association has a receiving home in Ottawa, whence the young emigrants are placed out with Catholic farmers, and their progress is watched until they come of age.

Certain other Catholic societies, which flourish in some form or other in the three countries, carry on very useful social work: the Catholic Prisoners' Aid Society (with branches in London, Dublin, Glasgow, and other large towns, not necessarily connected, but working on similar lines), which assists Catholic prisoners on leaving prison, and endeavours to start them in life again; the Catholic Needlework Guild, whose members bind themselves each year to provide a certain number of useful garments for the poor; and the Catholic Boys' Brigade, whose aim is to unite Catholic boys as they leave the elementary schools, to keep them in touch with the Church, and to provide in various ways for their spiritual, physical, and social well-being.

The great drawback to all Catholic social efforts is, undoubtedly, the lack of intercommunication between Catholic workers in different parts. Two organizations have, however, recently been started, which as they spread will probably tend to remove this defect: the Catholic Women's League, which has already in London established a social information bureau, and has succeeded in bringing together Catholic women workers from all parts of the country; and the Catholic Social Guild, for Catholic social study, which many hope will eventually develop into a Catholic Institute of Social Service for Great Britain and Ireland, upon lines which have already proved so useful in other countries.

Handbook of Catholic, Charitable and Social Works (London, 1910); *Catholic Directory* (London, 1910); *Irish Catholic Directory* (Dublin, 1910); *Catholic Social Year Book* (London, 1910).

JOHN W. GILBERT.

IV. IN THE UNITED STATES.—This description is confined to methods followed in serving the poor outside of institutions strictly so called, and does not include institutional works conducted by religious communities, which are described elsewhere under appropriate headings, nor relief given by individuals to individuals, as the spirit and method in Catholic charity come to best expression through organization. Furthermore, the need of organization and the approval of it become daily more and more pronounced. Individuals contribute with increasing generosity to organizations, and refer to them the applications for relief which they meet. A sense of responsibility toward the poor will be found in the parish, the city as such, the diocese, and the religious community whether of men or of women, and each accordingly engage in relief work. In our greater cities a tendency is found to establish central offices through which all Catholic charities may be co-

ordinated. A similar movement toward co-ordination of diocesan charities is also found. General meetings of charitable organizations of all kinds for purposes of discussion and improvement of methods occur with increasing frequency. Finally, there are organizations which undertake particular works and gradually expand activity until they include representation from a large number of cities and states in their organization.

The combination of all Catholic charities in the United States into one vast national conference has just been begun under the name "The National Conference of Catholic Charities". The aims of the Conference, much like those of all similar charitable organizations, are the following: (1) to bring about exchange of views among experienced Catholic men and women who are active in the work of charity; (2) to collect and publish information concerning organization, problems, and results in Catholic charity; (3) to bring to expression a general policy toward distinctive modern questions in relief and prevention and towards methods and tendencies in them; (4) to encourage further development of a literature in which the religious and social ideals of charity shall find dignified expression. Relief problems will differ somewhat with the locality and with the character of those in need. This is particularly the case in the United States where city population is so heterogeneous. It is necessary, therefore, to confine this description to typical methods, excluding those peculiar to any locality. Furthermore, no attempt is made to indicate quantities in relief work or extent in organization. The methods described are the methods actually found in Catholic circles, which are to a large extent like those followed in organized charity generally, but differ in motive and spirit and the degree in which certain principles are followed or certain factors emphasized.

Information concerning the needs of the poor reaches the organization through many channels. Application may be made directly by those in want. Members of an organization while working among the poor whom they know are constantly discovering new cases. Other charitable organizations, whether secular or religious, will usually notify a Catholic society when they discover Catholics in want. Teaching sisters in parochial schools are frequently able to render most efficient service through the knowledge which they obtain of the needs of poor families. Policemen report cases of which they learn. The ministrations of the parish priest among the poor, and the prompt instinctive turning of these to the priest when distress comes, enable the latter to place information concerning every conceivable plight of the needy in the hands of the charitable organization. We thus find a fairly complete network of factors through which relief agencies are enabled to obtain early knowledge and give prompt assistance. No doubt the tendency in many poor families to hide their suffering and bear privation in silence baffles the watchfulness of all agencies, but on the whole these factors in the work of relief are extremely helpful.

Once it is discovered that relief is needed an experienced member of an organization is directed to take charge of the case immediately. If an emergency is found immediate relief is given without question, otherwise such inquiry is instituted as will bring out the cause of the distress together with the kind and degree of relief needed. Relatives are sought out if there are any in position to take care of the case, former employers or even friends who might be willing to assist are looked for, and appeal is made to them. If there are no such relations discovered, the charitable organization assumes charge of the case and accepts full responsibility for it. From that moment, personal attention and service will be given

to the family or individual as long as may be needed. Spirit and practice in Catholic circles strongly favour most delicate regard for the feelings and privacy of the poor. In fact, organizations usually make provision for exceptional cases by placing funds at the disposal of the priests or some officer of the society, no account of which will be rendered even to the organization itself. No knowledge of the names of those relieved or of the nature of their need is given even to any officer in the organization.

The result of an inquiry into the condition of a family, full account of the relief given, and all the salient facts in the condition and history of the family or individual are made a matter of record in the minutes of the society's meetings. These minutes are accessible to the members of the organization and to no one else unless definite necessity require it. The impression that records are a matter of indifference in Catholic circles is to some extent inexact. The card index method with its elaborate details is not used as widely as in other circles, but substantial records found in the minutes, supplemented by definite personal knowledge of the poor, serve practically every purpose at which any matter of record-keeping can aim. Cases are thoroughly discussed in the regular meetings of the charitable society. Reports are made by those in charge and judgment in governing a case is based on thorough but confidential discussion. Every stage of relief-giving is made a matter of direct personal concern to a member of the society, who looks upon his work as an organic part of his religious activity. This service of the poor is associated with the work of prayer and fasting in the religious life of an individual. The bond of spiritual union in charity, which results from this commonly shared estimate of its spiritual character, paves the way for a certain degree of co-ordination which adds greatly to the efficiency of Catholic charities.

We may take for illustration an average poor family and study the process of relieving it. If housing conditions are bad, they are corrected, or a new house found. If the neighbourhood contains elements of moral danger, the family is moved to a new environment in another section of the city as a first step in its reconstruction. If housing conditions are satisfactory and the family is unable to pay rent, provision is made for it. The resources of the family are studied, and for members who are capable of wage-earning activity, employment is unfailingly found. This constitutes one of the most important and helpful features of relief work. If the mother is compelled to labour, provision is made for the care of her young children, as described below. If conditions do not warrant the mother in working, she is kept at home to care for her family and provision is made for her support. The family may be able to earn part but not all of the income needed, or it may need complete relief temporarily. Whatever the condition, effort is made to adjust the kind and degree of relief to the needs and outlook of the family. At all times the primary aim is to draw out their resources, to do nothing which will stifle them, but to do everything which will lead the family to believe in itself and effect its own salvation.

The standard of adequate relief cannot be a universally determined quantity. The judgment of those in immediate charge of the case is usually accepted as final, under the general policy of not doing too much nor quite all that may be needed. The family is made to realize that self-help is in all cases better than relief from outside. The relief needed may be given in money to be expended by the family or in tickets on which are described the items and the quantities to be obtained. These tickets are presented to a selected retailer or to the storekeeper of the organization itself when the latter keeps stand-

ard supplies. We find many charitable associations which make a specialty of furnishing one particular kind of relief. Thus, for instance, one society may provide shoes and books for school children; another, outfits for newly-born infants or for First Communion children; another assumes the rôle of Santa Claus and makes provision to answer the hopeful letters which the children of the poor write asking for Christmas gifts. Certain organizations, like sewing circles, will meet regularly throughout the year or during a given period to make garments for later distribution. An interesting modification in relief work which is the outgrowth of the beautiful Christmas sentiment is found in the practice of furnishing well-supplied baskets of provisions for Christmas dinners. This practice is rapidly assuming large proportions, and appears to have a high educational value. Many who appear indifferent to the needs of the poor are won over to an interest in them by the spirit of Christmas giving, and numbers remain faithful contributors to charity work from that time on.

If the resources of a family are temporarily suspended, a loan rather than formal charity may be needed, or redemption from the bondage of the loan shark. In such cases the required loan is found, the loan shark forcefully dealt with, or his claims taken and carried by the charitable society. The high sense of honour frequently found among the poor in repaying such loans or even money given in charity is worthy of mention. If the family has need of legal assistance as may occur in cases of wife-desertion, non-support, cruelty, or injustice, the need is met by attorneys who are active members of a charitable organization, or by legal aid societies made up of attorneys united for the purpose of giving legal aid to the poor. If the family has sufficient income to meet its wants and its plight is due rather to mismanagement than to need, efforts are made to give assistance in the management of things. Small debts are gathered up into one sum, the time and manner of paying them are agreed upon and followed out, the purchase of necessities is studied by the friendly visitor and the mother or father, with a view to intelligent economy and protection against fraud. The most intimate details in household management are regulated. If the father has carried insurance and is then unable to pay his dues, the society makes the payments. Such services make up the work of the friendly visitor. The aim is to bring to the family the services of a real and helpful friend rendered in a natural and friendly spirit, thus introducing into the family circle the strength, intelligence, and moral support that come into normal lives through normal friendships. If the mother is a poor housekeeper, she is instructed; if she lacks intelligence in training her children, assistance is offered. There is no difficulty or defect in the whole economy of the home to which the friendly visitor will not direct attention in the hope of awakening the latent intelligence and resources of the little group.

Though every poor family must be looked upon individually and should be relieved according to its individual constitution, the presence of large numbers of poor families subjected to practically the same environment and manifesting typical forms of weakness and inefficiency will present conditions which may be best dealt with collectively. The following are typical methods of collective relief: When a number of poor mothers are compelled to work, provision for the care of their young children is made in what is known as the day nursery. A central house is rented or purchased, where the mothers bring their children in the morning, and call for them after the day's work is done. The day nursery may be in charge of either religious or lay women. The children are taught, amused, fed, and clothed. The mothers are instructed as to the care of their children when

occasion arises. In some cases a nominal charge of five or ten cents per day is made; in other cases there is no charge whatever. The policy is determined not from the standpoint of revenue but from that of sustaining the self-respect of the family and hindering possible abuses of the generosity of the organization. A second form of collective service is found in what is known as the social settlement. The charitable society selects a house in a poor neighbourhood and makes it a centre of social activities for the poor families about it. Hither come mothers for their club meetings, instruction in sewing, house-keeping, and care of children; boys and girls, for their club meetings, play, or evening study. Old and young find an adequate library where the whole range of their approved tastes in reading may be satisfied. At such times and in such manner as suit conditions instruction is given in religion, the elements of character, and simpler trades; particular attention is directed to the work of teaching girls to make their own clothes. The social settlement furnishes for the poor as wide a range of opportunity for inspiration and self-development as the wealthy find in their clubs.

Collective relief is found also in what is known as Fresh Air Work. A home is provided in the country to which the children of the poor are taken in relatively large numbers and remain from seven to fourteen days. A well-balanced diet is given to them during their stay, and their physical condition, moral, and spiritual needs are looked into. When the fresh air home is completely equipped, all physical defects are carefully noted and cases requiring attention are referred to charitable organizations for attention after the child's return home. These homes are under the direction of either religious or lay women. A modification of this work is found in the single day excursions which are provided at frequent intervals during the summer for the children of the poor and for children in institutions. Another form of collective service is that of encouraging thrift. The typical method of doing this is to send collectors among the poor who gather their nickels and dimes which would otherwise be wasted, giving in return some form of receipt such as a stamp pasted into a book used for the purpose. The money thus collected is held to the credit of the saver and is returnable on demand. In this way, families very frequently save sufficient during the summer to make provision for times of idleness or for the severer demands of the winter.

The care of the sick poor in their homes is a matter of supreme concern. Aside from the service rendered by the friendly visitor whose function extends to all the members of the family, whatever their condition, there are communities of sisters and associations of lay women which aim to nurse the sick and supply medicine, food, and clothing without remuneration of any kind. Physicians are found in fair numbers among our charitable organizations, and their services are uniformly given in the work. Religious communities thus engaged make no distinction as to creed or colour. The associations aim to supply definite needs of the sick poor. If a change of climate is required for an individual, the means and directions necessary are forthcoming; if tubercular patients require a special diet or delicate infants need a certified milk, provision is made; surgical appliances, artificial limbs, crutches, etc. are supplied whenever called for. Provision for the decent burial of the poor is found in practically all Catholic charitable organizations; traditionally, the cemetery corporations furnish lots without expense. The hospital dispensary which is found widely among Catholic hospitals provides the services of physicians in special, as well as in general, practice for every type of ailment which may be brought to notice and furnishes

medicines. All types of religious communities, except those cloistered, perform every variety of service for the sick poor as conditions invite and circumstances permit. The activities of sisters in every form of relief work concurrently with those of lay organizations merit notice for their efficiency as well as their extent. Thus, for instance, a community of sisters engaged in hospital work will carry on systematically the work of giving relief to poor families, friendly visiting, conducting sewing circles, instructing children, feeding destitute adults under certain conditions, finding employment, and making provision which the exigencies of illness may require.

Hospitals furnish free wards for the poor whether adults or children. Convalescent Homes make provision for the sick poor who are necessarily dismissed from hospitals before their final recovery from illness or operations. Separate homes are found for chronic and incurable cases such as those afflicted with cancer or tuberculosis. Homes for those temporarily out of employment, homes for working girls where food and lodging are obtained at a cost proportionate to income, homes for newsboys, shelters for homeless children, and industrial schools where the children of the poor may learn trades, are also found. The lay charitable organizations include in their range of normal activities the visitation of inmates in such institutions and very frequently assistance of a most valuable kind is rendered. Visitors go to these institutions for the purpose of chatting with inmates and cheering the lonely monotony which tends to develop in spite of the best will and most careful management. Reading matter is brought and the homely comfort that may be found in a piece of fancy work or supply of chewing tobacco is not deemed unworthy of the visitor's attention. We find lay men and women constituting boards of directors to act in conjunction with the management of institutions and acting on auxiliary boards for the more remote but equally necessary purpose of raising money or furthering the interests of the institutions with the public. For instance, ladies auxiliary work in conjunction with hospitals, Good Shepherd Homes, or orphan asylums, and raise money or provide linens of all kinds which are needed in the normal work of such institutions. The "linen shower" is a picturesque illustration of this method of work. Annual social events of one kind or another are inaugurated for the purposes of directing attention of the public toward institutions and to raise money for their general work. The tendency is marked to forget differences of creed in these larger events. One finds Catholics and non-Catholics working side by side in the spirit of a common purpose. Seminarians will at some time form organizations whose members devote one afternoon a week to the visiting of these institutions, doing the work of the friendly visitors or good samaritans in the spirit of Christian friendship.

Various types of child life in our large cities present extremely distressing problems to the charitable society. Newsboys, half-orphans, friendless children, who are entirely neglected by their parents and wander away from home, are found in distressingly large numbers in our great cities. All such types are kept in mind and either lay or religious associations aim to discover them and to provide temporary or permanent homes for them. Usually those working in this manner act as employment agencies, and endeavour to find work for the children if they are of legal age, or to restore them to their homes and obtain for them the attention and provision to which they have a natural right. When a boy leaves an industrial school the authorities will find board and lodging without cost to him until he secures work. When work is found a representative of the school selects a safe boarding place for the boy, encourages him to save his money, and keeps in touch

with him either personally or by correspondence as long as there is need.

Homes for the aged under the care of sisters are numerous, though Catholics are, of course, often found in public poor-houses. The visitation of inmates of all such institutions is well-organized. Homes are found for friendless women of good character and destitute mothers with infants, where protection may be had until employment is found or provision made for whatever relief the circumstances demand. Lodging and food are furnished for friendless and destitute men during periods of enforced idleness. This is done entirely without cost or possibly on the payment of a nominal charge of ten or fifteen cents per day. Lodging-houses in the large cities contain vast numbers of men of every kind and character. The danger in these places is more or less great because of their tendency to develop an atmosphere of vulgar abandon. In the largest cities Catholic charitable societies provide halls and offer weekly entertainments exclusively to this type of friendless men. Volunteers are found who furnish musical or literary entertainment, and all are encouraged to sing. Lectures are given, usually by a priest on some moral or spiritual topic. Appeal is made gently but strongly to the better element of these homeless and friendless men, with the result that in large numbers they reform and return home or feel a renewal of spiritual vigour and helpfulness. Much temperance work is done among them, with results which are encouraging in the extreme.

A notably large percentage of delinquents come from among the poor, hence the normal range of activity of Catholic charitable organizations extends to those upon whom the hand of the law has descended. The work of rescuing fallen women is notably well developed through the activity of religious. Little girls in danger of moral perversion are received by such homes where they have opportunity to learn a trade and arrive safely at maturity. Youthful offenders who come within the jurisdiction of the Juvenile Court are committed to reformatories or industrial schools or placed on probation. Catholic charitable societies and individual Catholics are active in co-operating with the probation feature of the court. Sometimes an association pays the salary of a Catholic probation officer who will be recognized by the court, or Catholics in a position to do so offer their services as volunteer probation officers without compensation. The organization of Catholics thus engaged is now under way in the formation of Catholic Probation Leagues. This service is rendered by both men and women. Associations provide truant officers whose duty is to follow up cases of truancy in parochial schools and report on them. The work of the big brother, in which an adult takes personal charge of a juvenile delinquent or of a poor boy and establishes informal friendly relations with him, is taking on hopeful proportions. The visiting of prisoners plays a considerable part in the life of nearly all important Catholic charitable societies. The visitors call in a friendly way, encourage the prisoners to take hopeful outlook, induce them to resume correspondence with their families, and lead them to the promise of amended life which in many cases effects striking reforms. Reform schools for boys and girls are regularly visited in the same manner.

Practically all activity related to the care of defectives is concentrated in institutions. Provision for the deaf and dumb, blind, insane, epileptic, feeble-minded, and crippled is made by religious communities to such an extent as resources permit. The interests of dependents, defectives, and delinquents of the Catholic Faith who are inmates of public institutions are provided for in a general way by the public policy found throughout the United States. There are State Boards of Charity under whose

Poor, LITTLE SISTERS OF THE, an active, unenclosed religious congregation founded at St Servan, Brittany, 1839, through the instrumentality of Abbé Augustin Marie Le Pailleur. To two of his penitents, in whom he discerned an unusual aptitude for spiritual things, he had given a rule of life, and had placed one of them, Marie Jamet, in the position of superior to her companion, Virginie Trédaniel. These young workwomen, at the instance of their director, added to their daily duties the personal care and support of a poor blind woman. While in search of a lodging for this aged woman the Abbé Le Pailleur formed the acquaintance of Jeanne Jugan, who was born at Cancale, 15 May, 1793. She was soon eager to share in the charitable work, and on 15 October, 1840, Marie Jamet and Virginie Trédaniel, with their charge, went to live in her house. The three young women went out daily to their work, bringing home their earnings for their common support and that of the blind woman. In course of time they were joined by Madeleine Bourges and gave shelter to other helpless old people. The zeal displayed by Jeanne Jugan in securing the means to support those in their care has caused her to be regarded as the real foundress of the order.

The congregation is included in the class of hospitaliers. Its constitutions are based on the Rule of St. Augustine, and the sisters take simple and perpetual vows of poverty, chastity, and obedience, to which they add a fourth, hospitality. They receive into their houses aged men and women who have no other shelter. Sixty is the youngest age at which they are admitted, after which they are members of what is known as the "Little Family", the superior being called by all the "Good Mother". To the best of

their ability they assist the sisters in the work of the home. For the support of their foundation the sisters are dependent absolutely on charity, having no fixed income or endowments, and most of what they receive they procure by begging. The constitution was definitively approved by Pius X, 7 May, 1907. The mother-house and novitiate are at La Tour St Joseph, St. Pern, Ile-et-Vilaine, France; there are also novitiates in Italy, Spain, Belgium, and the United States. The total number of foundations (1911) is 307; in France there are more than 100 houses, seven of them being in Paris; there are thirty in England, fifteen in Belgium, fifty-two in Spain, sixteen in Italy, four in Sicily, forty-nine in America, three in Australia, one in New Zealand, one in New Caledonia, etc. The order numbers more than 5400 members. On 19 January, 1911, the sisters in charge of the refuge of Campolide, Lisbon, where they cared for 329 inmates, were ordered to leave, their places to be supplied by lay attendants. In Rome the sisters have a house near S. Pietro in Vincoli. In Kimberley, South Africa, they are known as Sisters of Nazareth.

BLANCHE M. KELLY.

Poor Brothers of St. Francis Seraphicus, a congregation of lay brothers of the Third Order of St. Francis, instituted for charitable work among orphan boys and for educating the youth of the poorer classes. The founder was Philip Hoefer, b. at Obersthöhe, near Cologne, Germany, 1816; a schoolmaster at

Breidt and Aachen. Through the influence of Mother Frances Schervier, foundress of the Little Sisters of the Poor of St. Francis, Hoefer, at Christmas, 1857, dedicated himself with four others to the service of God and of the abandoned men. In 1860 the Brothers obtained a home at Aachen. In the following year (5 Jan.) Cardinal Geissel, Archbishop of Cologne, approved the new congregation. When Hoefer died in 1864, it had twenty-six members and some postulants. In 1869 the institution received a Catholic orphanage at Moabit, Berlin, and since 1866 it has spread in the United States (Teutopolis, Illinois; Detroit, Michigan; Thenville, Kentucky; and Cincinnati, Ohio). Although in the Austro-Prussian war, 1866, and in the Franco-Prussian war, 1870-71, the Poor Brothers were helpful in the field hospitals, the Prussian *Kulturkampf* did not spare them; in 1876-77 they had to give up all their houses in Prussia. They retired to Blyerheide on the Dutch frontier, where the new mother-house was erected. After 1888 the Brothers were allowed to return to Prussia, and different houses were founded; Hohenhof in Upper Silesia, 1891; Dormagen on the Rhine, 1902, etc.; in Belgium at Voelkerich, 1900; in Holland at Roermond, 1903. In the United States the Poor Brothers possess a house of education at Mt. Alverno near Cincinnati; and St. Vincent's in Cincinnati. In 1907 the members of the Congregation were 230, of whom 50 were in the United States. The constitutions of the Poor Brothers were approved by Pius X in 1910.

LIVARIUS OLIGER.

Poor Catholics (*Pauperes Catholici*), a religious mendicant order, organized in 1208, to reunite the Waldenses with the Church and combat the current heresies, especially the Albigensian. The recruits were taken from the "*Pauperos Lugdunenses*" (original name of the Waldenses); however, to distinguish them from the latter, Innocent III gave them the name of "*Pauperes Catholici*".

The heretical movement of the Albigenses had taken such enormous proportions in the beginning of the thirteenth century that they were justly called by Innocent III a greater peril to the Church than the Saracens. Their doctrine was dualistic. They believed and taught that the visible and invisible world emanated from two separate and distinct, coeternal principles, one essentially bad, which created the material world, and the other essentially good, author of the spiritual world. This doctrine led logically to the renunciation of all things material. Hence they rejected marriage, the use of animal food, hell, purgatory etc., and advocated a life of self-denial and renunciation of all material pleasures. The systematic teaching of these doctrines, as well as the abstemious life of the sectaries, rapidly influenced the richer classes, especially the nobility, of whom it is said that they preferred sending their children for education to the heretics rather than to Catholic schools. The Waldenses, on the other hand, formed a religious, social movement among the common people, who had become dissatisfied with their economic and social conditions and estranged from religion on account of the scandalous neglect of the clergy. The latter, unfortunately, took more interest in the administration of their temporal affairs than in administering to the spiritual needs of the faithful. Innocent III complains bitterly, in a letter to the bishops, saying that the people are hungry for the Bread of Life, but that there is no one to break it for them. Public preaching, exclusively in the hands of the bishops, had become a rare event.

The result was that the common people, who needed spiritual help in a time of religious and social disturbance, looked for religious support elsewhere. They

began to study the Sacred Scriptures and, not having the proper religious guidance, soon regarded them as their sole authority. They practised religion according to their conception of the Gospel and preached the same openly to their fellow-men, believing this to be in conformity with the teaching of Christ. Still, they tried to live up to the laws and regulations of the Church but, being told by the pope to stop preaching until they had conferred with the proper authorities, they disobeyed, continuing to preach as usual, attacking the scandalous life of the clergy, and finally becoming antagonistic to the Church itself. Although at war with the Church, they vigorously fought its most dangerous enemy, the Albigenses, whom they regarded in the beginning as equally dangerous to themselves. The position of the Church was critical, yet not hopeless. Having thus far failed in its attempts to suppress the heresy, on account of the inadequate methods of its missionaries, it now adopted a new method, which consisted in meeting the enemy with its own weapons: fearlessly preaching the word of God and leading a life of resignation and evangelical poverty. Those who already practised this life were, of course, considered the fittest men for this work. The Church saw that the Waldenses, who constituted the masses, were gradually drifting away. Its plan was to bring these still harmless but zealous workers back to the fold in reorganizing them according to their former practice of studying the Sacred Scriptures, preaching the word of God, and following the rule of absolute poverty and resignation. Once reunited, they would then form a phalanx of energetic soldiers fit to oppose the Albigenses.

Through the missionary activities of Bishop Diego of Osma and St. Dominic, a small group of Waldenses, under the leadership of Duran of Huesca (Spain), was won back to the Church during a religious discussion at a meeting held at Pamiers (France) towards the end of 1207. These new converts, desirous of continuing their religious activity, went the same year to Rome, where they were welcomed by Innocent III. Anxious to realize his plan, the pope gave the young band, seven in number, a constitution by which they could retain their former rule of life, and which pointed out to them a definite plan they were to follow in preaching against the Albigenses. Aside from this they had to make a profession of faith which represented the doctrine of the Church relative to all current heresies, and which was intended, not only to free their minds from all heretical tendencies and subject them to the authority of the Church, but also to offer them a guide according to which they could enter upon their missionary activities with a series of formulated truths giving them a clear outline of their faith and absolute certainty in their work. After having promised allegiance to the pope and the doctrines of the Church, they entered upon their mission in the beginning of 1208. Innocent III recommended them to the bishops of Southern France and Spain. They seemed to be successful, for we soon find them busy, not only through Southern France, but even as far as Milan, where they founded a school in 1209 to gather and educate recruits for their order. Three years later, 1212, a group of penitents placed themselves under their spiritual direction. Within four years of their foundation they extended their activities over the Dioceses of Béziers, Uzès, Nîmes, Carcassonne, Narbonne, Taragon, Marseilles, Barcelona, Huesca, and Milan.

However, in spite of their apparent success, the undertaking of the Poor Catholics was doomed from the beginning. They became a victim of the unfavourable conditions under which they originated. After 1212 they began to disintegrate. Innocent III stood by them for four years, making concession after concession, repeatedly urging the bishops to support them, recommending them to the King of Taragon; he even went so far as to exempt them from taking

the oath of allegiance, as this was contrary to the teachings of the Waldenses, and finally placed them under the protectorate of St. Peter, but all in vain. They did not show any positive results and, for this reason, the pope abandoned them in 1212 and gave his attention to the Preaching Friars of St. Dominic and the Friars Minor of St. Francis, whose labours promised better results. In 1237 Gregory IX requested the provincial of the Preaching Friars to visit the provinces of Narbonne and Taragon and compel the Poor Catholics to adopt one of the approved rules, which, if we consider the similarity of purpose, justifies the supposition that the Poor Catholics in these provinces were affiliated with the friars. In Milan we find them till 1256 when, by a Decree of Innocent IV, they were united with the Augustinian Hermits.

The principal causes of their failure were the organization adopted from the Waldenses, and the object of their foundation. The whole enterprise was looked upon as an innovation contrary to all established rights and privileges of the clergy, and naturally called forth a severe opposition by these. Their chief occupation remained, as it was before their reconciliation, the preaching of the word of God directed against the heretics. To be successful in realizing his plan Innocent III placed himself as sole director at the head of the organization, thus replacing the *majoralis*, leader of the Waldenses. He gave them the name of "Pauperes Catholici", to show that they practised poverty in common with the "Pauperes Lugdunenses" but were separated from them in enjoying the benefits and sympathy of the Church. The division into "perfecti" and "credentes" remained the same, only the names were changed into "fratres" and "amici". In their activity the Waldenses were divided into three classes: the "sandaliati", who had received sacred orders and the especial office to confute the heresiarchs; the "doctores", who had charge of the instructing and training of the missionaries; and the "novellani", whose chief work consisted in preaching to the common people. The work of the Poor Catholics had the same division; however, the names "sandaliati", "doctores" and "novellani" were changed into "doctiores", "honestiores", and "idonei". The habit, a light gray, remained unchanged, except the buckles on the sandals, by which the Waldenses were known as heretics. Manual labour was forbidden as before. The only means of support were the daily offerings of the faithful. It was thought that, by giving the Poor Catholics this organization, the Waldenses could be won back easily to the Church. However, the danger existed that, with their former customs and habits, they would also retain their heretical tendencies. This proved only too true and gave rise to frequent complaints by the bishops. The fact, however, that simple laymen, although they had received the tonsure and were regarded as clerics, publicly preached the doctrine of the Church, and this under the protection of the supreme pontiff himself, was unheard of and looked upon as a usurpation of episcopal powers and rights and, naturally, occasioned severe opposition on the part of the higher clergy. The latter even went so far it seems as to curtail the offerings of the faithful, the only support of the Poor Catholics. Under these conditions it was impossible for them to prosper. Still, the great work of reformation was begun and, although they were sacrificed by introducing it, it was continued and successfully carried out by the Preaching Friars and the Friars Minor.

RECONCILED LOMBARDS.—An article on Poor Catholics would be incomplete without some account of the Reconciled Lombards. Peter Waldes had not confined his teaching to Lyons alone, where he set the Waldensian movement on foot. When he was expelled from that city, he decided to go to Rome and make a personal plea for his cause to the

pope. Going through Lombardy, he propagated his ideas. The lay people readily accepted his views on religion and formed an economic, religious body known by the name of Humiliates (*humiliati*). Some of them appeared in Rome with him the following year, 1179, and asked Alexander III to sanction their rule or form of life, which consisted in leading a religious life in their separate homes, abstaining from the oath, and defending the Catholic doctrine by public preaching. The pope granted them permission to lead a religious life in their homes, but forbade them to preach. Unmindful of the pontiff's answer and continuing their former life, they were excommunicated by Lucius III about the year 1184. In this state they remained until 1201, when, upon presentation of their constitution, Innocent III reconciled them with the Church, and reorganized them in conformity with their economic and religious customs, also approving of the name "Humiliati". This brought most of them back to the Church; but a number persevered in the heresy and continued their former life under the direction of the Poor of Lyons, with whom they were naturally affiliated. Economic and religious difficulties, however, aggravated long-felt dissensions between the two groups and, in 1205, these non-reconciled Humiliates separated from the Lyonesse and formed a distinct group, adopting the name of Poor Lombards, "Pauperes Lombardi".

In order to bring the Poor Lombards back to the Church, Innocent III founded and organized in 1210 the order of the Reconciled Lombards, under the immediate supervision of the supreme pontiff. The recruits were taken from the ranks of the Poor Lombards. Their first superior was Bernard Primus, a former Lombard leader, who, with a few followers, had given the impetus for the foundation of the order by presenting a rule of life to the pope. Innocent III did not entrust the reconciliation of the Poor Lombards to the Poor Catholics on account of their divergent views on the subject of labour. The latter had abolished all manual labour for the missionaries. The Lombards and the Humiliates, on the contrary, gave manual labour the first place. Every member, irrespective of position or talent, had to learn a trade in order to make his living. This predominance of manual labour we also find a deciding factor in the reorganization of the Reconciled Lombards. Two years later, however, Innocent III gave them a new constitution, in which he retained manual labour for all the members of the order, but declared it only of secondary value for the missionaries or friars to whom he assigned the study of Holy Scripture and preaching as main occupation. He also makes a more definite division of the members into three classes, or orders, comprising respectively the missionaries or friars, the women who took the vows, and the married people. The object of this second constitution was to bring order into the chaos of social and religious agitation among the different classes of members and, at the same time, to bring the better elements to the front to train them for missionary work against the Cathari. The Reconciled Lombards, like the Poor Catholics, did not meet with the expectations of the Roman Curia; both failed for the same reasons. They succumbed in preparing and initiating the great work of reform so successfully carried out by the Dominicans and Franciscans.

J. B. PIERRON.

Poor Child Jesus, SISTERS OF THE, a congregation founded at Aachen in 1844 for the support and education of poor, orphan, and destitute children, especially girls; approved by Pius IX in 1862 and 1869, and by Leo XIII in 1881 and 1888. Clara Fey, Leocadia Startz, Wilhelmina Istas, and Aloysia Vossen were at school together at Aachen; they were the co-foundresses of the congregation. The home of Clara Fey was a rendezvous for priests and earnest-minded laity for the discussion of religious and social questions. In February, 1837, Clara and some companions rented a house, gathered together some children, fed, clothed, and taught them. Soon the old Dominican convent was secured and, with other houses, opened as schools. After seven years of rapid progress the four foundresses entered upon community life 2 Feb., 1844, under the rule and direction of Clara Fey (b. 11 April, 1815; d. 8 May, 1894). Fifty children were housed with the community, and several hundreds attended the day schools. In 1845 Card. Geissel of Cologne approved the rules and obtained recognition from the Holy See, whilst the Prussian Government also authorized the foundation. An old convent in Jakobstrasse became the first mother-house of the new order. The growth was rapid, and in quick succession houses were opened at Bonn, Derendorf, Düsseldorf, Neuss, Cologne, Coblenz, Landstuhl, Luxemburg, Stolberg, and Vienna.

The need of providing funds for the original work of rescue, as well as the entreaties of bishops, led to other activities being undertaken, e. g. high schools for girls, training of domestics, homes for girls in business, modelling of wax figures for statues, and notably church embroidery. For the latter, designs were furnished by Pugin at the instance of Mrs. Edgar, an English resident at Aachen, and the exquisite needle-painting of the sisters became famed throughout Germany and the neighbouring countries. The house at Burtscheid (Aachen) became, and still remains, the German secretariate of the society of the Holy Childhood. In twenty years the number of houses had grown to twenty-five, with 450 sisters. Invaluable advice and assistance were afforded the order by Bishop Laurent, Vicar Apostolic of Luxemburg, and by Pastor Sartorius of Aachen, who with Father Andreas Fey, a brother of Clara, acted as spiritual director and confessor. After the Franco-Prussian war, the devotion of the sisters in nursing the sick and wounded was rewarded by an autograph letter from the emperor and decorations for many sisters. The influence of the empress delayed the expulsion of the congregation during the Kulturkampf until 1875, when steps were taken to close the houses in Prussia; but not until 1878 was the mother-house at Aachen transferred to Simpelveld, a few miles over the Dutch frontier. There Bishop Laurent, who had resigned his see, took up his residence, and remained as counsellor until his death in 1884. The exiles found refuge in Holland, Bavaria, Belgium, Luxemburg, and Austria. In England a house was established in 1876 at Southam, where an orphanage was immediately opened by the ten exiles who arrived there. This community now numbers over forty sisters with orphanage, day and boarding schools, and a school of embroidery.

The relaxation of the Falk Laws enabled the congregation in 1887 to regain many of its convents. At the present time (1911) the total number of houses is 38, with over 2000 sisters engaged in a variety of charitable and educational occupations, with thousands of children of every class.

The range of work is wide: seminaries for teachers at Maastricht, Ehrenfeld, Brussels; high schools

(boarding and day), Godesberg, Düsseldorf, Vienna, Roermond, Maastricht, Brussels, Borsbeek, Antwerp, Plappeville etc.; domestic training at many houses; embroidery at Simpelveld, Aachen, Brussels, Landstuhl, Southam, Vienna (Döbling); elementary schools and orphanages at most houses. The mother general resides at Simpelveld, the mother-house and chief novitiate, with provincials for Austria and Holland. The constitutions aim at promoting a simplicity of character and joyful spirit in imitation of the Child Jesus born in poverty. The twenty-fifth of each month is a day of special devotion before the Crib, the nineteenth in honour of St. Joseph, the chief patron, Guardian of the Poor Child; and the secondary patron is St. Dominic.

WALTER HÖFLER.

Poor Clares (POOR LADIES, SISTERS OF ST. CLARE), the Second Order of St. Francis. The subject will be treated here under the following heads: I. Beginnings at San Damiano; II. Rule of Ugolino; III. Definitive Rule of St. Clare; IV. Spread of the Order; V. Colettine Reform; VI. In England and America; VII. Mode of Life; VIII. Saints and Blessed of the Order; IX. Present Status.

I. In the great Franciscan movement of the thirteenth century an important part was played by this order of religious women, which had its beginning in the convent of San Damiano, Assisi. When St. Clare (q. v.) in 1212, following the advice of St. Francis (q. v.), withdrew to San Damiano, she was soon surrounded by a number of ladies attracted by the holiness of her life. Among the first to join her were several immediate relatives, including her sister Agnes, her mother, aunt, and niece. Thus was formed the nucleus of the new order. Here St. Clare became the counsellor of St. Francis and after his death remained the supreme exponent of the Franciscan ideal of poverty. "This ideal was the exaltation of the beggar's estate into a condition of spiritual liberty, wherein man would live in conscious dependence upon the providence of God and the good will of his fellow-men" (Cuthbert, "The Life and Legend of the Lady St. Clare", p. 4). At the outset St. Clare received from St. Francis a "formula vitæ" for the growing community. This was not a formal rule, but simply a direction to practise the counsels of the Gospel (Seraphicæ legislationis textus originales, p. 62). "Vivere secundum perfectionem sancti Evangelii" was the keynote of St. Francis's message. On behalf of the sisters, St. Clare petitioned Innocent III for the "privilege" of absolute poverty, not merely for the individual members but for the community as a whole. Highly pleased with the unusual request he granted it, says the saint's biographer, with his own hand "cum hilaritate magna" ("Röm. Quartalschrift", 1902, p. 97; see, however, Robinson, "Life of St. Clare", note 114).

II. In 1217 an event occurred which proved to be of first importance in the development of the new community. In that year Ugolino, Cardinal-Bishop of Ostia, was sent to Tuscany as Apostolic delegate; he formed a warm attachment for St. Francis, and soon became the confidant and adviser of the seraphic doctor in all things relating to the second Order ("Analecta Franciscana", III, p. 686). Concerning the manner of life of the religious who gathered in various places imitating the example of the community at San Damiano we have only the account given by Jacques de Vitry in 1216 and the letters of Ugolino to Honorius III in 1218. The former speaks of women who dwell in hospices in community life and support themselves by their own labour. Ugolino writes that many women have renounced the world and desired to establish monasteries where they would live in total poverty with no possessions except their houses. For

this purpose estates were often donated, but the administration of these presented difficulties. The pope decided that Ugolino should accept these estates in the

ST. CLARE

Fresco by Simone Martini in the lower Church of San Francesco at Assisi

name of the Church and that the houses established thereon should be immediately subject to the pope. About 1219 Ugolino drew up a rule for these groups of women, taking the Rule of St. Benedict as a ground work, with severe regulations having, however, no distinctively Franciscan element in them. His first foundation was the monastery of Monticello near Florence (1219). This rule was soon adopted by the monasteries at Perugia, Siena, Gattajola, and elsewhere. There is no evidence that it was ever accepted at San Damiano. It is noteworthy that it does not raise the question of the ownership of property by the various monasteries. This was a point on which St. Francis and Ugolino did not agree. The subsequent modifications which this rule underwent at the hands of Innocent IV in 1247, and of Urban IV in 1263, resulted in the triumph of Ugolino's view, while St. Francis's ideal of utter poverty found expression in a definitive rule, the confirmation of which St. Clare secured in 1253. The opening words of Ugolino's Rule, "*Regulam beatissimi Benedicti vobis tradimus observandam*", have been taken to indicate that the Poor Clares were an offshoot of the Benedictines. This conclusion, however, is unwarranted. The Lateran Council, a few years earlier, had decreed that new orders should adopt a rule already approved. The new order was not bound to the observance of the older rule, except in regard to the three customary vows. This was Ugolino's intention in drawing up the rule, and it is confirmed by a letter of Innocent IV to Agnes of Bohemia, in which he explains the meaning of the words in question (Sbaralea, I. p. 315).

After the death of St. Francis (1226) and the elevation of Ugolino to the papal chair as Gregory IX (1227), certain changes were introduced in the practical direction of conventual life. The pope offered to bestow possessions on the convent of San Damiano over which St. Clare presided. She firmly refused the offer and petitioned to be permitted to continue in the

spirit of St. Francis. In response to this request, Gregory granted her (17 September, 1228) the "privilege of most high poverty", namely, "*ut recipere possessiones a nullo compelli possitis*". The convents of Perugia and Florence followed the example of San Damiano. Other convents, however, gladly availed themselves of the possessions which the pope offered them, "*propter eventus temporum et pericula seculorum*". Thus were laid the foundation of the two observances which obtain among the daughters of St. Clare. The plea of Agnes of Bohemia for a new rule was rejected by Gregory IX in 1238, and again by Innocent IV in 1243. In 1247 Innocent IV, to secure unity of observance and peace of conscience for the sisters, modified the original rule in two points. In place of the reference to the Rule of St. Benedict he inserted a reference to the Rule of St. Francis, which, in the meantime, had been approved, and he embodied in the rule regulations covering certain changes already introduced in various convents by his predecessor or by himself. Thus, the direction of the communities of the order was placed in the hands of the general and provincial of the Franciscans. The sisters were directed to recite the Divine Office according to the custom of the Friars Minor. The regulations concerning silence and abstinence were modified. The length of novitiate was fixed at one year. The most notable change is to be found in the express permission granted to every convent to hold possessions, for the administration of which a prudent procurator was to be secured by each house. In the year 1263 the original rule underwent a final modification at the hands of Urban IV. On 18 October of that year the sovereign pontiff issued the rule which is in the most general observance among the Poor Clares and which has given the name "Urbanist" to a large division of the order. It is noteworthy that in Urban's Rule the new community received for the first time the official title of

THE SMALL CHOIR OF ST. CLARE IN THE CHURCH OF SAN DAMIANO, ASSISI

"Order of St. Clare". In a few particulars the new regulations were less severe than in the rule of 1247. For instance, the abbess was empowered to dispense with the obligation of silence during certain hours of the day at her good pleasure. The sections of the rule

are arranged in a new order and are divided into twenty-six chapters. For the most part the very words of the previous rule are employed. One important change must be noted. Innocent IV had left the Second Order in charge of the general and provincial of the Friars Minor. Urban IV withdrew from these officials practically all their authority over the Second Order and bestowed it on the cardinal protector.

III. Meanwhile, St. Clare had secured from Innocent IV the confirmation of a new rule differing widely from the original rule drawn up by Ugolino, and modified by his successors on the papal throne. For forty years she had been the living rule from which the community at San Damiano had imbibed the spirit of St. Francis. A few days before her death she placed the convent under a rule which embodied that spirit more perfectly than did Ugolino's Rule. The Bull "Solet annuere", 9 August, 1253, confirming St. Clare's Rule, was directed to the Sisters of San Damiano alone. The new rule was soon adopted by other convents and forms the basis of the second grand division of the Poor Clares. It is an adaptation of the Franciscan Rule to the needs of the Second Order. Its twelve chapters correspond substantially to those of the Franciscan Rule, and in large sections there is a verbal agreement between the two rules. In a few instances it borrows regulations from the original rule and from the modified form of that rule published by Innocent IV. The most important characteristic of St. Clare's Rule is its express declaration that the sisters are to possess no property, either as individuals or as a community. In this regulation the new rule clearly breathes the spirit of the seraphic founder. It is improbable, however, that St. Francis was the author of it or that it was approved by Gregory IX, as is sometimes asserted. With the data obtainable no categorical answer can be given to the question of authorship, though the compiler may well have been St. Clare herself (Lemmens in "Röm. Quartalschr.", I, page 118). The original Bull of Innocent IV confirming the Rule of St. Clare was discovered in 1893 in a mantle of the saint which had been preserved, among other relics, at the monastery of St. Clare at Assisi (Robinson, "Inventarium documentorum", 1908).

IV. While the rule was undergoing these various modifications, the order was rapidly spreading throughout Europe. At San Damiano, St. Clare's sister, Agnes, and her aunt, Buona Guelfuccio (in religion Sister Pacifica), played a large part in its early development. In 1318 permission was obtained from the Bishop of Perugia for the establishment of a monastery in that city. The following year Agnes founded at Florence a community which became the centre of numerous new foundations, namely, those at Venice, Mantua, and Padua. Monasteries of the order were soon to be found at Todi, Volterra, Foligno, and Beziers. St. Clare's niece, Agnes, introduced the new order into Spain. The cities of Barcelona and Burgos became thriving communities. The first foundation in Belgium was effected at Bruges by Sister Ermentrude, who, after the death of St. Clare, displayed great zeal in spreading the order through Belgium and northern France. The earliest community in France, however, was planted at Reims in 1229 at the request of the archbishop of that see. The monasteries at Montpellier, Cahors, Bordeaux, Metz, and Besançon sprang from the house at Reims; and that of Marseilles was founded from Assisi in 1254. The Royal Abbey at Longchamp, which enjoyed the patronage of Bl. Isabel, daughter of Louis VIII and Blanche of Castile, is usually though with some question counted as a branch of the Poor Clares. (See article ISABEL OF FRANCE.) Among the earliest foundations in Germany was that of Strasburg, where Innocent IV's revision of the rule was accepted in 1255. In Bohemia the order had an illustrious patroness, Princess Agnes (Blessed Agnes of Prague), a cousin of St. Elizabeth of

Hungary. Agnes was but one of the ladies of high rank who, attracted to the new order, put aside the vanities of their social position to embrace a life of poverty and seclusion from the world.

V. For a century after the death of St. Clare comparatively few of the convents had adopted the Rule of 1253. Most of them had availed themselves of the permission to hold property in the name of the community. Moreover, in the fourteenth century the order suffered very much during the Great Western Schism, which was responsible for the general decline of discipline (*Manuale Historiæ Ordinis Fratrum Minorum*, p. 586). At the beginning of the fifteenth century, however, the spirit of utter poverty was revived through the instrumentality of St. Colette (d. 1447), who instituted the most vigorous reform the Second Order has ever experienced. Her desire to restore or introduce the practice of absolute poverty was put on a fair way to realization when, in 1406, Benedict XIII appointed her reformer of the whole order and gave her the office of Abbess General over all convents she should establish or reform. In 1412 St. Colette established a monastery at Besançon. Before her death (1447) she had founded 17 new monasteries, to which, in addition to the Rule of St. Clare, she gave constitutions and regulations of her own. These Constitutions of St. Colette were confirmed by Pius II (*Seraphicæ Legislationis Textus Originales*, 99-175). After the death of St. Colette her reform continued to spread and by the end of the fifteenth century reformed convents were to be found throughout France, Flanders, Brabant, Savoy, Spain, and Portugal. The number of sisters at that time exceeded 35,000 and they were everywhere commended by the austerity of their lives (Pidoux, "Sainte Colette", p. 158). From the year 1517 the spiritual direction of the Poor Clares, the Coletines not excepted, was given to the Observants. This was a return to the condition existing before the year 1263, at which time the Friars Minor, under the leadership of St. Bonaventure, at the General Chapter of Pisa sought to resign the spiritual care of the Second Order (*Archivum Franciscanum Historicum*, October, 1910, 66-79). The first quarter of the sixteenth century witnessed a widespread revival of the Urbanist Rule. Towards the end of the same century, though the religious wars had destroyed many monasteries, there were about six hundred houses in existence. Subsequently the order experienced a rapid growth and the external development of the Poor Clares appears to have reached its culmination about 1630 in 925 monasteries with 34,000 sisters under the direction of the minister general. If we can credit contemporary chroniclers, there were still more sisters under the direction of the bishops, making the entire number about 70,000. After the opening years of the eighteenth century the order declined and the French Revolution and the subsequent policy of secularization almost totally destroyed it, except in Spain, where the monasteries were undisturbed.

VI. In 1807 a Poor Clare community of the Urbanist Observance, fleeing from the terrors of the French Revolution, took refuge in England and founded a monastery at Scorton Hall in Yorkshire. They were the first of their order to establish themselves in that country since the religious changes of the sixteenth century. Fifty years after their arrival they removed to their present home, the Monastery of St. Clare at Darlington, also in Yorkshire. Refugees from the French Revolution likewise found their way to America. In 1801 a community, presided over by Abbess Marie de la Marche, purchased property in Georgetown, D. C., and opened a school for their support. Their efforts met with little success and they returned to Europe. The suppression of the religious in Italy was the occasion of the first permanent settlement of the Poor Clares in the United States. In August, 1875, two sisters by blood as well as in religion, Maria Mad-

delena, and Maria Costanza Bentivoglio, from the celebrated Monastery of San Lorenzo-in-Panisperma, came to America by direction of Pius IX in response to a petition presented by Mother Ignatius Hayes of the Third Order Regulars of St. Francis. After vainly seeking to found convents in New York, Cincinnati, and Philadelphia, they went to New Orleans, but soon removed to Cleveland, Ohio, where they were joined by a community of German Poor Clares to whom they relinquished the convent. The new German community remained in Cleveland and have since founded another convent in Chicago; they follow the reform of St. Colette. Meanwhile the Italian sisters found a permanent home in Omaha, thanks to the munificence of Mr. John Creighton. On 14 July, 1882, the canonical enclosure was established in the new monastery. From the monastery of St. Clare in Omaha have sprung directly, or indirectly, the foundations of the order at New Orleans; Evansville, Ind.; Boston; and Borden-town, N. J.

VII. The daily life of the Poor Clares is occupied with both work and prayer. It is a life of penance and contemplation. The rule says that the sisters shall fast at all times except on the Feast of the Nativity. The constitutions explain that meat may not be used even on Christmas. The "great silence" is from Compline until after the conventual Mass. During the day there is one hour of recreation except on Friday. Meals are taken in silence. The Divine Office is recited, not sung. The Franciscan breviary is used. The habit is a loose fitting garment of gray frieze; the cord is of linen rope about one-half inch in thickness having four knots representing the four vows; the sandals are of cloth.

VIII. Among the saints of the order may be mentioned: the founder, Clare of Assisi (d. 1253); Agnes of Assisi (d. 1253); Collette of Corbie (d. 1447); Catharine of Bologna (d. 1463); Veronica Giuliani (d. 1727). Holzappel enumerates seventeen Blessed of the order (*Manuale*, 638), of whom the following are the more important: Agnes of Bohemia (d. 1280); Isabel of France (d. 1270); Margaret Colonna (d. 1284); Cunegundis of Hungary (d. 1292); Antonia of Florence (d. 1472).

IX. According to the census of the Poor Clares, taken in October, 1909, the following is the present status of the order: Italy, Houses 108, Members 1816; Sardinia, H. 3, M. 40; Corsica, H. 1, M. 24; Palestine, H. 2, M. 54; Tyrol, H. 1, M. 50; Dalmatia, H. 1, M. 15; Prussia, H. 4, M. 126; Bavaria, H. 3, M. 100; Holland, H. 4, M. 112; Belgium, H. 39, M. 870; Ireland, H. 9, M. 178; England, H. 11, M. 129; France, H. 31, M. 760; Spain, H. 247, M. 5543; Portugal, H. 3, M. 40 (now dispersed); Peru, H. 1, M. 34; Columbia, H. 5, M. 136; Ecuador, H. 5, M. 155; Bolivia, H. 2, M. 36; Argentina, H. 1, M. 36; Brazil, H. 2, M. 3(?) ; Mexico, H. 14, M. 204; Canada, H. 1, M. 20; United States, H. 7, M. 125; Total H. 505, M. 10,586.

EDWIN V. O'HARA.

Poor Handmaids of Jesus Christ, a community founded by Catherine Kasper, a native of Dernbach, Germany. She was born 26 May, 1820, of humble parents, and at an early age resolved to consecrate her life to God. She was animated with the spirit of Mary and the activity of Martha and wished to combine the contemplative and the active life in the service of her Master. She and two companions took vows and professed themselves Poor Handmaids of Jesus Christ, on 15 August, 1851. Sister Mary (Catherine Kasper) was chosen mother-general of the newly founded community and continued as such until her death, 2 Feb., 1898, when the community had branches throughout Germany, Austria, England, Holland, and North America.

Mother Mary Kasper had at first simply desired that her community be devoted to the sick and needy and especially the orphan; but it soon engaged in the work of teaching and began to conduct in Germany parochial schools, academies, boarding schools, kindergartens, and industrial schools. The *Kulturkampf* compelled the sisters to abandon their parochial schools, but they continued the other works of charity. The constitution of the community was temporarily approved by Pius IX in 1870 and finally confirmed by Leo XIII.

Through Bishop Luers and Rev. Edward Koenig, pastor of St. Paul's Church at Fort Wayne, the community began to labour at Hesse Cassel in the Diocese of Fort Wayne on 3 August, 1863. From this place three sisters were called to Chicago in 1869 by the Very Rev. Peter Fischer, vicar general, to take charge of the German orphan asylum, which opened with twelve children, but now shelters more than six hundred orphans. On 9 May, 1869, the Rockhill property at Fort Wayne was purchased and converted into a hospital. To this was added a convent and chapel in 1883 at a cost of \$32,000. The convent is the provincial mother-house of the community in America.

The first parochial school conducted by the sisterhood in this country was St. Paul's in Fort Wayne, of which they took charge on 6 October, 1869. Now the community is represented in the Dioceses of Fort Wayne, Belleville, Alton, Superior, and in the Archdioceses of St. Paul, Chicago, Philadelphia, and St. Louis. The sisters are engaged in teaching, and nursing the sick in hospitals and private homes. Of the 3500 members which the community now numbers, 500 labour in the United States.

MOTHER M. SECUNDA.

Poor Laws are those legal enactments which have been made at various periods of the world's history in many countries for the relief of various forms of distress and sickness prevailing amongst the destitute. In England this is not strictly accurate, as certain laws have been enacted for the special benefit of the poor, which have not been classified as poor laws, in order to avoid classifying the recipients of relief as paupers, a name much disliked amongst the poor. A person of seventy years of age in receipt of relief from the guardians of the poor would be classed a pauper, but if the relief were granted under the Old Age Pension Act such would not be the case, as the grant would be made up, to a large extent, from imperial taxation instead of local rates and the guardians of the poor would have no control over its distribution.

The English poor law system is the most comprehensive and is the result of nearly four centuries of experiment; even now it is receiving the most careful consideration with a view to further legislation in consequence of the report of the Royal Commission on the Poor Laws issued in 1909. This commission sat for three years, held over two hundred meetings, took evidence from over one thousand three hundred witnesses, and the commissioners made upwards of eight hundred personal visits to Unions, meetings of Boards of Guardians, and institutions in England, Scotland, and Ireland. The volume containing the report consists of one thousand two hundred and fifty folio pages, six hundred and forty of which are signed by a majority of fourteen out of eighteen of the commissioners, and over five hundred by a minority of four. The two reports are the subject of much discussion, and rival associations are formed to further their respective recommendations. That more modern European systems can show many points of improvement upon the English system as a whole is obvious.

The system in Denmark is considered by many to be vastly superior to the English system, in that infinite trouble is taken to prevent any person who deserves a better fate from becoming a pauper owing to misfortune, temporary distress, illness, or accident. In England no one would ever think of applying to a poor law officer for advice, or for a loan or gift to help him over evil days, but in Denmark this is often done. At the same time those who receive poor law relief in Denmark are subject to penalties which would not be tolerated in England. In Austria and Russia great interest is taken in homes for the aged poor and the inmates always seem much brighter and happier than the average poor person in an English workhouse. In Belgium there is no poor rate, but large endowments exist. In France there are *hospices civils* for indoor relief, and *bureaux de bienfaisance* for outdoor relief, but the relief of the poor is not compulsory except for foundlings and lunatics. The same may be said of Italy, but the charitable foundations there amount to more than thirty millions sterling. The poor laws of the United States are in many respects like the English poor laws, although not so comprehensive, and they are not universally adopted in all states. Every man is entitled by law to relief from the town of his settlement, the rate being assessed on whole towns and not on parishes. These areas bear the burden of the settled poor; the unsettled poor, including Indians, are a charge upon the state. In New York one year's residence is sufficient to constitute a settlement. In some states outdoor relief is considered more economical than relief in a workhouse. The idle and the vagrant may be committed to the workhouse and forced to labour as in a house of correction. The administration is in the hands of overseers, but the counties elect superintendents, holding office for three years, who are again responsible to a Board of Supervisors. Generally the American system is marked by a high degree of classification, variety of work, special education, and liberal treatment in the matter of diet. In Canada and Australia there are practically no poor laws, but many Catholic charitable institutions exist for dealing with the various forms of destitution and sickness.

The history of the poor laws in England practically had its beginning with the abolition of the monasteries by Henry VIII. A curious act of Edward VI (1551) enacted that everyone should give alms to the collectors on Sundays, and that if any one refused the bishop should admonish him. This form of "moral suasion" was not sufficient for the congregations of the new worship; and a few years later another act directed the bishop to commit those who did not give sufficient alms to the justices, who were to levy on

them whatever rate they thought fair. The establishment of an official poor fund led to the establishment of an official register of the poor; and an early act of Elizabeth caused dwellings to be built, overseers to be appointed and "stuff" to be provided to set the sturdy paupers to work. In 1604 the act of 43 Elizabeth, c. 2, crystallized the whole arrangement, leaving the main administrative power in the hands of parochial authorities, annually appointed. Among other things it provided for setting to work children of parents unable to maintain them; also for setting to work all such persons, married or unmarried, who had no ordinary daily occupation to obtain a living. It provided for the relief of the lame, impotent, and blind, and those poor who were unable to work.

This and other acts were renewed in the reign of James I and made perpetual in the reign of Charles I. Each renewal saw some new development. In the eighteenth century many experimental acts were passed, some of which were completely opposite in policy. In 1772 the workhouse test was introduced and no one who refused to be lodged and kept in such houses was entitled to parochial relief. In 1782 by an act known as Gilbert's Act power was given to adjacent parishes to unite into a union and to build workhouses for combined parishes. Section 29 of this act provided that no person should be sent to the poorhouse except such as were become indigent by old age, sickness, or infirmities, and were unable to acquire a maintenance by their labour, and orphan children. For the able-bodied the guardians were ordered to find suitable employment near their own homes. Poor law expenditure was beginning to grow and by 1785 it amounted to £2,000,000. In 1796 an act (36 Geo. III, c. 23) was passed, repealing an act of 1722 which restricted out-relief. This reversal of policy encouraged out-relief to poor persons in their own homes and the cost of relief rose with frightful rapidity until it reached in 1818 the sum of £7,870,000. This was looked upon as an intolerable burden and many petitions were presented to Parliament for its alleviation.

In 1832 a royal commission was appointed to investigate the working of the poor laws and the report issued by the commissioners in 1834 presents a very unsatisfactory state of things. It was reported that funds collected were applied to purposes opposed to the letter and still more to the spirit of the law, and the morals and welfare of the people were being destroyed. It was found that in many places not only the rates due from the people were being paid from poor funds, but their house rent as well; consequently paupers became a very desirable class of tenant. In many districts it was the custom to make up the earnings of a family to what was considered a living wage, which enabled employers of labour to pay low wages, knowing the earnings would be supplemented from the poor funds. To provide employment in return for relief granted was most unusual and even where any attempt to do so was made, it was of a most unsatisfactory nature. The men were usually paid at a higher rate of wage than the independent labourer and were required to work fewer hours. Wives of independent labourers were often heard regretting that their husbands were not paupers.

The method of collecting rates for the poor fund was found to be as bad as its distribution. No general method existed: sometimes tradespeople would be called upon to pay the rates and in addition compelled to give employment where it was not required; at another time and place farmers would have to bear the burden. An instance is given of a farmer with five hundred acres having to pay ten per cent per acre and to employ four or five more labourers than he required, costing him another £100, to say noth-

ing of the damage done by worthless labour. The evils existing in the workhouses were absence of classification, discipline, and employment, and the extravagance of allowances. Children were herded with older people and soon acquired their bad habits; particularly was this the case with young girls who were obliged to associate with the many women of evil repute who came in to recruit their health and then return to their trade; paupers were allowed to leave the workhouse one day a week and return intoxicated without punishment. Only in a very few instances were things found to be in the least degree satisfactory and these particular instances were due to the extraordinary energy and wisdom of a few individuals. It is not difficult to imagine the disastrous effect these abuses had upon all classes of the community. The independent labourers, the employers of labour, the owners of property, were all seriously affected. The foregoing evils were to a large extent due to the administrative machinery, upon which the commissioners were no less severe in their report. Overseers, assistant overseers, open vestries, representative vestries, self-appointed vestries, and magistrates, were the chief administrators of the poor funds. Some of these had to serve compulsorily without payment and much against their will; others were paid and were of a most illiterate class, many not being able to read or write, and a final appeal for the pauper against the overseers or vestries was with the magistrate, who not having the time nor inclination to go into the details of the cases brought to his notice would invariably give a wrong decision, against which there was no appeal.

One portion of the report is not without interest to Catholics, viz., that in which the commissioners refer to the large number of Roman Catholic children who were illegitimate in consequence of the priest alone having married the parents. A magistrate said that as many as a dozen of these cases had come under his notice in a single day. The remedial measures proposed by the commissioners fill two hundred and thirty-six quarto pages of close print, and the result of their report was the passing of the Poor Law Amendment Act of 1834 (4 & 5 William IV, c. 76). The act consists of one hundred and ten clauses, the first fifteen of which deal with the appointment and duties of "The Poor Law Commissioners for England and Wales", three in number, afterwards called the Local Government Board. The future administration of the poor laws, power to make rules and regulations for the management of the poor, and the government of workhouses, were placed in the hands of the new commissioners. They are required to make an annual report to be placed before Parliament and to give the Secretary of State any information respecting their proceedings he may require. The succeeding sections of the act deal with the alteration and building of workhouses; the union and dissolution of unions of parishes; the number, duties, and qualifications of guardians and their elections; expenditure and assessment; qualifications, duties, and salaries of officers; making of contracts; regulation of relief to the able-bodied and their families; raising of money; audit of accounts; and apprenticeship of children. The Roman Catholic Relief Bill, passed in 1829, gave courage and hope to a certain number of Catholics, who soon began to bestir themselves in the interests of their poorer brethren in the workhouses, and the result of their efforts was seen in section 19 of the Act of 1834. This section provides that

"No Rules, Orders or Regulations of the said Commissioners, nor any By-Laws at present in force, or to be hereafter made, shall oblige any inmate of any workhouse to attend any religious service which may be celebrated in a mode con-

trary to the religious principles of such inmate, nor shall authorize the education of any child in such workhouse in any religious creed other than that professed by the parents or surviving parent of such child, and to which such parents or parent shall object, or, in the case of an orphan, to which the godfather or godmother of such orphan shall so object: provided also, that it shall and may be lawful for any licensed minister of the religious persuasion of any inmate of such workhouse, at all times in the day, on the request of such inmate, to visit such workhouse for the purpose of affording religious assistance to such inmate, and also for the purpose of instructing his child or children in the principles of their religion."

Section 55 provides for masters of workhouses and overseers keeping a register of all relief given, and subsequent orders of the Poor Law Board provide for the entry in this register of the religious creed of those receiving indoor relief.

Although the Act of 1834 was the beginning of religious freedom for Catholics under the poor laws, it was not without considerable difficulty, and in some cases legal action, before the Catholic clergy and the inmates were able to obtain the benefit of that act. Some Boards of Guardians refused to admit a priest into the workhouse even when an inmate had made a request for him to visit, and others would give him no facilities for finding those who were Catholics. The creed register was therefore instituted in 1863 by the Poor Law Amendment Act, 31 and 32 Vict., c. 122. Sections 16, 17, and 19 provide for a separate register to be kept in every workhouse, district, or other pauper school, into which the religious creed of every inmate shall be entered: the religious creed of a child under twelve shall be entered as that of his father if it can be ascertained, if not, as that of his mother. The religious creed of an illegitimate child shall be deemed to be that of his mother. Should the father be a Protestant and wish his child educated as a Catholic, he is entitled to have his wish carried out, but the entry in the creed register must be that of the father's religion. Such register is to be opened to the inspection of any minister of any denomination, nearest the workhouse or school, or any rate-payer of any parish in the Union, at any time of the day between ten and four o'clock, except Sunday. Section 18 provides for any question as to correctness of entry being settled only by the Local Government Board. Section 20 provides for the minister visiting and instructing those who are of the same religion as himself. Although the act provides for the child being instructed according to the entry in the creed register, the act of William IV referred to above in some instances contradicts it. A child may be entered as a Roman Catholic, that being the religion of his father, but he being dead, the Protestant mother can object to the child being instructed in the Catholic Faith. Section 22 provides for a child above the age of twelve years altering his religion if the Local Government Board consider him competent to exercise a judgment upon the subject. Those for whom no religious service is provided in the workhouse are allowed by section 21 to attend a place of worship of their own denomination within a convenient distance of the workhouse. Many guardians have refused to allow inmates under sixty years of age to go out to Mass on Sundays, Good Friday, and Christmas Day, but this is not legal and can be remedied by applying to the local Government Board (Order 1847, Art. 126). This right can only be stopped if abused and then the guardians must enter the cause in the minutes. The Local Government Board have permitted the appointment of a considerable number of priests, with stipends, to attend to the spiritual interests of Catholic inmates of

workhouses; they cannot be called chaplains, but are known as Roman Catholic instructors. Mass is regularly said in many workhouses and in some the Blessed Sacrament is reserved. Benediction is also given in several workhouses.

By the act to provide for the maintenance and education of pauper children, 1862 (25 and 26 Vict., c. 43), guardians are empowered (section 1) to send any poor child to any school certified by the Local Government Board, and supported wholly or partially by voluntary subscriptions, and to pay out of the funds in their possession the expenses of maintenance, clothing, and education. By an act of 1882 (45 and 46 Vict., c. 58, s. 13), the rate of payment is sanctioned by the Local Government Board and it varies from five to seven shillings a week. The amount of the payment, within this limit, will be a matter of agreement between the guardians and the school.

Certified schools are inspected by the Local Government Board inspector; and guardians who have sent a child to any such school may from time to time appoint one of their body to visit and inspect. A child cannot be sent to a certified school without the consent of its parents or surviving parent, unless it be an orphan or a child deserted by its parents or surviving parent. This regulation is neither recognized by the guardians nor enforced by the Local Government Board in London. A child cannot be sent to a school conducted on the principles of a religion to which the child does not belong (25 & 26 Vict., c. 43, s. 9). Should a Board of Guardians refuse to send a child to a certified school, the course to adopt to compel them to do so is to apply to the Local Government Board. Orphan and deserted children, and children adopted by the guardians under the acts of 1889 and 1898 may be boarded out under very strict regulations compiled in the orders of 1905 and 1909, but in no case may a child be boarded out with a foster-parent of a religious creed different from that to which the child belongs. Formerly if a child were adopted and taken off the rates altogether, the jurisdiction both of the guardians and of the Local Government Board was at an end; now, however, the Poor Law Act 1899 provides that where a child maintained by guardians is with their consent adopted by any person, the guardians must, during a period of three years from the date of the adoption, cause the child to be visited at least twice in each year by some competent person appointed by them for the purpose, who is to report to them. And the guardians may, if they think fit, at any time during the three years revoke their consent to the adoption and the child must thereupon be returned to them by the person having the custody of him. Efforts are now being made to have all such children placed under the regulations of the boarding out orders. Guardians are authorized to bury Catholics in a Catholic burial ground and a Catholic priest may officiate and be paid a reasonable sum for his services.

THOMAS G. KING.

Poor of St. Francis, SISTERS OF THE, ■ Congregation, founded by the Venerable Mother Frances Schervier at Aachen in the year 1845, whose members observe the Rule of the Third Order of St. Francis, as given by Leo X for Tertiaries living in
XII.—17

community, and Constitutions adapted to their special work, care of the sick poor, dependent upon charity.

Foundation.—Frances Schervier, b. in Aachen, 3 January, 1819, was the child of John Henry Caspar Schervier, proprietor of a needle manufactory and associate magistrate of the city, and Maria Louisa Migeon, descendant of a wealthy French family. Frances's education was thorough, and it was always her desire to serve the sick and poor. She began by giving them food and clothing, labouring for them, and visiting them in their homes and hospitals. In 1840 she joined a charitable society, in order to exercise this charity more actively. In 1844 she and four other young ladies (Catherine Daverkosen, Gertrude Frank, Joanna Bruchhans, and Catherine Lassen) became members of the Third Order of St. Francis. The following year, with the permission of a priest, they went to live together in a small house beyond St. James's Gate, and Frances was chosen superior of the community. The life of the sisters was conventual, and the time spent in religious exercises, household duties, and caring for the sick poor. In 1848 the community numbered thirteen members.

Development.—In the latter part of 1848 a mild form of cholera broke out in Aachen, followed by an epidemic of small pox, and an infirmary was opened in an old Dominican building, the property of the city. The Sisters offered their services as nurses and they were authorized to take up their abode in the building (1849). New members were admitted in 1849, when they were called to take charge of an infirmary for cholera patients in Burtscheid. In 1850 they established a hospital for incurables in the old Dominican building, and the home nursing and charity kitchens in different parishes were entrusted to them. In 1850 the "Constitutions" were compiled and submitted to the Archbishop of Cologne. They were approved, and on 12 August, 1851, Mother Frances and her twenty-three associates were invested with the habit of St. Francis. On 13 June, 1850, they took charge of a hospital in Juelich (later abandoned). In 1851 a foundation was established at Bonn and also at Aachen for the care of the female prisoners in the House of Detention. When the home of the Poor Clares, before their suppression in 1803, was offered for sale in the summer of 1852, Mother Frances purchased the spacious building for a convent—the first mother-house. The congregation grew steadily and rapidly. In 1852 two houses were founded in Cologne, and a hospital was opened at Burtscheid. Foundations were established in Ratingen, Mayence, Coblenz (1854); Kaiserswerth, Crefeld, Euskirchen (1855); Eschweiler (1858); Stolberg and Erfurt (1863), etc. The number of institutions in Europe at time of present writing (1911) is about 49.

Congregation in America.—The year 1858 marks an important epoch in the development of the congregation, namely: the transplanting of the congregation to America. Mrs. Sarah Peter, a convert of Cincinnati, O., received a commission from the archbishop in that city to bring German Sisters to America to care for the destitute poor of German nationality, and Irish Sisters for the Irish poor. While in Rome in 1857 she submitted the plan to the Holy Father, who advised her to apply for German Sisters to some Austrian bishop. Cardinal Von Geissel, the Archbishop of Cologne, earnestly recommended the Congregation of Mother Frances for the purpose. In Ireland she succeeded in obtaining the Sisters of Mercy. Mother Frances resolved to found a house in Cincinnati, and on 24 August, 1858, the six sisters chosen by her set sail for America. Upon their arrival in Cincinnati, the Sisters of the Good Shepherd kindly gave them hospitality. Soon they received the offer of the gratuitous use of a vacated orphanage for their patients. The following year three more sisters arrived from Europe,

and in March they purchased several lots at the corner of Linn and Betts Streets (the present site of St. Mary's Hospital), and began constructing a hospital. More sisters soon arrived from the mother-house, and in 1860 they were able to establish a branch-house in Covington, Ky.

In the spring of 1861 Mrs. Peter offered her residence to the sisters for a novitiate, and home for the Clarisses or recluses, a contemplative branch of the congregation, for whose coming she had long been negotiating with Mother Frances. In October, 1861, three recluses came to America, and from their arrival up to the present time perpetual adoration of the Most Blessed Sacrament has been carried on without interruption in this novitiate convent of St. Clara. Mrs. Peter reserved for herself the use of several rooms, wherein she lived a life of retirement until her death in Feb., 1877. The congregation owed much of its rapid progress in the New World to the influence of this noble lady. Hospitals have been founded in the following cities of the United States: Cincinnati (1858); Covington, Ky. (1860); Columbus, O. (1862); Hoboken, N. J. (1863); Jersey City, N. J. (1864); Brooklyn, N. Y. (1864); 5th St., N. Y. City (1865); Quincy, Ill. (1866); Newark, N. J. (1867); Dayton, O. (1878); N. Y. City (1882); Kansas City, Kan. (1887); Fairmount, Cin., O. (1888); Columbus, O. (1891); 142nd St., N. Y. City (1906). In 1896 the novitiate was removed to Hartwell, O., where the congregation possesses a large convent, church, and grounds, the centre of activity of the Province in America.

SISTER ANTONIA.

Poor Servants of the Mother of God, a religious congregation founded in 1808 by Mother Mary Magdalen Taylor in conjunction with Lady Georgiana Fullerton (q. v.). Mother M. Magdalen was the daughter of a Church of England clergyman. As one of Miss Nightingale's band of nurses in the Crimea she became acquainted with the Catholic Faith as manifested by many of the soldiers, and on her return to England entered the Church. Her subsequent intimacy with Lady Georgiana Fullerton led to the foundation of a congregation for work among the poor of London, then inadequately served by a single convent. At first an affiliation with the Little Sisters of Mary (Archduchy of Posen) was considered, but this was found to be impracticable, and the new order was placed under the direction of its own superior general (Mother M. Magdalen). From the first it was approved and encouraged by Cardinal Manning, its spiritual training being committed to the Fathers of the Society of Jesus, near whose church in Farm St., London, its existence began. Its Constitutions are based on the Rule of St. Augustine, and the congregation was approved by Leo XIII in 1885. The members devote themselves to visiting the poor, teaching in parochial schools, nursing, and conducting institutions of refuge and rescue for women. To the mother-house in Rome are attached two schools and the public church of St. George and the English Martyrs. In this church on Good Friday, 1887, the Three Hours was preached for the first time in English by Father Lucas, S.J. Other houses are in Florence; London (2); Brentford; Roehampton; Streatham; St. Helen's, Lancashire, where the sisters conduct the only free hospital in the town; Liverpool; Brighton; Dublin (2); Carrigtohill, Co. Cork; Youghal, Co. Cork. The congregation is under the direction of a superior general. A black habit is worn, with a blue scapular and a black veil. There are no lay sisters.

BLANCHE M. KELLY.

Popayán, ARCHDIOCESE OF (POPAYANENSIS), lies approximately between 1° 20' and 3° 2' north latitude, and 78° 4' and 80° 3' east longitude. Since the Decree of the Sacred Congregation of the Consistory (7 July, 1910), the boundaries of the archdiocese are, on the north, the Diocese of Cali, along the Rivers Sonso and Rio Claro; on the west, the same diocese, along the mountain chain of the Cordillera Occidental; on the south, the Diocese of Pasto, along the Rivers Patía and Juanambú, and on the east, the Diocese of Garzón, along the Cordillera Central. The archdiocese comprises the entire Department of del Cauca, and portions of the Departments of Nariño and El Valle. The diocese was established by Paul III 1 Sept., 1546; the see, however, was not erected until 8 Sept., 1547, when the first bishop named to the see, Don Juan del Valle, performed the ceremony by Apostolic delegation at Aranda del Duero, in the Diocese of Osma, Spain. The diocese became a suffragan of Lima, and so remained until 1573, in which year Bogotá became a metropolitan see and received Popayán among its suffragans. The Sacred Congregation of the Consistory, however, by its Decree of 20 June, 1900, made Popayán an archdiocese, with Pasto, Garzón, and Cali for suffragans, its first archbishop being Don Manuel José de Cayzedo. Among the Bishops of Popayán, special mention should be made of Agustín de la Coruña (1509-89), an Augustinian, who was a student under St. Thomas of Villanova. He suffered vexations, and even banishment, for his activity in defence of the Indians. Bishop Carlos Bermúdez (1827-86) restored the seminary, and suffered banishment through his firm defence of the rights and privileges of the Church. The Bishop Juan Buenaventura Ortiz (1840-94) wrote a history of the Diocese of Popayán (*Historia de la Diócesis*) and a treatise on religion for colleges (*Religión para los Colegios*).

M. ANTONIO ARBOLIDA.

Pope, ALEXANDER, poet, son of Alexander Pope and his second wife, Edith Turner, b. in London, England, 22 May, 1688; d. at Twickenham, England, 30 May, 1744. His parents were both Catholics, and the son lived and died in the profession of the faith to which he was born. The poet's father was a linen merchant in Lombard Street, London, who before the end of the seventeenth century retired on a moderate fortune first to Kensington, then to Binfield, and finally to Chiswick, where he died in 1717. Soon after this event Pope with his mother removed to the villa at Twickenham, which became his permanent abode, and which, with its five acres, its gardens, and its grotto, will be forever associated with his memory. As a child he was very delicate, and he retained a constitutional weakness as well as a deformity of body all through his life, while in stature he was very diminutive. His early education was spasmodic and irregular, but before he was twelve he had picked up a smattering of Latin and Greek from various tutors and at sundry schools, and subsequently he acquired a similar knowledge of French and Italian. From his thirteenth year onward he was self-instructed and he was an extensive reader. Barred from a political and to a great extent from a professional career by the penal laws then in force against Catholics, he did not feel the restraint very acutely, for his earliest aspiration was to be a poet, and at an exceptionally youthful period he was engaged in writing verses. His first idea was to compose a great epic, the subject that presented itself being a mythological one, with Alcander, a prince of Rhodes, as hero; and perhaps he never wholly relinquished his intention of producing such a poem, for after his death there was found among his papers a plan for an epic on Brutus, the mythical great-grandson of Æneas and reputed founder of Britain. The Alcander epic, which had reached ■

many 4000 lines, was laid aside and never completed. Pope's first publication was the "Pastorals"; "January and May", the latter a version of Chaucer's "Merchant's Tale"; and the "Episode of Sarpedon" from the "Iliad". These appeared in 1709 in Tonson's "Poetical Miscellanies". His "Essay on Criticism" appeared in May, 1711, and some months later was warmly, if not enthusiastically, commended by Addison in the "Spectator" (No. 253, 20 Dec., 1711). Steele was eager to get hold of the rising poet to contribute to the paper, and eventually succeeded, for practically the entire literary portion of one issue of the "Spectator" (No. 378, 14 May, 1712) is given over to Pope's "Messiah: A Sacred Eclogue". In 1712 the first edition of "The Rape of the Lock", in two cantos, came out in Lintot's "Miscellany". Later Pope extended the work to five cantos, and by introducing the supernatural machinery of sylphs and gnomes and all the light militia of the lower sky, he gave to the world in 1714 one of its airiest, most delightful, and most cherished specimens of the mock-heroic poem. In the April of the preceding year (1713), Addison's tragedy of "Cato" was produced with almost unparalleled success at Drury Lane Theatre and the prologue, a dignified and spirited composition, as Macaulay describes it, was written by Pope. It was published with the play and also in No. 33 of the "Guardian". To the "Guardian" also Pope contributed eight papers in 1713. In the same year he published his "Windsor Forest" and the "Ode on St. Cecilia's Day". "The Wife of Bath", from Chaucer, and two translations from the "Odyssey"—the "Arrival of Ulysses at Ithaca" and the "Garden of Alcinoüs"—came out in 1714 in a volume of miscellanies edited by Steele for Tonson, the publisher. "The Temple of Fame", in which Steele said there were a thousand beauties, was separately published in the following year, 1715.

In November of 1713 a turning point was reached in Pope's fortunes. He issued proposals for the publication, by subscription, of a translation of Homer's "Iliad" into English verse, with notes. The matter was warmly taken up, and subscriptions poured in apace. His friends stood by him, Swift in particular obtaining a long list of influential patrons. Work was at once begun on the undertaking, and the first four books appeared in 1715, the remaining volumes coming out at intervals in 1716, 1717, 1718, and 1720, when the task was completed. Three years later he undertook the translation of the "Odyssey", which, with the aid of Broome and Fenton as collaborators, he completed by 1726. Pope's exact share was twelve books; the rest were by his assistants. By Homer Pope made close on £9000, which, added to what his father had left him, placed him in a position of independence for the remainder of his life. While engaged on his great translation Pope found time for other forms of literary work, and in 1717 he published two of the very best of his lyrics, namely, the "Elegy to the Memory of an Unfortunate Lady" and the "Epistle of Eloisa to Abelard", and he joined with Gay and Arbuthnot in writing and producing the unsuccessful farce "Three Hours after Marriage". He also undertook for Ton-

son, the publisher, an annotated edition of Shakespeare, which appeared in 1725, a task for which Pope's powers were unequal, for he was not sufficiently versed in the literature of the Elizabethan and Jacobean period, and although the preface is very fine and many shrewd emendations were made in the text, Pope's Shakespeare was on the whole far from being a success. It was at once attacked by Theobald, who thus exposed himself to the characteristic vengeance which Pope was shortly to take by making him the first hero of the "Dunciad". In 1713-14 Pope, with Swift, Arbuthnot, and other leaders of the Tory Party, had formed a sort of literary society called the Scriblerus Club, and had amused themselves by burlesquing the vagaries of literature in the "Memoirs of Martinus Scriblerus", which, although included in the edition of Pope's prose works in 1741, was mainly the composition of Arbuthnot. Arising

partly out of the performance of "Scriblerus", Pope and Swift published in 1727-28 three volumes of their "Miscellanies", which contained among other things Pope's "Treatise on the Bathos, or the Art of Sinking in Poetry", illustrated by examples from the inferior poets of the day. These "Miscellanies", and particularly the "Bathos", drew down upon the authors a torrent of abuse from every quill-driver and poetaster who had been in reality attacked or fancied himself ridiculed. The "Dunciad" was in turn the outcome of these invectives. This celebrated satire first appeared, in three books, in May, 1728, and an enlarged edition followed in 1729. In 1742 a further issue appeared with the addition of a fourth book, and in 1743 the poem came out in its final form with Theobald dethroned and Colley Cibber installed in his room as King of the Dunces. The

publication of this swingeing satire naturally increased the fury against Pope, who was roundly abused in all the moods and tenses. Nor did he shrink from the fray. He gave back blow for blow for eight years, 1730-37, in a weekly sheet, the "Grub Street Journal", as well as paying off old scores when opportunity offered in his avowed and more ambitious publications.

While thus engaged Pope came more directly than ever before under the influence of Bolingbroke, with whom he had been on intimate terms in the palmy pre-Georgian days. Bolingbroke undoubtedly indoctrinated Pope with the tenets of his own system of metaphysics and natural theology, and the fruit was seen in the "Essay on Man", in four "Epistles" (1732-34), and in the "Moral Essays", also in four "Epistles" (1731-35). The fifth Epistle—"To Mr. Addison, occasioned by his 'Dialogues on Medals'"—placed arbitrarily enough by Warburton in this series of "Moral Essays", was actually written in 1715, and has appeared in Tickell's edition of Addison's works in 1720. Bolingbroke, in another connexion, once said of Pope that he was "a very great wit, but a very indifferent philosopher"; and in these "Essays", especially in the "Essay on Man", he was endeavouring to expound a system of philosophy which he but imperfectly understood. The result is that the tendency of his principal theories is towards fatalism and naturalism, and the consequent reduction of man to a mere puppet. This position Pope

ALEXANDER POPE

never had the intention of taking up, and he shrank from it when it was forcibly exposed by Crousaz as logically leading to Spinozism. To clear himself of the charge of a denial of revealed religion and, in Johnson's celebrated phrase, of representing "the whole course of things as a necessary concatenation of indissoluble fatality", he wrote, in 1738, the "Universal Prayer", which is now generally appended to the "Essay on Man", but which, despite the piety it displays, is not entirely convincing. From 1732 to 1738 he was busy with the composition and publication of his "Imitations of Horace", which, in diction and versification at least, some critics consider his masterpieces. He also at this period published two of the "Satires of Dr. Donne", which he had versified earlier in life. In 1735 appeared the "Epistle to Dr. Arbuthnot, or Prologue to the Satires", and in 1738 the "Epilogue to the Satires, in Two Dialogues". In 1737 he published an authorized and carefully prepared edition of his "Correspondence", which had been brought out in 1735 by Curll in what Pope alleged to be a garbled form.

With the publication of the "Dunciad", in 1743, Pope's literary activity ceased. He indeed set about the collection of his works with a view to an authoritative edition; but he was obliged to abandon the attempt. His health, always poor, began rapidly to fail. He always expressed undoubting confidence in a future state, and when his end was obviously approaching he willingly yielded to the representations of a Catholic friend that he should see a priest. It was noticed by those about him that after he had received the last sacraments his frame of mind was very peaceable. He died calmly the next day, 30 May, 1744, in the fifty-seventh year of his age. He was buried near the monument which he had raised to the memory of his father and mother at Twickenham.

Probably no writer, as such, ever made more enemies than Pope. Not only did he lash Bufo and Sporus, Sappho and Atossa, and scores of others by their own names or under thin disguise, but he boasted that he made a hundred smart in Timon and in Balaam. Herein indeed he over-reached himself, for the great majority of the victims of his satire would have been long ago forgotten but that he has embalmed them for all time in the "Dunciad" and elsewhere. But if he had the fatal gift of arousing enmity and the fault of vindictiveness in the persecution of those who had incurred his wrath, it must be put to the credit side of his account that scattered throughout his works there are many generous tributes to worth among his contemporaries. He possessed beyond question a deep fund of affection. He was a loving and devoted son, a loyal and constant friend. His happy relations with Arbuthnot and Swift, with Atterbury and Oxford, with Parnell and Prior, with Bolingbroke and Gay, with Warburton and Spence, and with many others of his acquaintances were interrupted only by death. His friendship with Addison, which augured so auspiciously at first, was unfortunately soon clouded over. The question of their estrangement has been so voluminously discussed by Johnson, Macaulay, Ward, and others that it is unnecessary, as it would be unprofitable, to pursue it here in detail. It will perhaps be sufficient to say that there were probably faults on both sides. If Pope was unduly suspicious, Addison was certainly too partial to the members of his own immediate little coterie. And if for real or fancied slights or wrongs Pope took an exemplary vengeance in his celebrated character of Atticus (Epistle to Dr. Arbuthnot, II, 193-214), it must always be borne in mind that he has taken care in many passages to pay compliments to Addison, and not empty compliments either, but as handsome as they were well deserved. A reference, for example, to Epistle I of the Second Book of Horace, will sufficiently prove

the truth of this statement. Regarding Pope's position in the literature of his country, there has been an extraordinary amount of controversy; some critics going the length of denying him the right to be called a poet at all. Opinion has fluctuated remarkably on his merits. By his contemporaries he was regarded with a sort of reverential awe. To his immediate successors he was the grand exemplar of what a poet should be. His standing was first assailed by Joseph Warton, in 1756, in his "Essay on the Genius and Writings of Pope", but Johnson gave the great weight of his authority to the other side. During the Romantic reaction of the last part of the eighteenth century he lost caste to some extent, and his reputation was very seriously jeopardized in the height of the Romantic movement from about 1820 onward. He was, however, warmly defended by Campbell, Byron, and others. Nor is he without stalwart champions in our own day. At present opinion appears to have crystallized in the direction of recognizing him as among the really great names of English literature. Johnson's criticism may, on the whole, be regarded as sound. His opinion, expressed in his biography of the poet, is that Pope had in proportions very nicely adjusted to one another all the qualities that constitute genius, invention, imagination, judgment, rare power of expression, and melody in metre; and he replies to the question that had been raised, as to whether Pope was a poet, by asking in return: If Pope be not a poet, where is poetry to be found? To treat this subject fully would lead to a discussion of two very vexed questions, namely what poetry really is, and what the proper subjects of poetry are. It will perhaps serve the purpose if the opinion be indicated that, when detraction has done its worst, Pope will still stand out, not perhaps as a master-genius, but as the typical man of letters and as the great representative English poet of the first half of the eighteenth century.

P. J. LENNOX.

Pope, ELECTION OF THE. See CONCLAVE; PAPAL ELECTION

Pope (eccles. Lat., *papa* from Gr. *πάππας*, a variant of *πάππας*, father; in classical Latin *pappas*—Juvenal, "Satires", vi, 633), THE. The title pope, once used with far greater latitude (see below, section V), is at present employed solely to denote the Bishop of Rome, who, in virtue of his position as successor of St. Peter, is the chief pastor of the whole Church, the Vicar of Christ upon earth. Besides the bishopric of the Roman Diocese, certain other dignities are held by the pope as well as the supreme and universal pastorate: he is Archbishop of the Roman Province, Primate of Italy and the adjacent islands, and sole Patriarch of the Western Church. The Church's doctrine as to the pope was authoritatively declared in the Vatican Council in the Constitution "Pastor Æternus". The four chapters of that Constitution deal respec-

tively with the office of Supreme Head conferred on St. Peter, the perpetuity of this office in the person of the Roman pontiff, the pope's jurisdiction over the faithful, and his supreme authority to define in all questions of faith and morals. This last point has been sufficiently discussed in the article INFALLIBILITY, and will be only incidentally touched on here. The present article is divided as follows: I. Institution of a Supreme Head by Christ; II. Primacy of the Roman See; III. Nature and Extent of the Papal Power; IV. Jurisdictional Rights and Prerogatives of the Pope; V. Primacy of Honour: Titles and Insignia; VI. Election of the Popes; VII. Chronological List of the Popes.

I. INSTITUTION OF A SUPREME HEAD BY CHRIST.—The proof that Christ constituted St. Peter head of His Church is found in the two famous Petrine texts, Matt., xvi, 17–19, and John, xxi, 15–17. In Matt., xvi, 17–19, the office is solemnly promised to the Apostle. In response to his profession of faith in the Divine Nature of his Master, Christ thus addresses him: "Blessed art thou, Simon Bar-Jona: because flesh and blood hath not revealed it to thee, but my Father who is in heaven. And I say to thee: That thou art Peter; and upon this rock I will build my church, and the gates of hell shall not prevail against it. And I will give to thee the keys of the kingdom of heaven. And whatsoever thou shalt bind on earth it shall be bound also in heaven: and whatsoever thou shalt loose on earth, it shall be loosed also in heaven." The prerogatives here promised are manifestly personal to Peter. His profession of faith was not made, as has been sometimes asserted, in the name of the other Apostles. This is evident from the words of Christ. He pronounces on the Apostle, distinguishing him by his name Simon son of John, a peculiar and personal blessing, declaring that his knowledge regarding the Divine Sonship sprang from a special revelation granted to him by the Father (cf. Matt., xi, 27). He further proceeds to recompense this confession of His Divinity by bestowing upon him a reward proper to himself: "Thou art Peter [*Cepha*, transliterated also *Kîphā*] and upon this rock [*Cepha*] I will build my Church." The word for Peter and for rock in the original Aramaic is one and the same (ܨܬܐ); this renders it evident that the various attempts to explain the term "rock" as having reference not to Peter himself but to something else are misinterpretations. It is Peter who is the rock of the Church. The term *ecclesia* (ἐκκλησία) here employed is the Greek rendering of the Hebrew *qāhāl* (קָהָל), the name which denoted the Hebrew nation viewed as God's Church (see CHURCH, THE, I).

Here then Christ teaches plainly that in the future the Church will be the society of those who acknowledge Him, and that this Church will be built on Peter. The expression presents no difficulty. In both the Old and New Testaments the Church is often spoken of under the metaphor of God's house (Num., xii, 7; Jer., xii, 7; Osee, viii, 1; ix, 15; I Cor., iii, 9–17, Eph., ii, 20–2; I Tim., iii, 5; Heb., iii, 5; I Peter, ii, 5). Peter is to be to the Church what the foundation is in regard to a house. He is to be the principle of unity, of stability, and of increase. He is the principle of unity, since what is not joined to that foundation is no part of the Church; of stability, since it is the firmness of this foundation in virtue of which the Church remains unshaken by the storms which buffet her; of increase, since, if she grows, it is because new stones are laid on this foundation. It is through her union with Peter, Christ continues, that the Church will prove the victor in her long contest with the Evil One: "The gates of hell shall not prevail against it." There can be but one explanation of this striking metaphor. The only manner in which a man can stand in such a relation to any corporate body is by possessing authority over it. The supreme head of a

body, in dependence on whom all subordinate authorities hold their power, and he alone, can be said to be the principle of stability, unity, and increase. The promise acquires additional solemnity when we remember that both Old Testament prophecy (Is., xxviii, 16) and Christ's own words (Matt., vii, 24) had attributed this office of foundation of the Church to Himself. He is therefore assigning to Peter, of course in a secondary degree, a prerogative which is His own, and thereby associating the Apostle with Himself in an altogether singular manner.

In the following verse (Matt., xvi, 19) He promises to bestow on Peter the keys of the kingdom of heaven. The words refer evidently to Is., xxii, 22, where God declares that Eliacim, the son of Helcias, shall be invested with office in place of the worthless Sobna: "And I will lay the key of the house of David upon his shoulder: and he shall open, and none shall shut: and he shall shut and none shall open." In all countries the key is the symbol of authority. Thus, Christ's words are a promise that He will confer on Peter supreme power to govern the Church. Peter is to be His vicegerent, to rule in His place. Further, the character and extent of the power thus bestowed are indicated. It is a power to "bind" and to "loose"—words which, as is shown below, denote the grant of legislative and judicial authority. And this power is granted in its fullest measure. Whatever Peter binds or looses on earth, his act will receive the Divine ratification. The meaning of this passage does not seem to have been challenged by any writer until the rise of the sixteenth-century heresies. Since then a great variety of interpretations have been put forward by Protestant controversialists. These agree in little save in the rejection of the plain sense of Christ's words. Recent Anglican controversy tends to the view that the reward promised to St. Peter consisted in the prominent part taken by him in the initial activities of the Church, but that he was never more than *primus inter pares* among the Apostles (see Lightfoot, "Apost. Fathers", II, 480; Gore, "Roman Cath. Claims", v; Puller, "Primitive Saints, etc.", lect. 3). It is manifest that this is quite insufficient as an explanation of the terms of Christ's promise. For a more detailed consideration of the passage the following works may be consulted: Knabenbauer, "In Matt.", ad loc; Passaglia, "De Prærog. B. Petri.", II, iii–x; Palmieri "De Rom. Pont.", 225–78.

The promise made by Christ in Matt., xvi, 16–19, received its fulfilment after the Resurrection in the scene described in John, xxi. Here the Lord, when about to leave the earth, places the whole flock—the sheep and the lambs alike—in the charge of the Apostle. The term employed in xxi, 16, "Be the shepherd [*ποιμαίνε*] of my sheep", indicates that his task is not merely to feed but to rule. It is the same word as is used in Ps. ii, 9 (Sept.): "Thou shalt rule [*ποιμανεῖς*] them with a rod of iron". The scene stands in striking parallelism with that of Matt., xvi. As there the reward was given to Peter after a profession of faith which singled him out from the other eleven, so here Christ demands a similar protestation, but this time of a yet higher virtue: "Simon, son of John, lovest thou Me more than these?" Here, too, as there, He bestows on the Apostle an office which in its highest sense is proper to Himself alone. There Christ had promised to make Peter the foundation-stone of the house of God: here He makes him the shepherd of God's flock to take the place of Himself, the Good Shepherd. The passage receives an admirable comment from St. Chrysostom: "He saith to him, 'Feed my sheep'. Why does He pass over the others and speak of the sheep to Peter? He was the chosen one of the Apostles, the mouth of the disciples, the head of the choir. For this reason Paul went up to see him rather than the others. And also to show him that he must have confidence now that

his denial had been purged away. He entrusts him with the rule [προστασία] over the brethren. . . . If anyone should say 'Why then was it James who received the See of Jerusalem?', I should reply that He made Peter the teacher not of that see but of the whole world" ["Hom. lxxxviii (lxxxvii) in Joan.", i, in P. G., LIX, 478. Cf. Origen, "In Ep. ad Rom.", v, 10, in P. G., XIV, 1053; Ephraem Syrus, "Hymn. in B. Petr." in "Bibl. Orient. Assemani", I, 95; Leo I, "Serm. iv de natal.", ii, in P. L., LIV, 151, etc.]. Even certain Protestant commentators (e. g. Hengstenberg and recently Weizsäcker) frankly own that Christ undoubtedly intended here to confer the supreme pastorate on Peter. On the other hand Dr. Gore (op. cit., 79) and Mr. Puller (op. cit., 119), relying on a passage of St. Cyril of Alexandria ("In Joan.", XII, i, in P. G., LXXIV, 750), maintain that the purpose of the threefold charge was simply to reinstate St. Peter in the Apostolic commission which his threefold denial might be supposed to have lost to him. This interpretation is devoid of all probability. There is not a word in Scripture or in patristic tradition to suggest that St. Peter had forfeited his Apostolic commission; and the supposition is absolutely excluded by the fact that on the evening of the Resurrection he received the same Apostolic powers as the others of the eleven. The solitary phrase of St. Cyril is of no weight against the overwhelming patristic authority for the other view. That such an interpretation should be seriously advocated proves how great is the difficulty experienced by Protestants regarding this text.

The position of St. Peter after the Ascension, as shown in the Acts of the Apostles, realizes to the full the great commission bestowed upon him. He is from the first the chief of the Apostolic band—not *primus inter pares*, but the undisputed head of the Church (see CHURCH, THE, III). If then Christ, as we have seen, established His Church as a society subordinated to a single supreme head, it follows from the very nature of the case that this office is perpetual, and cannot have been a mere transitory feature of ecclesiastical life. For the Church must endure to the end the very same organization which Christ established. But in an organized society it is precisely the constitution which is the essential feature. A change in constitution transforms it into a society of a different kind. If then the Church should adopt a constitution other than Christ gave it, it would no longer be His handiwork. It would no longer be the Divine kingdom established by Him. As a society it would have passed through essential modifications, and thereby would have become a human, not a Divine institution. None who believe that Christ came on earth to found a Church, an organized society destined to endure for ever, can admit the possibility of a change in the organization given to it by its Founder. The same conclusion also follows from a consideration of the end which, by Christ's declaration, the supremacy of Peter was intended to effect. He was to give the Church strength to resist her foes, so that the gates of hell should not prevail against her. The contest with the powers of evil does not belong to the Apostolic age alone. It is a permanent feature of the Church's life. Hence, throughout the centuries the office of Peter must be realized in the Church, in order that she may prevail in her age-long struggle. Thus an analysis of Christ's words shows us that the perpetuity of the office of supreme head is to be reckoned among the truths revealed in Scripture. His promise to Peter conveyed not merely a personal prerogative, but established a permanent office in the Church. And in this sense, as will appear in the next section, His words were understood by Latin and Greek Fathers alike.

II. PRIMACY OF THE ROMAN SEE.—We have shown in the last section that Christ conferred upon St. Peter the office of chief pastor, and that the permanence of

that office is essential to the very being of the Church. It must now be established that it belongs of right to the Roman See. The proof will fall into two parts: (1) that St. Peter was Bishop of Rome, and (2) that those who succeed him in that see succeed him also in the supreme headship.

(1) It is no longer denied by any writer of weight that St. Peter visited Rome and suffered martyrdom there (Harnack, "Chronol.", I, 244, n. 2). Some, however, of those who admit that he taught and suffered in Rome, deny that he was ever bishop of the city—e. g. Lightfoot, "Clement of Rome", II, 501; Harnack, op. cit., I, 703. It is not, however, difficult to show that the fact of his bishopric is so well attested as to be historically certain. In considering this point, it will be well to begin with the third century, when references to it become frequent, and work backwards from this point. In the middle of the third century St. Cyprian expressly terms the Roman See the Chair of St. Peter, saying that Cornelius has succeeded to "the place of Fabian which is the place of Peter" (Ep. lv, 8; cf. lix, 14). Firmilian of Caesarea notices that Stephen claimed to decide the controversy regarding rebaptism on the ground that he held the succession from Peter (Cyprian, Ep. lxxv, 17). He does not deny the claim: yet certainly, had he been able, he would have done so. Thus in 250 the Roman episcopate of Peter was admitted by those best able to know the truth, not merely at Rome but in the churches of Africa and of Asia Minor. In the first quarter of the century (about 220) Tertullian (De Pud., xxi) mentions Callistus's claim that Peter's power to forgive sins had descended in a special manner to him. Had the Roman Church been merely founded by Peter, and not reckoned him as its first bishop, there could have been no ground for such a contention. Tertullian, like Firmilian, had every motive to deny the claim. Moreover, he had himself resided at Rome, and would have been well aware if the idea of a Roman episcopate of Peter had been, as is contended by its opponents, a novelty dating from the first years of the third century, supplanting the older tradition according to which Peter and Paul were co-founders, and Linus first bishop. About the same period, Hippolytus (for Lightfoot is surely right in holding him to be the author of the first part of the "Liberian Catalogue"—"Clement of Rome", I, 259) reckons Peter in the list of Roman bishops.

We have moreover a poem, "Adversus Marcionem", written apparently at the same period, in which Peter is said to have passed on to Linus "the chair on which he himself had sat" (P. L., II, 1077). These witnesses bring us to the beginning of the third century. In the second century we cannot look for much evidence. With the exception of Ignatius, Polycarp, and Clement of Alexandria, all the writers whose works we possess are apologists against either Jews or pagans. In works of such a character there was no reason to refer to such a matter as Peter's Roman episcopate. Irenæus, however, supplies us with a cogent argument. In two passages (Adv. hæc., I, xxvii, 1, and III, iv, 3) he speaks of Hyginus as ninth Bishop of Rome, thus employing an enumeration which involves the inclusion of Peter as first bishop (Lightfoot was undoubtedly wrong in supposing that there was any doubt as to the correctness of the reading in the first of these passages. See "Zeitschrift für kath. Theol.", 1902. In III, iv, 3, the Latin version, it is true, gives "octavus"; but the Greek text as cited by Eusebius reads *ἐνατος*). Irenæus we know visited Rome in 177. At this date, scarcely more than a century after the death of St. Peter, he may well have come in contact with men whose fathers had themselves spoken to the Apostle. The tradition thus supported must be regarded as beyond all legitimate doubt. Lightfoot's suggestion (Clement, I, 64), maintained as certain by Mr. Puller, that it had its origin in the

Clementine romance, has proved singularly unfortunate. For it is now recognized that this work belongs not to the second, but to the fourth century. Nor is there the slightest ground for the assertion that the language of Irenæus, III, iii, 3, implies that Peter and Paul enjoyed a divided episcopate at Rome—an arrangement utterly unknown to the Church at any period. He does, it is true, speak of the two Apostles as together handing on the episcopate to Linus. But this expression is explained by the purpose of his argument, which is to vindicate against the Gnostics the validity of the doctrine taught in the Roman Church. Hence he is naturally led to lay stress on the fact that that Church inherited the teaching of both the great Apostles. Epiphanius ("Hær.", xxvii, 6, in P. G., XLI, 372) would indeed seem to suggest the divided episcopate; but he has apparently merely misunderstood the words of Irenæus.

(2) History bears complete testimony that from the very earliest times the Roman See has ever claimed the supreme headship, and that that headship has been freely acknowledged by the universal Church. We shall here confine ourselves to the consideration of the evidence afforded by the first three centuries. The first witness is St. Clement, a disciple of the Apostles, who, after Linus and Anacletus, succeeded St. Peter as the fourth in the list of popes. In his "Epistle to the Corinthians", written in 95 or 96, he bids them receive back the bishops whom a turbulent faction among them had expelled. "If any man", he says, "should be disobedient unto the words spoken by God through us, let them understand that they will entangle themselves in no slight transgression and danger" (Ep. n. 59). Moreover, he bids them "render obedience unto the things written by us through the Holy Spirit". The tone of authority which inspires the latter appears so clearly that Lightfoot did not hesitate to speak of it as "the first step towards papal domination" (Clement, I, 70). Thus, at the very commencement of church history, before the last survivor of the Apostles had passed away, we find a Bishop of Rome, himself a disciple of St. Peter, intervening in the affairs of another Church and claiming to settle the matter by a decision spoken under the influence of the Holy Spirit. Such a fact admits of one explanation alone. It is that in the days when the Apostolic teaching was yet fresh in men's minds the universal Church recognized in the Bishop of Rome the office of supreme head.

A few years later (about 107) St. Ignatius of Antioch, in the opening of his letter to the Roman Church, refers to its presiding over all other Churches. He addresses it as "presiding over the brotherhood of love [*προκαθημένη τῆς ἀγάπης*]." The expression, as Funk rightly notes, is grammatically incompatible with the translation advocated by some non-Catholic writers, "preëminent in works of love". The same century gives us the witness of St. Irenæus—a man who stands in the closest connexion with the age of the Apostles, since he was a disciple of St. Polycarp, who had been appointed Bishop of Smyrna by St. John. In his work "Adversus Hæreses" (III, iii, 2) he brings against the Gnostic sects of his day the argument that their doctrines have no support in the Apostolic tradition faithfully preserved by the Churches, which could trace the succession of their bishops back to the Twelve. He writes: "Because it would be too long in such a volume as this to enumerate the successions of all the churches, we point to the tradition of that very great and very ancient and universally known Church, which was founded and established at Rome, by the two most glorious Apostles, Peter and Paul: we point, I say, to the tradition which this Church has from the Apostles, and to her faith proclaimed to men which comes down to our time through the succession of her bishops, and so we put to shame . . . all who assemble in unauthor-

ized meetings. For with this Church, because of its superior authority, every Church must agree—that is the faithful everywhere—in communion with which Church the tradition of the Apostles has been always preserved by those who are everywhere [*Ad hanc enim ecclesiam propter potentiorum principallitatem necesse est omnem convenire ecclesiam, hoc est eos qui sunt undique fideles, in quâ semper ab his qui sunt undique, conservata est ea quæ est ab apostolis traditio*]." He then proceeds to enumerate the Roman succession from Linus to Eleutherius, the twelfth after the Apostles, who then occupied the see. Non-Catholic writers have sought to rob the passage of its importance by translating the word *convenire* "to resort to", and thus understanding it to mean no more than that the faithful from every side (*undique*) resorted to Rome, so that thus the stream of doctrine in that Church was kept immune from error. Such a rendering, however, is excluded by the construction of the argument, which is based entirely on the contention that the Roman doctrine is pure by reason of its derivation from the two great Apostolic founders of the Church, Sts. Peter and Paul. The frequent visits made to Rome by members of other Christian Churches could contribute nothing to this. On the other hand the traditional rendering is postulated by the context, and, though the object of innumerable attacks, none other possessing any real degree of probability has been suggested in its place (see Dom. J. Chapman in "Révue bénédictine", 1895, p. 48).

During the pontificate of St. Victor (189–98) we have the most explicit assertion of the supremacy of the Roman See in regard to other Churches. A difference of practice between the Churches of Asia Minor and the rest of the Christian world in regard to the day of the Paschal festival led the pope to take action. There is some ground for supposing that the Montanist heretics maintained the Asiatic (or Quartodeciman) practice to be the true one: in this case it would be undesirable that any body of Catholic Christians should appear to support them. But, under any circumstances, such a diversity in the ecclesiastical life of different countries may well have constituted a regrettable feature in the Church, whose very purpose it was to bear witness by her unity to the oneness of God (John, xvii, 21). Victor bade the Asiatic Churches conform to the custom of the remainder of the Church, but was met with determined resistance by Polycrates of Ephesus, who claimed that their custom derived from St. John himself. Victor replied by an excommunication. St. Irenæus, however, intervened, exhorting Victor not to cut off whole Churches on account of a point which was not a matter of faith. He assumes that the pope can exercise the power, but urges him not to do so. Similarly the resistance of the Asiatic bishops involved no denial of the supremacy of Rome. It indicates solely that the bishops believed St. Victor to be abusing his power in bidding them renounce a custom for which they had Apostolic authority. It was indeed inevitable that, as the Church spread and developed, new problems should present themselves, and that questions should arise as to whether the supreme authority could be legitimately exercised in this or that case. St. Victor, seeing that more harm than good would come from insistence, withdrew the imposed penalty.

Not many years since a new and important piece of evidence was brought to light in Asia Minor dating from this period. The sepulchral inscription of Abercius, Bishop of Hieropolis (d. about 200), contains an account of his travels couched in allegorical language (see ABERCIUS, INSCRIPTION OF). He speaks thus of the Roman Church: "To Rome He [sc. Christ] sent me to contemplate majesty: and to see a queen golden-robed and golden-sandalled." It is difficult not to recognize in this description a testimony to the supreme position of the Roman See. Tertullian's

bitter polemic, "De Pudicitia" (about 220), was called forth by an exercise of papal prerogative. Pope Callistus had decided that the rigid discipline which had hitherto prevailed in many Churches must be in a large measure relaxed. Tertullian, now lapsed into heresy, fiercely attacks "the peremptory edict", which "the supreme pontiff, the bishop of bishops", has sent forth. The words are intended as sarcasm: but none the less they indicate clearly the position of authority claimed by Rome. And the opposition comes, not from a Catholic bishop, but from a Montanist heretic.

The views of St. Cyprian (d. 258) in regard to papal authority have given rise to much discussion (see CYPRIAN OF CARTHAGE, SAINT). He undoubtedly entertained exaggerated views as to the independence of individual bishops, which eventually led him into serious conflict with Rome. Yet on the fundamental principle his position is clear. He attributed an effective primacy to the pope as the successor of Peter. He makes communion with the See of Rome essential to Catholic communion, speaking of it as "the principal Church whence episcopal unity had its rise" (*ad Petri cathedram et ad ecclesiam principalem unde unitas sacerdotalis exorta est*). The force of this expression becomes clear when viewed in the light of his doctrine as to the unity of the Church. This was, he teaches, established by Christ when He founded His Church upon Peter. By this act the unity of the Apostolic college was ensured through the unity of the foundation. The bishops through all time form a similar college, and are bound in a like indivisible unity. Of this unity the Chair of Peter is the source. It fulfils the very office as principle of union which Peter fulfilled in his lifetime. Hence to communicate with an antipope such as Novatian would be schism (*Ep. lxviii, 1*). He holds, also, that the pope has authority to depose an heretical bishop. When Marcian of Arles fell into heresy, Cyprian, at the request of the bishops of the province, wrote to urge Pope Stephen "to send letters by which, Marcian having been excommunicated, another may be substituted in his place" (*Ep. lxviii, 3*). It is manifest that one who regarded the Roman See in this light, believed that the pope possessed a real and effective primacy. At the same time it is not to be denied that his views as to the right of the pope to interfere in the government of a diocese already subject to a legitimate and orthodox bishop were inadequate. In the rebaptism controversy his language in regard to St. Stephen was bitter and intemperate. His error on this point does not, however, detract from the fact that he admitted a primacy, not merely of honour, but of jurisdiction. Nor should his mistake occasion too much surprise. It is as true in the Church as in merely human institutions that the full implications of a general principle are only realized gradually. The claim to apply it in a particular case is often contested at first, though later ages may wonder that such opposition was possible.

Contemporary with St. Cyprian was St. Dionysius of Alexandria. Two incidents bearing on the present question are related of him. Eusebius (*Hist. eccl., VII, ix*) gives us a letter addressed by him to St. Xystus II regarding the case of a man who, as it appeared, had been invalidly baptized by heretics, but who for many years had been frequenting the sacraments of the Church. In it he says that he needs St. Xystus's advice and begs for his decision (*γνώμην*), that he may not fall into error (*δεδιώς μὴ ἄρα σφάλλωμαι*). Again, some years later, the same patriarch occasioned anxiety to some of the brethren by making use of some expressions which appeared hardly compatible with a full belief in the Divinity of Christ. They promptly had recourse to the Holy See and accused him to his namesake, St. Dionysius of Rome, of heretical leanings. The pope replied by laying down authorita-

tively the true doctrine on the subject. Both events are instructive as showing us how Rome was recognized by the second see in Christendom as empowered to speak with authority on matters of doctrine. (St. Athanasius, "De sententia Dionysii" in P. G., XXV, 500). Equally noteworthy is the action of Emperor Aurelian in 270. A synod of bishops had condemned Paul of Samosata, Patriarch of Alexandria, on a charge of heresy, and had elected Domnus bishop in his place. Paul refused to withdraw, and appeal was made to the civil power. The emperor decreed that he who was acknowledged by the bishops of Italy and the Bishop of Rome, must be recognized as rightful occupant of the see. The incident proves that even the pagans themselves knew well that communion with the Roman See was the essential mark of all Christian Churches. That the imperial Government was well aware of the position of the pope among Christians derives additional confirmation from the saying of St. Cyprian that Decius would have sooner heard of the proclamation of a rival emperor than of the election of a new pope to fill the place of the martyred Fabian (*Ep. lv, 9*).

The limits of the present article prevent us from carrying the historical argument further than the year 300. Nor is it in fact necessary to do so. From the beginning of the fourth century the supremacy of Rome is writ large upon the page of history. It is only in regard to the first age of the Church that any question can arise. But the facts we have recounted are entirely sufficient to prove to any unprejudiced mind that the supremacy was exercised and acknowledged from the days of the Apostles. It was not of course exercised in the same way as in later times. The Church was as yet in her infancy; and it would be irrational to look for a fully developed procedure governing the relations of the supreme pontiff to the bishops of other sees. To establish such a system was the work of time, and it was only gradually embodied in the canons. There would, moreover, be little call for frequent intervention when the Apostolic tradition was still fresh and vigorous in every part of Christendom. Hence the papal prerogatives came into play but rarely. But when the Faith was threatened, or the vital welfare of souls demanded action, then Rome intervened. Such were the causes which led to the intervention of St. Dionysius, St. Stephen, St. Callistus, St. Victor, and St. Clement, and their claim to supremacy as the occupants of the Chair of Peter was not disputed. In view of the purposes with which, and with which alone, these early popes employed their supreme power, the contention, so stoutly maintained by Protestant controversialists, that the Roman primacy had its origin in papal ambition, disappears. The motive which inspired these men was not earthly ambition, but zeal for the Faith and the consciousness that to them had been committed the responsibility of its guardianship. The controversialists in question even claim that they are justified in refusing to admit as evidence for the papal primacy any pronouncement emanating from a Roman source, on the ground that, where the personal interests of anyone are concerned, his statements should not be admitted as evidence (*cf., for example, Puller, op. cit., 99, note*). Such an objection is utterly fallacious. We are dealing here, not with the statements of an individual, but with the tradition of a Church—of that Church which, even from the earliest times, was known for the purity of its doctrine, and which had had for its founders and instructors the two chief Apostles, St. Peter and St. Paul. That tradition, moreover, is absolutely unbroken, as the pronouncements of the long series of popes bear witness. Nor does it stand alone. The utterances, in which the popes assert their claims to the obedience of all Christian Churches, form part and parcel of a great body of testimony to the Petrine privileges, issuing

not merely from the Western Fathers but from those of Greece, Syria, and Egypt. The claim to reject the evidence which comes to us from Rome may be skilful as a piece of special pleading, but it can claim no other value. The first to employ this argument were some of the Gallicans. But it is deservedly repudiated as fallacious and unworthy by Bossuet in his "Defensio cleri gallicani" (II, l. XI, c. vi).

The primacy of St. Peter and the perpetuity of that primacy in the Roman See are dogmatically defined in the canons attached to the first two chapters of the Constitution "Pastor Æternus": (a) "If anyone shall say that Blessed Peter the Apostle was not constituted by Christ our Lord as chief of all the Apostles and the visible head of the whole Church militant: or that he did not receive directly and immediately from the same Lord Jesus Christ a primacy of true and proper jurisdiction, but one of honour only: let him be anathema." (b) "If any one shall say that it is not by the institution of Christ our Lord Himself or by divinely established right that Blessed Peter has perpetual successors in his primacy over the universal Church: or that the Roman Pontiff is not the successor of Blessed Peter in this same primacy:—let him be anathema" (Denzinger-Bannwart, "Enchiridion", nn. 1823, 1825).

(3) A question may be raised as to the precise dogmatic value of the clause of the second canon in which it is asserted that the Roman pontiff is Peter's successor. The truth is infallibly defined. But the Church has authority to define not merely those truths which form part of the original deposit of revelation, but also such as are necessarily connected with this deposit. The former are held *fide divina*, the latter *fide infallibili*. Although Christ established the perpetual office of supreme head, Scripture does not tell us that He fixed the law according to which the headship should descend. Granting that He left this to Peter to determine, it is plain that the Apostle need not have attached the primacy to his own see: he might have attached it to another. Some have thought that the law establishing the succession in the Roman episcopate became known to the Apostolic Church as an historic fact. In this case the dogma that the Roman pontiff is at all times the Church's chief pastor would be the conclusion from two premises—the revealed truth that the Church must ever have a supreme head, and the historic fact that St. Peter attached that office to the Roman See. This conclusion, while necessarily connected with revelation, is not part of revelation, and is accepted *fide infallibili*. According to other theologians the proposition in question is part of the deposit of faith itself. In this case the Apostles must have known the law determining the succession to the Bishop of Rome, not merely on human testimony, but also by Divine revelation, and they must have taught it as a revealed truth to their disciples. It is this view which is commonly adopted. The definition of the Vatican to the effect that the successor of St. Peter is ever to be found in the Roman pontiff is almost universally held to be a truth revealed by the Holy Spirit to the Apostles, and by them transmitted to the Church.

III. NATURE AND EXTENT OF THE PAPAL POWER.—This section is divided as follows: (1) the pope's universal coercive jurisdiction; (2) the pope's immediate and ordinary jurisdiction in regard of all the faithful, whether singly or collectively; (3) the right of entertaining appeals in all ecclesiastical causes. The relation of the pope's authority to that of œcumenical councils, and to the civil power, are discussed in separate articles (see COUNCILS, GENERAL; CIVIL ALLEGIANCE).

(1) *Popes*.—Not only did Christ constitute St. Peter head of the Church, but in the words, "Whatsoever thou shalt bind on earth, it shall be bound also in heaven; and whatsoever thou shalt loose on earth, it

shall be loosed in heaven," He indicated the scope of this headship. The expressions *binding* and *loosing* here employed are derived from the current terminology of the Rabbinic schools. A doctor who declared a thing to be prohibited by the law was said to bind (אָסר), for thereby he imposed an obligation on the conscience. He who declared it to be lawful was said to loose (הָריר, Aramaic שָׁרַף). In this way the terms had come respectively to signify official commands and permissions in general. The words of Christ, therefore, as understood by His hearers, conveyed the promise to St. Peter of legislative authority within the kingdom over which He had just set him, and legislative authority carries with it as its necessary accompaniment judicial authority. Moreover, the powers conferred in these regards are plenary. This is plainly indicated by the generality of the terms employed: "Whatsoever thou shalt bind . . . Whatsoever thou shalt loose"; nothing is withheld. Further, Peter's authority is subordinated to no earthly superior. The sentences which he gives are to be forthwith ratified in heaven. They do not need the antecedent approval of any other tribunal. He is independent of all save the Master who appointed him. The words as to the power of binding and loosing are, therefore, elucidatory of the promise of the keys which immediately precedes. They explain in what sense Peter is governor and head of Christ's kingdom, the Church, by promising him legislative and judicial authority in the fullest sense. In other words, Peter and his successors have power to impose laws both preceptive and prohibitive, power likewise to grant dispensation from these laws, and, when needful, to annul them. It is theirs to judge offences against the laws, to impose and to remit penalties. This judicial authority will even include the power to pardon sin. For sin is a breach of the laws of the supernatural kingdom, and falls under the cognizance of its constituted judges. The gift of this particular power, however, is not expressed with full clearness in this passage. It needed Christ's words (John, xx, 23) to remove all ambiguity. Further, since the Church is the kingdom of the truth, so that an essential note in all her members is the act of submission by which they accept the doctrine of Christ in its entirety, supreme power in this kingdom carries with it a supreme *magisterium*—authority to declare that doctrine and to prescribe a rule of faith obligatory on all. Here, too, Peter is subordinated to none save his Master alone; he is the supreme teacher as he is the supreme ruler. However, the tremendous powers thus conferred are limited in their scope by their reference to the ends of the kingdom and to them only. The authority of Peter and his successors does not extend beyond this sphere. With matters that are altogether extrinsic to the Church they are not concerned.

Protestant controversialists contend strenuously that the words, "Whatsoever thou shalt bind etc.", confer no special prerogative on Peter, since precisely the same gift, they allege, is conferred on all the Apostles (Matt., xviii, 18). It is, of course, the case that in that passage the same words are used in regard of all the Twelve. Yet there is a manifest difference between the gift to Peter and that bestowed on the others. In his case the gift is connected with the power of the keys, and this power, as we have seen, signified the supreme authority over the whole kingdom. That gift was not bestowed on the other eleven: and the gift Christ bestowed on them in Matt., xviii, 18, was received by them as members of the kingdom, and as subject to the authority of him who should be Christ's vicegerent on earth. There is in fact a striking parallelism between Matt., xvi, 19, and the words employed in reference to Christ Himself in Apoc., iii, 7: "He that hath the key of David; he that openeth, and no man shutteth; shutteth, and no man openeth." In both cases the second clause de-

clares the meaning of the first, and the power signified in the first clause by the metaphor of the keys is supreme. It is worthy of note that to no one else save to Christ and His chosen vicegerent does Holy Scripture attribute the power of the keys.

Certain patristic passages are further adduced by non-Catholics as adverse to the meaning given by the Church to Matt., xvi, 19. St. Augustine in several places tells us that Peter received the keys as representing the Church—e. g. "In Joan.", tr. 1, 12, in P. L., XXXV, 1763: "Si hoc Petro tantum dictum est, non facit hoc Ecclesia . . . ; si hoc ergo in Ecclesia fit, Petrus quando claves accepit, Ecclesiam sanctam significavit" (If this was said to Peter alone, the Church cannot exercise this power . . . ; if this power is exercised in the Church, then when Peter received the keys, he signified the Holy Church); cf. tr. cxxiv, 5, in P. L., XXXV, 1973; "Serm.", cxcv, in P. L., XXVIII, 1349. It is argued that, according to Augustine, the power denoted by the keys resides primarily not in Peter, but in the whole Church. Christ's gift to His people was merely bestowed on Peter as representing the whole body of the faithful. The right to forgive sins, to exclude from communion, to exercise any other acts of authority, is really the prerogative of the whole Christian congregation. If the minister performs these acts he does so as delegate of the people. The argument, which was formerly employed by Gallican controversialists (cf. Febronius, "De statu eccl.", i, § 6), however, rests on a misunderstanding of the passages. Augustine is controverting the Novatian heretics, who affirmed that the power to remit sins was a purely personal gift to Peter alone, and had disappeared with him. He therefore asserts that Peter received it that it might remain for ever in the Church and be used for its benefit. It is in that sense alone that he says that Peter represented the Church. There is no foundation whatever for saying that he desired to affirm that the Church was the true recipient of the power conferred. Such a view would be contrary to the whole patristic tradition, and is expressly reprobated in the Vatican Decree, cap. i.

It appears from what has been said that, when the popes legislate for the faithful, when they try offenders by juridical process, and enforce their sentences by censures and excommunications, they are employing powers conceded to them by Christ. Their authority to exercise jurisdiction in this way is not founded on the grant of any civil ruler. Indeed the Church has claimed and exercised these powers from the very first. When the Apostles, after the Council of Jerusalem, sent out their decree as vested with Divine authority (Acts, xv, 28), they were imposing a law on the faithful. When St. Paul bids Timothy not receive an accusation against a presbyter unless it be supported by two or three witnesses, he clearly supposes him to be empowered to judge him *in foro externo*. This claim to exercise coercive jurisdiction has, as might be expected, been denied by various heterodox writers. Thus Marsilius Patavinus (*Defensor Pacis*, II, iv), Antonius de Dominis (*De rep. eccl.*, IV, vi, vii, ix), Richer (*De eccl. et pol. potestate*, xi-xii), and later the Synod of Pistoia, all alike maintained that coercive jurisdiction of every kind belongs to the civil power alone, and sought to restrict the Church to the use of moral means. This error has always been condemned by the Holy See. Thus, in the Bull "Auctorem Fidei", Pius VI makes the following pronouncement regarding one of the Pistoian propositions: "[The aforesaid proposition] in respect of its insinuation that the Church does not possess authority to exact subjection to her decrees otherwise than by means dependent on persuasion: so far as this signifies that the Church 'has not received from God power, not merely to direct by counsel and persuasion, but further to command by laws, and to coerce and compel the delinquent and contumacious by external

and salutary penalties' [from the brief 'Ad assiduas' (1755) of Benedict XIV], leads to a system already condemned as heretical." Nor may it be held that the pope's laws must exclusively concern spiritual objects, and their penalties be exclusively of a spiritual character. The Church is a perfect society (see *CHURCH*, XIII). She is not dependent on the permission of the State for her existence, but holds her charter from God. As a perfect society she has a right to all those means which are necessary for the attaining of her end. These, however, will include far more than spiritual objects and spiritual penalties alone: for the Church requires certain material possessions, such, for example, as churches, schools, seminaries, together with the endowments necessary for their sustentation. The administration and the due protection of these goods will require legislation other than what is limited to the spiritual sphere. A large body of canon law must inevitably be formed to determine the conditions of their management. Indeed, there is a fallacy in the assertion that the Church is a spiritual society; it is spiritual as regards the ultimate end to which all its activities are directed, but not as regards its present constitution nor as regards the means at its disposal. The question has been raised whether it be lawful for the Church, not merely to sentence a delinquent to physical penalties, but itself to inflict these penalties. As to this, it is sufficient to note that the right of the Church to invoke the aid of the civil power to execute her sentences is expressly asserted by Boniface VIII in the Bull "Unam Sanctam". This declaration, even if it be not one of those portions of the Bull in which the pope is defining a point of faith, is so clearly connected with the parts expressly stated to possess such character that it is held by theologians to be theologically certain (Palmieri, "De Romano Pontifice", thes. xxi). The question is of theoretical, rather than of practical importance, since civil Governments have long ceased to own the obligation of enforcing the decisions of any ecclesiastical authority. This indeed became inevitable when large sections of the population ceased to be Catholic. The state of things supposed could only exist when a whole nation was thoroughly Catholic in spirit, and the force of papal decisions was recognized by all as binding in conscience.
